SEMESTER VI

ELECTIVE PAPER 2 -

TECHNOLOGY MEDIATED ENGLISH

Unit 1:

1. World Wide Web & Email: WWW FAQ'S : Email, Internet
2. Searching the Internet & Search FAQ's
3. The Internet as Resource Bank and classroom tool
4. E.Mail Projects and Discussion Lists

Unit 2:

1. Introduction to NET (I)
2. Introduction to NET (II)

Unit 3:

1. Strange news
2. Making news
3. Eco-tourism

Unit 4:

1. Writing Projects
2. Online groups
3. Blogs and Wikis
4. Email projects and discussion lists

Unit 5:

1. A good book
2. Puzzle maker
3. web quest
4. Professional development online

Prescribed Text

The Internet and the Language Classroom – A Practical Guide for Teachers – II Edition – Gavin Dudency , Cambridge University Press, 2007.

SEMESTER VI

ELECTIVE - PAPER 2

BUSINESS ENGLISH

UNIT I

1. Introduction to Business Communication
2. Communication in Organizations

UNIT II

1. Non- Verbal Communication
2. Effective Listening

UNIT III

1. Making presentations
2. Audio - Visual Aids
3. E-Mail Communication

UNIT IV

1. Resumes and cover letters
2. Preparing an Effective cv
3. Group Discussions
4. Interview Techniques

UNIT V

1. Memos, Reports, Proposals
2. Note taking, Note making
3. Inter cultural communication

Books for Study and Reference

N. Krishnaswamy, Manju Dariwal, Lalitha Krishnaswamy.

Sanghita Sen , Alankrita Mahendra , Priyadarshi Patnaik.
Communication & language skills. Cambridge University Press India.2015

SEMESTER VI

ELECTIVE PAPER - 3 COPY EDITING AND PROOF READING

UNIT I: INTRODUCTION TO COPY EDITING

1. What is copy editing?
2. Type Scripts: Hard copy, Electronic and Camera ready
3. Type Scripts corrected by the author
4. Copy editing on Screen

UNIT II: PREPARING THE TEXT FOR THE TYPE SETTER

1. Various legal aspects
2. A well organized and consistent book
3. Copy right permissions and acknowledgements

UNIT III: ILLUSTRATIONS AND PROOFS

1. How to read proofs
2. How to make corrections
3. Colour coding corrections
4. The author's corrected proof
5. After passing proofs for Press

UNIT IV: HOUSE STYLE

1. House Style and Preliminary Pages
2. Cross – references
2. Date and Time
3. Spelling and Punctuation
4. Title page
5. Contents List
6. List of Illustrations

UNIT V: OTHER PARTS OF A BOOK AND LITERARY MATERIAL

1. Running Heads
2. Page numbers
3. Headings
4. Footnotes and Endnotes
5. Tables
6. Appendixes
7. Glossaries

Prescribed Text:

"Butcher's copy Editing" – Fourth Edition – Judith Butcher, Caroline Drake and Marseen Leach – CUP.

SEMESTER VI

ELECTIVE PAPER -3

EFFECTIVE COMMUNICATION

UNIT I- JUST A MINUTE

Planning a speech- Beginning a speech-Transitions-Closing statements- Body language- Voice modulation- Practising a speech- Effective Communication

UNIT II- WRITING SKILLS

Features of good writing – Gathering ideas – Purposes of writing – Writing for a specific audience – Organising ideas – Writing an introduction

UNIT III- CRITICAL THINKING SKILLS

Developing support ideas- Writing a conclusion – Using linkers – Choosing the right words – Common errors in writing – Editing and proofreading

UNIT IV- GROUP DISCUSSION

Group discussion as a tool for selection- Skills for group discussion- Leadership and problem solving skills- Types of group discussions- Group dynamics- Roles and functions: beginning, presenting, elaborating- Roles and functions: agreeing/disagreeing and summarising- Etiquette, body language and time management- group discussion activities

PAPER - 1

B. BUSINESS MATHEMATICS

Objective:

To understand the fundamentals of Business Mathematics.

UNIT-I

Sets: Finite and infinite sets - equality of sets - Disjoint sets - universal set - set operation Union of sets, intersection of sets - difference of sets - complement of sets - venn diagram - De-Morgan's law - Cartesian product.

UNIT-II

Matrices - type of matrices - matrix operation - Determinant of matrix - Singular and Non Singular matrices - adjoint, inverse of matrix - solving simultaneous linear equations - matrix inversion method and method of reduction.

UNIT-III

Co-ordinate geometry - Co-ordinates - distance between two points - straight line - Concurrent lines - slope - intercept from, slope - point from, two points form - angle between straight lines, parallel and perpendicular conditions - simple problems.

UNIT-IV

Simple interest - compound interest - annuities - discount on bills.

UNIT-V

Differentiations - limits - derivatives of standard function x^n, e^x, $\log_x^e$, trigonometric functions - rules of Differentiation - Differentiation on different types of functions - successive Differentiation - maxima and minima - applications in business problems.

CORE PAPER- 4

ELEMENTS OF INSURANCE

Objective:

To gain a knowledge of insurance and its importance.

UNIT-I

Definition of insurance - classification of Contracts of insurance - marine and non-marine - general principles of law as applied to non-marine insurance.

UNIT-II

Life Assurance - objects of life Assurance - principles of life Assurance - different plans of life Assurance and annuities - policy condition and privilege - assignment and nomination - lapses and revivals - surrender values and loans - claims - double insurance.

UNIT-III

Marine insurance - principles of marine insurance - functions of marine insurance - proximate clause - subrogation and contribution

UNIT-IV

Types of marine policy - clauses in general use - warranties - kinds of marine losses - reinsurance and double insurance.

UNIT-V

Fire insurance - principles of law as applied to fire insurance - the subject matter of fire insurance - fire waste - hazard types of fire policy - cover notes - surveys and inspection average - re-insurance - renewals.

Text and Reference Books:

1. Dr. B. Vardharajan - Insurance Vol 1 and 2. - Tamil Text Book.
2. R.S. Sharma - Insurance Principle & Practice - Vara Bombay, 2006.
3. A. Murthy - Elements of Insurance Risk management & Insurance - Harrington, 2006 - Tata McGraw Hill pub.

ALLIED - 1

(To choose any 1 out of 3)

PAPER – 2

A. INDIAN ECONOMY - II

UNIT-I

Role of Technology - Information Technology BPO in India - their impact on Economic Development – Cyber Crime.

UNIT-II

Role of industries - Cottage & Small Scale industries - Some Large Scale industries (Cotton, Sugar, Iron & Steel, Tea & Petro Chemical) Industrial Policy - 1991 and after - Public sector Enterprises - Dis-investment and Privatisation.

UNIT-III

Transport - Importance of Transport (Roadways, Railways, Shipping and Civil Aviations) to Economic growth - Evaluation of Government in Policy in relation to privatisation policy - Transport Coordination.

UNIT-IV

Planning in India - Strategy of Indian Planning - Resources for Financing Plan - Agriculture and Industrial Development - Planning techniques - Investment Priorities – General Objectives – Targets, Achievements and Failures – 11^{th} and 12^{th} five year plans- NITIAYOG

UNIT-V

Poverty in India - Poverty Eradication Programmes - Recent Employment scheme-Swaraj Bharat Mission - Role of Micro finance - (SHG, Cottage and Household Sector etc.,) - Regional Development Disparities -India's Foreign Trade and Balance of Payments.

ALLIED - 1

PAPER - 2

B. LOGISTIC MANAGEMENT

Objective:

To understand the comprehensive nature of Logistics Management.

UNIT-I

Logistics - definition - scope - functions - objectives of Logistics Management - customer service and logistics.

UNIT-II

Supply Chain - components - role of logistics in supply chain - Warehousing - functions - types - warehouse layout - material handling and logistics - Inventory Management.

UNIT-III

Transportation - infrastructure - freight management - transportation network - route planning - containerization.

UNIT-IV

Logistical packaging - logistics information needs - logistics design for distribution channels - logistics outsourcing.

UNIT-V

Government policies and regulations - Motor Vehicles Act, carriage by air, sea, multi-modal transportation etc., Documentation - Airway Bill, Railway Receipt, Lorry Receipt, Bill of Lading etc.

CORE PAPER - 8

BUSINESS STATISTICS – I

Objective

To understand and apply statistical tools in business.

UNIT-I

Statistics - Definitions - Scope and Limitations - Collection of Data - Primary and Secondary Data - Questionnaire - Classification and Tabulation - Diagrammatic and graphical representation of data.

UNIT-II

Measures of Central tendency - Mean - Median - Mode - Harmonic Mean and Geometric Mean,

UNIT-III

Measures of Dispersion - Range - Quartile deviation - Mean Deviation - Standard Deviation - Coefficient of Variation - Lorenz Curve.

UNIT-IV

Measures of Skewness - Karl Pearson's and Bowlay's Coefficient of Skewness - Kurtosis - Characteristics of Kurtosis - Measures - Calculation.

UNIT-V

Statistical Quality Control - Control Charts - X, P, C, R - Charts - Acceptance sampling only.

(Weightage of Marks = Problems - 80%, Theory - 20%)

Text Books:

1. Dr. S.P. Gupta, Business Statistics & Operation Research - Sultan Chand.
2. PA. Navanitham, Business Statistics & Operation Research, Jai Publications, Trichy.
3. S.P. Rajagopalan& R. Sattanathan, Business Statistics & Operation Research 3rd Edition, Vijay Nicole Publications, Chennai.

Reference Books:

1. Dr. S.P. Gupta, Statistical Methods - Sultan Chand.
2. R.S.N. Pillai&Bhagavathi, Statistics.
3. J.K. Sharma, Business Statistics - Pearson Education.
4. B. Agarwal, Basic Statistics - Wiley Eastern.

ALLIED - 2

PAPER - 3

BUSINESS ECONOMICS – I

UNIT-I

Introduction to Business Economics - Objectives of Business Profit maximization - Social responsibility of Business.

UNIT-II

Demand analysis - Demand schedule - Demand curve - Different types of Elasticity of demand - Measurement - Importance of elasticity of demand.

UNIT-III

Utility analysis - Cardinal - Ordinal - The law of diminishing marginal utility - Equi-Marginal utility - Indifference curve - Break-even analysis - Profit theories and concepts.

UNIT-IV

Demand Forecasting - Different types of Demand Forecasting.

UNIT-V

Production - Production function - The law of variable proportions - Economies of scale, Law of returns to scale.

Reference Books:

Business Economics, K.P.M Sundaram and E.N. Sundaram, Sultan & Chand, New Delhi.

Business Economics, S. Sankaran, Margham Publications, Chennai

THIRUVALLUVAR UNIVERSITY

B.Sc. MATHEMATICS

SYLLABUS
CBCS PATTERN
(For the candidates admitted from 2017 - 2018)

SEMESTER I

PAPER - 1

ALGEBRA

Objectives

In this Course students are exposed to topics like Theory of Equations, Summation of Series, Matrices, Continued Fractions and Elementary Number Theory. The stress is on the development of problem solving skills.

UNIT-I: THEORY OF EQUATIONS

Polynomial Equations - Symmetric Functions of roots in terms of Coefficients - Reciprocal Equations - Transformation of Equations.

UNIT-II: THEORY OF EQUATIONS (Contd...)

Descartes Rule of Signs - Approximate Solutions of Polynomials by Horner's method - Newton - Raphson method of Solution of a Cubic Polynomial.

UNIT-III: SUMMATION OF SERIES

Summation of series using Binomial - Exponential and Logarithmic series (Theorems without proofs) - Approximation using Binomial & Exponential series and logarithmic series simple problems.

UNIT-IV: MATRICES

Symmetric - Skew symmetric, - Hermitian - Skew Hermitian - Orthogonal and Unitary Matrices - Cayley-Hamilton Theorem (without proof) - Eigen Values - Eigen Vectors–Similar Matrices - Diagonalisation of a Matrix.

UNIT-V: ELEMENTARY NUMBER THEORY

Prime Number - Composite Number - Decomposition of a Composite Number as a Product of Primes uniquely (without proof) - Divisors of a Positive Integer - Congruence Modulo *n* - Euler Function (without Proof) - Highest Power of a Prime Number p contained in *n!*- Fermat's and Wilson's Theorems (statements only) - simple problems.

Recommended Texts

T.K.ManicavachagomPillay, T.Natarajan and K.S.Ganapathy.(2004) *Algebra,* Volume I & II S.Viswanathan Printers & Publishers Pvt. Ltd. Chennai.

Reference Books

4. S.Sudha(1998) *Algebra and Trigonometry*. Emerald Publishes, Chennai.

PAPER - 2

TRIGONOMETRY

Objectives

This course is a fundamental one for many courses of this Degree Programme. This covers topics on the expansions of trigonometric functions, hyperbolic functions, inverse circular, inverse hyperbolic functions and it aims to develop computational skills.

UNIT-I

Expansions of cosnθ , sin nθ - Expansion of tan nθ in terms of tan θ - Expansion of tan(A+B+C+…) - Formation of Equations. Chapter III section 1 to 3

UNIT-II

Powers of sines and cosines of θ in terms of functions of multiples of θ - expansions of sin θ and cos θ in a series of ascending powers of θ - Expansion of Inverse Circular Functions. Chapter III section 4 and 5

UNIT-III: Hyperbolic Functions

Definition – Relation between Hyperbolic Functions - Inverse Hyperbolic Functions. Chapter IV sections 1 to 2.3

UNIT-IV

Resolution into Factors - simple problems only - DeMoivre's Property on the Circle and Cote's Property on the Circle.Logarithm of complex quantities.
Chapter V sections 2 and 3(Problems only)
Chapter V sections 4, 4.1, 4.2, 5, 5.1, 5.2...

UNIT-V

Summation of Trigonometric Series: When the angles are in A.P, C+iS method of summation - Method of Differences - Gregory Series - Euler Series.
Chapter VI section 1, 2 ,3 ,3.1, 3.2.

Recommended Text

SEMESTER II

PAPER - 3

CALCULUS

Objectives

The course introduces students to the fundamental principles, concepts and knowledge in the areas of Differential and Integral Calculus. This prepares the students to apply these fundamental concepts and working knowledge to other courses.

UNIT-I

Differential Calculus: n^{th} derivative - Leibnitz's theorem (Without proof) and its application - Jacobians - Total differential - maxima and minima functions of 2 & 3 independent variable, Lagrange's method (without proof), problems on this concepts.

UNIT-II: Differential Calculus (Contd…)

Polar coordinates – Angle between radius vector and tangent – Angle between two curves, Curvature, Radius of Curvature in Cartesian and Polar coordinates, p-r equation, Evolutes.

UNIT-III: Differential Calculus (Contd…)

Asymptotes: Methods (without proof) of finding asymptotes of rational algebraic curves with special cases.(First 5 sections only)

UNIT-IV: Integral Calculus

Reduction formulae, $\int \sin^n x\,dx$, $\int \cos^n x\,dx$, $\int \sin^m x\cos^n x\,dx$, Beta and Gamma Functions - Properties and Problems.

UNIT-V: Integral Calculus (Contd…)

Double Integrals - Change of order of Integration - Triple Integrals - Applications to Area, Surface Area and Volume.

PAPER - 4

ANALYTICAL GEOMETRY OF THREE DIMENSIONS

Objective:

To deepen the knowledge of the students in various concepts of Analytical Solid Geometry.

Unit I: Plane

General equation of a plane – Equation of a plane in the normal form – Angle between planes – Plane through three given points – Equation of a plane through the line of intersection of two planes.

UNIT II: Straight Line

Symmetrical form of a straight line – Image of a point with respect to a plane – Image of a line with respect to a plane – Length and equation of the shortest distance between two skew lines - Coplanar lines.

UNIT III: Sphere

Equation of the sphere – Length of the tangent – Tangent plane – Section of a sphere by a plane – Orthogonal spheres – Equation of a sphere through a given circle.

UNIT IV: Cone

Equation of a cone with a given vertex and a given guiding curve - Equation of a cone with its vertex at the origin - Condition for the general equation of the second degree to represent a cone - Right circular cone – Enveloping cone - Tangency of a plane to a cone.

UNIT V: Cylinder

Equation of a cylinder with a given generator and a given guiding curve - Right circular cylinder - Enveloping cylinder – Enveloping cylinder as a limiting form of an enveloping cone.

SEMESTER III

PAPER - 5

DIFFERENTIAL EQUATIONS

Objectives

This course aims to provide logical skills in the formation of differential equations, to expose to different techniques of finding solutions to these equations and in addition stress is laid on the application of these equations in geometrical and physical problems.

UNIT-I: Ordinary Linear Differential Equations

Bernoulli Equation – Exact Differential Equations – Equations Reducible to Exact Equations – Equations of First order and Higher degree: Equations solvable for p, Equation solvable for x and Equations Solvable for y – Clairaut's Equation.

UNIT-II: Ordinary Linear Differential Equations [Contd...]

Method of Variation of Parameters – 2^{nd} order Differential Equations with Constant Coefficients for finding the P.I's of the form e^{ax} V, where V is sin(mx) or cos(mx) and x^n – Equations reducible to Linear equations with constant coefficients – Cauchy's homogeneous Linear Equations – Legendre's Linear Equations.

UNIT-III: Differential Equations of Other Types

Simultaneous Equations with Constant coefficients – Total Differential Equations Simultaneous Total Differential Equations – Equations of the form dx/P = dy/Q = dz/R

UNIT-IV: Laplace Transform

Transform-Inverse Transform – Properties – Application of Laplace Transform to solution of first and second order Linear Differential equations [with constant coefficients].

UNIT-V: Partial Differential Equations

Formation of PDF – Complete Integral – Particular Integral – Singular Integral – equations Solvable by direct Integration – Linear Equations of the first order – Non-linear Equations of the first Order:

Types:

f[p,q]=0,

f[x,p,q]=0, f[y, p, q]=0, f(z, p, q]=0, f[x, q]= f[y, p],

z= px+qy + f[p, q]

SKILL BASED SUBJECT

PAPER - 1

LINEAR PROGRAMMING

Objectives

To improve the skills of solving very common problems which we come across in various fields like transportation, games and industries with machines.

UNIT-I

Linear programming problem - Mathematical formulation of the problem - Graphical solution method - simple method - Duality - primal and dual relation (simple Problems).

UNIT-II

Transportation problem - Degeneracy in transportation problem.

UNIT-III

The Assignment problem – Travelling salesman method.

UNIT-IV

Game theory - two persons zero sum game - the maximin minimax principle - saddle points - games without saddle points.

UNIT-V

Simulation - application - advantages and disadvantages - Monte Carlo method - simple problems.

6. Algebra, Manickavachakam Pillai & Narayanan

NON-MAJOR ELECTIVE

PAPER -1

BASIC MATHEMATICS

Objectives

To introduce a few basic and elementary concepts of mathematics for other major students.

UNIT-I: Sets

Definition - Subsets - Power sets - Equality of sets - Finite and Infinite sets - Set operations - De-Morgan's laws - Distributive tables - Cartesian products.

UNIT-II: Number system

Binary, octal, hexadecimal numbers - conversion from one system to another system - addition and subtraction - one's complement.

UNIT-III: Symbolic logics

Logical statements - connectives - truth tables - tautologies operations - groups – (problems and simple properties only).

UNIT-IV: Determinants

Definition - properties (without proof) - application of determinants - Cramer's rule for the solution of a system of equations

UNIT-V: Matrices

Definition - types of matrices - operations on matrices - adjoint and inverse - applications - solving non-homogeneous equations.

Recommended Texts

SEMESTER-IV

PAPER-6

VECTOR ANALYSIS AND FOURIER ANALYSIS

Objectives

This course covers the topics in vector and tensor calculus which are essential tools of modern applied mathematics. To develop deep understanding of key concepts followed by problems of applied nature. The portion on Fourier analysis will lead to post-graduate studies and research in pure as well as applied mathematics.

UNIT-I: Differential Vector Calculus

Differentiation of a Vector - Geometrical Interpretation of the Derivative - Differentiation Formulae - Differentiation of dot and Cross Products - Partial Derivatives of Vectors - Differentials of Vectors.

UNIT-II: Gradient, Divergence and Curl

Vector Differential Operator Del - Gradient of a Scalar Function - Directional Derivative - Geometric Interpretation - Gradient of the sum of Functions; of the product of functions and of a function of function - Operations involving Del - Divergence of a Vector and its Physical Interpretation - Curl of a Vector and its Physical Interpretation - Expansion Formulae for Operators involving Del - Solenoidal and Irrotational.

UNIT-III: Vector Integration

The Line Integral - Surface Integral and its Physical Meaning – Volume integral. Simple problems.

UNIT-IV: Vector Integration(Contd.)

Statements of Stoke's Theorem, Gauss Divergence Theorem and Green's Theorem and problems.

UNIT-V: Fourier Series

Euler's Formulae - Conditions for Fourier Expansion - Functions having Discontinuity - Change of Interval - Odd and Even Functions - Expansions of Odd or Even periodic Functions - Half-range Series-Typical Wave Forms - Parseval's Formula.

PAPER - 2

MATHEMATICS FOR COMPETETIVE EXAMINATIONS-I

Objectives

To introduce concepts of mathematics with emphasis on analytical ability and computational skill needed in competitive examinations.

Unit- I

Numbers, H.C.F. and L.C.M. of numbers, Decimal Fractions.

Unit -II

Simplification, Square roots and Cube Roots, Average.

Unit- III

Problems on numbers, problems on Ages.

Unit -IV

Surds and Indices, Percentage, Profit and Loss.

Unit -V

Ratio and Proportion, Partnership.

Text Books:-

ABSTRACT ALGEBRA

Objectives

This course aims to impart emphasis on concepts and technology of the groups and rings as these algebraic structures have applications in Mathematical Physics, Mathematical Chemistry and Computer Science.

UNIT-I: Groups

Definition of a Group - Examples - Subgroups;

UNIT-II: Groups (Contd)

Counting Principle - Normal Subgroups - Homomorphisms.

UNIT-III: Groups (Contd)

Automorphisms - Cayley's Theorem - Permutation Groups.

UNIT-IV: Rings

Definition and Examples - Integral Domain - Homomorphism of Rings - Ideals and Quotient Rings.

UNIT-V: Rings (Contd)

Prime Ideal and Maximal Ideal - The field of quotients of an Integral domain – Euclidean rings.

PAPER - 8

REAL ANALYSIS I

Objectives

To understand various limiting behavior of sequences and series

To explore the various limiting processes viz.continuity, uniform continuity, differentiability and integrability and to enhance the mathematical maturity and to work comfortably with concepts.

UNIT-I: Functions & Sequences

Functions – real valued functions – equivalence – countability and real numbers – least upper bound – definition of sequence and subsequence – limit of a sequence – convergent sequence
Ch. 1.4 to 1.7, 2.1 to 2.3 of Goldberg.

UNIT-I: Sequences [Contd...]

Divergent sequences – Bounded sequences – Monotone sequence – Operations on convergent sequences – Operations on divergent sequences – Limit superior and Limit inferior – Cauchy sequences
Ch. 2.4 to 2.10 of Goldberg.

UNIT-III: Series of Real Numbers

Convergence and Divergence – Series with non negative terms – Alternating series – conditional convergence and Absolute convergence – Test for Absolute convergence.
Ch. 3.1 to 3.4 and 3.6 of Goldberg.

UNIT-IV: Series of Real Numbers [Contd...]

Test for Absolute convergence – The class ℓ^2 – Limit of a function on the real line – Metric spaces – Limits in Metric spaces.
Ch. 3.7, 3.10, 4.1 to 4.3 of Goldberg.

UNIT-V: Continuous Functions on Metric Spaces

Functions Continuous at a point on the real line – Reformulation – Functions Continuous on a Metric Spaces – Open Sets – Closed Sets.
Ch. 5.1 to 5.5 of Goldberg

Recommended Text

PAPER - 9

COMPLEX ANALYSIS - I

Objectives

This course provides

(i) a modern treatment of concepts and techniques of complex function theory

(ii) To gain knowledge about the complex number system, the complex function and complex integration.

UNIT-I: Complex numbers and Elementary functions

Complex Number system, complex numbers –Algebraic properties-Point at Infinity Stereographic Projection-Function of a complex variable-Mappings-Elementary Functions- The Logarithmic function- Branches of log Z.
Sections 1-10, 21-30.

UNIT-II: Analytic functions

Definitions of Limits -Continuity-Derivatives and Differentiation formula-Cauchy-Riemann equations-Cauchy-Riemann equations in polar form-properties of Analytic functions-Necessary and sufficient conditions for Analytic functions-problems. Sections 11-19.

UNIT-III: Conformal Mappings

Harmonic functions-Determination of Harmonic conjugate and Analytic functions-conformal mapping-Isogonal mapping-Further properties and examples-transformations of Harmonic functions**.**
Sections 20, 76-80.

UNIT-IV Mapping by Elementary transformations

The transformations $w=z+d$, $w=1/z$, $w=z^2$, $\overline{w}=\sqrt{z}$, $w = e^z$, $w=\sin z$ Bilinear Transformation andspecial Bilinear Transformation problems.
Sections 31-36, 38-39

UNIT-V: Integrals

Contours - Line Integrals _ Cauchy-Goursat's Theorem (without proof) Cauchy's Integral Formula - Derivatives of Analytic Functions - problems. Sections 43-46, 50-52.

PAPER - 10

STATICS

OBJECTIVES

This course introduces the students the basic concepts of forces, moments, couple, friction law virtual displacement and work, catenary and the centre of gravity and kinematics. This course stresses the development of skills in formation of suitable mathematical models and problems solving techniques.

UNIT- I

Forces, Type of forces- Resultant of three forces related to triangle acting at a point - Resultant of several forces acting on a particle - Equilibrium of a particle under three forces - Equilibrium of a particle under several forces - Limiting Equilibrium of a particle on an inclined plane.

UNIT- II

Moment of a forces- General motion of a Rigid body- Equivalent system of forces – Parallel forces- Forces along the sides of the triangle.

UNIT- III

Couples- Resultant of several coplanar forces – Equation of line of action of the resultant – Equilibrium of a rigid body under three coplanar forces.

UNIT - IV

Reduction of coplanar forces into a force and a couple – Friction – laws of friction – cone of friction and angle of friction – Applications involving frictional forces.

UNIT - V

Center of mass – Center of mass of a triangular lamina – Three particles of same mass - Three particles of certain masses – uniform rods forming a triangle – lamina in the form of a trapezium and solid tetrahedron – Center of mass using integration – circular arc – circular lamina – elliptic lamina – solid hemisphere – solid right circular cone – hemispherical shell – hollow right circular cone.

PAPER - 11

DYNAMICS

OBJECTIVES

This course aims to provide models for some real life problems. This covers topics like Simple Harmonic Motion, Projectiles, Central Orbits and Moment of Inertia. Stress is on the mathematical formulation of the physics aspects of the problems and it develops logical deduction and interpretation.

UNIT- I

Velocity, Relative Velocity, Angular Velocity, Acceleration, Rectilinear motion, Rectilinear motion with constant acceleration, Relative angular velocity, Work, Power, Energy.

UNIT- II

Motion of a projectile, Nature of a trajectory, Results pertaining to the motion of a projectile, Range on an inclined plane, Maximum range on the inclined plane. Simple problems.

UNIT -III

Impulsive force, Conservation of linear momentum, Impact of a sphere, Laws of impact, Impact of two smooth spheres, Direct impact of two smooth spheres, Direct impact of a smooth sphere on a plane, oblique impact of a smooth sphere on a plane. Simple problems.

UNIT- IV

Central force and Central Orbit, Equation of central orbit, finding law of force and speed for a given orbit, Determination of the orbit when law of force is given, Kepler's Laws on planetary motion. Simple Problems.

UNIT -V

Moment of Inertia of simple bodies, Theorems of parallel and perpendicular axes, Moment of inertia of triangular lamina, circular lamina, circular ring, right circular cone, sphere. Simple problems.

ELECTIVE

PAPER - 1

A. GRAPH THEORY

Objectives

To study and develop the concepts of graphs, subgraphs, trees connectivity, Eulerian and Hamiltonian graphs, matching colorings of graphs and planar graphs

UNIT-I

Graphs, subgraphs, Degree of a vertex, Isomorphism of graphs, independent sets and coverings.

UNIT-II

Intersection graphs; Adjacency and incidence of matrices; Operations on graphs;;

UNIT-III

Walks; trails; paths; Connectedness and components; cut point, bridge, block.

UNIT-IV

Connectivity theorems and simple problems. Eulerian graphs and Hamiltonian graphs; simple problems

UNIT-V

Trees, theorems, and simple problems.

Recommended Text

B. ASTRONOMY

Objectives

This course aims to provide working knowledge about the universe.

UNIT-I

Celestial Sphere - Diurnal motion - Simple Problems page 39 - 83 (Use the results 65,67,83,84) to solve problems.No derivation.)

UNIT-II

Zones of Earth - Terrestrial Latitudes and Longitudes - Rotation of Earth - Dip of the horizon - - Simple problems. Page 90-131 (Use the results of 96,99,102 to solve problems. No need for derivation.

UNIT-III

Twilight-simple problems-Astronomical refraction - Simple problems.page 131-157. (use the result of 124,125,126,127 to solve problems. No need to derive the result)

UNIT-IV

Kepler's Laws - simple problems page 172-189. (Use result s of 159,160 to solve the problems.No need to derive the results.

UNIT-V

Moon - phases of moon - Eclipses - Introduction - umbra and penumbra - lunar eclipse - solar eclipse - condition for the occurrence of lunar and solar eclipses. Page 334-377. (Use the results of 270,271,272 to solve problem, no need to derive the results)

LINEAR ALGEBRA

Objectives

To study the Algebraic structures of Vector Spaces and Linear Transformation

UNIT-I: Vector Spaces

Definition and examples-Linear dependence and independence

UNIT-II: Vector Spaces (Contd)

Dual space - Inner Product spaces.

UNIT-III: Linear Transformation

Algebra of linear transformations - Characteristic roots

UNIT-IV: Linear Transformation (Contd)

Matrices, Canonical forms; Triangular forms.

UNIT-V: Linear Transformation (Contd)

Trace and Transpose, Determinants

REAL ANALYSIS II

Objectives

To understand Integration process of Riemann
To develop the understanding of point wise and uniform convergence of sequence and series of functions.
To enhance the mathematical maturity and to work comfortably with concepts.

UNIT-I: Connectedness, Completeness

Open Sets – Connected Sets – Bounded Sets and Totally Bounded Sets – Complete Metric Spaces.
Ch. 6.1 to 6.4 of Goldberg

UNIT-II: Compactness

Compact Metric Space – Continuous Functions on Compact Metric Spaces - Continuity of Inverse Functions – Uniform Continuity.
Ch. 6.5 to 6.8 of Goldberg

UNIT-III: Riemann Integration

Sets of measure zero - Definition Riemann Integral – Properties of Riemann Integral – Derivatives.
Ch. 7.1, 7.2 7.4, 7.5 of Goldberg.

UNIT-IV: Riemann **Integration [Contd...]**

Rolle's Theorem – The law of mean – Fundamental theorems of calculus – Taylor's theorem.

Ch. 7.6 to 7.8 and 8.5 of Goldberg.

UNIT-V: Sequences and Series of Functions

Pointwise convergence of sequences of functions – Uniform convergence of sequences of functions – consequences of uniform convergence – Convergence and uniform convergence of series of functions.

Ch. 9.1 to 9.4 of Goldberg.

PAPER - 14

COMPLEX ANALYSIS II

Objectives:

(1) To gain knowledge about complex Integration and series.
(2) This course provides methods to solve problems in pure as well as in applied mathematics.

UNIT-I: Integrals:

Morera's theorem- Maximum Moduli of functions- The fundamental theorem of Algebra-Lioulle's theorem-convergence of sequences and series-uniform convergence. Sections 53-56, 61.

UNIT-II: Power series.

Taylor's and Laurent's theorem-Integration and differentiation o f power series-problems.
Sections 57-60.

UNIT-III: Singularities and Residues.

Singularities and classifications- Isolated singularties:Removable singularity Pole and essential singularity-Residues-Cauchy's Residue theorem-problems.
Sections 67-71.

UNIT-IV: Analytic continuation

Conditions under which f (z)=o-Uniqueness-Singular points:Poles and zeros-Essential singular points-Number of zeros and poles-The Argument principal.
Sections 106 -114.

UNIT V: Contour Integration

Evaluation of Improper Real Integrals-Improper integrals involving Trigonometric functions -Integration around a Branch point.
Sections 72-75.

PAPER - 15

PROGRAMMING IN C LANGUAGE

Objectives

To develop programming skill in the Computer Language C

UNIT-I

C Constants, variables, Data-type, Declaration of variables, assigning values to variables.

UNIT-II: Operators

Arithmetic, Relational, Logical, Assignment, Increment and decrement, Conditional, Arithmetic Expressions, Evaluation of Expressions, Precedence of Arithmetic operators, Formatted input and output.

UNIT-III: Operators

Decision making and branching If, simple if, If else, Nesting of if - else, Else - If ladder, Switch statement, the?: operator, Go to statement. Decision making with looping: While, Do, for statement, Jumps in loops.

UNIT-IV: Arrays

One - dimensional array, two - dimensional array, Initializing arrays, Multi - dimensional arrays.

UNIT-V: User-Defined Function

Need for User-defined function, Multi-function program, the form of C-Function, Return Value and their types.

Structures and Unions:

Structure definition, Structure initialization, Comparison of structure variables, union**.**

PRACTICAL

PRACTICAL IN C LANGUAGE

Objectives

This computer practice course aims to provide strong logical thinking and error-free syntax codes writing, to master the debugging techniques and to present the results in neat form in C Language for numerical methods. Students will be able to solve problems numerically whenever theoretical methods are not available.

The following exercises shall be performed as minimum mandatory requirements (for eligibility to take the practical examination) and a RECORD of the code-listing and outputs shall be maintained by each students.

1. Assigning the ASCII value.
2. Square of numbers: Using For loop, While loop
3. Square of numbers: Do-While loop, Goto statement.
4. Characters between two given characters.
5. Number of vowels and consonants.
6. Three – dimensional matrix.
7. Prime numbers between two give numbers.
8. Fibonacci series.
9. Factorial numbers
10. Power of a value.
11. Interchange sort.
12. Student record.

Note: Mathematics faculty should be appointed as an Examiner.

PAPER - 2

OPERATIONS RESEARCH

Objectives

To develop computational skill and logical thinking in formulating industry oriented problems as a mathematical problem and finding solutions to these problems.

UNIT-I

Network-construction of network diagram-Critical path method (CPM) – Three floats

UNIT-II

Three time estimates-Network scheduling by PERT Method-PERT Computation

UNIT-III

Inventory models - EOQ model (a) Uniform demand rate infinite production rate with no shortages (b) Uniform demand rate finite production rate with no shortages – Inventory control with Price Breaks.

UNIT-IV

Sequencing problem - n jobs through 2 machines, n jobs through 3 machines - two jobs through m machines – n jobs through m machines.

UNIT-V

Queuing Theory - Basic concepts - Steady state analysis of M/M/1 and M/M/N systems with finite and infinite capacities.

CALCULUS OF FINITE DIFFERENCES AND NUMERICAL METHODS

(To be chosen only by those students who have not taken Numerical Methods as Allied subject)

Objectives

This course covers the basic methods for finding the finite difference, solution of simultaneous equations and the techniques of Numerical Differentiation and Numerical Integration. It also deals with solution of Algebraic and Transcendental equations.

(Note: All The Formulae Without Proof - Units I to V)

UNIT-I: Finite differences & Interpolation

Forward difference operator ▲ and Backward difference operator ▼ and shifting operator E, Relation between ▲, ▼and E - Interpolation - Newton - Gregory forward & backward formulae, Estimating the missing terms- Lagrange's and Newton's divided difference Formula for unequal intervals.

UNIT-II: Solutions of simultaneous linear equations

Gauss elimination method - matrix inversion method - Gauss-Jordan Method, Gauss – Seidal method.

UNIT-III: Numerical Differentiation

Newton's forward and backward differences formulae to compute derivatives - using Guass forward and backward formulae.

UNIT-IV: Numerical Integration

General Quadrature formula - Trapezoidal rule - Simpson's one third rule - Simpson's three-eight rule.

UNIT-V: Solution of Algebraic and Transcendental Equations:

Bisection method - Regula - falsi method (False Position method) – Newton - Raphson method. Numerical solution of ordinary Differential equation (First order only): Euler's method, modified Euler's method, Picard's method, Runge - Kutta method

PAPER – 3

B.FUZZY MATHEMATICS

Objectives

1. To know the fundamentals of fuzzy Algebra.
2. To know the basic definitions of fuzzy theory
3. To know the applications of fuzzy Technology.

UNIT-I

Introduction- Fuzzy subsets-Lattices and Boolean Algebras- L fuzzy sets-operations on fuzzy –α level sets – properties of fuzzy subsets of a set. section s 1.1-1.10

UNIT-II

Algebraic product and sum of two fuzzy subsets-properties satisfied by Addition and product-cartesian product of fuzzy subsets. Sections 1.11-1.13.

UNIT-III

Introduction- Algebra of fuzzy relations-logic-connectives. section s 2.1-2.4

UNIT-IV

Some more connectives-Introduction-fuzzy subgroup-homomorphic image and Pre-image of subgroupoid. Sections 2.5,3.1-3.3

UNIT-V

Fuzzy invariant subgroups-fuzzy subrings.
Section 3.4 and 3.5.

ALLIED SUBJECTS FOR MATHEMATICS STUDENTS

To choose any two out of the following Four Allied subjects as Allied I and Allied II. Each Allied subject consists of two Examination papers as paper I and Paper II.

1. Mathematical Statistics (Paper I and II)
2. Numerical Methods (Paper I and II)
3. Physics (Paper I and II)
4. Chemistry (Paper I and II)

ALLIED

MATHEMATICAL STATISTICS - I

Objective

To apply Statistics Methods for Mathematical Problems

UNIT-I

Concept of Sample Space - Events - Definition of Probability (Classical, Statistical and Axiomatic) - Addition and Multiplication laws of Probability - Independence of Events - Conditional Probability - Baye's Theorem - Simple Problems.

UNIT -II

Random Variables (Discrete and Continuous) - Distribution Function - Expectation and Moments - Moment Generating Function - Probability Generating Function - Cumulant Generating Function - Simple Problems.

UNIT-III

Characteristic Function - Properties - Uniqueness and Inversion Theorem (Statement only) Chebychev's Inequality - Simple Problems

UNIT-IV

Concept of Bivariate Distribution - Correlation - Karl Pearson's Coefficient of Correlation - Rank Correlation - Linear Regression.

UNIT-V

Standard distributions: Discrete distributions - Binomial, Poisson, Hyper Geometric and Negative Binomial Distributions - Continuous Distributions Normal, Uniform, Exponential.

Recommanded text book:

S.C. Gupta & V.K. Kapoor : Fundamentals of Mathematical Statistics, Sultan & sons

Books for Reference

1. Hogg, R.V. &Craig.A.T.(1998) : Introduction to Mathematical Statistics, Macmillan
2. Mood. A.M. Graybill. F.A.&Boes.D.G.(1974) : Introduction to theory of Statistics, McGraw Hill.
3. Snedecor.G.W. &Cochran.W.G.(1967) : Statistical Methods, Oxford and IBH
4. Hoel, P.G (1971): Introduction to Mathematical Statistics, Wiley.
5. Wilks S.S. Elementary Statistical Analysis, Oxford and IBH

ALLIED

MATHEMATICAL STATISTICS II

Objective

To apply Statistics for Mathematical problems

UNIT-I

Statistical Population Census and Sampling Survey - Parameter and Statistics - Sampling and Sampling Distribution and Standard Error. Sampling distributions - students 't', chi - square and F distributions.

UNIT-II

Test of significance - Large sample test for proportion, mean and standard deviation - Exact test based on 't', Chi - square and F distribution with respect to population mean, variance and correlation coefficient - Tests of independence of attributes - goodness of fit tests.

UNIT-III

Point estimation - Concept of unbiasedness, consistency, efficiency and sufficiency - Cramer- Rao Inequality - Methods of Estimation - Maximum Likelihood Estimation - Method of Moments.

UNIT-IV

Test of Hypothesis: Null and Alternate Hypothesis - Type I and Type II error - Power of the test - Neymann Pearson lemma - Likelihood Ratio Test - Concept of Most Powerful test (Statement and Results only) - Simple Problems

UNIT-V

Analysis of Variance - One - way and Two-way Classification - Basic Principles of Design of Experiments - Randomization, Replication, Local Control, Completely Randomized Design, Randomized Block Design and Latin Square Design.

Recommended Text:

S.C. Gupta & V.K. Kapoor: Fundamentals of Mathematical Statistics, Sultan & sons

Books for Reference

1. Hogg, R.V. & Craig. A. T. (1998): Introduction to Mathematical Statistics, Macmillan
2. Mood.A.M.,Graybill. F.A.&Boes. D.G.(1974): Introduction to theory of Statistics, McGraw Hill.

5. Wilks . S. S.Elementary Statistical Analysis, Oxford and IBH
6. O. Kempthone - Design of Experiments
7. Das and Giri : Design of Experiments Wiley Eastern

ALLIED PRACTICAL

MATHEMATICAL STATISTICS

1. Measures of location and Dispersion (absolute and relative)
2. Computation of Correlation Coefficient for raw and Grouped data, Rank Correlation Coefficient
3. Computation of Regression Equations for Raw and Grouped Data
4. Curve Fitting by the Method of Least Squares
   a. $y=ax+b$
   b. $y=ax^2+bx+c$
   c. $y=ae^{bx}$
   d. $y=ax^b$
5. Fitting of Binomial, Poisson, Normal distributions and tests of goodness of fit.
6. Large sample tests with regard to population mean, proportion, standard deviation
7. Exact tests with Respect to Mean, Variance and Coefficient of Correlation
8. Test for Independence of Attributes Based on Chi-Square Distribution
9. Confidence Interval based on Normal, t and Chi-square and F Distributions
10. Problems based on ANOVA-one way and two way Classification
11. Completely Randomized Design
12. Randomized Block Design
13. Latin Square Design

Note
Use of scientific calculator shall be permitted for practical examination.
Statistical and Mathematical tables are to be provided to the students at the examination hall.

- Mathematics faculty alone should be appointed as examiners.

Books for Reference

8. O. Kempthone - Design of Experiments.

ALLIED PAPERS

NUMERICAL METHODS - I

Objectives

This course will cover basic methods for finding the Finite differences, Central differences, Inverse interpolation, Summation of series, Interpolation for equal & unequal intervals, Solutions of simultaneous equations, Important principles, Method and Processes to get numerical results, Reliability of numerical result.

UNIT-I: Finite Differences

First and higher order differences-forward differences and Backward differences-Properties of operators-Differences of a Polynomial-Factorial Polynomials-Operator E, Relation between ▲,▼and E–Interpolation - Newton - Gregory forward & backward formulae for interpolation.

UNIT-II: Central Differences

Central difference Operators-Central differences formulae: Gauss Forward and Backward formulae-Sterling's formula-Bessel's formula.

UNIT-III: Interpolation for Unequal Intervals

Divided differences-Newton's divided differences formula and Lagrange's-Estimating the Missing terms (With one or more missing values).

UNIT-IV: Inverse Interpolation

Lagrange's method and Reversion of series method (Using Newton's forward formula only).

Summation of series: Sum to n term of the series whose general term is the first difference of a function-summation by parts.

UNIT-V: Solutions of Simultaneous Linear Equations

Gauss elimination method-matrix inversion method-Gauss-Jordan Method, Gauss-Seidal method (Three unknowns only).

NUMERICAL METHODS II

Objectives

This course covers the techniques of Numerical Differentiation and Numerical Integration. It also deals with solution of difference equations, Algebraic and Transcendental equations and Numerical solution of Ordinary differential equations of first order.

UNIT-I: Numerical Differentiation

Newton's forward and backward differences to compute derivatives-derivative using divided differences formula-maxima and minima using the above formulae.

UNIT-II: Numerical Integration

General Quadrature formula-Trapezoidal rule-Simpson's one third rule-Simpson's three-eight rule, Weddle's rule- Euler-Maclaurin Summation Formula

UNIT-III: Difference Equations

Linear differences equations-Linear homogeneous difference equation with constant co-efficient-Particular integrals for a^x, x^m, sinax, cosax and $a^x f(x)$.

UNIT-IV: Solution of Algebraic and Transcendental Equations

Bisection method-Iteration method-Regula-falsi method (False Position Method)-Newton-Rapson Method.

UNIT-V: Numerical Solution of Ordinary Differential Equations (First order only)

Euler's method- Euler's modified method-Picard's method - Taylor's methods-Runge-Kutta method (Fourth order only).

LIST OF PROBLEMS

1. Derivatives by Newton's method
2. Gauss elimination method.
3. Gauss-Jacobi method.
4. Gauss-Siedel method.
5. Power method (eigenvalue).
6. Newton's forward and backward interpolation.
7. Lagrange interpolation.
8. Trapezoidal and Simpson one-third rules.
9. Euler's method.
10. Picard's method
11. Runge-Kutta's method.
12. Predictor-corrector method.

ALLIED

PHYSICS - I

UNIT – I: PROPERTIES OF MATTER

Elasticity : Hooke's Law – Elastic Constants – bending of beam – Bending moment – Cantilever Depression at the loaded end of a cantilever – determination of Young's modulus by non-uniform bending.

Torsion : Torsion couple – Potential energy in a twisted wire – Torsional pendulum – Time period – Determination of rigidity modulus by Torsional oscillation (without masses).

Viscosity: Viscosity of a liquid – Viscous force – Co-efficient of viscosity of a liquid – Poiseuille's formula .

Surface Tension: Surface Tension – Surface Tension and interfacial surface tension by the method of drops.

UNIT – II: HEAT

Heat: Specific heat – Newton's law of cooling – determination of specific heat of a liquid using Newton's law of cooling – Emissivity and Emissive Power.
Low Temperature: J.K. Effect – Positive Effect – Negative Effect – Temperature of Inversion – Super conductors. Type I and II – Meisner Effect – Helium I and II.

UNIT – III: ELECTRICITY AND MAGNETISM

Electricity: Potentiometer – Principle – Calibration of low range voltmeter – Measurement of internal resistance of cell – measurement of an unknown resistance.

Magnetism – Moment and pole strength of a magnet – Deflection magnetometer – Tan C position – Vibration magnetometer – Theory – Period of Oscillation – Determination of M and B_H using the deflection magnetometer in Tan C position and the vibration magnetometer.

UNIT – IV: SOUND AND ACOUSTICS OF BUILDING

Sound: Transverse vibration of strings – Velocity and frequency of vibrations of a stretched string – laws – sonometer – A.C. Frequency – Steel Wire – Brass wire.

Ultrasonics – Production by Piezo – electric method – properties and uses.
Acoustics of buildings: Reverberation – Reverberation time – Sabine's formula (definition only) – Sound absorption co-efficient of surface – conditions for the perfect acoustics.

UNIT – V: OPTICS

Interference: Air Wedge – Description – Test for optical flatness of glass plate – Determination of diameter of a thin wire by air wedge.

Diffraction: Theory of transmission grating – Normal Incidence – Determination of Wavelength of monochromatic source and Wavelength of mercury line using a grating by normal Incidence.

Fibre optics: principle-classification of optical fibres-fibre optic communication system block diagram.

Books for Study & Reference

1. Allied Physics – R. Murugesan S. Chand & Co. First Edition (2005).
2. Allied Physics – Dr. K. Thangaraj, Dr. D. Jayaraman Popular Book Department, Chennai.
3. Allied Physics – Prof. Dhanalakshmi and others.
4. Elements of Properties of Matter – D.S. Mathur, S. Chand & Co. (1999).
5. Heat and Thermodynamics – N. Brijlal and Subramaniam S. Chand & Co.
6. A text book of Sound – by M. Narayanamoorthy and other National Publishing Companies (1986).
7. Modern Physics – R. Murugesan S. Chand & Co. (2004).
8. Introduction to Fibre optics- K.Thyagarajan and Ajay Ghatak,Cambridge,University Press(1999).

ALLIED

PHYSICS II

UNIT – I: WAVE MECHANICS

Wave Mechanics – De Broglie Waves – Dual Nature – Experimental Study of Matter Waves – Davission and Germer's Experiment – G.P. Thomson's Experiment _ Heisenberg's uncertainty Principle – The position and moment of a particle.

UNIT – II : NUCLEAR PHYSICS

Particle accelerators – cyclotron, particle detectors – GM Counter Artificial Transmutation – Rutherford's Experiment – The Q value equation for nuclear reaction – Threshold energy – Nuclear Reactions.

Conservation Laws: Conservation of Charge – Conservation of Nucleons – Conservation of Mass – Energy – Conservation of Parity – Quantities conserved and quantities not conserved in a nuclear reaction.

UNIT – III : ENERGY PHYSICS

Sources of conventional energy – Need for non-conventional energy resources – solar energy utilization – solar water heater – solar drier – conversion of light into electrical energy – solar cell – merits and demerits of solar energy – wind energy – its conversion systems – energy from Bio mass – Bio gas generation – Industrial and space application.

UNIT – IV: CRYSTALLOGRAPHY

Crystallography : The crystal structure – Unit Cell –Bravais lattice- structures of simple cubic-BCC and FCC- co ordination number, packing factor calculation for the above structures –Hexogonal closed packed(HCP) structure -Miller indices – concept of Reciprocal Vectors.

UNIT – V: ELECTRONICS

Electronics: Transistor characteristics in common base and common emitter mode- Transistor single stage amplifier- Expression for input impedence, output impedence and current gain.
Digital Electronics : NAND and NOR as universal building blocks- De Morgan's theorem –statement and proof- Fabrication of diodes and transistors using Monolithic technology–limitations.

Books for Study & Reference

1. Allied Physics – R. Murugesan S. Chand & Co. First Edition (2005).
2. Allied Physics – Dr. K. Thangaraj, Dr. D. Jayaraman Popular Book Department, Chennai.
3. Allied Physics – Prof. Dhanalakshmi and others.
4. Elements of Properties of Matter – D.S. Mathur, S. Chand & Co. (1999).
5. Heat and Thermodynamics – N. Brijlal and Subramaniam S. Chand & Co.
6. A text book of Sound – by M. Narayanamoorthy and other National Publishing Companies (1986).
7. Modern Physics – R. Murugesan S. Chand & Co. (2004).
8. Electronic Principles and Applications – A.B. Bhattacharya, New Central Book Agency, Calcutta.
9. Introduction to Solid State Physics – C. Kittel, 5^{th} Edition Wiley Eastern Ltd.
10. Renewable & Sustainable energy sources – Agarwal.

ALLIED PRACTICAL

PHYSICS

(Any 15 Experiments)

1. Young's modulus – non uniform bending – pin and microscope.
2. Rigidity modulus – Static Torsion Method Using Scale and Telescope.
3. Ridigity modulus – Torsional oscillation method (without symmetric masses).
4. Determination of Co-efficient of Viscosity – Graduated Burette.
5. Surface Tension and Interfacial Tension – By drop weight method.
6. Specific Heat Capacity of a liquid – by Newton's Law of Cooling.
7. Sonometer – Determining A.C. Frequency. (Screw Gauge is given).
8. Sonometer – frequency of tuning fork.
9. Newton's Rings – Radius of Curvature.
10. Air Wedge – Determination of thickness of thin wire.
11. Spectrometer Grating – Minimum Deviation – Mercury Lines.
12. Spectrometer – Refractive Index of a liquid – Hollow Prism.
13. Potentiometer – Calibration of High Range Ammeter.
14. Potentiometer – Calibration of Low Range Voltmeter.
15. Determination of M and B_H using Deflection Magnetometer in Tan C position and vibration magnetometer.
16. Figure of merit and voltage sensitiveness of table galvanometer.
17. Construction of AND, OR gates using diodes and NOT by transistors.
18. Zener diode – Voltage Regulation.
19. NAND / NOR as universal gate.
20. Demorgan's theorem verification.

ALLIED

PAPER – 1

CHEMISTRY – I

OBJECTIVE:

- Basic knowledge on Metallurgy, Cycloalkanes, Polarising Effects, Stereochemistry, Chemical Kinetics, Catalysis, Photochemistry, VSEPR Theory, Fuels, Osmosis, Nuclear Chemistry, Petroleum Chemistry, Chemistry of Naphthalene, Conductors and Applications wherever necessary are to be taught for I- Semester.

UNIT – I

1.1General Metallurgy - Extraction of Metals - Minerals and Ores- Difference between Minerals and Ores – Minerals of Iron, Aluminum and Copper - Ore Dressing or Concentration of Ores - Types of Ore Dressing- Froth Floatation process, Gravity separation and Magnetic separation.

1.2 Calcination, Smelting, Roasting, Fux, Slag - Definition - Reduction methods - Goldschmidt Aluminothermic process and Carbon Reduction method - Refining of Metals - Electrolytic, Van Arkel and Zone Refining.

1.3 Ores of Titanium and Cobalt - Extraction of Titanium and Cobalt.

UNIT – II

2. Cycloalkanes - Preparation – Wurtz reaction and Dieckmann's condensation - Properties of Cycloalkanes – Substitution and Ring opening reactions.

2.2 Polarisation - Inductive effect, Mesomeric effect and Steric effect (Acid and Base Strength).

2.3Stereoisomerism – Types - Cause of Optical Activity – Enantiomers - Diastereomers - Meso form - Optical Activity of Lactic acid and Tartaric acid - Racemisation and Resolution – Definition and Methods - Geometrical isomerism – Definition and example - Maleic and Fumaric acid – Differences.

UNIT – III

3.1 Chemical Kinetics – Rate of a reaction – Definition of Order and Molecularity – Distinction between Order and Molecularity - Derivation of First order rate equation - Half Life Period of first order reaction.

3.2 Catalysis - Catalyst - Autocatalyst - Enzyme catalyst - Promoters - Catalytic poisons –

Active Centre - Differences between Homogeneous and Heterogeneous Catalysis - Industrial Applications of Catalysts.

3.3 Photochemistry – Grothus-Draper's law – Stark-Einstein's law - Quantum yield – Photosynthesis - Phosphorescence – Fluorescence.

UNIT – IV

4.1 VSEPR Theory – Hybridisation and Shapes of simple molecules BF_3, PCl_5, SF_6 and XeF_6.

4.2 Fuels – Classification of Fuels - Calorific value of Fuels – Water gas, Carbureted Water gas and Producer gas – Composition and Uses - Non-Conventional fuels - Need of Solar Energy - Applications - Biofuels – Oil gas, Natural gas and LPG – Uses.

4.3 Osmosis - Osmotic pressure - Reverse osmosis – Definition - Desalination of Sea water.

UNIT – V

5.1Nuclear Chemistry – Atomic number, Mass number - Isotopes, Isobars and Isotones – Definition and Examples - Definition of Half life period - Nuclear Binding Energy, Mass Defect and N/P ratio - Nuclear Fission and Nuclear Fusion (Elementary idea) - Applications of Radioisotopes in Medicine, Agriculture and Industries – Carbon Dating.

5.2 Crude Oil - Petroleum - Petroleum Refining - Cracking - Applications of Cracking – Naphthalene – Preparation – Haworth's method – Properties – Oxidation, Reduction and Uses of Naphthalene - Structure of Naphthalene (Structural elucidation not necessary).

5.3 Conductors, Insulators, Semiconductors, N- and P- Type Semiconductors – Definitions and Examples.

ALLIED

PAPER – 2

CHEMISTRY – II

OBJECTIVE:

- Basic knowledge on Coordination Chemistry, Industrial Chemistry, Carbohydrates, Aminoacids, Proteins, Electrochemistry, Paints and Pigments, dyes, Vitamins, Medicinal Chemistry, Corrosion and Applications wherever necessary are to be taught for II- semester.

UNIT – I

1.1 Coordination Chemistry - Nomenclature of Coordination Compounds - Ligands, Central Metal Ion and Complex Ion – Definition and Examples – Coordination Number - Werner's Theory of Coordination Compounds - Chelates - Functions and Structure of Haemoglobin and Chlorophyll.

1.2 Industrial Chemistry - Fertilisers and Manures – Biofertilisers - Organic Manures and their importance - Role of NPK in plants - Preparation and Uses of Urea, Ammonium Nitrate, Potassium Nitrite and Super Phosphate of Lime.

1.3 Contents in Match Sticks and Match Box - Industrial making of Safety Matches – Preparation and Uses of Chloroform, DDT, Gammexane and Freons.

UNIT – II

2.1 Carbohydrates - Definition and Examples - Classification – Oxidation and Reduction Reactions of Glucose - Structure of Glucose (Structural elucidation not necessary) - Uses of Starch - Uses of Cellulose Nitrate and Cellulose Acetate.

2.2 Amino Acids – Definition and Examples - Classification of Amino Acids - Preparation - Gabriel Phthalimide Synthesis – Properties – zwitterion and Isoelectric point - Structure of Glycine.

2.3 Proteins – Definition - Classification of Proteins based on Physical properties and Biologcal functions - Primary and Secondary Structure of Proteins (Elementary Treatment only) – Composition of RNA and DNA and their Biological role - Tanning of Leather - Alum (Aluminum chloride tanning) - Vegetable tanning – Chrome Tanning.

UNIT – III

3.1 Electrochemistry - Electrolytes – Definition and Examples – Classification - Specific and Equivalent Conductance - their determination – Variation of Specific and Equivalent conductance with Dilution – Ostwald's Dilution Law and its Limitations.

3.2 Kohlrausch's Law - Determination of Dissociation Constant of weak Electrolytes using Conductance measurement - Conductometric titrations.

3.3 pH – Definition and pH determination by indicator method - Buffer solutions - Buffer action - Importance of buffers in the living systems.

UNIT – IV

4.1Paints - Components of Paint – Requisites of a Good Paint - Pigments – Classification of Pigments on the basis of Colour – Examples - Dyes – Definition – Chromophores and Auxochromes – Examples - Colour and Dyes - Classification based on Constitution and Application – Examples.

4.2 Vitamins – Definition – Classification – Water Soluble and Fat Soluble – Occurrence - Biological Activities and Deficiency Diseases caused by Vitamin A, B, C, D, E and K - Hormones – Definition and Examples – Biological Functions of Insulin and Adrenaline.

4.3 Chromatography - Principles and Applications of Column and Paper chromatography- R_f value.

UNIT – V

5.1 Drugs - Sulpha Drugs – Preparation and Uses of Sulphapyridine and Sulphadiazine - Mode of Action of Sulpha Drugs - Antibiotics - Uses of Penicillin, Chloramphenicol and Streptomycin - Drug Abuse and Their Implication - Alcohol – LSD.

5.2 Anaesthetics - General and Local Anaesthetics - Antiseptics - Examples and their Applications - Definition and One Example each for Analgesics, Antipyretics, Tranquilizers, Sedatives - Causes, Symptoms and Treatment of Diabetes, Cancer and AIDS.

5.3 Electrochemical Corrosion and its Prevention – Electroplating – Applications.

ALLIED PRACTICAL

CHEMISTRY

VOLUMETRIC ANALYSIS

1. Estimation of HCl – Standard sulphuric acid.
2. Estimation of Borax - Standard Sodium Carbonate.
3. Estimation of NaOH – Standard Oxalic Acid.
4. Estimation of $FeSO_4$ – Standard FAS.
5. Estimation of Oxalic acid – Standard $FeSO_4$.
6. Estimation of FAS – Standard Oxalic Acid.
7. Estimation of Oxalic acid – Standard Oxalic Acid.
8. Estimation of Fe^{2+} using Diphenylamine / N- Phenyl Anthranilic acid as indicator.

ORGANIC ANALYSIS

Systematic Analysis of Organic Compounds containing One Functional Group and Characterisation by Confirmatory Tests.

Reactions of Aromatic Aldehyde, Carbohydrates, Mono and Dicarboxylic acids, Phenol, Aromatic Primary Amine, Amide and Diamide.

******

SCHEME OF VALUATION FOR ALLIED CHEMISTRY PRACTICALS

Internal assessment: 25 Marks

External assessment: 75 marks

Total: 100 marks

Max. Marks: 75

Record: 15 Marks

Volumetric Analysis: 30 Marks

Organic Analysis : 30 Marks

Volumetric Analysis : 30 Marks (Maximum)

Procedure : 5 Marks

Error upto 2 % : 25 Marks

2.1 to 3 % : 20 Marks

3.1 to 4 % : 15 Marks

4.1 to 5 % : 10 Marks

> 5 % : 5 Marks

Arithmetic error : Deduct 1 mark

Wrong calculation : Deduct 20 % of marks scored

No calculation : Deduct 40 % of marks scored

Organic Analysis : 30 Marks

Preliminary Reactions : 4 Marks

Aliphatic or Aromatic : 4 Marks

Saturated or unsaturated : 4 Marks

Tests for 3 elements : 9 Marks (3 x 3)

Tests for functional group : 9 Marks.

THIRUVALLUVAR UNIVERSITY

B.Sc. MICROBIOLOGY

SYLLABUS
UNDER CBCS PATTERN
(With effect from 2017-2018)

SEMESTER I

PAPER - 1

FUNDAMENTALS OF MICROBIOLOGY

Objective

To make the students to understand the fundamentals on microbes.

UNIT-I

Definition and scope of Microbiology - History of Microbiology. The origin of Microbial life - Theory of spontaneous generation. Pasteurs's Tyndall experiments fermentation studies. Contributions of Leewenhoek, Lister, Robert Koch, Thomas J.Burrill, Sergei N. Winogeadsky, Willen Beijerinck, Emil Christian Hansen, S.A. Wakmann, Alexander flaming, Stanely Iwenewsky - Impact of Microbiology and the future.

UNIT-II

Microscopy - simple, compound, dark field, phase contrast, Florescence & Electron microscopy. Staining methods and its principles.

UNIT-III

Microbial Evolution and Diversity - Endosymbiotic theory. Binomial nomenclature of Microbes. Classification - Five kindom concept - eight kindom concept (Cavalier Smith).

UNIT-IV

Anatomy of prokaryotes - cell wall, cytoplasmic membrane, cilia flagella capsule, cytoplasmic inclusions, sporulation.

UNIT-V

Sterilization - methods of sterilization and Disinfection. Antimicrobial chemotherapy - tests for sensitivity to antimicrobial agents.

Text Books:

1. Rajan. S and Selvi Christy (2015). Essentials of Microbiology, Anjanaa Book House Publishers, Chennai.
2. Pelczar Jr. M.J. Chan. E.C.S and Kreig. N.R (2006). "Microbiology"- 5th Edition Mc Graw Hill Inc. New York.
3. Ananthanarayan and Panikers (2013) Textbook Microbiology 9th edition, Universities Press (India) Private Ltd.
4. David, B.D., Delbecco, R., Eisen, H.N and Ginsburg, H.S (1990) "Microbiology" 5th Edition. Harper & Row, New York.
5. Dubey RC and Maheswari DK (2005). A text book of Microbiology, Revised Multicolour edition, S.Chand Publishers, New Delhi.
6. Purohit SS (2005). Microbiology - Fundamentals and Applications. Student Edition Publishers, Jodhpur.
7. Powar & daginawala (2005). General Microbiology Vol.I & II 8th Edition, Himalaya Publishing House, Mumbai.
8. Salle, AJ (2001). Fundamentals & Principles of Bacteriology. 7th edition. Tata McGraw-Hill, Davis,
9. Delbecco, Eisen & Ginsburg (1990) Microbiology 5th Edition Harper & raw, New York

Reference Books:

1. Lansing M. Prescott., John. P. Harley., Donald A, Klein, "Microbiology"-Mc Graw Hill Inc. New York.
2. Robert F.Boyd., "General Microbiology" 2nd Edition, Times MIRROR/Moshy College Publishing Virginia.

ALLIED - 1
PAPER - 1
BIOCHEMISTRY I

UNIT-I: Chemistry of Carbohydrates

Definition and Classification of carbohydrate. Monosaccharides - occurrence, structure; physical and chemical properties, linear and ring forms (Haworth formula) for glucose and fructose. Disaccharides - occurrence, structure; physical and chemical properties of sucrose and lactose. Polysaccharides - occurrence, structure, physical and chemical properties of starch.

UNIT-II: Chemistry of amino acids

Definition and classification of amino acids. Reaction with ninhydrin, common properties of amino acids, amphoteric nature, isoelectric point, isoelectric pH and Zwitter ion.

UNIT-III: Chemistry of Proteins

Classification based on solubility, shape and size. Physical properties: salting in and salting out, denaturation, peptide bond. Structure of protein: primary, secondary, tertiary and quaternary structure.

UNIT-IV: Chemistry of Lipids

Definition, classification and functions of lipids. Occurrence, chemistry and biological functions of simple lipids, compound lipids (e.g. phospholipids) and derived lipids: steroids (e.g. cholesterol). Physical property-emulsification. Chemical property-saponification. Functions of bile acids and bile salts.

UNIT-V: Chemistry of Nucleic acids

Definition - nucleoside, nucleotide and polynucleotide. Double helical model of DNA and its biological functions. Structure, types and functions of RNA: tRNA, mRNA and rRNA. Differences between DNA and RNA.

References:

1. Lehninger Principles of Biochemistry-David L. Nelson, Michael M. Cox, Macmillan worth Publishers.
2. Harper's Biochemistry-Rober K. Murray, Daryl K. Grammer, McGraw Hill, and Lange Medical Books. 25th edition.
3. Fundamentals of Biochemistry-J.L. Jain, Sunjay Jain, Nitin Jain, S. Chand & Company.
4. Biochemistry-Dr. Amit Krishna De, S. Chand & Co., Ltd.
5. Biochemistry-Dr. Ambika Shanmugam, Published by Author.
6. Biomolecules-C. Kannan , MJP Publishers, Chennai - 5.

SEMESTER II
PAPER - 2
MICROBIAL PHYSIOLOGY

Objective

To make the students to understand the physiology of microbes.

UNIT-I

Basic concepts of metabolism - Nutritional types of microorganisms uptake of nutrient in to the cell. Transport of nutrients by active and passive ways.

UNIT-II

Cultivation of microbes - Bacteria fungi, virus. Culture technique - media preparation. Types of media. Isolation of pure culture - preservation of cultures.

UNIT-III

Microbial growth - Growth curve measurement of microbial growth - Measurement of cell number, measurement of cell mass. Factors affecting growth.

UNIT-IV

Control of microbial growth by Antiseptics. Antiparasitic and Antiviral drugs - Antimicrobial resistance.

UNIT-V

Basic concepts of metabolism - Mechanism of ATP formation - Substrate phosphorylation. Electron transport, phosphorylation, photophosphorylation. Energy production during oxidation of organic substrate - Amino acid and assimilatory pathway. Bacterial enzymes - coenzymes - isoenzymes - structure, classification and properties.

Text Books:

1. Rajan. S and Selvi Christy (2015). Essentials of Microbiology, Anjanaa Book House Publishers, Chennai.

2. Ananthanarayan and Panikers (2013) Textbook Microbiology 9th edition, Universities Press (India) Private Ltd.

10. Delbecco, Eisen & Ginsburg (1990) Microbiology 5th Edition Harper & raw, New York

Reference Books:

1. Stainer, R.Y., Ingraham, J.L., Wheelis, M.L and Painter, P.R. (1986). "General Microbiology" -Mac Milan Education Ltd. London.

2. Dall, D.O and Rao, K.K (1995) "Photosynthesis" –Cambridge University press.

3. Chandar Sbekar, C.N. (2006). Manipal Manual of Physiology, CBS Publishers and distributors Pvt. Ltd., Chennai.

4. Pal, G.K and Pravathi Pal (2016), A text book of Practical Physiology, 4th Edition Universities Press (India) Pvt Ltd,

CORE PRACTICAL
PAPER 1 & 2

Objective:

To impart hand on training on basics of microbiology and microbial physiology.

1. Cleaning of glass ware.

2. Sterilization principle and methods-moist heat - dry heat and filtration methods.

3. Media preparation: Liquid media, solid media, Agar deep, Agar slants, Agar plates, Basal, enriched, selective media preparation - quality control of media, growth supporting properties and sterility check of media.

4. Pure culture technique: Streak plate, pour plate, spread plate, decimal dilution.

5. Cultural characteristics of microorganisms: Growth on different media, growth characteristics and description. Demonstration of pigment production and extraction.

6. Microscopy: Light microscopy, bright field microscopy, dark field microscopy and phase contrast microscopy.

7. Motility demonstration: Hanging drop preparation, wet mount, dark field microscopy, semisolid agar, Craigies tube method.

8. Staining techniques: Smear preparation, simple staining, Gram's staining, Acid fast staining, staining for metachromatic granules.

9. Morphology of microorganisms: Morphological variations in algae. Morphology of fungi, yeasts, slide culture techniques.

10. Antibiotic sensitivity testing: Disc diffusion test - Quality control with standard strains.

11. Micrometry: Determination of size of Bacteria, yeast. Fungal filaments.

12. Physiological characteristics: IMViC test, MR-VP test, H_2S, Oxidase, catalase, urease test, gelatin liquefaction, casein, starch degradation. Carbohydrate fermentation, Maintenance of pure culture, Paraffin method - Stab culture - maintenance of mound culture.

ALLIED - 1

PAPER - 2
BIOCHEMISTRY II

UNIT-I: Metabolism

Glycolysis, TCA cycle and its energetics, HMP shunt pathway. Deamination, transamination reaction, transaminase enzymes, Urea cycle.

UNIT-II: Metabolic Disorders

Diabetes mellitus, Glycogen storage diseases, Glycosuria, Ketosis, Jaundice, Phenyl ketonuria, Alkaptonuria. Dehydration: definition, causes, symptom and prevention.

UNIT-III: Enzymes

Definition, classification of enzymes with one example. Mechanism of enzyme action - Lock and key mechanism, Induced Fit theory. Michaleis-Menton equation. Enzyme inhibition: competitive, uncompetitive and non competitive. Biological functions of enzymes.

UNIT-IV: Molecular Biology

Central dogma of molecular biology. DNA and RNA act as genetic material. Replication: Definition, types, mode of action of replication, mechanism of replication. General mechanism of transcription and translation. Genetic code.

UNIT-V: Vitamins

A brief outline of source, requirement, biological function and deficiency of Vitamins (fat soluble and water soluble vitamins).

References:

ALLIED PRACTICAL
BIOCHEMISTRY I & II

PRACTICAL I

Volumetric Estimation

1. Estimation of HCl using Na2CO3 as link and NaOH as primary standard.

2. Estimation of Iron in Ferrous Ammonium Sulphate using potassium permanganate as link solution and oxalic acid as primary standard.

3. Estimation of Glucose by Benedict's method.

4. Estimation of Glycine by formal titration.

5. Estimation of Ascorbic acid.

****

SEMESTER III
PAPER - 3
IMMUNOLOGY

Objective:

To make the students to understand the immune system

UNIT-I

History of Immunology - Immunohaematology. Blood groups - Blood transfusion - Host parasite relationships. Microbial infections.

UNIT-II

Structure and function of the cells, tissues and organs of immune system. Types of immunity - Humoral and cell-mediated, innate, acquired immunity. Complement system - function and pathways.

UNIT-III

Antigen - types, properties. Hapten, adjuvants, Immunoglobulins: Structure types properties and their function - Theory of antibody production.

UNIT-IV

Vaccines and Immunization - Types and their characteristics. Monoclonal Antibody - Hybridoma Technology. Cell mediated immune response - Lymphokines, Cytokines.

UNIT-V

Antigen-antibody interaction in vitro Agglutination, complement fixation, Precipitation, ELISA, RIA, Flow cytometry and Fluorescence immunoblotting – Hypersensitivity. Skin tests (In vivo).

ALLIED - 2
PAPER - 3
HUMAN ANATOMY AND PHYSIOLOGY

Objective: To make the students to understand the importance of human anatomy.

UNIT-I: Respiratory System (RS) and Special Sensory Organs (SSS)

Introduction to applied human anatomy and physiology.

Respiratory System (RS): Different organs of the Respiratory System. Functions of the different organs of the Respiratory System.

Special Sensory Organs (SSS): Introduction to special sensory organs. Function and functions of eye, ear, nose, tongue, and skin.

UNIT-II: Gastro Intestinal (GI) System

Gastro Intestinal (GI) System: Different organs associated with the Gastro Intestinal system: (Salivary glands, Pancreas, Liver and Gall bladder and others).

UNIT-III: Musculoskeletal System (MSS), Skin and Nervous System (NS)

Musculoskeletal System (MSS) and Skin: Introduction of musculo-skeleton system. Different parts of involved in skeleton system. Function of skeleton. Parts and function of skin.

Nervous System (NS): Introduction to nervous system. Different organs and function of central nervous system (CNS) and peripheral nervous system PNS and related to infection

UNIT-IV: Circulatory System (CS) and Endocrine System (ES)

Circulatory System (CS): Blood: Site of formation, composition, functions of blood cells, Different parts of the circulatory system and its function.

Endocrine System (ES): Introduction to endocrine system.

UNIT-V: Reproductive System (RS) and Urinary System (US)

Reproductive System (RS): Introduction Male reproductive system – physiological anatomy, spermatogenesis and its regulation, testicular hormones, composition of semen Female reproductive system – menstrual cycle, pregnancy and parturition, lactation and family planning.

Urinary System (US): Different organs and Functions of Urinary System.
Mechanism of urine formation and composition of urine.

SKILL BASED SUBJECT
PAPER - 1
HEMATOLOGY AND BLOOD BANKING

UNIT-I

Blood: Definition, Characters, Composition. Collection of Blood - Capillary Blood: from Adults / Infants, Examinations employed. Advantages/Disadvantages - venous blood: from Adults / Infants, Examinations employed Advantages/Disadvantage. Anticoagulants: Definition - Type: Wintrobes /EDTA /Heparin /Citrate, Concentration, Examinations, Advantages /Disadvantage.

UNIT-II

Counting of Blood Cells: Neubaeur counting chamber - Total RBC count : diluting fluids , Macro dilution / Micro dilution technique , Falsely Law and High Counts , Normal values - Total WBC count : diluting fluids , Macro dilution / Micro dilution technique , Falsely Law and High Counts , Normal values - correction for TWBC - Absolute Eosinophil count - Differential Leucocyte count: Granulocyte / Agranulocytes, Morphology / Function, Staining Technique - Platelet Count : Morphological characters / Functions , Direct /Indirect method - Reticulocyte count, Dry/ Wet smear technique. Haemoglobin: Composition/Normal Values: Determinations: Tallqvist/Acid Haematin /Alkaline Haematin, Haldane's Carboxy/Drabkins /Dare, Spencers/Specific gravity/ Gasometric, Chemical.

UNIT-III

Coagulation Mechanism: Factors: Bleeding time, Clotting time. Halmotological indices:- Packed cell volume : Wintrobes / Micro HCT method - Mean corpuscular Volume - Mean corpuscular haemoglobin - Mean Corpuscular haemoglobin concentration - Volume index- volume thickness index - Mean corpuscular diameter - saturation index. Erythrocyte sedimentation etc, Principle-Determination: introbes / Westegren Method - advantages / disadvantages - Factors influencing.

UNIT-IV

Preparations of stains and staining techniques: Wright stain - Leishmans stain - Gienisa's stain -Jaswanth singh and Bhattarcharji stain - Fields stain - Peroxidase stain: Examination of Blood smear:-Peripheral smear report: Size/colour/shapes/inclusions -Blood parasites: Malarial parasite/Microfilaria.

UNIT-V

ABO Grouping: History/Discovery - slide / Tube technique - Rh. Typing: Slide / Tube technique, Bovine replacement technique - Coombs test: Direct /Indirect - Donor screening - Cross matching: Major / Minor - Collection Of blood / preservation /storage.

NON-MAJOR ELECTIVE
PAPER - 1
COMPUTER APPLICATIONS IN BIOLOGY

Objective

To make the students to understand the applications of computers in biology.

UNIT-I

Introduction to Computers. History of Computers, Basic Anatomy of Computers.

UNIT-II

Input and output devices, hardware and software. Operating system. MS Windows, Desk top publishing: MS Word, Data bases and graph generation: MS-Excel, project presentation: MS-PowerPoint.

UNIT-III

Programming in C (Basic) Introduction, simple programs, Decision is making and looping, functions, structures, input and output filing system.

UNIT-IV

Basic of WEB Design using HTML: Basic HTML, text styles, list and special characters, adding pointers and links, adding pictures, backgrounds and music, tables and frames.

UNIT-V

Computers in Taxonomy and Systemic Data Analysis in Microbiology. Computers in clinical microbiology - Computer applications in fermentation - Technology Computers in Drug - Designing using various software's in Drug designing.

Text Books:

1. Dave Taylor 1995 HTML. Tata McGraw - Hill Publishing Company Ltd, New Delhi

2. Paul McFedries 1997. Microsoft office 97 sams publishing techmedia, New Delhi.

3. Rajagopalan 1987. Understanding Computers Tata McGraw-Hill Publishing Company Ltd, New Delhi.

4. Sharon Crawford 1998. Windows 98 No Experience Required. BPB publications, New Delhi.

5. Yashwant Canetrar 1980. Let us C. BPP Publishers, New Delhi.

SEMESTER IV
PAPER - 4
MICROBIAL GENETICS

Objective:

To make the students to understand the genetics of microbes.

UNIT-I

Genetics - Historical Introduction - Discovery of DNA structure and organization of DNA and RNA - DNA and RNA as genetic material - Genetic code.

UNIT-II

Organization & functioning of prokaryotic genome plasmids - Structure and types - Replication of DNA.

UNIT-III

Gene transfer mechanism - transformation, transduction, Conjugation.

UNIT-IV

Oncogenes and cancer - Mutation - its types, transforming viruses carrying oncogenes - Retroviral oncogenes - Immortalization & transformation.

UNIT-V

RNA and Protein synthesis in prokaryotes and eukaryotes. Operon concept - Lac & Try Operon. Mutagenesis - Mutation - Mutants - Types of mutants - DNA repair mechanism.

Text Books:

1. Lodish, H. Baltimore Daerk . A. Zipsury, S.L. Marsudaisa. P. Darnel. J. (1995) Molecular cell biology.

2. Gardner- Simon snustad Principles of genetics, 8th Edition. John Wiley & sons. Inc. New York.

Reference books:

1. Maloy, S.R. Cronan Jr. J.E, Freifelder D (1994), Microbial genetics. Jones and Barlett publishers.

2. Ajoy Paul (2011). Text Book of Genetics- from Genes to Genomes, Books and Allied (P) Ltd, Kolkatha.

CORE PRACTICAL - 2
PAPER 3 & 4

Objective:

To impart hands on training on immunology and microbial genetics.

1. Blood groups and Rh. typing coomb's test.

2. Precipitation reaction in gel. Ouchterlony double immuno diffusion test, single redial immuno diffusion test.

3. VDRL, RPR

4. Agglutination reactions: Slide and Tube methods RBC agglutination IHA, TPHA, Bacterial agglutination: Widal, typing of bacteria Latex agglutination: RA, ASLO (Latex) B HCG.

5. Complement fixation test. Titration of amboceptor complements (Demonstration only)

6. Immunofluorescence, ELISA (Demonstration only).

7. Isolation of Buffy coat, using heparin lymphocytes (T cells, B cells) enumeration of different cells types, Peripheral blood cell counts, absolute cell counts.

8. Antibody productions in rabbits against sheep RBC and its titration (Demonstration only).

9. Anaphylactic reactions in guinea pigs. Authorities' reaction in rabbits. (Demonstration).

10. Skin tests. Both immediate and delayed hypersensitivity reactions of egg proteins, bacterial, fungal antigens.

ALLIED - 2
PAPER - 4
BIOSTATISTICS

Objective:

To make the students to understand the biostatistics.

UNIT-I

Nature and scope of statistical methods and their limitations - compilation Classification and tabulation of statistical - data.

UNIT-II Events and sets - samples space - concepts of probability - Addition and multiplication theorem on probability - conditional probability and independence of events.

UNIT-III

Coefficient of correlation - scattered diagram - regression lines.

UNIT-IV

Standard distributions - Binomial Poisson and normal distributions - Standard distributions - Binomial Poisson and normal distributing. To test based on normal - t, Chi - square and R- non parametric test run median, Sign, Mann, Whitney and Wilcox signed rank test.

UNIT-V

Principles of scientific experiment Randomization replication and local control Analysis of Variance - One way and two way classifications.

ALLIED PRACTICAL-2
(Subjects covering Paper- Allied - 2 Paper – 3 only)

HUMAN ANATOMY AND PHYSIOLOGY

Objective:

To impart hands on training on human anatomy and physiology

1. Absolute Eosinophil Count
2. Demonstration of ECG/Echo and its interpretation techniques.
3. Determination of Bleeding Time and Clotting Time
4. Determination of Erythrocyte Sedimentation Rate
5. Determination of Specific Gravity of Blood
6. Estimation of Bile Salt
7. Estimation of Hemoglobin Concentration
8. Estimation of Urine albumin,
9. Estimation of Urine sugar
10. Hair perforation Test
11. Measurement of Pulse, BP
12. Preparation and Examination of Blood smear
13. Serum cholesterol analysis
14. Serum Sugar analysis
15. Study of different histological slides
16. Total Platelet count

Reference books:

1. Rajan. S and Selvi Christy (2010). Experimental Procedures in Life Sciences, Anjanaa Book House Publishers, Chennai.
2. Pal, G.K and Pravathi Pal (2016), A text book of Practical Physiology, 4th Edition Universities Press (India) Pvt Ltd.

SKILL BASED SUBJECT
PAPER - 2
VERMITECH

UNIT-I

General properties of the soil - structure of the soil -sand, clay, salt, types of soils - soil organisms.

UNIT-II

Physical properties of soil - soil colour, soil moisture, soil temperature, bulk density of soil, chemical properties of soil PH, Electrical conductivity, organic, Nitrogen, Phosphate and potash.

UNIT-III

Soil biota -Earthworms -Ecological classification of earth worms as Epigeics - Introduction to earthworm biology -physical and chemical effects of earth worms on soils - Role of earthworms in soil -classification of earthworms based on ecological strategies- Burrowing activity of earthworms- Drilospheres -Microorganisms and their relationship with earthworms.

UNIT-IV

Composing -anaerobic composing, aerobic composing, types of composing, vermicompost- earthworm species used in vermicompost production - endemic species, exotic species.

UNIT-V

Vermicopost -setting up vermicompost quality N, P, K, C, N, Microbial quality applications - vermiculture -vermiwash -role of vermicompost in organic farming - its quality and advantages over chemical inputs. Earthworms in Bio-reclamation of soil. Problems in vermiculture units - remedial suggestions. Vermicomposting as a tool for solid waste management - a small scale industry and its economics.

Reference Books:

1. Brady, C.N, 1974 "The Nature and Properties of soils" Macmillan publishing Co. New York, London. 2. Edwards, C.A., and Bohlen, P.J., 1996. Biology and Ecology of Earthworms, Chapman and Hall, London Ismail, S.A., 1997, Vermicology: The Biology Earth worm Orient Longman.

3. Kale Radha,D 1998. Earthworm: Cinderella of organic farming. Prism Books Pvt. Ltd., Bangalore.

4. Satchell, J.E., 1983 Earthworm ecology: From Darwin to Agriculture. Chapman and Hall, London StephensonJ., 1923. The fauna of British India -Oligo.

NON MAJOR ELECTIVE
PAPER – 2
HUMAN MICROBIAL DISEASES, CAUSES AND CONTROL

UNIT I:

Morphology, pathogenicity and laboratory diagnosis of Gram positive organisms, *Staphylococcus aureus, Streptococcus pyogenes, Bacillus anthracis, Corynebacterium diphtheriae, Clostridium perfringens, Clostridium tetani*. Morphology, pathogenicity and laboratory diagnosis of Gram negative organisms - *Escherichia coli, Klebsiella pneumoniae, Proteus mirabilis, Salmonella typhi, Shigella dysentriae, Pseudomonas aeuruginosa, Vibrio cholerae*.

UNIT II:

Morphology, pathogenicity and laboratory diagnosis of *Mycobacterium tuberculosis, Mycobacterium leprae, Treponema pallidum, Leptospira icterohaemorragens, Chlamydia trachomatis, Rickettsia rickettsi.*

UNIT III:

Mycology, superficial infections – Dermatophytes – *Microsporum – Trichophyton, Epidermophyton* – Madura mycosis – Opportunistic fungal infections – *Candida albicans, Aspergillus, Mucor.*

UNIT IV:

Parasitic diseases – *Plasmodium vivax, Giardia, Taenia solium, Ancylostoma, Ascariasis, Wuchereria bancrofti, Enterobius, Trichuris trichura*.

UNIT V:

Antibiotics and chemotherapeutic agents – mechanism of actions – Drug resistance – Antimicrobial susceptibility testing – Disc diffusion – Kirby Bauer - MIC, MBC, Serum killing power.

Text books:

1. Ananthanarayanan, R. and C.K., Jayaram Paniker, Textbook of Microbiology. Orient Longman, 5th Edition, (1994).

3. Bailey and Scotts, Diagnostic Microbiology, Baron and Finegold CV Mosby publications, 9th Edition, (1994).

SEMESTER V
PAPER - 5
MOLECULAR BIOLOGY AND GENETIC ENGINEERING

Objective

To make the students to understand the molecular biology and genetic engineering.

UNIT-I

Historical perspectives - Synthetic DNA, DNA amplification technique - PCR.

UNIT-II

Preparation of genomic library, DNA library, gene cloning system, vectors enzymes, expression system.

UNIT-III

Application of genetic engineering in medical field - genetherapy, vaccines preparation, Hybridoma and monoclonal antibody techniques.

UNIT-IV

Application in agricultural field - Production of biotechnological products. Food - SCP (algae, yeast, mushrooms, Biopesticide) 'Nif' gene - transfer - development of resistant plant variety,

UNIT-V

Application in Pharmaceuticals - antigens, interferons, vaccines, insulin, Social impact of recombinant DNA technology.

Text Books:

1. Old, R.S. and Primrose, S.B. (1995) Principles of Gene manipulation. An introduction to genetic Engineering. 5th Edition. Blackwell Scientific Publication, London.

2. Lodish, H. Baltimore Daerk . A. Zipsury, S.L. Marsudaisa. P. Darnel. J. (1995) Molecular cell biology.

Reference Books:

2. Benjamin Lewin (1997) Genes VI, Oxford University Press.

3. Ajoy Paul (2007). Textbook of Cell and Molecular Biology, Books and Allied (P) Ltd, Kolkatha.

PAPER - 6
MEDICAL BACTERIOLOGY

Objective:

To make the students to understand the medical bacteriology.

UNIT-I

Normal microbial flora of human body; General attributes and virulence factors of bacteria causing infections. Host Parasite relationships.

UNIT-II

Specimen Collection, Transport and Storage; Specimen processing. (Blood, Urine, GSF, Sputum, other body fluids)

UNIT-III

Classification morphology, cultural characteristics, pathogenicity, epidemiology, laboratory diagnosis, treatment, prevention and control of diseases caused by: Staphylococci, Streptococci, Pneumococci, Neisseriae (Gonococci and Meningococci), Corynebacterium, Mycobacterium, Clostridium, Bacillus, Pseudomonas and Haemophilus.

UNIT-IV

Human Pathogens - of Salmonella, Shigella, Vibrios, Brucella, Bordetella, Escherichia, Gramnegative anaerobes, Spirochaetes, Rickettsiae, Chlamydiae, Mycoplasmas and Ureoplasmas.

UNIT-V

Zoonotic diseases and their control; Hospital acquired infections and their control; Hospital waste disposal; Ethical committee and their functions.

Text Books:

1. Ananthanarayanan R. and Jayaram Panicker C.K. (1994). Text book of Microbiology. Orient Longman.
2. Balasubramanian, A. and Senthil kumar, P.K, (2017) Medical Microbiology. Darshan Publication, Rasipuram.
3. Salle, A.J. (1992). Fundamental Principles of Bacteriology. 7th Edition, Mc. Graw Hill Publishing Co. Ltd., New York.
4. Baron, E.J. and Finegold S.M. (1995). Scientific Company. Diagnostic Microbiology. Blackwell Scientific Company.

Reference Book: 1. Bergeys Manual of determinative Bacteriology.

PAPER - 7
MEDICAL VIROLOGY, MYCOLOGY AND PARASITOLOGY

Objective

To make the students to understand the medical virology, mycology and parasitology.

UNIT-I

General properties of viruses - Detection of viruses and antigens in clinical specimens - Serological diagnosis of virus infections. Cultivation of viruses. Structure & properties of viroids, prions.

UNIT-II

Arthropod borne and rodent borne virus diseases - Picorna viruses and diseases, Hepatitis viruses-Rabies and other neuro viruses - Orthomyxo and paramyxo viruses. Pox, Adeno, Horpes, Reo, Rota and AIDS viruses. Oncogenic viruses. Viral vaccines, their preparation and their immunisation schedules. Viruses of importance to plants and soil.

UNIT-III

Viruses of importance to bacteria - Bacteriophages - Their structure, types - Uses in Microbiology - Typing and application in bacterial genetics.

UNIT-IV

General Introduction Morphology and taxonomy of fungi of medical importance. Detection and recovery of fungi from clinical specimens. Dermatophytes and agents of superficial mycoses. Yeasts of medical importance dimorphic fungi causing systemic mycoses.

UNIT-V

Classification Morphology, Pathogenicity, lab diagnosis of common protozoan diseases - Amoebiasis, Giardiasis, Balantidiosis, Trypanosomiasis, Malaria, Toxoplasmosis, Leishmaniasis. Classification Morphology, Pathogenicity, lab diagnosis of common parasitic metazoan diseases – Ascariasis, Hook worm, Filariasis, Hydatidosis, Taenia infection.

Text Books:

1. Rajesh Karykarte and Ajit Damle (2003). Medical Parasitology, 3rd Edition. Books and Allied (P) Ltd, Kolkatha.

2. Chatterjee, K.D. Parasitology, M.D. 12th Edition. Chatter (1980) Joe media Publishers Culcutta.

ELECTIVE
PAPER - 1

HERBAL TECHNOLOGY

OBJECTIVES

To enable the students to understand the basic knowledge in Herbal technology.

UNIT - I

Pharmacognosy: Pharmacology - Definition and history, Indian systems of medicine - Siddha, ayurvedha, and Unani systems. Taxonomy of locally available medicinal plants, their chemical constituents and medicinal uses - Classification of Crude drugs - Chemistry of Drugs - Future of pharmacognosy.

UNIT - II

Classification of medicinal plants - Vernacular name and family - Geographical source, cultivation, collection, and processing for market and commerce in crude drugs. Morphological and histological studies, chemical constituents - Therapeutic and other pharmaceutical uses. Underground stem - ginger, Alpinia - Roots - Rauolfia - Belladona - Aerial parts - Bark - Cinchona.

UNIT - III

Leaves - Adathoda, Eucalyptus - Flower - Clove fruits seeds - Nux vomica Nutmegs, Gooseberry - unorganized drugs - Gum - Acacia - Resin - Turpentine, fixed oil - castor oil.

UNIT - IV

Herbal medicines for Human ailments - Drugs acting on cardiac diseases, cerebral diseases, Nasal, diseases - Blood pressure Drugs acting on Nervous system - Depressants. - stimulants - Respiration and Drugs - Urogenital system and drugs - Psychoactive plants.

UNIT - V

Propagation of medicinal plants - Micro and macro propagation conservation of rare medicinal plants Role of biotechnology in medicinal plants banks - cultivation of medicinal and aromatic plants - Drug adulteration - methods of Drug evaluation, Herbal food - Food processing - packaging - Herbal sale and Export of medicinal plants - marketing - Intellectual property rights - Export laws.

Reference books:

1. Agarwal, S.S and Paridhavi, M (2012) Herbal Drug Technology, 2nd Edition. Universities Press (India) Private Ltd.

6. Jain, S.K (1980) Indian Medicinal plants.
7. Kokate, C.K., Durohit, A.P. and Gokhale, S.R., Pharmacognosy by 12th edition - Nirali Prakasham Publishers, Pune.
8. Kumar N.C. (1993) Introduction to Medical Botany and Pharmacognosy.
9. Nadkarni (1981) Indian Materia Medica.
10. Shah, S.C. and Qudary (1990). A text book of Pharmacognosy.

SKILL BASED SUBJECT
PAPER - 3
MUSHROOM-CULTURE TECHNIQUES

UNIT-I

Edible and non-edible mushroom (Historical account, most commonly cultivated mushrooms in the world, distribution and production in various countries).

UNIT-II

Cultivation of button mushroom -morphology raising a pure culture & spawn preparation. Preparation of compost & cultivation of Agaricus bisporus, Pleurotus flabelltus, harvest.

UNIT-III

Cultivation of oyster and paddy straw mushroom - preparation of pure culture & spawn cultivation methods, harvest.

UNIT-IV

Pests and diseases of Edible mushrooms (Environmental, fungal, bacterial, viral, insect pests and Nematode diseases and competitor moulds.

UNIT-V

Economics of mushroom cultivation (fixed assets, recurring expenditure, labour, economics of cultivation throughout the year and seasonal growing formulation of project report for getting finance from funding agencies). Precautions in mushroom cultivation (precaution to be taken while selecting the area, spawn preparation, spawn run, during cropping harvesting etc.). Mushroom recipes (western and Indian recipes, pickles, powders, jams etc.

Reference books:

1. Changs. T. W.A. Hayanes 1978. "Biology and cultivation of Mushrooms" Acad Press.N.Y.

2. Zadrazil. F & K. Grabbe 1983 "Edible Mushroom, Biotechnology" Vol. 3, Weinheim: Verlag Chemie, Berlin.

3. Kannaiyan. 2001. Handbook of Edible Mushrooms" TNAU Publication.

SEMESTER VI
PAPER - 8
FOOD MICROBIOLOGY

Objective

To enable the students to understand the microbes in the food.

UNIT – I

Food as a substrate for microorganisms - factors affecting the growth of micro-organism in food. Mold, yeast and bacteria- general characteristics, classification & importance.

UNIT – II

Principles of food preservation – Methods of food preservation – asepsis, removal of microorganism anaerobic conditions, high temperature- low temperature, drying and food additives – Canning.

UNIT – III

Contamination and spoilage of milk and milk products, meat and meat products, fish and fish products, vegetables and fruits and canned food.

UNIT – IV

Fermented foods – Bread, malt beverages, Beer & wine, vinegar, fermented vegetables – Fermented Dairy products. Microorganisms as food –SCP.

UNIT –V

Food bore disease – food borne infections and intoxication – laboratory testing – preventing measures - food sanitation – plant sanitation.

Text books:

1) Frazier, W.C and Westhoff, D.C (1988). Food microbiology, 4th edition, Tata Mac Graw Hill, New Delhi.

2) Adams, M.R and Moss M.O (1995) Food Microbiology New Age International (p) Limited Publishers.

3) Banwart, G.J., (1989). Basic Food Microbiology, 2nd Edition CBS Publishers and Distributors, New Delhi.

4) Robinson R.K (1990) Dairy Microbiology, Elsevier Applied science, London.

5) Hobbs BC Roberts D (1993). Food Poisoning and Food Hygiene Edward Arnold, London.

PAPER - 9

SOIL, AGRICULTURAL AND ENVIRONMENTAL MICROBIOLOGY

Objective

To enable the students to understand the microbes in the Agriculture and environment.

UNIT-I

Soil – physical and chemical properties of soil – types of sil – Microflora of soil.

UNIT-II

Biogeochemical cycles – carbon, nitrogen, phosphorus, sulphur and iron. Organic matter decomposition - Composting & Vermicomposting. Biopesticide (Bacterial, Viral & Fungal).

UNIT-III

Microbial interaction between microorganisms, plants and animals – Rhizosphere, phyllosphere. Rumen microbiology.

UNIT-IV

Microbiology of air – Sources of microorganisms in air – Assessment of air quality – air sampling techniques – Enumeration of air borne organisms – air borne diseases – air sanitation.

UNIT-V

Aquatic Microbiology – Ecosystems – Fresh water (Ponds, Lakes, Streams, Marine, Esturies, Mangrooves, Deep sea). Microbial assessment of water quality – Water purification. Water borne diseases. Waste treatment – Solid and liquid waste treatment.

Text Books:

PAPER - 10
INDUSTRIAL AND PHARMACEUTICAL MICROBIOLOGY

Objective

To enable the students to understand microbial processes in industries and pharmaceutical companies.

UNIT-I

Industrially important microbes and their products, screening, strain development strategies.

UNIT-II

Food fermentations and food produced by microbes, bread, fermented dairy products. Microbial cell as food, feed, SCP.

UNIT-III

Bioreactors – Structure and types. Fermentation media, media sterilization, Types of fermentation (Batch and Continuous) and downstream processing.

UNIT-IV

Microbial productions of citric acid, lactic acid, acetic acid, alpha amylase. Ethanol. Production of pharmaceutical compounds through microbes – TPA, Insulin, Recombinant Vaccines.

UNIT-V

Tannery technology – Tanning – types of tanning – chrome tanning and vegetable tanning. Tanning Process (pre tanning, tanning, post tanning and finishing). Treatment of tannery effluents by microbes.

Text Books:

1. Hugo, W.B., Russell, A.D, pharmaceutical Microbiology 4th edition. Blackwell scientific publications / Oxford.

5. Arumugam, N. and Kumaresan, V. (2016) Fundamentals of Biotechnology, Saras Publication, Nagercoil.

Reference Books:

1. Russell and Ayliffe, G.A.J (1982) Principles and practice of Disinfection, preservation and sterilization Oxford:

2. Gregory P.H. Microbiology of the atmosphere, 2nd edition. Leonard Hill.

3. Mann, I. Process of utilization of Animal by products, FAO Rome 1962.

4. Scaria .K.J. Mahendrakumar and Divakaran, S. Animal byproducts – Their processing and utilization, CLRI, Madras, 1961.

CORE PRACTICAL - 3

PAPERS 5, 6 & 7

Objective

To impart hands on training on molecular biology, genetic engineering and medical microbiology.

1. General requirements of collections, transport of clinical specimens Direct examinations - staining of specimens, - Methods of enriched, selective and enrichment culture techniques used to isolate organisms from clinical materials.
2. Wet mounts examinations of stool for parasites. Cholera stool, vaginal specimens for Trichomonas.
3. KOG and Lacto phenol preparations for skin scrapings, for fungi and for scables mites.
4. Simple, differential and special staining of clinical materials viz. Throat swab, vaginal swab, slit smears, pus, urine, sputum, stool etc.,
5. Enumeration of Bacteria in urine. Quantitative test for yeasts.
6. Estimation of worm burden in stool. Floatation and sedimentation techniques of stool examination.
7. Germ tube, Assimilation, fermentation tests for yeasts.
8. Isolation and identification of bacterial pathogens from clinical specimens their biochemical reactions.
9. Antimicrobial sensitivity testing and determination of MIC and quality control.
10. Identification of pathogenic microbes including viruses in slides / smears / specimens as spotters.

CORE PRACTICAL - 4

PAPERS - 8 & 9

Objective

To impart hands on training on microbes of food, agriculture and environment and industrial and pharmaceutical microbiology.

1. Water analysis by MPN technique Presumptive coli forms test Confirmed coli forms test Completed coli forms test.

2. Isolation of microorganisms from air - air sampler technique - settle plate method.

3. Isolation and counting of fecal bacteria from water.

4. Detection of bacteria in milk by SPC - Dye reduction test Detection of number of bacteria in milk.

5. Litmus mil reaction. 6. Isolation of lactobacilli and staphylococcus from curd.

7. Azolla - Morphological study; Seed inoculation with rhizobia.

8. Isolation of bacteria and fungi from spoiled food. 9. Isolation of fungi from molting leaves.

ELECTIVE
PAPER - 2
BIOINOCULANTS TECHNOLOGY

UNIT- I

General account of the microbes used as biofertilizers for crop plants and their advantages. Symbiotic N2 fixers: Rhizobium - Isolation, characterization, identification, Classification, inoculum production and field application. Frankia - Isolation, characterization - actinorrhizal nodules - non-leguminous crop symbiosis.

UNIT- II

Non - Symbiotic N2 fixers - Azospirillum - Free living - Azotobacter - free isolation, characterization, mass inoculum production and field application.

UNIT-III

Symbiotic N2 fixers - Cyanobacteria, Azolla - Isolation, characterization, mass multiplication - Role in rice cultivation - Crop response – field application - immobilization.

UNIT-IV

Phosphate solubilizers - Phosphate solubilizing microbes - Isolation, characterization, mass inoculum production, field application - Phosphate solubilization mechanism.

UNIT-V

Mycorrhizal bioinoculants - classification - importance of mycorrizal Ectomycorzhizae - Endomycorrhizae - Ectendo mycorrhizae - Taxonomy of mycorrhizae - Isolation of VA mycorrhizae - Quantification and assessment of VAM in roots - Mass inoculum production of VAM - field applications of Ectomycorrhizae and VAM.

ELECTIVE
PAPER - 3
FOOD ANALYSIS AND QUALITY CONTROL

Objectives: The paper focuses on physical, chemical, microbial and sensory analysis of food, concepts of quality control and quality management, national and international food loss and adulterants in various food products

UNIT-I

Sampling – Sampling techniques and preparation of food samples.

Techniques used in food analysis – Chromatography, Electrophoresis, Electrometric determinations, Refractometry and Polarimetry Spectrophotometry, Fluorimetry, Radio - active tracer techniques, Atomic absorption

UNIT-II

Physico chemical methods for food analysis - Moisture and Total solids, Carbohydrates, Proteins, Fats, Fiber, Ash and its types, Minerals, Vitamins. Enzymatic methods

Biological methods of food analysis - Standard plate count; Plate loop method; Spiral plate; Droplet technique; Dye reduction; Catalase test and ELISA. Testing of food for organisms such as *B. cereus, C. botulinum, E. coli, L. monocytogenes, S.aureus, Salmonella* and *Shigella.*

UNIT-III

Sensory assessment of food quality –Appearance of food, Flavor of food, Texture of food.

Sensory Tests – Difference, Rating and Sensitivity tests. Types of panels, Testing area and schedule.

Quality control of following food products – Milk and milk products, Oils and Fats, Cereal grains and flours, Fruits and vegetable products, Canned foods, Egg and egg products, Meat and Meat products

UNIT-IV

Food quality management – Objectives, Importance and Functions of quality control. Total quality, management, Good manufacturing practices, seven principles of HACCP and codex in food. Quality control, methods of – a. raw materials, b. manufacturing process and c. finished products.

UNIT-V

Food Safety – Role of voluntary agencies and legal aspects of consumer protection. National and International food laws – PFA, FDA, BIS, AGMARK, Essential Commodity Act, Export (quality and inspection act, Consumer protection act), Nutritional labeling requirements of foods, Food adulteration.

INDUSTRIAL VISIT: Food and Pharmaceuticals Industry and Report.

SKILL BASED SUBJECT
PAPER - 4
BIOINSTRUMENTATION

UNIT-I

Centrifuge: Basic principles of sedimentation – relative centrifugal force – Types of centrifuges (clinical, high speed, refrigerated and ultra). Centrifugation - Principles and various types – Applications.

UNIT-II

Calorimetry – principle, Beer – Lambert's law – Applications. Spectrophotometry – UV & Visible, Parts of a spectrophotometer – IR, NMR & Atomic absorption spectrophotometry – Applications.

UNIT-III

Chromatography – Paper, TLC, Column, Adsorption, Ion exchange, GC & HPLC – Principle & applications.

UNIT-IV

Electrophoresis techniques: proteins and nucleic acids – Types of electrophoresis – Paper, Gel, Immunoelectrophoresis.

UNIT-V

Radioisotopes and their applications. Radioisotopic techniques – RIA. Detection and measurement of radioactivity – GM counter, Scintillation counter, Autoradiography. Biosensor & its types.

Text books:

1. Keith Wilson and John Walker, 1994. Practical Biochemistry – principles and techniques. Cambridge Press, New York.

Industrial Visit (IV)

Factory Industrial Visit (M. Sc. Applied Microbiology)

Course Objectives: Students will be exposed to professional work environment to acquire the knowledge, independent working capacity and leadership so that at the end of the course they will be able to manage the laboratory and research work with full responsibility and reliability.

Factory Industrial Visit Guide Line: Internship will be conducted in an institute under the supervision of supervisor/s.

During the **Industrial Visit**, students should his/her visiting work should be submitted to the supervisor/department. A report of an industrial Visit should be submitted to the department after completion of the work should be authorized by the concerned supervisor of the institute/factory.

THIRUVALLUVAR UNIVERSITY

BACHELOR OF COMPUTER APPLICATIONS

SYLLABUS
UNDER CBCS

(with effect from 2017 - 2018)

SEMESTER I

PAPER – 1
Digital Logic &Programming in C

Objective :

Provide basic knowledge on Digital Electronics to understand the working principles of Digital computer and to develop programming skill using C language .

UNIT I: Number systems and Boolean Algebra

Number Systems -Decimal, Binary, Octal, Hexadecimal and their inter conversions, - Binary Arithmetic -1's complement, 2's complement and 9's complement .Binary codes - BCD, Excess-3, Graycode.

Boolean Algebra : Boolean Laws - Simplification of Boolean Functions - Logic gates and Truth Table – Universal Gates (NAND and NOR) - The K-map method up to five variables, don't care conditions, POS & SOP forms.

UNIT-II: Combinational and Sequential Circuits

Combinational Logic: Half/Full adder/subtractor , code conversion, Multiplexers,demultiplexers, encoders, decoders, Combinational design using MUX & DEMUX. BCD adder, magnitude comparator.**Sequential logic**: Flip flops (RS, Clocked RS, D, JK, JK Master Slave)-Counters & types Synchronous and Asynchronous counters- Registers, Shift registers and their types.

UNIT –III: C Basics and Control constructs

C fundamentals- Operators- Constants- Expression – Library functions- Decision making and branching- Switch- FOR,WHILE, DO WHILE loops- Continue- break

Unit IV: Arrays, Functions and Structures

Arrays-Multi dimensional arrays- User defines functions- Call by Value and reference- Recursion- Storage classes- Structures and Union –Self referential structures

Unit – V: Pointers and Files

Pointers- Pointer operations and Arithmetic- File management in C :File opening and closing- - I/O operations on files - Error handling during I/O operations - Random access to files - Command line arguments

Text Book:

1. Morris Mono M. "**Digital Logic and Computer Design**",PHI Latest Pub. Ed. (Unit I and 2)
2. ReemaThareja,**" Programming in C "** Oxford University Press

Reference Book

1. Albert Paul Malvino, Donald P Leach, **Digital principles and applications**TMH,1996.
2. Balagurusamy," Programming in C" TMH

CORE PRACTICAL – I

PROGRAMMING IN C- LAB

1. Summation of Series: Sin(x) (Compare with built in functions)
2. Summation of Series Cos(x) (Compare with built in functions)
3. Counting the no. of vowels, consonants, words, white spaces in a line of text
4. Reverse a string & check for palindrome without built in string function
5. ${}^{n}P_{r}$, ${}^{n}C_{r}$ in a single program using function
6. Matrix Addison, subtraction and multiplication
7. Linear Search of a number in an array
8. Sorting an array in ascending and descending order
9. Finding maximum and minimum of list of numbers
10. Call by value and call by reference of functions
11. Employee pay bill using structure
12. Preparing an EB bill using file

ALLIED

PAPER - I

MATHEMATICAL FOUNDATIONS - I

Objectives

To know about Logical operators, validity of arguments, set theory and set operations, relations and functions, Binary operations, Binary algebra, Permutations & Combinations, Differentiation, Straight lines, pair of straight lines, Circles, Parabola, Ellipse, Hyperbola.

UNIT-I: SYMBOLIC LOGIC

Proposition, Logical operators, conjunction, disjunction, negation, conditional and bi-conditional operators, converse, Inverse, Contra Positive, logically equivalent, tautology and contradiction. Arguments and validity of arguments.

UNIT-II: SET THEORY

Sets, set operations, venndiagram, Properties of sets, number of elements in a set, Cartesian product, relations & functions,

Relations : Equivalence relation. Equivalence class, Partially and Totally Ordered sets,

Functions: Types of Functions, Composition of Functions.

UNIT-III: BINARY OPERATIONS

Types of Binary Operations: Commutative, Associative, Distributive and identity, Boolean algebra: simple properties. Permutations and Combinations.

UNIT-IV: DIFFERENTIATION

Simple problems using standard limits,

$$\lim_{x \to a} \frac{x^n - a^n}{x - a}, \lim_{x \to 0} \frac{\sin x}{x}, \lim_{x \to 0} \frac{\tan x}{x}, \lim_{x \to 0} \frac{e^x - 1}{x}, \lim_{n \to \infty} (1 + 1/n)^n, \lim_{n \to 0} (1+n)^{1/n}$$

Differentiation, successive differentiation, Leibnitz theorem, partial differentiation, Applications of differentiation, Tangent and normal, angle between two curves.

UNIT-V: TWO DIMENSIONAL ANALYTICAL GEOMETRY

Straight Lines - Pair Straight Lines

Text Book.

P.R. Vittal, Mathematical Foundations – Maragham Publication,

Chennai.

Reference Books

1. U. Rizwan, Mathematical Foundation - SciTech, Chennai
2. V.Sundaram& Others, Dircrete Mathematical Foundation - A.P.Publication, sirkali.
3. P.Duraipandian& Others, Analytical Geometry 2 Dimension - Emerald publication 1992 Reprint.
4. Manicavachagompillay&Natarajan. Analytical Geometry part I - Two Dimension - S.Viswanathan (printers & publication) Put Ltd., 1991.

SEMESTER II

CORE THEORY PAPER – 2

C++ AND DATA STRUCTURE

Objective: To develop Object oriented programming skills using C++ and to introduce data structure concepts.

UNIT-I : Object Oriented Concepts and C++

C++ Fundamentals - Operators, Expressions and Control Structures: If, If..Else, Switch - Repetitive Statements- for, while, do..while - Input and Output in C++ - manipulators- manipulators with parameters. - Pointers and arrays

UNIT-II : Functions and Classes

Functions in C++ - Main Function - Function Prototyping - Parameters Passing in Functions - Values Return by Functions - inline Functions - Function Overloading.
Classes and Objects; Constructors and Destructors; and Operator Overloading - Type of Constructors

UNIT – III : Inheritance, Polymorphism & Files

Inheritance : Single Inheritance - Multilevel inheritance - Multiple inheritance - Hierarchical Inheritance - Hybrid Inheritance - Polymorphism - Working with Files : Classes for File Stream Operations - Opening and Closing a File - End-of-File Detection - Updating a File - Error Handling during File Operations .

UNIT-IV : Fundamental Data Structures

Definition of a Data structure - primitive and composite Data Types, Stacks (Array) - Operations –Linked Stack-Operations- Applications of Stack (Infix to Postfix Conversion).

Queue (Array)- operations-Linked Queue- Operations- - Singly Linked List - Operations, Application of List (Polynomial Addition)-. Doubly Linked List - Operations.

UNIT-V : Trees and Graphs

Trees: Binary Trees –Binary Search Tree- Operations - Recursive Tree Traversals- Recursion
Graph - Definition, Types of Graphs, Graph Traversal –Dijkstras shortest path- DFS and BFS.

Text Books

1. Mastering in C++, K.R.Venugopal, Raj Kumar, T.Ravisankar – McGraw Hill, 2011.
2. C++ Plus Data Structure by Nell Dale ,Narosa Publications, 2000

Reference Books:

1.ReemaThareja , Object Oriented Programming with C++, Oxford University Press, 2015

2. Balagurusamy, c++ programming, TMH.

3. Fundamentals of Data Structures in C++ by Ellis Horowitz, SartajSahni and Dinesh Mehtha, Second Edition, University Press

4. Data Structures using C++ byVarshaH.Patil. Oxford University Press, 2012

PRACTICAL – II

C++ & DATA STRUCTURE - LAB

1. Implementing classes, object, constructors and member functions for calculating area and perimeter of a circle.
2. Implementing function overloading(Find area/volume of rectangle, circle, sphere, cylinder, cone etc).
3. Implementing operator over loading(Addition, subtraction, multiplication of matrices)
4. Implementing single , multiple , hierarchical inheritance.
5. Implementing sequential file operations using error handling functions.
6. Implementing PUSH, POP operations of stack using Arrays.
7. Implementing add, delete operations of a queue using Arrays.
8. Implementing Infix to postfix conversion of an expression using stack
9. Implementing Binary tree recursive traversals (in-order, pre-order, and post-order).
10. Implementing Polynomial addition using linked list.

ALLIED II

MATHEMATICAL FOUNDATIONS II

Objectives

To know about Matrix Operations, Symmetric, Skew-Symmetric, Hermitian, Skew-Hermitian, Orthogonal, Unitary Matrices. Rank of a Matrix Solutions of linear equations Consistency and Inconsistency, Characteristic roots and Characteristics Vectors, Cayley - Hamilton Theorem, Integration of rational functions, Integration by parts, Reduction formulae, Area and volume using integration, Planes, Straight lines, Spheres, Curves, Cylinders.

UNIT-I: MATRICES

Multiplication of matrices, Singular and Non-Singular matrices, Adjoint of a Matrix, Inverse of a matrix Symmetric and Skew-Symmetric, Hermitian and Skew-Hermition, Orthogonal and unitary matrices, Rank of a matrix, Solution of Simultaneous Linear equations by

(i) Cramer's rule.

(ii) Matrix Inversion Method.

UNIT-II: MATRICES

Test for Consistency and Inconsistency of linear equations, (Rank Method), characteristic roots and characteristic vectors, Cayley - Hamilton theorem, matrix of linear transformations: reflection about the x, y axes and the line y=x, rotation about the origin through an angle, expansion or compression, shears, translation.

UNIT-III

Integration Simple problems, integration of rational function involving algebraic expressions of the form

$$\frac{1}{\sqrt{ax^2+bx+c}}, \frac{1}{\sqrt{ax^2+bx+c}\sqrt{ax^2+bx+c}}, \frac{px+q}{\sqrt{ax^2+bx+c}}, \frac{px+q}{\sqrt{ax^2+bx+c}}, \sqrt{px+q}$$

integrations using simple substitutions integrations involving trigonometric functions of the form

$$\frac{1}{a+b\cos x}, \frac{1}{a^2\sin^2 x+b^2\cos^2 x}$$

Integration by parts.

UNIT-IV

Properties of definite integrals. Reduction formulae for

$\int x^n e^{ax} dx$, $\int \sin^n x dx$, $\int \cos^n x dx$, $\int x^m (1-x)^n dx$, applications of integration for (i) Area under plane caurves, (ii) Volume of solid of revolution.

UNIT-V: ANALYTICAL GEOMETRY OF THREE DIMENSION

Planes, straight lines.

Text Book.

P.R.Vittal, Mathematical Foundations - Margham Publication, Chennai.

Reference Books

1. U. Rizwan, Mathematical Foundation - SciTech, Chennai
2. V.Sundaram& Others, Dircrete Mathematical Foundation - A.P.Publication, sirkali.
3. P.Duraipandian& Others, Analytical Geometry 3 Dimension – Emerald publication 1992 Reprint.
4. Manicavachagompillay&Natarajan. Analytical Geometry part II - three Dimension - S.Viswanathan (printers & publication) Put Ltd., 1991.

SEMESTER III

CORE THEORY PAPER – 3

JAVA Programming

Objectives:
To improve Object Oriented Programming gathered already through an independent platform.

Unit – I: BASICS, ESSENTIALS, CONTROL STATEMENT AND CLASSES & OBJECTS

Computer and its Languages – Stage, Origin and Features for Java - JDK–OOP; Java Essentials:Program – API - Variables& Literals - Data Types - String Class – Operators - Type conversion - Constants - Scope – Comments - Keyboard Input; Control Statements: Conditional Statements – Looping Statements - Break and Continue Statements; Classes and Objects: Modifiers - Arguments - Constructors - Packages and import - Static Class - Overloaded Methods and Constructors - Returning Objects – toString() - this reference – Enumeration - Garbage Collection.

Unit – II: ARRAYS, INHERITANCE, INTERFACES AND PACKAGES

Arrays - Three or More Dimensions; Inheritance: Basics - Calling the Superclass Constructor - Overriding Superclass Methods - Inheritance from Subclasses – Polymorphism -Abstract Classes and Methods - Interfaces: Fields - Multiple inheritance - Interface inheritance; Packages: Creating packages – Accessing package from other packages- Access Specifier.

Unit – III: STRING HANDLING, EXCEPTION HANDLING AND MULTITHREADING

String Handling: Basics - Operations –String Methods - String Buffer class - String Builder – to String method -String Tokenizer class. Exception Basics: try and catch block - Multiple catch block - Nested try - throws keyword - Throw vs Throws - Final vs Finally vs Finalize - Method Overriding - Custom Exception - Multithreading: Life Cycle - Methods in Thread - thread application – Thread priority – Synchronization - Inter-thread communication - Suspending, Resuming, and Stopping Threads;

Unit – IV: APPLET AND GUI APPLICATION

Applets: Basis - Lifecycle - Applet classes - Application – Graphics; AWT-I: GUI Programming - AWT classes - Windows fundamentals- Creating Windows - Dialog Boxes - Layout Managers - Radio Buttons and Check Boxes – Borders-Swing

Unit – V: JAVA DATABASE CONNECTIVITY

JDBC - Types of Drivers- Architecture- Classes and Interfaces - Developing JDBC Application - New Database and Table with JDBC - Working with Database Metadata.

3. Ken Arnold Gosling and Davis Holmen. "The Java Programming Language". 3rd Edition. Addition Wesley Publication.

CORE THEORY PAPER – 4

E-Commerce

UNIT-I

Electronic Commerce Framework, Traditional vs. Electronic business applications, the anatomy of E-commerce applications.

UNIT-II

Network infrastructure for E-Commerce - components of the I-way - Global information distribution networks - public policy issues shaping the I-way.The internet as a network infrastructure.The Business of the internet commercialization.

UNIT-III

Network security and firewalls - client server network security - firewalls and network security - data and message security - encrypted documents and electronic mail.

UNIT-IV

Electronic Commerce and world wide web, consumer oriented E-commerce, Electronic payment systems, Electronic data interchange (EDI),EDI applications in business ,EDI and E-commerce EDI implementation.

UNIT-V

Intraorganizational Electronic Commerce supply chain management.
Electronic Commerce catalogs, Document Management and digital libraries.

Text Book

1. R. Kalakota and A. B. Whinston, Frontiers of Electronic Commerce, Addison Wesley, 1996.

Reference Books

1.R.Kalakota and A.B.Whinston,Readings in Electronic Commerce, Addison Wesley, 1997.
2. David Kosiur, Understanding Electronic Commerce, Microsoft Press, 1997.
3. E-Commerce and E-Business, P.Rizwan Ahmed, Margham Publications.

CORE THEORY PAPER – 5

RESOURCE MANAGEMENT TECHNIQUES

Objectives: To improve the skills of solving very common problems which we come across in various fields like transportation and industries with machines. To develop computational skill and logical thinking in formulating industry oriented problems as a mathematical problem and finding solutions.

UNIT – I: Introduction and Linear Programming

.

BASICS OF OPERATIONS RESEARCH: Development – Definition – Characteristics – Phases – Models – Advantages and Limitations **LINEAR PROGRAMMING :** Formulation – Graphical Method of Solution – General Linear Programming Problem – Canonical and Standard form of LPP – Simplex method.

UNIT – II: Transportation and Assignment Model

TRANSPORTATION MODEL : Definition – Formulation and Solution – Additional Problems **ASSIGNMENT MODEL :** Definition – Solution of Assignment Models – Hungarian Method – Additional Problems – Traveling Salesman problem.

UNIT – III : SEQUENCING MODLES

Sequencing Problems – Assumptions – Processing *n* jobs through two machines – Processing *n* jobs through three machines – Processing of two jobs through *m* machines.

UNIT – IV: REPLACEMENT MODELS

Introduction – Replacement of items that deteriorate – Replacement of items whose maintenance and repair cost increase with time – Replacement of items that fail suddenly – group replacement policy.

UNIT – V: NETWORKING ANALYSIS

Project – Project Planning – Project Scheduling – Project Controlling – Activity on Node diagram – Critical Path Method – Program Evaluation and Review Technique

TEXT BOOK

Operations Research, P. K. Gupta and D.S. Hira, , S. Chand & Co, 5th Edition,-2008.

1. Operations Research , S.D.Sharma-Kedarnath - Ramnath Delhi 16th Revised Edition, 2010.
2. Introduction to Operations Research, Hiller & Libermann , CBS Publishes, 1st Edition, 1994.

CORE PRACTICAL

Practical 3- JAVA Programming LAB

List of Practical's

1. Implementing Package, inheritances and interfaces
2. Implementing Flow, Border and Grid Layouts
3. Implementing Dialogs , Menu and Frame
4. Implementing User defined Exception Handling
5. Implementing Multithreading
6. Implementing I/O Stream File handling
7. Implementing a Calculator using Swing
8. CRUD operation Using JDBC
9. Client Server using TCP and UDP Socket
10. GUI application with JDBC

ALLIED - 2

FINANCIAL ACCOUNTING - I

Objective:

To gain knowledge of accounting in general and to understand the system of Financial Accounting.

Unit - I: Introduction

Meaning of accounting – objectives of accounting – advantages and limitations of accounting- Accounting concepts and conventions - Methods of accounting -Rules of debit and credit- Journal - Ledger accounts– Trial Balance - Errors and their rectification - Rectification of Errors without suspense a/c - Rectification errors with suspense a/c (effect of rectification on profit and rectification during subsequent accounting year are excluded) - Bank Reconciliation Statement.

Unit - II: Depreciation, Provisions and Reserve

Meaning of depreciation – causes for depreciation – need for charging depreciation – Methods of calculating depreciation: straight line method and written down value method (change in method of depreciation is excluded) – Methods of recording depreciation: by charging depreciation to assets account or by creating provision for depreciation account.

Unit - III: Bills of exchange

Meaning of bill of exchange - features and advantages of bill of exchange- types of bill of exchange: Trade bills and accommodation bills - Accounting treatment of trade bills (accommodation bills are excluded).

Unit - IV: Final accounts

Meaning of final accounts – adjustments in preparation of final accounts – preparation of trading, profit & loss account and balance sheet of sole proprietorship concern.

Unit V: Accounts from incomplete records

Meaning of single entry system – features and limitations of single entry system – Distinction between single entry system and double entry system - Methods of calculation of profit: Statement of affairs method and Conversion method **–** Distinction between statement of affairs and balance sheet.

Note: Questions in section A,B and C shall be in the proportion of 20: 80 between theory and problems

4. Murugadoss, Jaya, Charulatha and Baskar, Financial Accounting, Vijay Nicholes Imprint Pvt. Ltd., Chennai.

SKILL BASED SUBJECT – PAPER 1

DESIGN AND ANALYSIS OF ALGORITHMS

Objective: To build a solid foundation of the most important fundamental subject in computer science. Creative thinking is essential to algorithm design and mathematical acumen and programming skills.

UNIT -I: ALGORITHM AND ANALYSIS

What is an Algorithm? - Algorithm Specification- Performance Analysis- Randomized Algorithms.

UNIT - II: DIVIDE AND CONQUER

General Method - Binary Search - Finding the Maximum and Minimum-Merge Sort - Quick Sort - Selection Sort- Stassen's Matrix Multiplications.

UNIT - III: THE GREEDY METHOD

The General Method - Knapsack Problem – Tree Vertex Splitting - Job Sequencing with Deadlines- Minimum Cost Spanning Trees - Optimal Storage on Tapes - Optimal Merge Pattern - Single Source Shortest Paths.

UNIT - IV: DYNAMIC POGRAMMING

The General Method – Multistage Graphs - All pair shortest path - String Editing - 0/1 Knapsack – Reliability Design - The Traveling Salesperson Problem

UNIT - V: TRAVERSAL, SEARCHING & BACKTRACKING

Techniques for Binary Trees- Techniques for Graphs - The General Method - The 8-Queens Problem – Sum of Subsets- Graph Coloring- Hamiltonian Cycles

TEXT BOOK

Fundamentals of Computer Algorithms, Ellis Horowitz, SartajSahni, SanguthevarRajasekaran, GalgotiaPublications, 1998.

REFERENCE BOOKS:

1. Introduction to Algorithms ,Coremen T.H.,Leiserson C.E. and Rivest R.L., PHI 1998.

2. Introduction to the Design and Analysis of Algorithms, AnanyLevitin, Pearson Education, 2nd Edition.

NON MAJOR ELECTIVE – I

INTRODUCTION TO INFORMATION TECHNOLOGY

Objective:

To enable the student to be proficient with Information Technology with a better knowledge of Computer

UNIT – I

Introduction to Computers: Definition - Characteristics of a Computer - Classification of Computers -Basic Anatomy of the Computer - Applications / Uses of Computers in different fields

UNIT – II

Input and Output Devices: Input Devices - Output Devices - Data Representation - Programming Languages / Computer Languages - **Software**: System Software - Application Software

UNIT – III

Data Communication and Computer Networks: Data Communication - Computer Network - The Uses of a Network - Types of Networks - Network Topologies- Transmission Media: Guided Transmission Media - Wireless Transmission

UNIT – IV

Internet and its Applications : History of Internet - Uses of Internet - Advantages of Internet - ISP - Internet Services - IP Address - Web Browser - URL - DNS - Internet Explorer - Types of internet connections - E-mail - Search Engine.

UNIT – V

Operating System: Evolution of operating systems - Function of Operating System - Classification of Operating –System - Example of Operating System – DOS –Windows – UNIX - Linux

TEXT BOOKS:

1. Alexis Leon and Mathews Leon, "Fundamentals of Information Technology", Vikas Publishing House Pvt. Ltd.
2. Introduction to Information Technology, P.Rizwan Ahmed, Second Edition, Margham Publications, 2016
3. Introduction to Information Technology, PelinAksoy, Laura DeNardis, Cengage Learning India Private Limited.

SEMESTER IV

CORE THEORY PAPER – 6

DATABASE MANAGEMENT SYSTEM

Objective: To incorporate a strong knowledge on databases to students

UNIT - I Database Basics

Introduction: Flat File – Database System – Database – Actionable for DBA. The Entity – Relationship Model: Introduction – The Entity Relationship Model. Data Models: Introduction – Relational Approach – The Hierarchical Approach – The Network Approach.

UNIT – II Relational Algebra

Structure of Relational Databases – Fundamental Relational Algebra Operations –Additional Relational Algebra Opearations - Extended Relational Algebra Operations - Null Values - Modification of the Database - The Tuple Relational Calculus – The Domain Relational Calculus

UNIT – III Normalization

Normalization: Introduction - Normalization – Definition of Functional Dependence (FD) – Normal Forms: 1NF, 2NF, 3NF and BCNF.

UNIT – IV Structured Query Language

Structured Query Language: Features of SQL – Select SQL Operations – Grouping the Output of the Query – Querying from Multiple Tables – Retrieval Using Set operators – Nested Queries. T-SQL – Triggers and Dynamic Execution: Transact-SQL..

UNIT – V Procedural Language

Procedural Language- SQL: PL/SQL Block Structure – PL/SQL Tables. Cursor Management and Advanced PL/SQL: Opening and Closing a Cursor – Processing Explicit Cursor – Implicit Cursor – Exception Handlers – Sub Programs in PL/SQL – Functions – Precaution While Using PL/SQL Functions – Stored Procedure – Object Oriented Technology.

2. Database System Concepts , Abraham Silberchatz, Henry F Korth , S.Sudarshan, McGraw-Hill - 5th Edition - 2006.

CORE THEORY PAPER – 7

ENTERPRISE RESOURCE PLANNING

UNIT - I

Business function and Business process: Functional areas and Business Process - functional area of operations - Business process - Marketing Sales - supply chain management - Accounting and finance - Human Resource - Functional areas of information system - The development of ERP system SAP R/3 - New directions in ERP - significance and benefits of ERP software and systems.

UNIT - II

Marketing information system and sales order process in ERP: sales and Distribution in ERP - Pre sales activities - sales order processing - inventory Sourcing - Delivery - Billing - payment - Customer relationship Management - benefits of CRM.

UNIT - III

Production and supply chain management information system: Production overview - The production planning process - The SAP ERP Approach to production planning - Sales forecasting - sales and operation Planning - Demand management - Material requirement planning in SAP ERP - ERP and supplier - Supply chain

UNIT - IV

Accounting in ERP: Accounting activities - using ERP for accounting Information - operational decision making problem - credit management - Industrial credit management in SAP ERP - product profitability analysis - Management reporting with ERP system - Document flow for customer Service.

UNIT - V

Human resource process in ERP: HR with ERP - Advance HR features - Time management - Payroll - Travel management - Training and Development - Management by objectives - ERP process modeling.

Text Book:

1) ELLEN MONK and BRET WAGNER, ENTERPRISE RESOURCE PLANNING - 3rd edition - MGH.

CORE THEORY PAPER – 8

DECISION SUPPORT SYSTEM

UNIT I

DECISION-MAKING AND COMPUTERIZED SUPPORT-Management Support Systems: An Overview, Decision Making, Systems, Modeling, and Support.

UNIT II

DECISION SUPPORT SYSTEMS-An Overview, Data Management: Warehousing, Access, and Visualization , Modeling and Analysis , Knowledge based Decision Support and Artificial Intelligence , User Interface and Decision Visualization Applications , Constructing a Decision Support System and DSS Research.

UNIT III

COLLABORATION, COMMUNICATION, AND ENTERPRISE SUPPORT SYSTEMS-Networked Decision Support: The Internet, Intranets, and Collaborative Technologies, Group Decision Support Systems, Executive Information and Support Systems.

UNIT IV

FUNDAMENTALS OF EXPERT SYSTEMS AND INTELLIGEN SYSTEMS-Fundamentals of Expert Systems, Knowledge Acquisition and Validation, Knowledge Representation, Inferences, Explanations, and Uncertainty, Building Expert Systems: Process and Tools.

UNIT V

CUTTING-EDGE DECISION SUPPORT TECHNOLOGIES-Neural Computing: The Basics, Neural Computing Applications, Genetic Algorithms, Fuzzy Logic, and Hybrid Intelligent Systems , Intelligent Agents and Creativity , Implementing and Integrating Management Support Systems , Organizational and Societal Impacts of Management Support Systems.

Text Book :

1. Efraim Turban, Jay E. Aronson, "Decision Support Systems and Intelligent Systems", Prentice Hall, New Delhi, 2004

Reference book:

1. George Marakas, "Decision Support Systems in the 21st Century", Prentice Hall, New Delhi, 2003
2. Robert J Thierauf, "User Oriented Decision Support Systems", Prentice Hall, New Delhi

PRACTICAL – IV

RDBMS Lab

1. Table creation and simple Queries
2. Queries using Aggregate Function and Set Operations
3. Table creation with various Joins
4. Nested Sub queries and correlated Sub queries
5. View creation and manipulation
6. PL/SQL program for cursor
7. PL/SQL program for packages
8. PL/SQL program for triggers and its type
9. PL/SQL program for procedures and functions

ALLIED – II

FINANCIAL ACCOUNTING - II

Objective:

To gain a knowledge of accounting in general and to understand the system of Financial Accounting.

Unit - I: Branch accounts

Meaning – objects of branch accounts – accounting in respect of dependent branches: debtors system; stock and debtors system; wholesale branch system and final accounts system - Independent branches – incorporation of branch trial balance in head office books.

Unit - II: Departmental Accounting

Meaning of departments and departmental accounting – Distinction between departments and branches- need for departmental accounting – advantages of departmental accounting - Apportionment of indirect expenses – Inter departmental transfers at cost and selling price - preparation of departmental trading, profit & loss account and balance sheet.

Unit - III: Hire purchase and Instalment purchase systems

Meaning and features of hire purchase system - calculation of interest – books of hire purchaser and books of hire vendor - default and repossession (Hire purchase trading account excluded)

Meaning of instalment system -distinction between hire purchase system and instalment system - calculation of interest – books of buyer and books of seller.

Unit - IV: Partnership accounts (fundamentals and reconstitution of partnership)

Meaning and features of partnership – Partnership deed - calculation of Interest on capital and interest on drawings – preparation of profit & loss appropriation account – preparation of capital accounts (fixed and fluctuating) – admission of a partner – retirement of a partner – death of a partner – treatment of goodwill as per AS 10.

Unit - V: Partnership Accounts (Dissolution of partnership firms)

Dissolution of a firm – insolvency of a partner (Garner Vs Murray rule) – Insolvency of all the partners – Piecemeal distribution: proportionate capital method and maximum loss method.

Note: Questions in section A, B and C shall be in the proportion of 20: 80 between theory and problems.

Text books

3. Parthasarathy,S.&Jaffarulla,A.FinancialAccounting,KalyaniPublishers,NewDelhi.
4. Murugadoss, Jaya, Charulatha and Baskar, Financial Accounting, Vijay Nicholes Imprint Pvt. Ltd., Chennai.

SKILLED BASED SUBJECT - II

COMPUTER ORGANISATION AND ARCHITECTURE

Objective: To enable the student to have a better understanding of architecture of computer and prepare the student for higher level of programming

UNIT - I

Instruction Codes – Computer Registers – Computer Instructions – Timing and Control – Instruction Cycle – Memory Reference Instructions – Input-Output and Interrupts.

UNIT - II

Control Memory – Address Sequencing – Micro program Examples – Design of Control Unit.

UNIT - III

Introduction – General Register Organization – Instruction Formats – Addressing Modes.

UNIT – IV

Peripheral Devices – I/O interface – Asynchronous Data Transfer – Modes of Transfer - Direct Memory Access – Input Output Processor (Excluding IBM and Intel IOPs).

UNIT - V

Auxiliary Memory – Main Memory – Auxiliary Memory - Associative Memory – Cache Memory -Virtual Memory.

NON MAJOR ELECTIVE II

INTERNET AND ITS APPLICATION

Objective: To equip students to basics of Internet usage and prepare them for digital

UNIT- I

Introduction to Computers Programming Language types History of Internet Personal Computers History of World Wide Web- Micro software .NET Java-Web resources.

UNIT – II

Web Browsers- Internet Explorer- connecting to Internet Features of Internet explorer6 Searching the Internet- online help and tutorials- File Transmission Protocol (FTP) Browser settings.

UNIT – III

Attaching a file, Electronic mail Creating an E-mail id Sending and Receiving mails-attaching a file-Instance messaging- other web browsers.

UNIT - IV

Introduction to HTML headers - Linking- Images-special characters and line breaks- unordered lists- simple HTML programs.

UNIT - V

E-marketing consumer tracking Electronic advertising search engine-CRM- credit card Payments- Digital cash – e wallets – smart card.

Textbook

Internet and World Wide Web Third edition H.M.Deital, P.J. Deital and A.B.Goldberg-PHI

Book for Reference

1. The Internet- Complete Reference Harley hahn, Tata McGraw hill
2. Internet and its Applications, P.Rizwan Ahmed, Margham Publication, 2014

SEMESTER V

CORE THEORY PAPER – 9

MOBILE APPLICATIONS DEVELOPMENT

Objectives:

This course aims to provide the students with a detailed knowledge on Mobile Application and Development and covers Android programming from fundamentals to building mobile applications for smart gadgets.

UNIT I Introduction to Mobile Applications:

Native and web applications - Mobile operating systems and applications - Mobile Databases. Android: History of Android - Android Features – OSS – OHA - Android Versions and compatibility - Android devices - Prerequisites to learn Android -– Setting up software – IDE - XML. Android Architecture: Android Stack - Linux Kernel - Android Runtime - Dalvik VM - Application Framework - Android emulator - Android applications.

UNIT II Android development:

Java - Android Studio – Eclipse – Virtualization – APIs and Android tools – Debugging with DDMS – Android File system – Working with emulator and smart devices - A Basic Android Application - Deployment. Android Activities: The Activity Lifecycle – Lifecycle methods – Creating Activity. Intents – Intent Filters – Activity stack.

UNIT III Android Services:

Simple services – Binding and Querying the service – Executing services.- Broadcast Receivers: Creating and managing receivers – Receiver intents – ordered broadcasts. Content Providers: Creating and using content providers – Content resolver. Working with databases: SQLite – coding for SQLite using Android – Sample database applications – Data analysis.

UNIT IV Android User Interface:

Android Layouts – Attributes – Layout styles - Linear – Relative – Table – Grid – Frame. Menus: Option menu – context menu - pop-up menu – Lists and Notifications: creation and display. Input Controls: Buttons-Text Fields-Checkboxes-alert dialogs-Spinners-rating bar-progress bar.

UNIT V Publishing and Internationalizing mobile applications :

Live mobile application development: Game, Clock, Calendar, Convertor, Phone book. App Deployment and Testing: Doodlz app – Tip calculator app – Weather viewer app.

CORE THEORY PAPER - 10

OPERATING SYSTEM

Objective: Enable the student to get sufficient knowledge on various system resources.

Unit – I Operating System Basics

Basic Concepts of Operating System - Services of Operating System-Classification of Operating System- Architecture and Design of an Operating System-Process Management -Introduction to Process-Process State -PCB - Process Scheduling - Interprocess Communication

Unit –II Operating System Scheduling

CPU Scheduling**:** Introduction - Types of CPU Scheduler - Scheduling Criteria - Scheduling Algorithms - FCFS Scheduling – SJF Scheduling;-Priority Scheduling - Round-Robin Scheduling- Multilevel Queue Scheduling - Deadlock - Basic Concept of Deadlock- Deadlock Prevention - Deadlock Avoidance- Deadlock - Detection and Recovery

Unit- III Memory management

Memory Management - Basic Concept of Memory - Address Binding; Logical and Physical Address Space- Memory Partitioning - Memory Allocation-Protection-Fragmentation and Compaction

Unit – IV Swapping

Swapping- Using Bitmaps - Using Linked Lists- Paging-Mapping of Pages to Frames - Hierarchical Page Tables- Segmentation - Virtual Memory - Basic Concept of Virtual Memory-Demand Paging - Transaction Look aside Buffer (TLB) - Inverted Page Table-Page Replacement Algorithms

Unit –V File Management

File Management - Basic Concept of File-Directory Structure-File Protection-Allocation Methods – Various Disk Scheduling algorithms

Text Books:

Abraham Silberschatz Peter B. Galvin, G. Gagne, “Operating System Concepts”, Sixth Edition, Addison Wesley Publishing Co., 2003.

Reference

1. Operating systems - Internals and Design Principles, W. Stallings, 6th Edition, Pearson
2. Willam-Stalling “Operating System” Fourth Edition, Pearson Education, 2003.

CORE THEORY PAPER - 11
DATA COMMUNICATION & NETWORKS

Objective:

To equip students to basics of Data Communication and prepare them for better computer networking

UNIT I

Introductory Concepts - Network hardware - Network software – Network Architecture - Physical layer - Guided transmission media - Cable television.

UNIT II

Data Link Layer - Design issues - Channel allocation problem - Multiple access protocols - Ethernet - Wireless LAN - 802.11 architecture.

UNIT III

Network Layer : Design issues, Routing Algorithms, Shortest path routing, Flooding, Broadcast & Multicast routing congestion, Control & internetworking.

UNIT IV

Transport Layer - Transport service - Elements of transport protocols - User Datagram Protocol - Transmission Control Protocol.

UNIT V

Application Layer - DNS - Electronic mail - World Wide Web - Multimedia - Network security.

TEXT BOOK

2. Black : Data Network, Prentice Hall of India.
3. W. Stallings, "Data and Computer Communication", Pearson Education, Fifth Edition, 2001

CORE PRACTICAL – 5

MOBILE APPLICATIONS DEVELOPMENT – LAB

1. Intent and Activity
2. Using Controls
3. Alert Dialogs
4. List View
5. Options Menu
6. Seek Bars
7. Shared Preferences
8. Status Bar Notifications
9. Tab Widgets Talking Clock.
10. Tween Animation
11. Grid View
12. Internal Storage - Files
13. SQlite - Database
14. Google Map
15. Permissions

CORE PRACTICAL – 6

OPERATING SYSTEM LAB

1. Implementing the Process system calls.
2. Implementing I/O system calls.
3. Implementing IPC using message queues.
4. Implementing CPU& scheduling algorithm for first come first serve scheduling.
5. Implementing CPU scheduling algorithm for shortest job first scheduling.
6. Implementing perform priority scheduling.
7. Implementing CPU scheduling for Round Robin Scheduling.
8. Implementing pipe processing.
9. Implementing first fit, best fit algorithm for memory management.
10. A program to simulate producer-consumer problem using semaphores.
11. A Shell Program to find factorial of a given number
12. A shell program to generate Fibonacci number

Elective – 1

A. DATA MINING

Objective: Enable the student to get sufficient knowledge on mining the data .

UNIT - I: Data Mining Basics

Introduction: Definition of data mining - data mining vs. query tools - machine learning - steps in data mining process - overview of data mining techniques.

UNIT - II: Data Models

Multidimensional Data Model - Data Cube - Dimension Modeling - OLAP Operations - Meta Data - Types of Meta Data.

UNIT - III: Data Editing

Data Pre-Processing And Characterization :Data Cleaning - Data Integration and Transformation - Data Reduction - Data Mining Query Language - Generalization - Summarization - Association Rule Mining

UNIT - IV: Classification

Classification: Classification - Decision Tree Induction - Bayesian Classification - Prediction - Back Propagation - Cluster Analysis - Hierarchical Method - Density Based Method - Grid Based Method - Outlier Analysis.

UNIT - V: Analysis

Cluster analysis: Types of data - Clustering Methods - Partitioning methods - Model based clustering methods - outlier analysis. Advanced topics: Web Mining - Web Content Mining - Structure and Usage Mining - Spatial Mining - Time Series and Sequence Mining.

TEXT BOOKS:

1. PaulrajPonnaiah, "Data Warehousing Fundamentals", Wiley Publishers, 2001.

2. Jiawei Han, MichelineKamber, "Data Mining: Concepts and Techniques",Morgan Kaufman Publishers, 2006.

REFERENCES:

4. Margaret Dunham, "Data Mining: Introductory and Advanced Topics", Prentice Hall, 2002.
5. Daniel T. Larose John Wiley & Sons, Hoboken, "Discovering Knowledge in Data: An Introduction to Data Mining", New Jersey, 2004

B. COMPUTER GRAPHICS

Objectives: To equip students to basics of computer drawing and prepare them for computer modeling of objects

UNIT – I : OVERVIEW OF GRAPHICS SYSTEMS AND OUTPUT PRIMITIVES
Video Display Devices- Raster Scan System- Random Scan Systems- Hard Copy Deices- Graphic Software- Line Drawing Algorithms: DDA- Bresenham's Line -Circle Generating Algorithms

UNIT – II : ATTRIBUTES AND TWO DIMESIONAL TRANSFORMATIONS
Line Attributes- Curve Attributes-Color And Gray Scale Level- Area Fill Attributes- Character Attributes- Inquiry Functions- Basic Transformations - Composite Transformation – Other transformation

UNIT – III : TWO DIMENSIONAL VIEWING AND CLIPPING
The Viewing Pipeline- Window To Viewport Transformation –Clipping Operations- Point Clipping- Line Clipping: Cohen Sutherland- Liang Barsky-Sutherland Hodgeman Polygon Clipping- Text Clipping- Exterior Clipping- Logical Classification Of Input Devices- Interactive Picture Construction

UNIT – IV : THREE DIMENSION TRANSFORMATION, VIEWING AND CLIPPING
Translation-Rotation-Scaling-Viewing Pipeline- Viewing Coordinates- Projections -View Volumes and General Projection Transformation- Clipping -

UNIT – V : VISIBLE SURFACE DETECTION METHODS
Classification of Visible Surface Detection Algorithms - Back Face Detection - Depth Buffer Method - A Buffer Method - Scan Line Method - Depth Sorting Method- BSP Tree Method - Area Sub Division Method - Octree Methods - Ray Casting Method

TEXT BOOK:

Computer Graphics(C version), Donald Hearn and M.Pauline Baker, Pearson- 2nd Edit. 2012.

REFERENCE BOOKS:

1. Interactive Computer Graphics–A top down approach using Open GL, Edward Angel , Pearson, 5th Edition.

2. Computer Graphics, Peter Shirley, Steve Marschner, Cengage Learning, Indian Edition,2009.

C. INFORMATION SECURITY

Objective: To enable the student to understand various methodology available for securing information

UNIT I Information Security Basics

INTRODUCTION -History, What is Information Security?, Critical Characteristics of Information, NSTISSC Security Model, Components of an Information System, Securing the Components, Balancing Security and Access, The SDLC, The Security SDLC

UNIT II Security Investigation

SECURITY INVESTIGATION - Need for Security, Business Needs, Threats, Attacks, Legal, Ethical and Professional Issues

UNIT III Security Analysis

SECURITY ANALYSIS-Risk Management: Identifying and Assessing Risk, Assessing and Controlling Risk

UNIT IV Security Models

LOGICAL DESIGN-Blueprint for Security, Information Security Poicy, Standards and Practices, ISO 17799/BS 7799, NIST Models, VISA International Security Model, Design of Security Architecture, Planning for Continuity

UNIT V Security Physical Design

PHYSICAL DESIGN-Security Technology, IDS, Scanning and Analysis Tools, Cryptography, Access Control Devices, Physical Security, Security and Personnel.

Text Book

1. Michael E Whitman and Herbert J Mattord, "Principles of Information Security", Vikas Publishing House, New Delhi, 2003

Reference

2. Stuart McClure, Joel Scrambray, George Kurtz, "Hacking Exposed", Tata McGraw-Hill, 2003
3. Matt Bishop, " Computer Security Art and Science", Pearson/PHI, 2002.

SKILL BASED SUBJECT - 3

SOFTWARE ENGINEERING

Objective:
This course introduces the concepts and methods required for the construction of large software intensive systems.

UNIT-I:
Introduction - Evolving Role of Software - Changing Nature of Software – SoftwareMyths; A Generic View of Process: Layered Technology - Process Models: Waterfall Model - Evolutionary Process Models.

UNIT-II:
Requirements Engineering: Tasks - Initiating the Requirements Engineering Process - Eliciting Requirements - Building the Analysis Model - Requirements Analysis - Data Modeling Concepts.

UNIT-III:
Data Engineering: Design Process and Design Quality - Design Concepts - The Design Model Creating an Architectural Design: Software Architecture - Data Design -Architectural Design - Mapping Data Flow into Software Architecture; Performing User Interface Design: Golden Rules.

UNIT-IV:
Testing Strategies: Strategic Approach to Software Testing- Test Strategies for Conventional and Object Oriented Software - Validation Testing - System Testing -Art of Debugging. Testing Tactics: Fundamentals - White Box- Basis Path - Control Structure - Black Box Testing Methods

UNIT-V:
Project Management: Management Spectrum - People - Product - Process - Project. Estimation: Project Planning Process - Resources - Software Project Estimation - Project Scheduling - Quality Concepts - Software Quality Assurance - Formal Technical Reviews.

TEXT BOOK:
Roger S Pressman, "Software Engineering - A Practitioner's Approach", Sixth Edition, McGraw Hill International Edition, New York: 2005.

1. Ian Somerville, "Software Engineering", 7th Edition, Pearson Education, 2006.
2. Mall Rajib, " Software Engineering", 2/E, PHI, 2006.

SEMESTER VI

CORE THEORY PAPER – 12

CLOUD COMPUTING

Objective:

To enable the students to learn the basic functions, principles and concepts of cloud Systems.

UNIT I: UNDERSTANDING CLOUD COMPUTING

Cloud Computing – History of Cloud Computing – Cloud Architecture – Cloud Storage – Why Cloud Computing Matters – Advantages of Cloud Computing – Disadvantages of Cloud Computing – Cloud Services.

UNIT II: DEVELOPING CLOUD SERVICES

Types of Cloud Service Development – Software as a Service – Platform as a Service – Web Services – On-Demand Computing – Discovering Cloud Services Development Services and Tools – Amazon Ec2 – Google App Engine – IBM Clouds.

UNIT III: CLOUD COMPUTING FOR EVERYONE

Centralizing Email Communications – Collaborating on Schedules – Collaborating on To-Do Lists – Cloud Computing for the Community – Collaborating on Group Projects and Events.

UNIT IV: PROGRAMMING MODEL

Parallel and Distributed Programming Paradigms – Map Reduce, Twister and Iterative Map Reduce – Hadoop Library from Apache – Mapping Applications - Programming Support - Google App Engine, Amazon AWS - Cloud Software Environments -Eucalyptus, Open Nebula, Open Stack, Aneka, CloudSim.

UNIT V: SECURITY IN THE CLOUD

Security Overview - Cloud Security Challenges and Risks - Software-as-a-Service Security- Security Governance - Risk Management - Security Monitoring - Security Architecture Design - Data Security - Application Security - Virtual Machine Security - Identity Management and Access Control - Autonomic Security.

TEXT BOOK:

1. Michael Miller, “Cloud Computing: Web-Based Applications That Change the Way You Work and Collaborate Online”, Que Publishing, August 2008.

REFERENCES:

CORE THEORY PAPER – 13

OPEN SOURCE PROGRAMMING

Objectives:
To discuss techniques that can be effectively applied in practice about HTML5, JavaScript, PHP , CSS and Linux

UNIT I : INTRODUCTION TO HTML5,JAVA SCRIPT, PHP AND CSS
Introduction to Dynamic Web content- HTTP and HTML- Request and Response Procedure- The Benefits of PHP, JAVA Script, CSS, and HTML5- Introduction to HTML5- The Canvas - The HTML5 Canvas- HTML5 Audio and Video- Introduction to CSS- CSS Rules-Style Types- CSS Selectors- CSS Colors.

UNIT-II : LINUX

Introduction : Linux Essential Commands – File system Concept – Standard Files – The Linux Security Model – Vi Editor – Partitions Creation – Shell Introduction – String Processing – Investigation and Managing Processes – Network Clients – Installing Application.

UNI- III : MYSQL

Introduction to MY SQL – The show Databases and Table – The USE command – Create Database and Tables – Describe Table – Select, Insert, Update, and Delete statement – Some Administrative detail – Table Joins – Loading and Dumping a Database.

UNIT-IV : PHP

PHP Introduction – General Syntactic Characteristics – PHP Scripting – Commenting your code – Primitives, Operations and Expressions – PHP Variables – Operations and Expressions Control -statement – Array – Functions.

UNIT – V PHP

Basic Form Processing – File and Folder Access – Cooking – Sessions – Database Access with PHP – MySQL - MySQL Functions – Inserting Records – Selecting Records – Deleting Records – Update Records.

Text Books

1. "Learning PHP, MySQL, Java Script, CSS and HTML5", Robin Nixon, O'Reilly Publications, 3rd Edition, 2014.
2. Steven Holzner, "HTML Black Book", Dreamtech Press &Paraglyph Press Publishers, 2007
3.

Reference Books

Open Source Software, P.Rizwan Ahmed, Margham Publication, Chennai, 2015

Core Practical

PRACTICAL – VII

ASP.NET Lab

1. Implement Validation Controls
2. Write a Program to implement ad rotator control
3. Write a Program to implement state management techniques
4. Write a Program to implement view State and Session State.
5. Write a Program to displaying data with the grid view
6. Write a Program to implement ASP.Net Server Side Controls.
7. Write a Program to implement ASP.Net Master Pages, Themes and Skins.
8. Write a Program working with forms using ASP.Net
9. Write a Program working with pages using ASP.Net.
10. Write a Program to access data sources through ADO.NET

Core Practical

PRACTICAL – VIII

Open Source Programming Lab

1. Create a web page with Frames and Tables.
2. Create a web page incorporating CSS (Cascading Style Sheets)
3. Write a shell program to find the factorial of an integer positive number
4. Write a shell program for checking whether a given string is a palindrome or not.
5. Create a simple calculator in Java script.
6. Write a JavaScript program to scroll your name in the scroll bar.
7. Develop a program and check message passing mechanism between pages.
8. Develop a program and check file system functions, date &time functions.
9. Create a student database table in MYSQL and manipulate records (insert, delete, update) records in a web browser.
10. Develop a program using cookies and session.

Elective II PAPER – 2

(A) SOFTWARE TESTING

Objective: To make the student more proficient with error free software development

UNIT-I PRINCIPLES OF TESTING

A test in time - The cat and the saint - Test the tests first - The Policemen on the bridge - Phase of software project - Quality, Quality Assurance and Quality Control - Testing, Verification and Validation -Process model to represent different phases - Life cycle models.

UNIT-II BLACK BOX AND WHITE BOX TESTING

White box testing - Challenges - Static testing - Structural testing - Black box testing.

UNIT-III INTEGRATION, SYSTEM AND ACCEPTANCE TESTING

Integration testing - Types - Phase of testing - Scenario testing - Defect bash - System and Acceptance testing: Overview - Functional vs. Non-Functional testing - Functional system testing - Non-functional testing-Acceptance testing.

UNIT-IV PERFORMANCE AND REGRESSION TESTING

Introduction - Factors Governing - Methodology for Performance testing - Tools and Process for Performance Testing - Regression Testing - Types of Regression testing - How to do Regression Testing?

UNIT-V INTERNATIONALIZATION AND ADHOC TESTING

Introduction to Internationalization - Primer on Internationalization - Test phases for Internationalization testing - Enabling testing - Locale testing - Internationalization Validation- Fake language testing - Language testing - Localization testing - Tools used for Internationalization - Challenges and Issues - Overview of Ad Hoc testing - Buddy, Pair, Exploratory, Iterative, Agile and Extreme Testing - Defect Seeding.

TEXT BOOK:

1. Srinivasan Desikan, Gopalaswamy Ramesh, “Software Testing: Principles and Practices”, Pearson Publications, 2006.

REFERENCES:

1. RenuRajani, Pradeep Oak, “Software Testing- Effective Methods, Tools and Techniques”, Tata McGraw Hill, 2004.
2. Boris Beizer, “Software Testing Techniques”, Dream Tech Press, Second Edition, 2003.

Elective II PAPER – 2

(B) MOBILE COMPUTING

Objective: To impart good knowledge of wireless communication to students

UNIT I **WIRELESS COMMUNICATION FUNDAMENTALS**

Cellular systems- Frequency Management and Channel Assignment- types of handoff and their characteristics, dropped call rates & their evaluation -MAC – SDMA – FDMA –TDMA – CDMA – Cellular Wireless Networks.

UNIT II **TELECOMMUNICATION NETWORKS & WIRLESS LAN**

Telecommunication systems – GSM – GPRS - Satellite Networks ,Wireless LAN – IEEE 802.11 - Architecture – services – MAC – Physical layer – IEEE 802.11a -802.11b standards – HIPERLAN – Blue Tooth.

UNIT III **MOBILE NETWORK LAYER & TRANSPORT LAYER**

Mobile IP – Dynamic Host Configuration Protocol - Routing – DSDV – DSR – Alternative Metrics. Traditional TCP, Mobile TCP

UNIT IV **APPLICATION LAYER**

WAP Model- Mobile Location based services -WAP Gateway –WAP protocols – WAP user agent profile- caching model-wireless bearers for WAP - WML – WML Scripts

UNIT V **DATABASE ISSUES**

Database Issues : Hoarding techniques, caching invalidation mechanisms, client server computing with adaptation, power-aware and context-aware computing, transactional models, query processing, recovery, and quality of service issues.

TEXT BOOKS:

1. Jochen Schiller, “Mobile Communications”, Second Edition, Pearson Education, 2003.
2. William Stallings, “Wireless Communications and Networks”, Pearson Education, 2002.

REFERENCE BOOKS:

1. KavehPahlavan, PrasanthKrishnamoorthy, “Principles of Wireless Networks”, PHI/Pearson Education, 2003.

2. UweHansmann, LotharMerk, Martin S. Nicklons and Thomas Stober, “Principles of Mobile Computing”, Springer, 2003..

Elective II PAPER – 2

C. MICROPROCESSORS AND ITS APPLICATIONS

Objective:
To learn the architecture, programming, interfacing and rudiments of system design of microprocessors.

Unit-I : 8085 MICROPROCESSOR AND ARCHITECTURE
Microprocessors - Memory - I/O Devices - Memory Mapped I/O - Pin diagram and internal architecture of 8085 - Registers, ALU, Control & Status Registers - Instruction and Machine Cycles. Interrupts

Unit II : PROGRAMMING THE 8085
Introduction to 8085 Assembly language programming - 8085 instructions - Programming techniques with Additional instructions - Counters and Time Delays - Stack and Subroutines - Code Conversions

Unit-III : 8086 MICROPROCESSOR AND ARCHITECTURE
Pin Details and Internal Architecture of 8086 - Register organization, Bus interface unit, Execution unit, Memory addressing, Memory segmentation. Operating modes - Hardware and Software interrupts - Addressing Modes.

Unit-IV : PROGRAMMING THE 8086
8086 Assembly Language Programming - Implementing Standard Program Structures - String - Procedure and Macros. Instruction Description and Assembler Directives

Unit-V : INTERFACING PERIPHERALS
8255 PPI , 8253/8254 PIT, 8237 DMAC,8259 PIC, 8251 USART.

TEXT BOOK

1. Microprocessor Architecture, Programming and Applications with 8085, Ramesh S.Gaonkar, Penram International Publishing (India) Pvt. Ltd. 4th Ed. (for Units I,II and V)
2. Microprocessors and Interfacing,Douglas V. Hall, Tata McGraw Hill , 2nd Ed. (for Units III and IV)

REFERENCE BOOKS:

1. Assembly Language Programming the IBM PC ,Alan R. Miller, SubexInc, 1987.
2. Advanced Microprocessors and Peripherals, Ray A K ,Bhurchandi K M , TMH.

Elective III PAPER – 3

(A) Internet of Things

Objective: To prepare the student for better application of internet technology.

Unit – I IoT Introduction

Introduction to Internet of Things: Definition – Characteristics of IOT – Physical Design of IoT – Things in IoT – IoT Protocols – Logical Design of IoT – Iot Functional Blocks – IoT Communication Models – IoT Communication APIs – IoT Enabling Technologies

Unit – II Domain Specific IoT - 1

Domain Specific IoT – I : Smart Lighting – Smart Appliances – Intrusion Detection – Smoke / Gas Detection – Smart Parking – Smart Roads – Structural Health Monitoring – Surveillance – Emergency Response – Weather Monitoring –

Unit – III Domain Specific IoT II

Domain Specific IoT – II : Air Pollution Monitoring – Noise Pollution Monitoring – Forest Fire Detection – River Flood Detection – Smart Grids- Smart Vending Machines – Route Generation & Scheduling – Fleet Tracking – Shipment Monitoring –

Unit – IV Domain Specific IoT III

Domain Specific IoT – III: Remote Vehicle Diagnostics – Smart Irrigation - Green House Control – Machine Diagnosis & Prognosis – Indoor Air Quality Monitoring – Health & Fitness Monitoring – Wearable Electronics

Unit – V IoT and M2M

IoT And M2M: M2M – Difference Between Iot And M2M – SDN And NFV For IoT – IoT System Management With NETCONF – YANG : Need For Iot Systems Management – SNMP-Network Operator Requirements – NETCONF – YANG-IoT Systems Management With NETCONF - YANG

Text Books:

1. Interconnecting Smart Objects with IP: The Next Internet, Jean-Philippe Vasseur, Adam

Dunkels, Morgan Kuffmann.

Reference

1. Internet of Things, P.Rizwan Ahmed, Margham Publications, Chennai.

2. Designing the Internet of Things , Adrian McEwen (Author), Hakim Cassimally

(B) System Software

Objective: To make the student to become more proficient with system programming

Unit – I LANGUAGE PROCESSORS

Language Processing Activities – Fundamentals of Language Processing – Fundamentals of Language Specification – Language Processor Development Tools.

UNIT II ASSEMBLERS AND MACRO

Elements of Assembly Language Programming – Overview of Assembly Process - Design of a Two – Pass Assembler - Macro Definition and Call – Macro Expansion – Nested Macro Calls.

UNIT III COMPILER I

Scanning: Finite State Automate – Regular Expressions – Building DFA – Performing Semantic Action – Writing a Scanner – Parsing: Parse Tree and Abstract Syntax Trees – Top Down Parsing – Bottom-Up Parsing.

UNIT IV COMPILER II AND INTERPRERTERS

Aspects of Compilation –Memory Allocation - Compilation of Expressions-Compilation of Control Structure-Code Optimization - Interpreters.

UNIT V LINKERS

Relocation and Linking Concepts – Design of a Linker – Self-Relocating Programs – Linking for Overlays - Loader.

TEXT BOOK

D.M. Dhamdhere, “System Programming And Operating Systems”, New Delhi: Tata McGraw-Hill Publishing Company Limited, 1993.

Elective III PAPER – 3

(C) Multimedia Systems

Objective :

This course presents the Introduction to Multimedia, Images & Animation and enable the students to learn the concepts of Multimedia.

UNIT I Introduction to Multimedia:

Introduction to Multimedia PCs – Components of Multimedia – Multimedia Tools Sound and Graphics : Digital Sound – Editing and Mixing sound files – MIDI creation – Tracking Procedure – Interactive and Non Interactive Graphics – High Resolution Graphics – Difference between TV and Computer Display.

UNIT II Video and Animation :

Digital Image concepts – Video Capturing – Scanning Images – Digital Filters Morphing and Warping – Two Dimensional and Three dimensional animation – Animation Tools – Layering technique – Blue Screen technique – Latest movie technologies – Motion Tracking System – Motion Capturing System.

UNIT III Creating Presentation:

Script Writing and creating interactive and non-interactive presentation – Linear and Non Linear Editing – Authoring Tools – File Formates SOUND, VIDEO, ANIMATION, Presentation Images. Multimedia Programming: Text Links – Hyper Text system – Form Creation – File storing - Error Trapping.

UNIT IV Sound Links:

Multimedia interfaces – MCI- API- High Level Multimedia Functions – WAVE , MIDI file processing. Animation : Color Palette – Events – ROPs.

UNIT V Imaging Special Visual Effects :

Bitmap – Brushes – Dissolve –Hotspot Editor – Scorlling. Media Control Interface : Simple Commands – API functions – CD Player – Video Capturing – Form – AVI Play Form.

Text Books :

1. Kaliyaperumal Karthikeyan,"Introduction to Multimedia System", LAP Lambert Academic Publishing, 2011
2. TayVaughan, "Multimedia Making It Work Eighth Edition", Tata McGraw-Hill Publishing Company, 2011
3. ParagHavaldarand Gerald Medioni, "Multimedia Systems", Cengage Learning, 2011
4. S. K. Bansal,"Multimedia Systems", Aph Publishing Corporation, 2011

Skilled Based Subject IV – Paper 4

ASP .NET

Objective: Students to become well aware of .NET technology

UNIT I : ASP.NET Basics

Introduction to ASP.NET: .NET Framework (CLR, CLI, BCL), ASP.NET Basics, ASP.NET Page Structure, Page Life Cycle. Controls: HTML Server Controls, Web Server Controls, Web User Controls, Validation Controls, Custom Web Controls.

UNIT II : Form

Form validation: Client side validation, Server side validation, Validation Controls: Required Field Comparison Range, Calendar Control, Ad rotator Control, Internet Explorer Control. State Management: View State, Control State, Hidden Fields, Cookies, Query Strings, Application State, Session State.

UNIT III : ADO.NET

Architecture of ADO. NET, Connected and Disconnected Database, Create Database, Create connection Using ADO.NET Object model, Connection Class, Command Class, Data Adapter Class, Dataset Class, Display data on data bound controls and Data Grid.

UNIT IV : Database accessing

Database accessing on Web Applications: Data Binding Concept with web, Creating Data Grid, Binding standard web server controls, Display data on web form using Data Bound Controls.

UNIT V : XML

Writing Datasets to XML, Reading datasets with XML. WEB services: Remote method call using XML, SOAP, Web service description language, Building and Consuming a web service, Web Application deployment.

Textbook:

Professional ASP.NET 1.1 Bill Evjen , Devin Rader , Farhan Muhammad, Scott Hanselman , SrivakumarWrox

REFERENCE BOOKS:

1. Introducing Microsoft ASP .NET 2.0 Esposito PHI
2. Professional ADO.NET BipinJoshi, Donny Mack, Doug Seven , Fabio Claudio Ferracchiati, Jan D Narkiewiez Wrox
3. Special Edition Using ASP.NET Richard Leineker Person Education
4. The Complete Reference ASP.NET Matthew MacDonald TMH
5. ASP.NET Black Book DreamTech

B.COM (COMPUTER APPLICATION)
SYLLABUS
UNDER CBCS
(With effect from 2017-2018)
SEMESTER I
CORE PAPER - 1
FINANCIAL ACCOUNTING – I

Objective:

To gain knowledge of accounting in general and to understand the system of Financial Accounting.

Unit - I: Introduction

Meaning of accounting – objectives of accounting – advantages and limitations of accounting- Accounting concepts and conventions - Methods of accounting - Rules of debit and credit- Journal - Ledger accounts– Trial Balance - Errors and their rectification - Rectification of Errors without suspense a/c - Rectification errors with suspense a/c (effect of rectification on profit and rectification during subsequent accounting year are excluded) - Bank Reconciliation Statement.

Unit - II: Depreciation, Provisions and Reserve

Meaning of depreciation – causes for depreciation – need for charging depreciation – Methods of calculating depreciation: straight line method and written down value method (change in method of depreciation is excluded) – Methods of recording depreciation: by charging depreciation to assets account or by creating provision for depreciation account.

Unit - III: Bills of exchange

Meaning of bill of exchange - features and advantages of bill of exchange- types of bill of exchange: Trade bills and accommodation bills - Accounting treatment of trade bills (accommodation bills are excluded).

Unit - IV: Final accounts

Meaning of final accounts – adjustments in preparation of final accounts – preparation of trading, profit & loss account and balance sheet of sole proprietorship concern.

Unit V: Accounts from incomplete records

Meaning of single entry system – features and limitations of single entry system – Distinction between single entry system and double entry system - Methods of calculation of profit: Statement of affairs method and Conversion method – Distinction between statement of affairs and balance sheet.

Note: Questions in section A, B and C shall be in the proportion of 20: 80 between theory and problems

Text books

1. Jain &Narang, Financial Accounting, Kalyani Publishers, New Delhi.
2. T.S. Reddy & Dr. A. Murthy, Financial Accounting, Margham Publications, Chennai.

Reference books

1. Gupta, R.L & Gupta,V.K, Advanced Accounting, Sulthan Chand & Sons, New Delhi.
2. Shukla & Grewal, Advanced Accounting, S. Chand & Co. New Delhi.
3. Parthasarathy, S. & Jaffarulla, A. Financial Accounting, Kalyani Publishers, New Delhi.
4. Murugadoss, Jaya, Charulatha and Baskar, Financial Accounting, Vijay Nicholes Imprint Pvt. Ltd., Chennai.

CORE PAPER – 2

Business Application & Accounting Software

UNIT – I Word and Excel

MS Word: Creating and Editing Documents –Menus, Commands, Toolbars and Icons—Formatting document – Creating Tables – Mail Merger.
MS Excel: Spreadsheet Overview – Menus, Toolbars, Icons-Creating worksheets – Editing and Formatting – excel Formulas and Functions – Creating a Chart Data Forms, Sort, and Filter.

UNIT – II PowerPoint and Access

MS Power Point – Introduction – Menus – Toolbars – Text and Formats – Animation, Art and Sound – Making the presentation template.
MS Access: Database overview – Creating a database – Modifying table and Creating Form – Query – Creating reports – Mailing Labels.

UNIT-III Tally introduction

Introduction to Tally – Company Creation – Alter – Display – Accounts info – Ledger Creation – Voucher Creation – Bank Reconciliation Statement – Bill wise Details – Cost Centre and Cost Category – Multi Currency – Interest calculation – Budgets and Credit Limits – Day Book.

UNIT-IV Inventory

Inventory info – Stock Group – Stock Category – Stock Item – Unit of Measures – Godowns – Inventory vouchers – Re-order level and status – Batch-wise Details – Bill of Material.

UNIT-V Taxation

Statutory and Taxation – Value Added Tax (VAT) – Tax Deducted at Source (TDS) – Tax Collected at Source (TCS) – Service Tax – Security Control and Tally audit – Export and Import – Backup and Restore – Open Database Connectivity.

Text Books:

TEXT BOOKS:

1. MS Office 2000 for Every One - Vikas Publishing House Pvt. Ltd., Sanjay Saxena.
2. MS Office 2000 Professional Fast & Easy – June Slton, BPB publications.
3. Guide to MS Office 2000 PH. - I Loura Acklen.
4. The ABC & MS Office Professional Edition - Guy Hart-Davis.
5. Tally 9.0 – A complete Reference – Tally Solutions (P) Limited.

ALLIED 1

(To choose any 1 out of 3)

PAPER - 1

A. INDIAN ECONOMY - I

Objective

To acquire sufficient knowledge about India's Economic features; occupational structure and the relative shares of the different Sectors. Students should know that India is an emerging economic power in the World market.

UNIT-I

Features of less developed and developing Economies. - Economic and Non-Economic factors impeding Economic development - Concept of growth and development - Indicators - Factors in Economic Development.

UNIT-II

Capital Formation - Human and Physical, Savings and Investment pattern since 1991 - National Income - Methods, trends, limitation - Distribution - Recent trends in National Income - Black Money - Corruption.

UNIT-III

Human Resources - Human Resource Development Size and growth of population-Causes, impact-measures to control population-Recent Population Policy.

UNIT-IV

Agriculture - It's Contribution to Economic Development - Food Problems - Methods of solving it - Agricultural productivity - Land Reforms - Green Revolution

UNIT-V

Agricultural labour – Definition – Features- Problems – Remedies Agricultural Credit - Grameen Bank.

BOOKS FOR REFERENCE:

1. Agrawal, A.N. : Indian Economy, Vikas Publishing House, New Delhi.
2. Alak Ghosh : Indian Economy, The World Press, Kolkata.
3. Arora, R.C. : Integrated Rural Development, S. Chand & Co.,
4. Arthur Lewis : The Theory of Economic Growth.
5. Arun Ghosh : India in Transition, Economic Policy Options, S. Chand & co.,

ALLIED - 1

PAPER - 1

B. BUSINESS STATISTICS – I

Objective

To understand and apply statistical tools in business.

UNIT-I

Statistics - Definitions - Scope and Limitations - Collection of Data - Primary and Secondary Data - Questionnaire - Classification and Tabulation - Diagrammatic and graphical representation of data.

UNIT-II

Measures of Central tendency - Mean - Median - Mode - Harmonic Mean and Geometric Mean,

UNIT-III

Measures of Dispersion - Range - Quartile deviation - Mean Deviation - Standard Deviation - Coefficient of Variation - Lorenz Curve.

UNIT-IV

Measures of Skewness - Karl Pearson's and Bowlay's Coefficient of Skewness - Kurtosis - Characteristics of Kurtosis - Measures - Calculation.

UNIT-V

Statistical Quality Control - Control Charts - X, P, C, R - Charts - Acceptance sampling only.

(Weightage of Marks = Problems - 80%, Theory - 20%)

Text Books:

1. Dr. S.P. Gupta, Business Statistics & Operation Research - Sultan Chand.
2. PA. Navanitham, Business Statistics & Operation Research, Jai Publications, Trichy.
3. S.P. Rajagopalan & R. Sattanathan, Business Statistics & Operation Research 3rd Edition, Vijay Nicole Publications, Chennai.

Reference Books:

1. Dr. S.P. Gupta, Statistical Methods - Sultan Chand.
2. R.S.N. Pillai & Bhagavathi, Statistics.
3. J.K. Sharma, Business Statistics - Pearson Education.
4. B. Agarwal, Basic Statistics - Wiley Eastern.

ALLIED - 1

PAPER - 1

C. CONSUMER PROTECTION AND CONSUMER RIGHTS

Objective:

To make students to acquire basic knowledge of consumer laws, consumer rights and consumer welfare and protection.

Unit - I

Introduction of Consumer Protection Act 1986 – Objectives - Consumer Protection Act 2006 (Amendments) – Salient features.

Unit - II

Definitions of the term: - Consumer – Types of Consumer Appropriate authority – Complainant – Consumer dispute – Restrictive Trade Practice.

Unit - III

The various Consumer Rights: - Right to Safety, Right to Information, Right to Choose, Right to be heard – Right against exploitation – Right to Consumer Education.

Unit - IV

Consumer Production Council: - Composition and Powers of National Commission, State Commission and District Consumer Forum.

Unit - V

Redressal of consumer grievances-Goods & Services covered under Consumer Protection Act-Procedure for filing of complaints with District Forum, State Commission , National Commission.

Books for reference

1. Lecture on Torts and Consumer Protection Laws by Dr. Rega Surya Rao – Asia Law House, Hyderabad.
2. Consumer Protection Laws – By Prof. RakeshKhanna – Central – Law Agency.
3. Consumer Protection (Amendment) Act, 2002. S. Chand & Sons.2012.

SEMESTER – II

CORE PAPER - 3

FINANCIAL ACCOUNTING – II

Objective:

To gain a knowledge of accounting in general and to understand the system of Financial Accounting.

Unit - I: Branch accounts

Meaning – objects of branch accounts – accounting in respect of dependent branches: debtors system; stock and debtors system; wholesale branch system and final accounts system - Independent branches – incorporation of branch trial balance in head office books.

Unit - II: Departmental Accounting

Meaning of departments and departmental accounting – Distinction between departments and branches- need for departmental accounting – advantages of departmental accounting - Apportionment of indirect expenses – Inter departmental transfers at cost and selling price - preparation of departmental trading, profit & loss account and balance sheet.

Unit - III: Hire purchase and Instalment purchase systems

Meaning and features of hire purchase system - calculation of interest – books of hire purchaser and books of hire vendor - default and repossession (Hire purchase trading account excluded)

Meaning of instalment system -distinction between hire purchase system and instalment system - calculation of interest – books of buyer and books of seller.

Unit - IV: Partnership accounts (fundamentals and reconstitution of partnership)

Meaning and features of partnership – Partnership deed - calculation of Interest on capital and interest on drawings – preparation of profit & loss appropriation account – preparation of capital accounts (fixed and fluctuating) – admission of a partner – retirement of a partner – death of a partner – treatment of goodwill as per AS 10.

Unit - V: Partnership Accounts (Dissolution of partnership firms)

Dissolution of a firm – insolvency of a partner (Garner Vs Murray rule) – Insolvency of all the partners – Piecemeal distribution: proportionate capital method and maximum loss method.

Note: Questions in section A, B and C shall be in the proportion of 20: 80 between theory and problems.

Text books

1. Jain & Narang, Financial accounting, Kalyani publishers, New Delhi.
2. T.S. Reddy & Dr. A.Murthy, Financial accounting, Margham publications, Chennai.

Reference books

1. Gupta, R.L & Gupta, V.K, Advanced Accounting, Sultan Chand & Sons, New Delhi.
2. Shukla & Grewal, Advanced Accounting, S.Chand & Co.New Delhi.
3. Parthasarathy, S.& Jaffarulla, A.Financial Accounting, Kalyani Publishers, New Delhi.
4. Murugadoss, Jaya, Charulatha and Baskar, Financial Accounting, Vijay Nicholes Imprint Pvt. Ltd., Chennai.

CORE PAPER - 4

Software & Tally Lab

MS.WORD:

1. a. Starting MS-WORD, Creating, Saving, Printing (with options), Closing and Exiting.
   b. Study of Word – Menu / toolbars.
2. a. Create a document, save it and edit the document as follows:
   i) Find and Replace options.
   ii) Cut, Copy, Paste options.
   iii) Undo and Redo options.
   b. Format the document:
   i) Using Bold, Underline and Italic.
   ii) Change Character size sing the font dialog box.
   iii) Formatting paragraph: Center, Left aligns & Right align
   iv) Changing paragraph and line spacing, Using Bullets and Numbering in Paragraphs.
   v) Creating Hanging Paragraphs.
3. Using tap settings enhancing the documents (Header, Footer, Page Setup, Border, Opening & Closing Toolbars, Print Preview).
4. Creating Tables in a document, Selecting Rows & Column sort the record by using tables format painter and Auto Format.
5. Drawing flow chart using (creating main document, data source, inserting merge fields and veiwing merge data, viewing and printing merged letter, using mail merge to print envelope creating mailing labels).

MS-EXCEL

1. a. Create a worksheet, moving/ copying/ inserting/ deleting rows and columns (usage of cut, paste, commands, copying a single cell, copying a range of data, filling up a cell. Undo command, inserting a row, column, deleting rows and columns).
   b. Formatting work sheets.
   1. Bold style.
   2. Italic style.
   3. Font size changing.
   4. Formatting numbers (Auto fill, Selection Command, Currency format, Currency)
   5. Specifying percentage (%) Scientific notations.
   6. Drawing border around cells.
   7. Printing a work sheet (Pring preview, Margin Setting, Header, Footer).
2. a. Database Concept: database, record field and filed name – creating and sorting a data base and maintaining a database (data form).
   b. Using auto filter, advanced filter
   c. Creating subtotals and grad totals - using database fucntions.

3. Creating charts
   - i) Using chart wizard (five steps)
   - ii) Changing the chart type (Pie,Bar, Line)
   - iii) Inserting titles for the axes X. Y
   - iv) Changing colors.
   - v) Printing charts.

4. a. Using date, time, maths functions:
   - i) entering current data.
   - ii) Using date arithmetic (adding and subtracting dates)
   - iii) Date functioins (day, month, second)

   b. Math Functions
   - i) SUM, COUNT, AVERAGE
   - ii) MAX, MIN
   - iii) STDDEV, VAR
   - iv) ABS, EXP, INT
   - v) LOG 10 AND LOG
   - vi) MOD, ROUND, SORT
   - vii) Using auto sum

   c. Logical and Financial Functions
   - i) Logical (IP / AND / OR / NOT)
   - ii) Financial (PMD, FV, NPER, RATE)

5. i) Creating and running a macro.
   - ii) Assigning button to a defined macro.
   - iii) Editing a macro.

MS-POWER POINT:

1. Creating a presentation using auto content wizard.
2. Different views in power point presentation.
3. Setting animation effects / grouping / ungrouping / cropping power / point objects.
4. Printing a presentation / Importing – Exporting files
5. Creating an organisation chart in Power Point.

TALLY:

1. Company Information

a. Company creation
b.Select Company
c. Shut Company
d. Alter Company
e. Split Company Data
f. Backup and Restore

2. Gateway of Tally

a.Accounts info

i) Groups
ii) Ledgers
iii) Voucher Types

b. Inventory info

i) Stock Group
ii) Stock Category
iii) Stock item
iv) Unit of Measures
v) Godown

c. Accounting Vouchers
d. Inventory Vouchers

3. Statutory and Taxation

a. Value Added Tax (VAT)
b. Tax Deducted at Source (TDS)
c. Tax Collected at Source (TCS)
d. Service Tax

4. Display

a. Trial Balance
b. Day Book
c. Accounts Book
d. Statement of Accounts
e. Inventory Books
f. Statement of Inventory
g. Statutory Info
h. Statutory Reports
i. Cash flow and Fund flow

ALLIED - 2

(To choose any 1 out of 3)

PAPER – 2

A. INDIAN ECONOMY II

UNIT-I

Role of Technology - Information Technology BPO in India - their impact on Economic Development – Cyber Crime.

UNIT-II

Role of industries - Cottage & Small Scale industries - Some Large Scale industries (Cotton, Sugar, Iron & Steel, Tea & Petro Chemical) Industrial Policy - 1991 and after - Public sector Enterprises - Dis-investment and Privatisation.

UNIT-III

Transport - Importance of Transport (Roadways, Railways, Shipping and Civil Aviations) to Economic growth - Evaluation of Government in Policy in relation to privatisation policy - Transport Coordination.

UNIT-IV

Planning in India - Strategy of Indian Planning - Resources for Financing Plan - Agriculture and Industrial Development - Planning techniques - Investment Priorities – General Objectives – Targets, Achievements and Failures – 11^{th} and 12^{th} five year plans- NITIAYOG

UNIT-V

Poverty in India - Poverty Eradication Programmes - Recent Employment scheme- Swaraj Bharat Mission - Role of Micro finance - (SHG, Cottage and Household Sector etc.,) - Regional Development Disparities -India's Foreign Trade and Balance of Payments.

ALLIED - 2

PAPER - 2

B. LOGISTIC MANAGEMENT

Objective:

To understand the comprehensive nature of Logistics Management.

UNIT-I

Logistics - definition - scope - functions - objectives of Logistics Management - customer service and logistics.

UNIT-II

Supply Chain - components - role of logistics in supply chain - Warehousing - functions - types - warehouse layout - material handling and logistics - Inventory Management.

UNIT-III

Transportation - infrastructure - freight management - transportation network - route planning - containerization.

UNIT-IV

Logistical packaging - logistics information needs - logistics design for distribution channels - logistics outsourcing.

UNIT-V

Government policies and regulations - Motor Vehicles Act, carriage by air, sea, multi-modal transportation etc., Documentation - Airway Bill, Railway Receipt, Lorry Receipt, Bill of Lading etc.

Text Books:

1. Ronal H. Ballou, Business Logistics / Supply Chain Management, Pearson Education, Prentice Hall, New Delhi - 2001.

Reference Books:

1. Vinod V. Sople, Logistics Management, Pearson Education (Singapore) P. Ltd.,

4. B. S. Sahay, Supply Chain Management for Global Competitiveness, Macmillan India Ltd., Delhi.

ALLIED - 2

PAPER - 2

C. BUSINESS STATISTICS – II

Objective

To understand and apply statistical tools in Business.

UNIT-I

Correlation - Definition - Karl Pearson's Coefficient of Correlation - Rank Correlation.

UNIT-II

Regression Equations – Properties of Regression Lines and Coefficients – Standard Error of Estimate.

UNIT-III

Index Number - Definition - Uses - Unweighted Index Number - Simple Aggregate Price Index, Simple Average of Price Relatives Index - Weighted Index - Laspeyre'sPaasche, DorbishBowley's - Marshall Edgeworth, Fisher Ideal Index - Time and Factor Reversal Test - Cost of Living Index.

UNIT-IV

Time Series - Definition and Uses - Components - Semi Average, Moving Average - Method of Least Square - Seasonal Variation - Simple Average Method.

UNIT-V

Probability - Addition and Multiplication Theorem - Permutation and Combination - Baye's Theorem.

(Weightage of Marks = Problems - 80%, Theory - 20%)

Text Books:

1. Dr. S.P. Gupta, Business Statistics & Operation Research - Sultan Chand.
2. PA. Navanitham, Business Statistics & Operation Research, Jai Publications, Trichy.
3. S.P. Rajagopalan& R. Sattanathan, Business Statistics & Operation Research 3rd Edition, Vijay Nicole Publications, Chennai.

Reference Books:

1. Dr. S.P. Gupta, Statistical Methods - Sultan Chand.
2. R.S.N. Pillai&Bhagavathi, Statistics.
3. J.K. Sharma, Business Statistics - Pearson Education.
4. B. Agarwal, Basic Statistics - Wiley Eastern.

SEMESTER – III

CORE PAPER - 5

CORPORATE ACCOUNTING – I

Objective:

To gain comprehensive understanding of all aspects relating to corporate accounting.

Unit - I: Share capital

Meaning and types of shares - Issue and allotment of equity and preference shares- issue at par, premium and at discount – calls in advance – calls in arrears – forfeiture of shares – reissue of forfeited shares – redemption of preference shares – underwriting of shares (Determining the liability of underwriters – firm underwriting)

Unit - II: Debentures

Meaning and types of debentures - Issue of debentures at par, premium and at discount – writing off discount on issue of debentures – issue of debentures as collateral security – issue of debentures for consideration other than cash - redemption of debentures – methods – open market buying – conversion of debentures into shares – sinking fund method – insurance policy method.

Unit - III: Acquisition of Business

Meaning of Acquisition of business – accounting treatment – new set of books to be opened - same set of books to be continued – profit prior to incorporation

Unit - IV: Final accounts

Preparation of Statement of profit & loss and Balance sheet (as per revised schedule VI)

Unit - V: Amalgamation, Absorption, External and Internal reconstruction

Purchase consideration – methods - Amalgamation in the nature of merger or purchase – absorption (AS 14). Alteration of share capital – reduction of share capital (scheme of capital reduction is excluded).

Note: Questions in Sec.A, B & C shall be in the proportion of 20:80 between Theory and Problems.

Text Books

1. Jain,S.P & Narang,N.L., Advanced Accounting, Kalyani Publications.
2. ReddyT.S.& Murthy,A, Corporate Accounting, Margham Publications, Chennai.

CORE PAPER – 7
BANKING THEORY, LAW AND PRACTICE

Objective:

To study in detail about the Central Bank and Commercial Banking System including the latest directives and decisions of Reserve Bank of India. To study the recent developments in Indian banking system.To acquire the basic knowledge about the banking transactions.

Unit - I

Origin of banks – Banking Regulation Act, 1949 – Roll of Banks and Economic Development – Central Banking and Role of RBI and their functions - Credit Control Measures of Central Bank.

Unit - II

Commercial Banks – Functions – E-Banking – ATM Cards, Debit cards, Personal Identification Number – Online enquiry and update facility – Electronic Fund Transfer – Electronic Clearing System – Credit Creation and Credit Control – Role of SBI in the Economic Development of India.

Unit - III

Types of Bank Accounts - Savings Account, Current Account - Types of Deposit Account – Fixed and Recurring Deposits Account – Procedure for opening of an Account – Types of customers (Individuals, firms and Companies) – Importance of CRM – Customer grievances and redressal – Ombudsman.

Unit - IV

Negotiable instruments – Promissory Note – Bills of Exchange, Cheque, Draft – Definitions, Features – Crossing – Endorsement – Material Alteration – Dishonour of Cheques – Paying Banker – Rights, Duties and Statutory Protection to Paying Banker – Collecting banker – Rights and Duties.

Unit - V

Principles of lending – Types of Loans – Precautions to be taken by a banker while lending against LIC Policies, Shares, Gold, Silver Ornament and Jewellery.

Text Books:

1. Banking Law Theory and Practice – Sundaram and Varshney – Sultan Chand Co.
2. Banking and Financial Systems – B. Santhanam, Margham Publishers.
3. Banking Law Theory and Practice – S.N. Maheswari – Kalyani Publications.
4. Banking Theory Law and Practice, Dr. S. Guruswamy, 3rd Edition, Vijay Nicholes Imprint Pvt. Ltd., Chennai.

Reference Books:

1. Indian Banking – Parameswaran – S. Chand and Co.
2. Financial Services – Dr. S. Gurusamy, Tata McGraw-Hill Education India.
3. Banking Theory Law Theory and Practice – Dr. S. Gurusamy, Tata McGraw-Hill Education India.

CORE PAPER - 8

MANAGEMENT INFORMATION SYSTEM

Unit-I:

Management Information – Meaning of Information – Information needs of Managers – Web Data basis – Data warehousing – Knowledge management – Information system for decision making.

Unit-II:

Types of Information System – Transaction Processing System – Office Automation System – Decision Support System – Executive Support System – MIS – Evolution of MIS – Computer and MIS.

Unit-III:

System Analysis – System Planning and Mutual Investigation – System Design - The Process and Stages of System Design – Input / Output forms Design – File Organisation – System Implementation.

Unit-IV:

Management Information Needs and Communication links for Marketing system, Production System, Accounting System, Manufacturing System, Inventory Control System and Budget Control System - IS Organisation – Top Management Responsibility – Processing Group Responsibility.

Unit-V:

Development – Maintenance of MIS – Operation of manual Information System – Role of Computer in MIS – Data base Concept – Expert Systems – System Audit.

Text Book:

1. M. Assam – Fundamentals of Management Information System – Vijay Nicole Imprints Private Ltd., Chennai.
2. Effy Oz, "Management Information Systems", Second edition, Thomson Learning Course Technology, 2002.

ALLIED - 3

PAPER - 3

MOBILE COMPUTING

Unit I : INTRODUCTION

Mobile Computing – Mobile Computing Vs wireless Networking – Why Go Mobile- Mobile Computing Applications – Characteristics of Mobile computing – Types of Wireless Devices Structure of Mobile Computing Application- Mobile Communication Networks.

Unit II : WIRELESS MAC PROTOCOLS & MOBILE INTERNET PROTOCOL

Wireless MAC Protocols- FDMA TDMA – CDMA – Advantages and Disadvantages- Why Mobile IP- What is Mobile IP-Motivations for Mobile IP- What Mobile IP does-Requirements to Mobile IP- Mobile IP terminologies- Mobile IP features-Key Mechanism in Mobile IP-Data transfer to the mobile system- Data transfer from mobile system- Key Mechanism in Mobile IP-DHCP.

Unit III : MOBILE TELECOMMUNICATION SYSTEM

Global System for Mobile Communication(GSM)-What is GSM-GSM Services- GSM Subscriber Services-GSM Supplementary Services- GSM Architecture- Mobile Station-General packet radio service(GPRS)-GPRS Services-Advantages of GPRS-Applications of GPRS-Universal Mobile Telecommunications System(UMTS).

Unit IV : MOBILE PLATFORMS AND APPLICATIONS

Mobile Device Operating Systems – Special Constraints & Requirements – Commercial Mobile Operating Systems – Windows Mobile- Palm OS- Symbian OS- iOS- Android- Blackberry Operating system-Software Development Kit - M-Commerce – Structure – Pros & Cons –Mobile Payment System – Bluetooth Security-Security Issues.

Unit V : E-BUSINESS, E-COMMERCE & M-COMMERCE

Introduction, Potential Benefits, Limitations, Classifications, Impact of E-Commerce on Business models.

E-Commerce Applications: Entertainment, E-Marketing, E-Advertising, Search Engines, E-Banking, Mobile Commerce, Online Trading, ELearning, E-Shopping.

Text Books:

1. Prasant Kumar Pattinaik, Rajib Mall , "Fundamentals of Mobile Computing", PHI Learning Pvt Ltd, New Delhi, 2012
2. E-Commerce: A Managerial Perspective: Micheal change, etc. A1
3. Electronic Commerce – Security: Greenstein & Feinman Risk Management & Control

SKILL BASED SUBJECT – I

PAPER – 1

ELEMENTS OF INSURANCE

Objective:

To gain a knowledge of insurance and its importance.

UNIT-I

Definition of insurance - classification of Contracts of insurance - marine and non-marine - general principles of law as applied to non-marine insurance.

UNIT-II

Life Assurance - objects of life Assurance - principles of life Assurance - different plans of life Assurance and annuities - policy condition and privilege - assignment and nomination - lapses and revivals - surrender values and loans - claims - double insurance.

UNIT-III

Marine insurance - principles of marine insurance - functions of marine insurance - proximate clause - subrogation and contribution

UNIT-IV

Types of marine policy - clauses in general use - warranties - kinds of marine losses - reinsurance and double insurance.

UNIT-V

Fire insurance - principles of law as applied to fire insurance - the subject matter of fire insurance - fire waste - hazard types of fire policy - cover notes - surveys and inspection average - re-insurance - renewals.

Text and Reference Books:

1. Dr. B. Vardharajan - Insurance Vol 1 and 2. - Tamil Text Book.
2. R.S. Sharma - Insurance Principle & Practice - Vara Bombay, 2006.

A. Murthy - Elements of Insurance Risk management & Insurance - Harrington, 2006 - Tata McGraw Hill pub.

NON-MAJOR ELECTIVE – I

PAPER – 1

ELEMENTS OF ACCOUNTANCY

Objectives:

To facilitate the non- commerce students to have a basic knowledge in Book-Keeping and Accounting.

Unit - I:

Need for Accounting – Definition (AICPA) – Steps – Objectives — Double Entry System - Meaning of Debit and Credit - Advantages – Limitations – Types of Accounts – Accounting Rules – Accounting Terminology – Accounting Concepts and Conventions – Meaning and Types – Accounting Equation.

Unit - II:

Journal – Ledger Accounts – Trial Balance.

Unit - III:

Subsidiary Books – Meaning – Types (no problems from Bills Receivable Book and Bills Payable Book but only theory) – Advantages over Journal – Ledger Accounts – Trial Balance.

Unit - IV:

Errors – Classification – Rectification (Rectification after the preparation of final account is excluded) – Suspense Account – Meaning and Need.

Unit - V:

Closing and Adjustment Entries – Final Accounts with simple Adjustments.

(Weightage: Theory: 25%, Problems: 75%)

Text Books

1. Jain,S.P&Narang,N.L.,AdvancedAccounting,KalyaniPublications.
2. Jaya Charulatha and Baskar, Introduction to Accountancy, Vijay Nicholes Imprint Pvt. Ltd., Chennai.

RELATIONAL DATABASE MANAGEMENT SYSTEMS

UNIT-I

Purpose of Database - Overall System Structure - Entity Relationship Model.

UNIT-II

Relational Model - Structure - Formal Query Language - Relational Algebra - Tuple and Domain Relational Calculus.

UNIT-III

Structured Query Language - Basic Structure - Set Operations - Aggregate Functions – Date and Numeric - Modification Of Databases - Joined Relations-DDL - Embedded SQL.

UNIT-IV

Relational Database Design - Pitfalls - Normalisation Using Functional Dependencies - First Normal Form-Second Normal Form-Third Normal Form.

UNIT-V

Oracle - Introduction - SQL (DDL, DML, DCL Commands) - Integrity Constraints - PL/SQL - PL/SQL Block - procedure, function.

Text Books:

1. Singh-Database systems: Concepts, Design & applications, Pearson Education.
2. Abraham Silberschatz, H.F.Korth And S.Sudarshan-Database System Concepts Mcgraw Hill Publication
3. Gerald V.Post - DBMS-Designing And Business Applications - McGraw Hill Publications
4. Michael Abbey And Michael.J.Corey-Oracle- A Beginners guide TMH

CORE PAPER – 12

RDBMS LAB

1. Create a table student_master with the following fields name, regno, dept and year with suitable data types. Use Select command to do the following.

   a) Select the student's name column.
   b) Eliminate the duplicate entry in table.
   c) Sort the table in alphabetical order.
   d) Select all the Students of a particular department.

2. Create a table master_book to contain the information of magazine code, magazine name, and publisher. Write PL/SQL block to perform insert, update, delete operations on the above table.

3. Create a table to contain phone number, user name, address of the phone user. Write a function to search for a address using phone numbers.

4. Create a table to store the salary details of the employees in a company. Declare the Cursor to contain employee number, employee name and net salary . Use Cursor to update the employee salaries.

5. Create a table to contain the information about the voters in a particular constituency. Write a proper trigger to update or delete a row in the table.

6. Create a table to store the details of the Alumni in an institution. Write a PL/SQL block to change address of particular alumni. Write proper exceptions and appropriate error messages.

ALLIED - 2

PAPER - 4

E-COMMERCE AND ITS APPLICATIONS

Unit - I:

Introduction to E-Commerce – Meaning – Working of E-Commerce – Electronic Business – Categories of E-Commerce Application – Global Trading Environment and Adoption of E-Commerce – Product suitability – Comparison between Traditional and Electronic Commerce – Advantages and Disadvantages of E-Commerce.

Unit - II:

Business Models of E-Commerce – Introduction – Major challenges of B2C E-Commerce – Meaning of B2B Exchange – Development of B2B E-Commerce – Types of B2B Markets – Difference between B2C and B2B Commerce.

Unit - III:

Introduction to E-Hub Concept – Introduction to B2G Concept – E-filing.

Unit - IV:

Internet – Internet Operation – Internet Explorer – Creation of E-mail ID, E-mail etiquettes.

Unit - V:

Web Browsing – Role of Website in B2C E-Commerce, Website strategies and goals. Websites Design Principles for E-Commerce websites.

Text Books:

E-Commerce – SrinivasaVallabhan. S.V – Vijay Nicole Imprints Private Ltd.,

Chennai.

SKILL BASED SUBJECT – II

PAPER - 2

INDUSTRIAL ORGANIZATION

Objective:

To gain knowledge of the basic industrial structure and its working.

UNIT-I

Meaning of Industrial Organisation – Industrial Revolution – Industrial Growth – Aggregation, Consolidation, Integration - Mass Production – Importance, Advantages, Limitations – Specialisation – division of labour – its advantages and disadvantages – Industrial growth in India – major industries in India – current scenario.

UNIT-II

Industrial ownership – Sole Proprietorship - Features, merits and demerits – partnership - Features, merits and demerits - Joint Stock Company - Features, merits and demerits - Types – Public Ltd and Private Ltd companies.

UNIT-III

Physical facilities – plant location – need for selection of location – stages in selection of location – plant layout – definition, objectives, advantages, types – factors influencing plant layout – tools used for design of plant layout – principles of a good plant layout.

UNIT-IV

Production management – product design – characteristics of a good product design – design of production system – its types – design of work study – motion study – time study - production planning – objectives, levels – production control – factors determining production control operation – functions of production planning and control.

UNIT-V

Materials management – its meaning, objectives, advantages, functions – purchasing-types of purchasing policy – store keeping – organisation of stores department – inventory control – its objectives, functions, benefits.

Text Book:

1. Dr. A. Murthy, Industrial Organisation, Margham Publications, Chennai.

CORE PAPER - 16

INTERNET AND ITS APPLICATIONS

UNIT-I

Introduction to Computers - Programming Language types – History of Internet – Personal Computers - History of World Wide Web – Micro Software .NET Java – Webresoures.

UNIT-II

Web Browsers – Internet Explorer – Connecting to Internet – Types of Internet connection – Features of Internet Explorer6 – Searching the Internet – Online help and tutorials – File Transmission Protocol (FTP) – Browser settings.

UNIT-III

Attaching a file – Electronic Mail – Creating an E-mail ID – Sending and Receiving Mails – Attaching a File – Instance Messaging – Other Web browsers.

UNIT-IV

Introduction to HTML headers – Linking – Images – Types of computer viruses – Ill-effect of Viruses – Remedy for Viruses.

UNIT-V

E-marketing – Consumer tracking – Electronic advertising search engine – CRM – Credit Card payments – Digital cash and e-wallets – Micro Payments – Smart Card.

Text Book:

Internet and World Wide Web, Third Edition, H.M. Deital, P.J. Deital and A.B. Goldberg – PHI

Reference Book:

Harley Hahn, The Internet – Complete Reference, Tata McGraw Hill.

ELECTIVE– I

(To choose any 1 out of 3)

PAPER - 1

A. ENTREPRENEURIAL DEVELOPMENT

Objective:

To encourage students to become entrepreneurs.

UNIT-I

Meaning of Entrepreneur – Entrepreneur and Enterprise – Entrepreneur and Manager – Entrepreneur and Intrapreneur – Qualities (Traits) of True Entrepreneur – Characteristics of Entrepreneur – Types of Entrepreneurs – Functions of an Entrepreneur – Roles of Entrepreneurs in the Economic Development.

UNIT-II

Establishing an Enterprise – Project Identification – Selection of the Product – Project Formulation – Assessment of Project Feasibility – Preparation of Project Report – Selection of Site (Location).

UNIT-III

Selection of Types of Organization – Sole Proprietorship – Partnership Joint Stock Company – Factors Influencing the Choice of Organization – Sources of Project Finance – Sources of Long Term Finance – Sources of Short Term Finance.

UNIT-IV

Incentives and Subsidies – Meaning of Incentives and Subsidies – Need and Problems – Incentives for Development of Backward Area – Incentives for SSI Units in Backward Areas – Taxation Benefits to SSI Units – Subsidies and Incentives in Tamil Nadu.

UNIT-V

Women Entrepreneurs – Concept – Functions and Role – Problems of Women Entrepreneurs – Suggestions for Development of Women Entrepreneurs – Rural Entrepreneurship – Need – Problems – How to Develop Rural Entrepreneurship.

Text Books:

1. C.B. Gupta, Entrepreneurship development in India – Sultan Chand.
2. Gupta C.B and SrinivasanN.P. Entrepreneurial Development, Sultan Chand & Sons, New Delhi.

2. I. Bayross, Web Enable Commercial Application Development Using HTML, DHTML, Javascript, Pen CGI, BPB Publications, 2000
3. J. Jaworski, Mastering Javascript, BPB Publications, 1999
4. T. A. Powell, Complete Reference HTML (Third Edition),TMH, 2002
5. G. Buczek, ASP.NET Developers Guide, TMH, 2002

CORE PAPER - 19

WEB TECHNOLOGY LAB

1. Create a simple page introducing yourself how old you are, what you do, what you like and dislike. Modify the introduction to include a bullet list of what you do and put list the 5 things you like most and dislike as numbered lists. Create another page about your favorite hobby and link it to (and from) your main page. Center something, and put a quote on one of your pages
2. Put an existing image on a web page. Create a table, use a heading and at least one use of row span/col. span. Color a page and some text within the page. Link to another site
3. Create a new file called index. html.
   - ❖ Put the normal HTML document structure tags in the file.
   - ❖ Give it a title.
   - ❖ At the bottom of the page (i.e. the last thing between the body tags) put the following:
     - ♦ A horizontal rule.
     - ♦ A Link to your e-mail Address (With your name between the tag) ; remember to put the link to your E- Mail address within address tags.
     - ♦ A line break.
     - ♦ The date. (I have this same structure at the bottom of this page).
     - ♦ Above this block (which is called the footer), put a title in heading tags.
     - ♦ Add some text describing yourself (you can split this into multiple headings and Paragraphs if you wish).
4. Write a script to create an array of 10 elements and display its contents.
5. Create a document that accepts the user's name in a text field form and displays the sanie the next time when the user visits the site informing him that he has accessed the site for the second time, and so on.

ELECTIVE– II

PAPER - 2

A. INCOME TAX LAW AND PRACTICE – II

Objective:

To enable the students to have a knowledge of law of practice of Income tax.

Unit I: Capital gains

What are capital assets? – what are not capital assets? – kinds of capital assets – transfer u/s 2 (47) – cost of acquisition – cost of improvement – computation of short term capital gain - computation of long term capital gain – exemptions from capital gains.

Unit II: Income from other sources

Specific incomes chargeable to tax – general incomes chargeable to tax – Interest on securities – Interest exempt from tax u/s 10 (15) - deductions allowed from Income from other sources – computation of income from other sources.

Unit III: Clubbing of Incomes and Set off and carry forward of losses

THIRUVALLUVAR UNIVERSITY

BACHELOR OF SCIENCE

B.SC. BIOCHEMISTRY

SYLLABUS
UNDER CBCS
(With effect from 2017 - 2018)

SEMESTER I

PAPER - 1

CELL BIOLOGY

UNIT - I

An overall view of cells - origin and evolution of cells. Cell theory. Classifications of cell - Prokaryotic and Eukaryotic cells. Differences between prokaryotic and eukaryotic cells. Molecular composition of Cells - Water, Carbohydrates, Lipids, Nucleic acids and Proteins.

UNIT - II

Cell membrane- Fluid Mosaic Model of membrane structure. Membrane proteins and their properties. Membrane carbohydrates and their role. Transport across membranes- diffusion, active and passive transport.

UNIT - III

Endoplasmic reticulum - types, structure and functions. Golgi apparatus- structures and functions. Lysosomes- structure and functions, Ribosomes - types, structure and functions.

UNIT - IV

Mitochondria: Structure and function. Cytoskeleton: Types of filaments and their functions. Microtubules: Chemistry and function (esp. cilia and flagella)

UNIT – V

Chromosome-chromatin structure, the cell cycle - phases of cell cycle. Meiotic and mitotic cell divisions, cell- cell communications, cell recognition, cell adhesion and cell functions.

References:

1. Cell biology structure and functions-David and Sadava, Jones Bartlett publishers.
2. Molecular Cell Biology - Lodish, Berk, Zipursky, Baltimore, Freeman.
3. Cytology-P.S. Verma, V.K. Agarwal, S. Chand Publications.
4. Lehninger Principles of Biochemistry-David L. Nelson, Michael M. Cox, Macmillan Worth Publishers.
5. Biochemistry - Garrett Grishmam. 3rd edition. International student's edition.
6. Biochemistry by L . Veerakumari , MJP publishers,Chennai-5.

ALLIED

CHEMISTRY – I

OBJECTIVE:

- Basic knowledge on Metallurgy, Cycloalkanes, Polarising Effects, Stereochemistry, Chemical Kinetics, Catalysis, Photochemistry, VSEPR Theory, Fuels, Osmosis, Nuclear Chemistry, Petroleum Chemistry, Chemistry of Naphthalene, Conductors and Applications wherever necessary are to be taught for I- Semester.

UNIT – I

1.1General Metallurgy - Extraction of Metals - Minerals and Ores- Difference between Minerals and Ores – Minerals of Iron, Aluminum and Copper - Ore Dressing or Concentration of Ores - Types of Ore Dressing- Froth Floatation process, Gravity separation and Magnetic separation.

1.2 Calcination, Smelting, Roasting, Fux, Slag - Definition - Reduction methods - Goldschmidt Aluminothermic process and Carbon Reduction method - Refining of Metals - Electrolytic, Van Arkel and Zone Refining.

1.3 Ores of Titanium and Cobalt - Extraction of Titanium and Cobalt.

UNIT – II

2.1 Cycloalkanes - Preparation – Wurtz reaction and Dieckmann's condensation - Properties of Cycloalkanes – Substitution and Ring opening reactions.

2.2 Polarisation - Inductive effect, Mesomeric effect and Steric effect (Acid and Base Strength).

2.3Stereoisomerism – Types - Cause of Optical Activity – Enantiomers - Diastereomers - Meso form - Optical Activity of Lactic acid and Tartaric acid - Racemisation and Resolution – Definition and Methods - Geometrical isomerism – Definition and example - Maleic and Fumaric acid – Differences.

UNIT – III

3.1 Chemical Kinetics – Rate of a reaction – Definition of Order and Molecularity – Distinction between Order and Molecularity - Derivation of First order rate equation - Half Life Period of first order reaction.

3.2 Catalysis - Catalyst - Autocatalyst - Enzyme catalyst - Promoters - Catalytic poisons – Active Centre - Differences between Homogeneous and Heterogeneous Catalysis - Industrial Applications of Catalysts.

3.3 Photochemistry – Grothus-Draper's law – Stark-Einstein's law - Quantum yield – Photosynthesis - Phosphorescence – Fluorescence.

UNIT – IV

4.1 VSEPR Theory – Hybridisation and Shapes of simple molecules BF_3, PCl_5, SF_6 and XeF_6.

4.2 Fuels – Classification of Fuels - Calorific value of Fuels – Water gas, Carbureted Water gas and Producer gas – Composition and Uses - Non-Conventional fuels - Need of Solar Energy - Applications - Biofuels – Oil gas, Natural gas and LPG – Uses.

4.3 Osmosis - Osmotic pressure - Reverse osmosis – Definition - Desalination of Sea water.

UNIT – V

5.1Nuclear Chemistry – Atomic number, Mass number - Isotopes, Isobars and Isotones – Definition and Examples - Definition of Half life period - Nuclear Binding Energy, Mass Defect and N/P ratio - Nuclear Fission and Nuclear Fusion (Elementary idea) - Applications of Radioisotopes in Medicine, Agriculture and Industries – Carbon Dating.

5.2 Crude Oil - Petroleum - Petroleum Refining - Cracking - Applications of Cracking – Naphthalene – Preparation – Haworth's method – Properties – Oxidation, Reduction and Uses of Naphthalene - Structure of Naphthalene (Structural elucidation not necessary).

5.3 Conductors, Insulators, Semiconductors, N- and P- Type Semiconductors – Definitions and Examples.

SEMESTER II

PAPER – 2

BIOMOLECULES

UNIT-I: Carbohydrates

Classification of carbohydrates, stereo isomerism and optical isomerism of sugars, anomeric form and mutarotation. Occurrence, structure and biological importance of mono, di and polysaccharides (esp. starch, glycogen and cellulose). Reaction of Carbohydrates due to the presence of hydroxyl, aldehyde and ketone groups.

UNIT-II: Proteins

Classification and structure of amino acids based on structure. Introduction, classification of proteins based on solubility, size and shape. Structure of proteins - primary, secondary, tertiary and quaternary.

UNIT-III: Lipids

Introduction, definition, classification and functions of Lipids - simple lipids, compound lipids - phospholipids (esp. lecithin cephalin, phospotidyl inositol and phospotidyl serine) and derived lipids - steroid (cholesterol).

UNIT-IV: Nucleic acids

Nature of genetic material, structure of purine and pyrimidine nucleotides. Composition of DNA and RNA-Watson crick model of DNA. Types of nucleic acid (DNA and RNA).

Properties of nucleic acids-Tm, denaturation and renaturation, hypo and hyper chromicity.

UNIT-V: Vitamins

Dietary Sources, deficiency manifestation and biological functions of fat soluble and water soluble vitamins.

References:

1. Lehninger Principles of Biochemistry-David L. Nelson, Michael M. Cox, Macmillan Worth Publishers.
2. Harper's Biochemistry-Rober K. Murray, Daryl K. Grammer, McGraw Hill, Lange Medical Books. 25th edition.
3. Fundamentals of Biochemistry-J.L. Jain, Sunjay Jain, Nitin Jain, S. Chand & Company.
4. Biochemistry-Dr. Amit Krishna De, S. Chand & Co., Ltd.
5. Biochemistry-Dr. Ambika Shanmugam, Published by Author.
6. Biomolecules-C.Kannan , MJP Publishers,Chennai-5.

CORE PRACTICAL - I

Objectives

1. Students should know the principles, theory and calculations of each experiment.

2. They should know to prepare all the solutions by themselves. They should standardize their solutions individually.

1. EXPERIMENT INVOLVING TITRIMETRIC PROCEDURES

a. Estimation of amino acids by formal titration.

b. Estimation of ascorbic acid by titrimertic method using 2, 6-dichlorophenol indo phenol.

c. Determination of saponification value of edible oil.

d. Determination of Acid number of edible oil.

e. Estimation of reducing sugar from biological fluids by Benedict's titrimertic method.

f. Iodine number of oil.

2. QUALITATIVE ANALYSIS.

a. Reactions of simple sugars including glucose, fructose, galactose, mannose, pentose, maltose, sucrose, lactose, starch, glycogen and dextrin.

b. Reactions of proteins - solubility, Biuret, Millon's, Xanthoproteic test, denaturation by heat, pH change and precipitation by acidic reagents. Color reactions of amino acids like tryptophan, tyrosine, cysteine, methionine, arginine, proline and histidine.

c. Reactions of lipids - solubility, saponification tests for unsaturations, Liebermann-Burchard test for Cholesterol.

ALLIED – 2

CHEMISTRY – II

OBJECTIVE:

- Basic knowledge on Coordination Chemistry, Industrial Chemistry, Carbohydrates, Aminoacids, Proteins, Electrochemistry, Paints and Pigments, dyes, Vitamins, Medicinal Chemistry, Corrosion and Applications wherever necessary are to be taught for II- semester.

UNIT – I

1.1 Coordination Chemistry - Nomenclature of Coordination Compounds - Ligands, Central Metal Ion and Complex Ion – Definition and Examples – Coordination Number - Werner's Theory of Coordination Compounds - Chelates - Functions and Structure of Haemoglobin and Chlorophyll.

1.2 Industrial Chemistry - Fertilisers and Manures – Biofertilisers - Organic Manures and their importance - Role of NPK in plants - Preparation and Uses of Urea, Ammonium Nitrate, Potassium Nitrite and Super Phosphate of Lime.

1.3 Contents in Match Sticks and Match Box - Industrial making of Safety Matches – Preparation and Uses of Chloroform, DDT, Gammexane and Freons.

UNIT – II

2.1 Carbohydrates - Definition and Examples - Classification – Oxidation and Reduction Reactions of Glucose - Structure of Glucose (Structural elucidation not necessary) - Uses of Starch - Uses of Cellulose Nitrate and Cellulose Acetate.

2.2 Amino Acids – Definition and Examples - Classification of Amino Acids - Preparation - Gabriel Phthalimide Synthesis – Properties – zwitterion and Isoelectric point - Structure of Glycine.

2.3 Proteins – Definition - Classification of Proteins based on Physical properties and Biologcal functions - Primary and Secondary Structure of Proteins (Elementary Treatment only) – Composition of RNA and DNA and their Biological role - Tanning of Leather - Alum (Aluminum chloride tanning) - Vegetable tanning – Chrome Tanning.

UNIT – III

3.1 Electrochemistry - Electrolytes – Definition and Examples – Classification - Specific and Equivalent Conductance - their determination – Variation of Specific and Equivalent conductance with Dilution – Ostwald's Dilution Law and its Limitations.

3.2 Kohlrausch's Law - Determination of Dissociation Constant of weak Electrolytes using Conductance measurement - Conductometric titrations.

3.3 pH – Definition and pH determination by indicator method - Buffer solutions - Buffer action - Importance of buffers in the living systems.

UNIT – IV

4.1Paints - Components of Paint – Requisites of a Good Paint - Pigments – Classification of Pigments on the basis of Colour – Examples - Dyes – Definition – Chromophores and Auxochromes – Examples - Colour and Dyes - Classification based on Constitution and Application – Examples.

4.2 Vitamins – Definition – Classification – Water Soluble and Fat Soluble – Occurrence - Biological Activities and Deficiency Diseases caused by Vitamin A, B, C, D, E and K - Hormones – Definition and Examples – Biological Functions of Insulin and Adrenaline.

4.3 Chromatography - Principles and Applications of Column and Paper chromatography- R_f value.

UNIT – V

5.1 Drugs - Sulpha Drugs – Preparation and Uses of Sulphapyridine and Sulphadiazine - Mode of Action of Sulpha Drugs - Antibiotics - Uses of Penicillin, Chloramphenicol and Streptomycin - Drug Abuse and Their Implication - Alcohol – LSD.

5.2 Anaesthetics - General and Local Anaesthetics - Antiseptics - Examples and their Applications - Definition and One Example each for Analgesics, Antipyretics, Tranquilizers, Sedatives - Causes, Symptoms and Treatment of Diabetes, Cancer and AIDS.

5.3 Electrochemical Corrosion and its Prevention – Electroplating – Applications.

ALLIED PRACTICAL

CHEMISTRY

VOLUMETRIC ANALYSIS

1. Estimation of HCl – Standard sulphuric acid.
2. Estimation of Borax - Standard Sodium Carbonate.
3. Estimation of NaOH – Standard Oxalic Acid.
4. Estimation of $FeSO_4$ – Standard FAS.
5. Estimation of Oxalic acid – Standard $FeSO_4$.
6. Estimation of FAS – Standard Oxalic Acid.
7. Estimation of Oxalic acid – Standard Oxalic Acid.
8. Estimation of Fe^{2+} using Diphenylamine / N- Phenyl Anthranilic acid as indicator.

ORGANIC ANALYSIS

Systematic Analysis of Organic Compounds containing One Functional Group and Characterisation by Confirmatory Tests.

Reactions of Aromatic Aldehyde, Carbohydrates, Mono and Dicarboxylic acids, Phenol, Aromatic Primary Amine, Amide and Diamide.

REFERENCE BOOKS

- Inorganic Chemistry - P. L. Soni - Sultan Chand (2006).
- Inorganic Chemistry - B. R.. Puri, L. R. Sharma and K. C. Kallia – Milestone Publications (2013).
- Selected Topics in Inorganic Chemistry - W. U. Malik, G. D. Tuli and R. D. Madan - S. Chand Publications (2008).

- Text Book of Physical Chemistry - P. L. Soni, O. P. Dharmarha andU. N. Dash - Sultan Chand & Co – 2006.
- Understanding chemistry – C. N. R. Rao, Universities Press – 2011.

SEMESTER III

PAPER – 3

BIOCHEMICAL TECHNIQUES – I

UNIT - I

Units of measurements of solutes in solution, e.g. Normality, Molality, Molarity, Ionic strength, Millimoles. Osmosis, Osmotic pressure, Osmolarity and its application. Concept of isotonic, hyper and hypotonic solution and its importance in biology.

UNIT - II

Concept of pH, pOH, buffer and its application, buffer capacity. Henderson - Hasselbalch equation and its importance. Buffer in body fluids, Red blood cells, white blood cells, tissues and its role.

UNIT - III

Principle, instrumentation and applications of hydrogen electrode, glass electrode in determination of pH. Principle, instrumentation and applications of Clark oxygen electrode.

UNIT - IV

General principle of chromatography. Partition and adsorption chromatography. Principle, operation procedure and applications of paper chromatography and their types. Principle, instrumentation, application of thin layer chromatography, ion exchange chromatography, and molecular gel exclusion chromatography and its application in separation of macromolecules.

UNIT – V: Basic principle of centrifugation techniques, sedimentation rate, Svedberg unit / sedimentation coefficient. Preparative ultracentrifuge, Differential centrifugation, density gradient centrifugation, rate zonal, isopycnic, equilibrium centrifugation. Analytical ultracentrifuge method - determination of molecular weight by sedimentation in an ultra centrifuge.

2. Principles and Techniques of Practical Biochemistry- Keith Wilson And John Walker, Cambridge Press.
3. Introduction to Practical Biochemistry - Shawney, Randhir Singh, Naraso Pub, N. Delhi.
4. Analytical Biochemistry - R.B. Turner, Elsevier, N.Y.
5. Biochemistry Laboratory: Modern theory and techniques -Rodney Boyer, Prentice Hall
6. Instrumental methods of chemical analysis - Chatwal -Anand, Himalayan Publication.
7. Biophysical Chemistry - Upadhyay and Upadhyay Nath, Himalayan Publication.

ALLIED - 3

1. MICROBIOLOGY – I

UNIT - I

Definition and scope of Microbiology, History and Recent Developments, Spontaneous generation, Biogenesis, Contribution of Louis Pasteur, Leewen Holk, Lazzarn - Spallanzani, John Tyndall, Joseph Lister, Robert Koch, Microscopy - Simple, Compound, Light Microscopy Dark ground, Phase contrast, Flurescence and Election microscopy.

UNIT - II

Five Kingdom consept cell Theory, Binomial Nomendature of microbes, species concept, classical approach with examples, Anatomy of Prokaryotes and Eukaryotes, ultra structure and function of cellwall and cell organelles.

UNIT - III

Culture Techniques, Media preparation, Preservation of cultures, Aerobic and Anaerobic culture techniques, Microbial morphology - wet mount, Hanging drop staining methods, Dyes, Simple - Differential and Special staining techniques Acid fast staining spore stain, Capsule stain, staining for met achromatic Granules, Development of Laboratory Techniques for pure and Mixed culture.

UNIT - IV

Antimicrobial chemotheraphy - Antibiotics - source, classification mode of action - Antimicrobial resistance - Tests for Sensitivity to Antimircrobial agents and its Quality control classical techniques of Microbial identification - Morphological, Physiological and Biochemical properties.

UNIT - V

Measurement of microbial growth Batch and continuous culture, Growth Determination - Growth curve. Structural characteristics of algae - Cholrella, Fungi - Mucor and Protozoa - Entamoeba.

ALLIED – 3

2. ZOOLOGY I

Objective:

To acquire knownledge about different kinds of animal species.

To study the systematic and fuctional morphology of invertebrates and chordates.

UNIT – I:
Type study includes life history.

Protozoa - Entamoeba, **Porifera** - Sycon. **Coelenterata** - Obelia geniculata. **Platyhelminthes** - Teania solium.

UNIT - II

Annelida - Earthworm, **Arthropoda** - Prawn, **Mollusca** - Fresh water mussel, **Echinodermata** - Sea star.

UNIT – III:
Type study includes Morphology, digestive system, respiratory system, circulatory system and urinogenital system of Chordate.

Chordata - Genaral charters, **Prochordata:** Morphology of Amphioxus. **Vertebrates: Pisces** - Shark.

UNIT - IV

Amphibia: Frog, **Reptiles:** Calotes

UNIT - V

Aves: Pigeon, **Mammalia:** Rabbit.

SKILL BASED SUBJECT

PAPER – 1

FUNDAMENTALS OF COMPUTER

UNIT - I

Computer fundamentals - Introduction, Definition, importance and advantages. Binary number system, types of computer, computer language, package, operating system, network. Differences between computer and human being.

UNIT - II

Classification of computers - digital, analog, hybrid, micro, mini and super computers. Generations of computer, personal and advanced computers and their types. Microsoft windows - windows fundamental. Managing the file system, printing in windows, windows accessories, control panel.

UNIT - III

Memory unit- primary and Auxiliary. Computer hardware - Input unit, Central processing Unit (CPU), output unit, UPS and external modem. MS Word - Introduction, starting MS Word, Standard menus–file, edit, view, Formatting a text, layouts, inserting a diagram, graph, page numbers, borders, bullet and numbering, spelling and grammar, letter and mailing, mail merge, tables and its applications.

UNIT - IV

MS Excel - Introduction, starting MS excel, creating a worksheet, page setup, print area, paste special, formula. Insert and formatting - cells, rows, columns and sheets. Functions, hyperlink, pivot charts, sorting, filters, header and footers, formula bars, status bar, options and its application.

UNIT - V

MS Power point- - Introduction, power point file types, creating a presentation, using color schemes, viewing a presentation, managing slide shows , adding pictures, transaction effects, animations, action setting and action buttons and its application.

NON MAJOR ELECTIVE

PAPER – 1

HEALTH AND NUTRITION

UNIT-I

Introduction and definition of food and Nutrition. Basic Food groups-Energy yielding, Body Building, Protective Foods. Basic concepts of Energy Expenditure, Unit of Energy, Calorific values of Proteins, Carbohydrates and Fats. BMR.

UNIT-II

Physiolgical role and Nutritional significance of Carbohydrates, Proteins, Lipids, Vitamins and Minerals. Biological value of Proteins (Animal and Plant), Single cell Proteins.

UNIT-III

Composition of Balanced Diet, RDA for Infants, Children, Adolescent, Adult male, female, Pregnant, Lactating women and Old age.

UNIT-IV

Food processing, Food Preservation. Principles of Diet therapy, therapeutic diets for Anaemia, heart diseases, obesity and Diabetes Mellitus.

UNIT-V

Protein Malnutrition (Kwashiorkar), Undernutrition (Marasmus) their preventive and curative measures. Deficiency diseases of Vitamins.

References

1. Text Book of Physiology and Nutrition-M.Swaminathan.
2. Human Nutrition &Dietetics-Davidson and Passemore.
3. Nutrition and Dietetics-Shubangini Joshi.

SEMESTER IV

PAPER – 4

BIOCHEMICAL TECHNIQUES – II

UNIT - I

Principles of electrophoresis, factors affecting electrophoretic mobility - sample, electric field, supporting medium, composition of buffer. Sodium dodecyl sulphate, polyacrylamide gel electrophoresis (SDS- PAGE) and its application. Determination of molecular weight of protein by SDS PAGE.

UNIT - II

Principle, methodology and application of immuno electrophoresis. Tiselius moving boundary electrophoresis and its application in serum protein separation. Principle, methods and application of Agarose gel electrophoresis.

UNIT - III

Basic principle of electromagnetic radiation, energy, wavelength, wave number, frequency. Absorption and emission spectra. Beer Lambert's law. Basic principle, instrumentation, application of colorimetry techniques. Principle, instrumentation, application of UV- visible spectroscopy.

UNIT - IV

Principle and instrumentation of spectrofluorimetry techniques. Principle, instrumentation and application in atomic absorption spectroscopy. Principle and instrumentation of flame photometry. Application in analysis of trace elements- sodium and potassium.

UNIT - V

Radiation, type of radioactive decay, half-life, unit of radioactivity. Detection and measurement of radioactivity - Methods based upon ionization (GM Counter), excitation (Scintillation counter). Application of radioisotopes in the elucidation of metabolic pathyways, clinical scanning and radio dating, RIA. Biological hazards of radiation and safety measures in handling radio isotopes.

5. Biochemistry Laboratory: Modern theory and techniques -Rodney Boyer, Prentice Hall
6. Instrumental Methods of chemical analysis - Chatwal -Anand,Himalayan Publication.
7. Biophysical Chemistry - Upadhyay and Upadhyay Nath, Himalayan Publication.

CORE PRACTICAL – II

1. BIOCHEMICAL PREPARATIONS

a. Isolation of Lecithin from egg yolk.

b. Isolation of Cholesterol from egg yolk and its estimation.

c. Isolation of Starch from potato.

d. Isolation of Casein and Lactalbumin from milk.

e. Isolation of Lipids by Folch's methods.

f. Isolation of Chromosomal DNA from liver cells.

2. CHROMATOGRAPHIC SEPARATION

a. Paper chromatographic separation and detection of aminoacid & Simple sugars.

b. Chromatographic separation of Chlorophyll & Carotenes of flower pigments by using Column chromatography.

c. Verification of Chargaff's rule by paper chromatography (Demonstration only).

3. PREPARATION OF BUFFERS

Phosphate buffer, Tris buffer and Citrate buffer.

4. COLORIMETRIC ESTIMATION

a) Estimation of Amino acid by Ninhydrin method.

b) Estimation of Protein by Biuret method.

c) Determination of DNA by Diphenylamine method.

d) Determination of RNA by Orcinol method.

ALLIED - 4

1. MICROBIOLOGY – II

UNIT - I

Soil Microbiology - Soil structure, Soil formation, Characterisation of Soil Types and importance, Biofertilizers.

UNIT - II

Aquatic Microbiology, Sewage Treatment - Physiological and Biological. Microbes in air, Distribution and Source of Airborne Organisms.

UNIT - III

Food Microbiology, Microbial Spoilage of food, food preservation techniques, Microbes in Milk and their source, Pasteurisation techniques. Industrial Production - Pencillin.

UNIT - IV

Morphology, Classification, Characteristics Pathogenecity, Laboratory diagnosis and prevention of Infections caused by following organisms mycobacteria, dermatophytes, Hepatitis, Entamoeba histolytica, Antigens - Antibody reactions.

UNIT - V

Biotechnology - Definition of a Gene, structure, Cloning Techniques, Genomic library. Nan technology - SCP production. Gene Theraphy methods.

ALLIED

2. ZOOLOGY II

Objective:

To study the principles of cell biology, genetics, developmental biology, physiology, ecology and evolution.

UNIT - I

Cell Biology - structure of animal cell, **Genetics:** molecular structure of gene - gene function, sex linked inheritance. Genetic Engineering and its application.

UNIT - II

Embryology - cleavage and gastrulation of Amphioxus.

Human Physiology: Digestion, Circulation - blood components, structure of heart, heart function.

UNIT - III

Diseases of Circulatory system - blood pressure, heart disease - Ischemia, Myocardial Infarction, Rheumatic heart disease, stroke.

Excretion - structure of kidney and mechanism of urine formation.

UNIT - IV

Environmental Biology - Biotic factors and Abiotic factors, food chain and food web. Pollution - Environmental degradation, (Air, Water and Land) - Green house effect - Bioremediation, Biodegradation - Global warming - acid rain.

UNIT - V

Evolution: Theories of Lamarkism & Darwinism.

ALLIED PRACTICAL

1. MICROBIOLOGY – I & II

1. Clearing of glassware, sterilization techniques.

2. Gram stain, Motility (Hanging drop)

3. Enumeration of soil microbes.

4. Enumeration of sewage microbes.

5. Assessment of milk quality by MBET test.

6. Streak plate, pour plate techniques.

7. Isolation of puncture techniques.

8. Wet mount preparation fungal material.

9. Serial dilation techniques.

10. Slant preparation.

11. Study of SCP, blue greens algee

12. Assessment of Air quality

13. Plant viral diseases like TMV, Tomato milting HIV, Virus structure diseases.

14. Micro photographs in Biotechnology of Microbes and Microbial products demonstration and identification.

15. Diseases like Tuberculosis, Chorine beefier diphtheria demonstration identification.

16. Medically important pathogens micro photographs demonstration.

17. Root Nodules Rhizobium isolation and identification methods.

ALLIED PRACTICAL

2. ZOOLOGY

I MAJOR PRACTICAL

DISSECTIONS

Cockroach: Digestive and nervous system

Prawn: Nervous system

II MINOR PRACTICAL

MOUNTING

1. Mouth parts of **Mosquito** and **Honey bee**

2. **Earthworm** - Body setae

3. Placoid scales of **shark**

III SPOTTERS

Entamoeba, Sycon, Obelia, Taenia solium (entire, scolex) earthworm (entire, Pineal setae) Prawn (entire), Fresh water mussel, Sea star, Amphioxus - Entire, Amphioxus - T.S. through pharynx, Shark, Frog, Calotes, Pigeon, feathers of pigeon and Rabbit.

Sphygnomanometer, Stethoscope, Rain gauge.

SKILL BASED SUBJECT

PAPER – 2

COMPUTER APPLICATIONS

UNIT - I

Operating system - MS DOS, DOS Features, MS DOS opening and closing, DOS commands, Batch Files. Windows XP- opening and closing, background setting, date and time adjustment, note pad, word pad, painting. Unix features and commands.

UNIT - II

Introduction to telecommunication, Networking. Internet - Introduction, Importance, requirements for internet. Electronic mailing, chatting, search engine, web pages.

Multimedia - Introduction, applications, components and its uses. Multimedia design, multimedia concept.

UNIT – III

Computer maintenance - causes of failure, components failure, temperature and humidity, dust and other particle, power line problems. Downloading software and files, copying CD/DVD. Computer virus- introduction, types, symptoms, virus avoiding methods, antivirus programs.

UNIT – IV

Computer application in banking, industries, educational institutions, hospitals, Research institutions - ISRO, BARC. Network - local area network, wide area network.

UNIT – V

HTML – Introduction – history – basic tags – tables – frames – images – anchor tags – hyperlinking documents – web browsers.

References :

1. Computer fundamental, V.K. Jain

2. Multimedia, System design, Prabhat k. Andleigh, Kiran Thakrar.

NON MAJOR ELECTIVE

PAPER – 2

FIRST AID

Unit I

First Aid: Important Rules of First Aid, First Aid Box. Injuries (Head, Spinal, Eye, Ear), Sprains and Strains.

Unit II

Cuts and Abrasions, Bleeding, Fractures, Dislocations of bones, Burns, Amputations, Nose bleeds, Electric Shock, Radiation burns.

Unit III

Common medical emergencies - First aid during Chest pain, Stroke, Seizures, Breathing difficulties, Epilepsy.

Unit IV

Common medical emergencies - First aid during Diabetic emergencies, Choking, Fainting, Heart attack, Low Blood Pressure.

Unit V

Poisonous Bites (Insects and Snakes) and Stings (Honey bee) - Animal bites (Dog) – Some Common Poisons and their antidotes – Acid Poisoning – Alkali Poisoning – Poisoning by Disinfectant.

Reference

1. Jayashree Ghosh – A Textbook of Pharmaceutical Chemistry, 1st Ed – S.S. Chand & Company

SEMESTER V

PAPER – 5

ENZYMES AND INTERMEDIARY METABOLISM

UNIT-I: Enzymes

Definition, units, various classifications, nomenclature, specificity, isoenzymes, factors affecting enzyme activity - pH, temperature, enzyme concentration. Lock and key mechanism, Induced Fit theory. Michaelis Menten equation, Line weaver Burk plot. Enzyme inhibition - Competitive, Non competitive and Uncompetitive (Concepts with example) inhibition.

UNIT-II: Carbohydrates Metabolism

Role of high energy compounds-Electron transport chain and Oxidative phosphorylation. Glycolysis, Glycogenesis and glycogenolysis, Citric acid cycle, Gluconeogenesis, HMP shunt.

UNIT III: Lipid Metabolism

Oxidation of fatty acids – Beta oxidation, alpha oxidation and omega oxidation. Oxidation of fatty acids with odd number of carbon atoms. Ketogenesis. Biosynthesis of saturated fatty acids and unsaturated fatty acids. Biosynthesis and degradation of triacyl glycerol and phospholipids. Biosynthesis and degradation of cholesterol.

UNIT-IV: Protein Metabolism

Degradation of proteins, Oxidative, Non-oxidative, deamination and decarboxylation of amino acids, Urea Cycle and Creatinine formation.

UNIT-V: Nucleic acid Metabolism

Biosynthesis and degradation of purine and pyrimidine nucleotides, uricotelic and urotelic system, inhibitors of nucleotides biosynthesis.

References:

1. Enzymes - Dixon and Webb
2. Understanding enzymes - Palmer
3. Enzyme kinetics – Segel, I.H.

5. Lippincott's Biochemistry - P.C. Champe
6. Harper's Biochemistry - Murray
7. Biochemistry - Voet and Voet

PAPER – 6

GENETICS AND MOLECULAR BIOLOLGY

UNIT-I

Mendelian genetics: Mendel's law of inheritance, test cross, back cross and law of incomplete dominance.

UNIT-II

Definition of gene, organization of genes and non coding DNA in prokaryotes. Eukaryotes – unique, moderately repetitive and highly repetitive DNA sequence, satellite DNA. Cot value. DNA is the genetic material - experimental evidence – Griffith, McLeod, McCarty and Avery, Hershey – Chase experiments. Definition and types of replication, experimental proofs for semi-conservative replication. Replication in prokaryotes and inhibitors of replication - requirements and mechanism of prokaryotic DNA-Replication.

UNIT-III

Prokaryotic transcription-RNA polymerases, role of sigma factor, initiation, elongation and termination. (Rho - dependent and independent). Post transcriptional modification in prokaryotes. Post-transcriptional modifications of mRNA, rRNA and tRNA. Inhibitors of transcription. Reverse transcription.

UNIT-IV

Translational activation of amino acids, initiation, elongation and termination of protein synthesis in prokaryotes. Inhibitors of protein synthesis. Post translational modification of proteins. Genetic code - definition, deciphering and salient features of genetic code. Composition of prokaryotic and eukaryotic ribosomes. Structure of t-RNA. Coding and non coding strands of DNA. Role of signal peptides.

UNIT - V

DNA repair mechanism-excision, SOS and UV repair. Prokaryotic gene regulation – Operon concept, Lac operon, positive and negative control. Gene mutation types - point, transition, transversion, frame shift, insertion and deletion.

PAPER – 7

HUMAN PHYSIOLOGY AND NUTRITIONAL BIOCHEMISTRY

UNIT-I: Respiratory and Circulatory Systems

Respiratory System: Components of transport of Oxygen and Carbon dioxide, Role of hemoglobin in transport. Mechanism of respiration, Chloride shift, Bohr's effect.

Circulatory System: Structure and functions of Heart, Blood vessels and its types, cardiac cycle, factors controlling blood pressure, electrocardiogram.

UNIT-II: Digestive and Excretory systems

Digestive system: Components of Digestive system, Digestion, absorption of carbohydrates, proteins and lipids. Mechanism of HCl formation, Role of various enzymes involved in digestive process.

Excretory System: Physiology of excretion, Kidney, GFR, Urine formation, Urine concentration, Micturition, Renin-Angiotensin system.

UNIT-III: Endocrine and Nervous systems

Endocrine glands: Hormones and its types, Functions of hormones. Brief outline of various endocrine hormones and their functions.

Nervous System: Brain, spinal cord, nerve cells, and nerve fibers. Synapse, chemical and electrical synapses, nerve impulses, action potential and neurotransmission.

UNIT-IV: Nutrition and Dietary Systems

Definition of food nutrition, basic food groups, Physiological role and nutritional significance of carbohydrates, protein, lipids, vitamins and minerals. Protein calorific malnutrition – Aetiology, management of Marasmus and Kwashiorkor. Nutrigenetics, Nutrigenomics (brief outline).

UNIT-V: Nutritive and Calorific Value of Food

Unit of energy measurements of food stuffs by Bomb colorimeter, calorific value and RQ of food stuffs. Basic metabolic rate (BMR) - its measurements and influencing factors, SDA of food. Essential amino acids. Nutritive value of protein. Composition of balanced diet for infants, pregnancy and lactating women and old age.

6. Guide to physiology- Y. Rajakshmi, S. Chand & Co., Ltd.

ELECTIVE

PAPER – 1

MEDICAL LABORATORY TECHNOLOGY – I

UNIT-I: Laboratory care and instrumentation

Code of conduct for laboratory personnel - safety measures in the laboratory-chemical/Reagents, labelling, storage and usage. First Aid in laboratory accidents - Precautions and first aid equipments.

UNIT-II: Laboratory equipments

Working of microscope - Phase contrast, Fluorescence, Electron microscope. Centrifuge, analytical balance, colorimeter - Usage and care. Glass wares, serological water bath, incubator.

Reporting laboratory tests and keeping records. Sterilization, preparation of reagents. General approach to quality control, quality control of quantitative data.

UNIT-III: Urine Analysis

Composition, collection, preservation, gross examination, interfering factors, chemical examination. Significance of sugar in urine, ketone bodies in urine, bile pigments, hematuria, uric acid, microscopic examination of the urinary sediment.

UNIT- IV: Stool Examination

Specimen collection- inspection of faeces- odour, pH, Interfering substance. Test for occult blood, faecal fat, microscopic examination of stool specimen.

UNIT-V: Clinical Hematology

Collection of blood - Anticoagulant, preservation, Estimation of Hb, PCV, WBC, RBC, Platelets, ESR. Clotting time, bleeding time - normal value, clinical interpretation.

SKILLED BASED SUBJECT

PAPER – 3

BIOSTATISTICS – I

UNIT - I

Nature and scope of statistical methods and their limitations. Collection, classification, tabulation of statistical data.. Organization of data - Individual series, discrete series, continuous series / class interval. Diagrammatic and graphical representation of statistical data (bar diagram, line diagram, pictogram, histogram & horizontal and vertical bar diagram).

UNIT - II

Measure of central tendency - Introduction, Characteristics of a good average, Mean, Median, Mode (Raw, Discrete & Continuous data) Merits and demerits.

UNIT - III

Measure of Dispersion- Introduction, definition, classification & properties. Range - Introduction, definition, location of range in individual, discrete, continuous series, merits and demerits of Range. Standard deviation, Variance, Coefficient of Variation.

UNIT - IV

Probability - Introduction, Definition, Kinds of Probabilities. Sample Space - Addition and Introduction, definition of mean deviation, quartile deviation – simple problems. Permutation and Combination - Definition, Factorial symbol, formula with example.

UNIT - V

Correlation Analysis - Introduction, Definition, uses, correlation and causation, kinds of correlation. Types of correlation - Positive and negative, linear and non linear, simple and multiple, partial and total correlation.

SEMESTER VI

PAPER – 8

CLINICAL BIOCHEMISTRY

UNIT-I: Diseases related to carbohydrate metabolism

Regulation of blood sugar, Glycosuria - types of glycosuria. Oral glucose tolerance test in normal and diabetic condition. Diabetes mellitus and Diabetes insipidus - hypoglycemia, hyperglycemia. Ketonuria, ketosis.

UNIT-II: Diseases related to lipid and lipoproteins metabolism

Lipids and lipoproteins: Classification, composition, mode of action.Cholesterol - Factors affecting blood cholesterol level. Dyslipoproteinemias, IHD, atheroscelorosis- risk factor, fatty liver.

UNIT-III: Inborn errors of metabolism

Introduction - clinical importance, phenyl ketonuria, cystinuria, alkaptonuria, Fanconi's syndrome, galactosemia, albinism, tyrosinemia and hemophilia.

UNIT-IV: Organ function test

Liver function tests: Metabolism of bilirubin, jaundice - types, differential diagnosis. Liver function test - Icteric index, Vandenberg test, plasma protein changes, PT.

Renal function tests: Clearance test – Urea, Creatinine, Inulin, PAH test, Concentration and dilution test.

Gastric function tests: Collection of gastric contents, examination of gastric residuum, FTM, stimulation test, tubeless gastric analysis.

UNIT-V: Clinical enzymology

Functional and non-functional plasma enzymes. Isoenzymes with examples. Enzyme patterns in acute pancreatitis, liver damage, bone disorder, myocardial infarction and muscle wasting.

References:

1. Text book of Clinical Biochemistry - Carl A. Burdis and Edward R Ashwood
2. Text book of Medical Biochemistry - Dr. M.N. Chatterjee and rane shinde

5. Clinical Biochemistry with clinical correlation – Devin, Wiley
6. Practical clinical biochemistry – Harold Varley, CBS, New Delhi

PAPER – 9

BIOTECHNOLOGY

UNIT – I

Biotechnology: Definition and scope, types and branches of biotechnology. Enzymes for in vitro manipulation - Restriction endonucleases, SI nucleases, DNA ligases, Alkaline phosphatase, Reverse transcriptase, DNA polymerase, polynucleotide kinase, terminal transferase. Use of Linkers and Adapters. Cloning vectors, Plasmids - properties of ideal vectors and its types – pBR322, pUC18, pUC19. Bacteriophage ʎ, Cosmid, YAC, and Shuttle vector.

UNIT - II

Methods of gene transfer - transfection, microinjection, electroporation. Recombinant selection and screening methods, Insertional inactivation. Blotting Techniques - Southern, Northern and Western blotting techniques, DNA hybridization techniques, PCR.

UNIT - III

Plant tissue culture - Media composition, nutrients, growth regulators, initiation and differentiation. Callus and suspension culture. Micro propagation, Somatic embryogenesis and somoclonal variation. Protoplast isolation, protoplast fusion and regeneration of plants.

UNIT - IV

Equipments and requirements for animal cell culture - laminar flow, CO_2 incubator, natural media, synthetic media, substrate for cell culture, substrate treatment, disaggregation of tissues, Cell lines – types and properties.

UNIT - V

Applications of genetic engineering: Transgenic plants, transgenic mice (SCID and KNOCK OUT mice), transgenic sheep, transgenic fish, diagnostic and therapeutic applications of monoclonal antibodies.

References:

1. Concept in biotechnology - D. Balasubraniam et al., Universal press India 1996.
2. Plant tissue culture - Razdan, Oxford IBH Publisher.
3. Animal cell culture - Freshney, IRL Press.

5. Molecular biotechnology 2006 - Channarayappa Univ. Press
6. Molecular Biology & Biotechnology - H.D. Kumar(1997), Vivas publishing house Pvt .Ltd
7. Molecular biotechnology - principle and application of recombinant DNA 3rd edition Bernard, R. Glick Jack, J. Pasternak 2003, Library of Congress cataloging in publication data.
8. A text book of Biotechnology - R. C. Dubey, S. Chand & co
9. Biotechnology - Prakash S. Lohar, MJP publisher, Chennai -5.

CORE PRACTICAL – III

COLORIMETRIC ESTIMATION

1. Estimation of creatinine by Jaffe's method.
2. Estimation of urea by Diacetyl monoxine method.
3. Estimation of glucose by Folin Wu method
4. Estimation of glucose by O- Toludine method

EXPERIMENTS ON ENZYMES

1. Effect of pH, temperature and substrate concentration and determination of Km for amylase and Urease.
2. Assay of activity of alkaline phosphatase in serum.
3. Assay of serum Transaminases (SGOT, SGPT).

BIOTECHNOLOGY EXPERIMENTS

1. Preparation of media – liquid, solid, slant
2. Culture techniques – streak plate, pour plate, spread plate
3. Immuno diffusion – single diffusion

DEMONSTRATION EXPERIMENTS

1. Separation of proteins by SDS-PAGE
2. Isolation of plasmid DNA and separation by electrophoresis

ELECTIVE

PAPER – 2

MEDICAL LABORATORY TECHNOLOGY – II

UNIT - I: Blood Banking

Blood grouping- ABO System, ABO Grouping, Rh typing. Coomb's test. Blood transfusion - Blood donors, donor screening, drawing of blood, compatibility testing, cross matching, blood transfusion complications.

UNIT - II: CSF and Other Body Fluids

Cerebrospinal fluid analysis. Semen analysis, sputum examination, pregnancy test - Interpretation.

UNIT - III: Endocrine Function Test

Thyroid function test - thyroid hormones and its function. Clinical disorder - diagnosis.T_4, ^{131}I Uptake, TSH, Stimulation test, FT_4, FTI, TSH, TBG.

UNIT - IV: Medical Parasitology

Amoebiasis, malarial parasites – life cycle, pathogenesis of malaria – acute and chronic filariasis – diagnosis.

UNIT - V Medical Microbiology

Culturing of organisms from various specimens. Culture media and antibiotic sensitivity test (pus, urine, stool, sputum, throat swab, gram staining, Ziehl –Neilson staining (TB, Lepra bacilli). Safety procedure in microbiological techniques.

References:

1. Medical Laboratory Technology - K. Mukherjee. Vol. I, II, III. Tata Mcgraw-Hill Publishing Company Ltd.

4. Medical Lab Technology - Ramnik Sood.

ELECTIVE

PAPER – 3

IMMUNOLOGY

UNIT - I

Immunity: Types of immunity-Innate and Acquired immunity, Humoral and cell mediated immune response, primary and secondary lymphoid organs, structure of T, B and NK cell, structure and function of Neutrophils, Eosinophils and Basophils, Macrophages – Phagocytosis and inflammation.

UNIT - II

Antigens: Properties, Specificity, Immunogenicity, antigenic determinants, haptens and adjuvants, Major Histocompatibility Complex [MHC]. Antibodies: Properties, Structure, Classes, Subclasses of Immunoglobins, Monoclonal antibodies - Production and its applications, complement pathways.

UNIT - III

Allergy and Hypersensitivity – types – I, II, III and IV and their clinical manifestations. Autoimmunity, mechanism of autoimmunity, Autoimmune diseases – Rheumatoid arthritis and Myasthenia gravis.

UNIT - IV

Transplantation – Immunologic response, Graft vs Host reaction, mechanism and prevention of graft rejection (skin), immunosuppressive drugs. Immunology of malignancy: Tumour antigens, immune response in malignancy and immunotherapy of cancer.

UNIT - V

Antigen and antibody interactions - precipitation and agglutination reactions, Precipitation in gel (Ouchterlony procedure, radial immunodiffusion, Immuno electrophoresis), Electro immunediffusion. RIA and ELISA.

References:

1. Immunology - J. Kannan, MJP Publishers, Chennai-5

6. Essential and clinical Immunology - Halen chapel, Mansal Haney, Siraj Misbah and Nial Snowdan.
7. Immunology - Geoffrey Zubay, W.M.C, Brown publishers, 4th edition 1992.
8. Immunology - The immune system in health and disease, 3rd edition.

ELECTIVE PRACTICAL

MEDICAL LABORATORY TECHNOLOGY

1. HAEMATOLOGY

Hematology – Haemoglobin by Sahli's method, RBC count, PCV, ESR, Total and differential WBC count, Platelet count, Blood grouping, ABO system, Rh System, Clotting time, Bleeding time.

Serology – VDRL, CRP, RA, HIV, HBsAg, Pregnancy test.

2. MICROBIOLOGY

Sterilization and disinfection, culture, gram staining, media preparation, antibiotic sensitivity testing

3. URINE AND FAECES ANALYSIS

1. Collection of urine and faecal samples
2. Faecal analysis to detect fats, undigested food and blood
3. Qualitative analysis of urine for normal and pathological conditions.

References:

1. Practical clinical Biochmistry - Harold Varley, CBS, New delhi

4. laboratory Manual in Biochemistry – Jayaraman
5. Biochemical methods – S.Sadasivan And Manickam
6. Introduction to practical biochemistry – David T. Plummer.

SKILLED BASED SUBJECT
PAPER – 4
BIOSTATISTICS – II

UNIT - I

Theoretical Distribution – Definition, Type of Theoretical Distribution, Binomial distribution and Poisson distribution- Definition, characteristics and Properties. Normal distribution, normal curve, standard Normal distribution - characteristics and Properties.

UNIT - II

Regression Analysis – Introduction, Definition, uses, types of regression- Positive and negative, linear and non linear, simple and multiple, partial and total. Regression equation – Regression equation of X on Y and Y on X.

UNIT - III

F-test and it's application, testing of Hypothesis – Null hypothesis, alternative hypothesis, standard error.

UNIT – IV

Chi- Square test- Introduction, Characteristics of Chi- Square test, Assumption, degree of freedom, application of chi- square test, t-test – Application and its Uses.

UNIT - V

Analysis of Variance- Introduction, techniques of Analysis of variance (ANOVA) – One way and two way classification, steps involved in analysis.

THIRUVALLUVAR UNIVERSITY

B.Sc., CHEMISTRY SYLLABUS UNDER CBCS

(With effect from 2017 - 2018)

SEMESTER I

PAPER – 1 GENERAL CHEMISTRY – I

Objective:

Basic concepts regarding Atomic Structure, Periodic Properties, Bonding Concepts, Ionic Bond, VSEPR and MO Theories, Nomenclature of Organic Compounds, Hybridisation, Reaction Intermediates, States of Matter, Principle of Volumetric Analysis, Related Problems and Applications wherever necessary are to be taught for I- Semester.

UNIT-I ATOMIC STRUCTURE

1.1 Quantum numbers n, l, m and s – Pauli's exclusion principle – Energy distribution and orbitals - Hund's rule of maximum multiplicity - Aufbau's principle - Electronic Configuration of elements - Stability of Half-filled and completely filled orbitals.

1.2 Classification of elements – General characteristics of s, p, d and f- Block elements – Periodicity of properties- Definition and Periodicity of the following properties – Atomic radii and Ionic radii - Factors affecting the Atomic radii and Ionic radii.

1.3 Ionisation potential, Electron affinity and Electronegativity - Factors affecting the Ionisation potential, Electron affinity and Electronegativity – Pauling scale – Mulliken electronegativity scale – Applications of Electronegativity regarding the Bonding nature.

UNIT- II CHEMICAL BONDING

2.1 Ionic bond - Conditions for the formation of ionic bond - General properties – Energetics of formation of NaCl from Na^+ and Cl^- - Hydration energy, Lattice energy and their applications – Born-Haber cycle - Fajan's rule - Characteristics of Electrovalent compounds.

2.2 Valence Bond Theory - Conditions for the formation of covalent bond - General properties - Polarity of bonds - Orbital overlap - Bond lengths and Bond energies - Hybridisation - Sigma and Pi bonds - VSEPR theory - Geometries of BF_3 , NH_3 , H_2O, PCl_5 and SF_6 molecules - Partial ionic character of covalent bond - Percentage of ionic character.

2.3 Molecular Orbital theory – Bonding and Anti-bonding orbitals - Relative order of Energies of molecular orbitals - MO diagram of H_2, He_2, O_2, N_2, F_2 and CO - Bond Order - Stability and Magnetic properties of the molecules - Comparison of VB and MO theories.

UNIT- III BASIC CONCEPTS OF ORGANIC CHEMISTRY

3.1 Classification of Organic Compounds – Nomenclature of Organic Compounds – Functional Groups - Homologous Series - IUPAC Recommendations for Naming Simple Aliphatic and Alicyclic Compounds.

3.2 Basic concepts of bonding in organic chemistry - Hybridisation – Definition – Geometry of Molecules - Methane, Ethane, Ethylene, Acetylene and Benzene - Electron displacement effects - Inductive - Inductomeric - Electromeric – Mesomeric Effect - Resonance - Hyperconjugation and Steric Effects.

3.3 Cleavage of bonds - Homolytic and Heterolytic fission of carbon-carbon bond – Methods to determine the Reaction Mechanism - Reaction intermediates - Structure and Stability of Carbocations, Carbanions and Free radicals.

UNIT-IV STATES OF MATTER

4.1 Gaseous state - Kinetic gas equation - Derivation - Gas laws from the kinetic gas equation - Kinds of velocities - Mean, RMS, Most Probable Velocities - Calculation of molecular velocities - Maxwell's distribution of Molecular Velocities (No derivation) - Effect of Temperature on velocity distribution - Equipartition of energy - Heat capacity on molecular basis - Virial equation of state - Boyle temperature - Coefficient of Compressibility and Thermal expansion.

4.2 Liquid state - Density – Diffusion - Viscosity – Evaporation - Surface tension - Effect of temperature on surface tension - Parachor - Definition and Applications only - Coefficient of Viscosity - Effect of Temperature and Pressure - Liquid crystals - Classification and Molecular arrangements.

4.3 Solid State - Crystal lattices - Laws of Crystallography - Symmetry elements in crystals - Seven crystal systems - Unit cell - Space lattice - Bravais lattices - Law of Rational Indices - Miller indices.

UNIT-V PRINCIPLES OF VOLUMETRIC ANALYSIS

5.1 Definitions of Molarity, Molality, Normality and Mole Fraction - Their Calculations - Definition and Examples for Primary and Secondary standards - Calculation of Equivalent Weight of Acid, Base, Oxidising Agent, Reducing Agent and Salts.

5.2 Principles of Volumetric Analysis - Theories of Acid- Base, Redox, Complexometric Iodometric and Iodimetric titrations.

5.3 Theories of indicators - Acid-base indicators - Choice of indicators - Redox, Metal ion and Adsorption indicators.

ALLIED

1. PHYSICS - I

UNIT – I: PROPERTIES OF MATTER

Elasticity : Hooke's Law – Elastic Constants – bending of beam – Bending moment – Cantilever Depression at the loaded end of a cantilever – determination of Young's modulus by non-uniform bending.

Torsion : Torsion couple – Potential energy in a twisted wire – Torsional pendulum – Time period – Determination of rigidity modulus by Torsional oscillation (without masses).

Viscosity: Viscosity of a liquid – Viscous force – Co-efficient of viscosity of a liquid – Poiseuille's formula .

Surface Tension: Surface Tension – Surface Tension and interfacial surface tension by the method of drops.

UNIT – II: HEAT

Heat: Specific heat – Newton's law of cooling – determination of specific heat of a liquid using Newton's law of cooling – Emissivity and Emissive Power.
Low Temperature: J.K. Effect – Positive Effect – Negative Effect – Temperature of Inversion – Super conductors. Type I and II – Meisner Effect – Helium I and II.

UNIT – III: ELECTRICITY AND MAGNETISM

Electricity: Potentiometer – Principle – Calibration of low range voltmeter – Measurement of internal resistance of cell – measurement of an unknown resistance.

Magnetism – Moment and pole strength of a magnet – Deflection magnetometer – Tan C position – Vibration magnetometer – Theory – Period of Oscillation – Determination of M and B_H using the deflection magnetometer in Tan C position and the vibration magnetometer.

UNIT – IV: SOUND AND ACOUSTICS OF BUILDING

Sound: Transverse vibration of strings – Velocity and frequency of vibrations of a stretched string – laws – sonometer – A.C. Frequency – Steel Wire – Brass wire.

Ultrasonics – Production by Piezo – electric method – properties and uses.
Acoustics of buildings: Reverberation – Reverberation time – Sabine's formula (definition only) – Sound absorption co-efficient of surface – conditions for the perfect acoustics.

UNIT – V: OPTICS

Interference: Air Wedge – Description – Test for optical flatness of glass plate – Determination of diameter of a thin wire by air wedge.

Diffraction: Theory of transmission grating – Normal Incidence – Determination of Wavelength of monochromatic source and Wavelength of mercury line using a grating by normal Incidence.

Fibre optics: principle-classification of optical fibres-fibre optic communication system block diagram.

Books for Study & Reference

1. Allied Physics – R. Murugesan S. Chand & Co. First Edition (2005).
2. Allied Physics – Dr. K. Thangaraj, Dr. D. Jayaraman Popular Book Department, Chennai.
3. Allied Physics – Prof. Dhanalakshmi and others.
4. Elements of Properties of Matter – D.S. Mathur, S. Chand & Co. (1999).
5. Heat and Thermodynamics – N. Brijlal and Subramaniam S. Chand & Co.
6. A text book of Sound – by M. Narayanamoorthy and other National Publishing Companies (1986).
7. Modern Physics – R. Murugesan S. Chand & Co. (2004).
8. Introduction to Fibre optics- K.Thyagarajan and Ajay Ghatak,Cambridge,University Press(1999).

ALLIED

3. ZOOLOGY I

Objective:

To acquire knownledge about different kinds of animal species.

To study the systematic and fuctional morphology of invertebrates and chordates.

UNIT – I:
Type study includes life history.

Protozoa - Entamoeba, **Porifera** - Sycon. **Coelenterata** - Obelia geniculata. **Platyhelminthes** - Teania solium.

UNIT - II

Annelida - Earthworm, **Arthropoda** - Prawn, **Mollusca** - Fresh water mussel, **Echinodermata** - Sea star.

UNIT – III:
Type study includes Morphology, digestive system, respiratory system, circulatory system and urinogenital system of Chordate.

Chordata - Genaral charters, **Prochordata:** Morphology of Amphioxus. **Vertebrates: Pisces** - Shark.

UNIT - IV

Amphibia: Frog, **Reptiles:** Calotes

UNIT - V

Aves: Pigeon, **Mammalia:** Rabbit.

4. BIOCHEMISTRY I

UNIT-I: Chemistry of Carbohydrates

Definition and Classification of carbohydrate. Monosaccharides - occurrence, structure; physical and chemical properties, linear and ring forms (Haworth formula) for glucose and fructose. Disaccharides - occurrence, structure; physical and chemical properties of sucrose and lactose. Polysaccharides - occurrence, structure, physical and chemical properties of starch.

UNIT-II: Chemistry of amino acids

Definition and classification of amino acids. Reaction with ninhydrin, common properties of amino acids, amphoteric nature, isoelectric point, isoelectric pH and Zwitter ion.

UNIT-III: Chemistry of Proteins

Classification based on solubility, shape and size. Physical properties: salting in and salting out, denaturation, peptide bond. Structure of protein: primary, secondary, tertiary and quaternary structure.

UNIT-IV: Chemistry of Lipids

Definition, classification and functions of lipids. Occurrence, chemistry and biological functions of simple lipids, compound lipids (e.g. phospholipids) and derived lipids: steroids (e.g. cholesterol). Physical property-emulsification. Chemical property-saponification. Functions of bile acids and bile salts.

UNIT-V: Chemistry of Nucleic acids

Definition - nucleoside, nucleotide and polynucleotide. Double helical model of DNA and its biological functions. Structure, types and functions of RNA: tRNA, mRNA and rRNA. Differences between DNA and RNA.

6. Biomolecules-C. Kannan , MJP Publishers, Chennai - 5.

5. MATHEMATICS – I*

Objectives of the Course:

To Explore the Fundamental Concepts of Mathematics

UNIT-I: ALGEBRA

Partial Fractions - Binomial, Exponential and logarithmic Series (without Proof) - Summation - Simple problems

UNIT-II : THEORY OF EQUATIONS

Polynomial Equations with real Coefficients - Irrational roots - Complex roots- Transformation of equation by increasing or decreasing roots by a constant - Reciprocal equations - Newton's method to find a root approximately - Simple problems.

UNIT-III : MATRICES

Symmetric - Skew-Symmetric - Orthogonal and Unitary matrices - Eigen roots and eigen vectors – Cayley - Hamilton theorem (without proof)-Verification and computation of inverse matrix

UNIT-IV: TRIGONOMETRY

Expansions of $\sin^n \theta$, $\cos^n \theta$, $\sin n\theta$, $\cos n\theta$, $\tan n\theta$ - Expansions of $\sin \theta$, $\cos \theta$, $\tan \theta$ in terms of θ.

UNIT-V: DIFFERENTIAL CALCULUS

Successive differentiation upto third order, Jacobians -Concepts of polar co-ordinates-Curvature and radius of curvature in Cartesian co-ordinates and in polar co-ordinates.

SEMESTER II

PAPER – 2

GENERAL CHEMISTRY - II

OBJECTIVES:

- Basic knowledge on s- and p- Block Elements, Group Study, Hydrocarbons, Cycloalkanes, Dienes, Quantum Chemistry, Thermochemistry, First Law of Thermodynamics, Derivation of Equations, Related Problems, Reaction Mechanism and Applications wherever necessary are to be taught for II- Semester.

UNIT-I s- and p- Block Elements

1.1 Alkali metals - Li, Na, K, Rb and Cs - Occurrence - Comparative study of Elements with respect to Oxides, Halides, Hydroxides and Carbonates - Exceptional property of Lithium - Diagonal Relationship of Li with Mg.

1.2 Alkaline earth metals - Be, Mg, Ca, Sr and Ba - Occurrence - Comparative study of the elements with respect to Oxides, Hydroxides, Halides, Sulphates and Carbonates - Exceptional property of Beryllium - Diagonal relationship of Be with Al - Comparison of Alkaline Earth Metals with Alkali Metals - Magnesium acting as bridge element between II A and II B groups - Magnesium resembles Zinc.

1.3 p- Block elements - Boron family - Group discussion - Anomalous behaviour of Boron - Diagonal Relationship between Boron and Silicon - Electron deficiency and Electron acceptor behaviour of Boron trihalides - Bonding in Diborane (Hydrogen-bridge structure) - Preparation, Properties, structure and Uses of Borazine - $NaBH_4$ - Preparation and Uses.

UNIT-II HYDROCARBONS

2.1 Alkanes - Methods of preparation of alkanes - Wurtz method, Kolbe's method and Reduction of alkyl halides - Physical and Chemical Properties of alkanes - Mechanism of Free Radical Substitution in alkanes – Halogenation and Reactivity.

2.2 Alkenes - Properties of alkenes – Electrophilic and Free radical addition - Addition reactions of Alkenes with mechanism - Addition of Hydrogen, Halogens, Hydrogen Halide (Markownikoff''s rule) - Hydrogen bromide (Peroxide effect) - Sulphuric Acid, Water, BH_3, Ozonolysis, Hydroxylation with $KMnO_4$ - Allylic substitution by NBS.

2.3 Alkynes - Acidity of alkynes - Addition of hydrogen - Hydroboration - Hydrohalogenation - Addition of hypohalous acid, Hydration - Addition of water with $HgSO_4$ catalyst - Oxidation with $KMnO_4$ – Ozonolysis - Formation of Acetylides.

UNIT-III DIENES AND CYCLOALKANES

3.1 Dienes – Classification - Conjugated, Isolated and Cumulative Dienes - Stability of Dienes - 1, 2- and 1, 4- Addition reactions of H_2 and HX with mechanisms – Synthesis of dienes – 1, 3 - Butadiene, Isoprene and Chloroprene - Diels-Alder reaction.

3.2 Cycloalkanes - Preparation using Wurtz's reaction, Dieckmann's ring closure and Reduction of aromatic hydrocarbons - Substitution and Ring opening reactions.

3.3 Stability of Alkanes, Alkenes and Cycloalkanes - Bayer's strain theory - Theory of Strainless rings.

UNIT-IV QUANTUM CHEMISTRY AND THERMOCHEMISTRY

4.1 Planck's Quantum theory of radiation - Photoelectric Effect - Compton Effect - Wave mechanical concept of the atom - de Broglie's relationship – Davisson and Germer experiment - Wave nature of electron - Heisenberg's Uncertainty Principle.

4.2 Schrodinger wave equation (Without derivation) - Significance of wave functions ψ and ψ^2 - Shapes of s, p and d- orbitals.

4.3 Thermodynamics - Definition and Explanation of terms - System, Boundary, Surroundings - Homogeneous and Heterogeneous systems - Isolated system - Closed system - Open system - Intensive and Extensive properties - State of a system - Independent state variables - Dependent state variables - Thermodynamic functions - State and Path functions.

UNIT-V THERMODYNAMICS

5.1 Thermodynamic processes - Types of processes - Cyclic - Reversible – Irreversible - Isothermal – Adiabatic Process - Exact and Inexact Differentials - Concept of Heat and Work - Zeroth Law of Thermodynamics.

5.2 First law of Thermodynamics - Statement and Equation – C_p and C_v Relationship - Calculation of W, Q, ΔE and ΔH for the Expansion of Ideal Gases under Reversible, Isothermal and Adiabatic Conditions.

5.3 Thermochemistry - Heat of a reaction - Exothermic and Endothermic reactions - Calculation of ΔH from ΔE and vice versa - Thermochemical equations - Bond dissociation energy - Calculation from thermochemical data - Variation of Heat of a reaction with temperature - Kirchoff's Equation and Its significance.

CORE PRACTICAL

Paper – 1

VOLUMETRIC ANALYSIS

Acidimetry

1. Estimation of Borax - Standard Sodium Carbonate

2. Estimation of Sodium Hydroxide - Standard Sodium Carbonate

3. Estimation of HCl – Standard Oxalic Acid.

Iodometry

4. Estimation of Copper - Standard Copper Sulphate

5. Estimation of Potassium Dichromate - Standard Potassium Dichromate

Complexometry

6. Estimation of Magnesium using EDTA.

7. Estimation of Zinc using EDTA

Dichrometry

8. Estimation of Ferrous Iron using Diphenyl amine / N- pPhenylanthranillic acid as indicator.

Precipitation titration

9. Estimation of Chloride in neutral medium (Demonstration experiment).

Permanganometry

10. Estimation of Ferrous Sulphate – Standard FAS.

11. Estimation of Oxalic Acid – Standard Oxalic Acid.

- Students must write Short Procedure for the given estimation in Ten Minutes during the examination and submit the Paper for Evaluation.

ALLIED – 2

1. PHYSICS II

UNIT – I: WAVE MECHANICS

Wave Mechanics – De Broglie Waves – Dual Nature – Experimental Study of Matter Waves – Davission and Germer's Experiment – G.P. Thomson's Experiment _ Heisenberg's uncertainty Principle – The position and moment of a particle.

UNIT – II : NUCLEAR PHYSICS

Particle accelerators – cyclotron, particle detectors – GM Counter Artificial Transmutation – Rutherford's Experiment – The Q value equation for nuclear reaction – Threshold energy – Nuclear Reactions.

Conservation Laws: Conservation of Charge – Conservation of Nucleons – Conservation of Mass – Energy – Conservation of Parity – Quantities conserved and quantities not conserved in a nuclear reaction.

UNIT – III : ENERGY PHYSICS

Sources of conventional energy – Need for non-conventional energy resources – solar energy utilization – solar water heater – solar drier – conversion of light into electrical energy – solar cell – merits and demerits of solar energy – wind energy – its conversion systems – energy from Bio mass – Bio gas generation – Industrial and space application.

UNIT – IV: CRYSTALLOGRAPHY

Crystallography : The crystal structure – Unit Cell –Bravais lattice- structures of simple cubic-BCC and FCC- co ordination number, packing factor calculation for the above structures –Hexogonal closed packed(HCP) structure -Miller indices – concept of Reciprocal Vectors.

UNIT – V: ELECTRONICS

Electronics: Transistor characteristics in common base and common emitter mode- Transistor single stage amplifier- Expression for input impedence, output impedence and current gain.
Digital Electronics : NAND and NOR as universal building blocks- De Morgan's theorem –statement and proof- Fabrication of diodes and transistors using Monolithic technology– limitations.

Books for Study & Reference

1. Allied Physics – R. Murugesan S. Chand & Co. First Edition (2005).
2. Allied Physics – Dr. K. Thangaraj, Dr. D. Jayaraman Popular Book Department, Chennai.
3. Allied Physics – Prof. Dhanalakshmi and others.
4. Elements of Properties of Matter – D.S. Mathur, S. Chand & Co. (1999).
5. Heat and Thermodynamics – N. Brijlal and Subramaniam S. Chand & Co.
6. A text book of Sound – by M. Narayanamoorthy and other National Publishing Companies (1986).
7. Modern Physics – R. Murugesan S. Chand & Co. (2004).
8. Electronic Principles and Applications – A.B. Bhattacharya, New Central Book Agency, Calcutta.
9. Introduction to Solid State Physics – C. Kittel, 5^{th} Edition Wiley Eastern Ltd.
10. Renewable & Sustainable energy sources – Agarwal.

3. ZOOLOGY II

Objective:

To study the principles of cell biology, genetics, developmental biology, physiology, ecology and evolution.

UNIT - I

Cell Biology - structure of animal cell, **Genetics:** molecular structure of gene - gene function, sex linked inheritance. Genetic Engineering and its application.

UNIT - II

Embryology - cleavage and gastrulation of Amphioxus.

Human Physiology: Digestion, Circulation - blood components, structure of heart, heart function.

UNIT - III

Diseases of Circulatory system - blood pressure, heart disease - Ischemia, Myocardial Infarction, Rheumatic heart disease, stroke.

Excretion - structure of kidney and mechanism of urine formation.

UNIT - IV

Environmental Biology - Biotic factors and Abiotic factors, food chain and food web. Pollution - Environmental degradation, (Air, Water and Land) - Green house effect - Bioremediation, Biodegradation - Global warming - acid rain.

UNIT - V

Evolution: Theories of Lamarkism & Darwinism.

6. Verma and Agarwal. 2000. Cell Biology, Genetics, Molecular Biology, Evolution and Ecology, S. Chand & Co., New Delhi.

4. BIOCHEMISTRY II

UNIT-I: Metabolism

Glycolysis, TCA cycle and its energetics, HMP shunt pathway. Deamination, transamination reaction, transaminase enzymes, Urea cycle.

UNIT-II: Metabolic Disorders

Diabetes mellitus, Glycogen storage diseases, Glycosuria, Ketosis, Jaundice, Phenyl ketonuria, Alkaptonuria. Dehydration: definition, causes, symptom and prevention.

UNIT-III: Enzymes

Definition, classification of enzymes with one example. Mechanism of enzyme action - Lock and key mechanism, Induced Fit theory. Michaleis-Menton equation. Enzyme inhibition: competitive, uncompetitive and non competitive. Biological functions of enzymes.

UNIT-IV: Molecular Biology

Central dogma of molecular biology. DNA and RNA act as genetic material. Replication: Definition, types, mode of action of replication, mechanism of replication. General mechanism of transcription and translation. Genetic code.

UNIT-V: Vitamins

A brief outline of source, requirement, biological function and deficiency of Vitamins (fat soluble and water soluble vitamins).

5. Biochemistry-Dr. Ambika Shanmugam, Published by Author.
6. Biomolecules-C. Kannan, MJP Publishers, Chennai-5.

5. MATHEMATICS – II*

Objectives of the Course

To Explore the Fundamental Concepts of Mathematics

UNIT-I: Application of Integration

Evaluation of double, triple integrals - Simple applications to area, volume -Fourier series for functions in $(0,2\pi)$ and $(-\pi, \pi)$.

UNIT-II: Partial Differential Equations

Formation, complete integrals and general integrals - Four standard types, Lagrange's equations.

UNIT-III: Laplace Transforms

Laplace Transformations of standard functions and simple properties - Inverse Laplace transforms - Applications to solutions of linear differential equations of order 1 and 2-simple problems

UNIT-IV: Vector Analysis

Scalar point functions - Vector point functions - Gradient, divergence, curl - Directional derivatives - Unit to normal to a surface.

UNIT-V: Vector Analysis (continued)

Line and surface integrals - Guass, Stoke's and Green's theorems (without proofs) - Simple problem based on these Theorems.

5. Isaac, Allied Mathematics. New Gamma Publishing House, Palayamkottai

ALLIED PRACTICAL

1. PHYSICS

(Any 15 Experiments)

1. Young's modulus – non uniform bending – pin and microscope.
2. Rigidity modulus – Static Torsion Method Using Scale and Telescope.
3. Ridigity modulus – Torsional oscillation method (without symmetric masses).
4. Determination of Co-efficient of Viscosity – Graduated Burette.
5. Surface Tension and Interfacial Tension – By drop weight method.
6. Specific Heat Capacity of a liquid – by Newton's Law of Cooling.
7. Sonometer – Determining A.C. Frequency. (Screw Gauge is given).
8. Sonometer – frequency of tuning fork.
9. Newton's Rings – Radius of Curvature.
10. Air Wedge – Determination of thickness of thin wire.
11. Spectrometer Grating – Minimum Deviation – Mercury Lines.
12. Spectrometer – Refractive Index of a liquid – Hollow Prism.
13. Potentiometer – Calibration of High Range Ammeter.
14. Potentiometer – Calibration of Low Range Voltmeter.
15. Determination of M and B_H using Deflection Magnetometer in Tan C position and vibration magnetometer.
16. Figure of merit and voltage sensitiveness of table galvanometer.
17. Construction of AND, OR gates using diodes and NOT by transistors.
18. Zener diode – Voltage Regulation.
19. NAND / NOR as universal gate.
20. Demorgan's theorem verification.

3. ZOOLOGY

I - MAJOR PRACTICAL

DISSECTIONS

Cockroach: Digestive and nervous system

Prawn: Nervous system

II - MINOR PRACTICAL

MOUNTING

1. Mouth parts of **Mosquito** and **Honey bee**

2. **Earthworm** - Body setae

3. Placoid scales of **shark**

III - SPOTTERS

Entamoeba, Sycon, Obelia, Taenia solium (entire, scolex) earthworm (entire, Pineal setae) Prawn (entire), Fresh water mussel, Sea star, Amphioxus - Entire, Amphioxus - T.S. through pharynx, Shark, Frog, Calotes, Pigeon, feathers of pigeon and Rabbit.

Sphygnomanometer, Stethoscope, Rain gauge.

ALLIED PRACTICAL

4. BIOCHEMISTRY I & II

PRACTICAL I

Volumetric Estimation

1. Estimation of HCl using Na2CO3 as link and NaOH as primary standard.

2. Estimation of Iron in Ferrous Ammonium Sulphate using potassium permanganate as link solution and oxalic acid as primary standard.

3. Estimation of Glucose by Benedict's method.

4. Estimation of Glycine by formal titration.

5. Estimation of Ascorbic acid.

SEMESTER – III

PAPER – 3

GENERAL CHEMISTRY – III

OBJECTIVE:

Basic concepts regarding the Principles of Inorganic Analysis and Applications of Qualitative Analysis, Types of Solvents, p- Block Elements, Group Study, Aromaticity, Electrophilic and Nucleophilic Substitution Reactions, Elimination Reactions, Reaction Mechanism, Second Law of Thermodynamics, Derivation of Equations, Related Problems and Applications wherever necessary are to be taught for III semester.

UNIT-I

1.1 Semimicro Techniques - Principles of Acid-Base Equilibria - Common ion effect - Solubility Product and its Applications in Qualitative Analysis - Principles of Inorganic Analysis.

1.2 Reactions involved in the Separation and Identification of Cations and Anions in Qualitative analysis - Spot test reagents - Aluminon, Cupferon, DMG, Thiourea, Magneson, Alizarin and Nessler's reagent.

1.3 Types of solvents - Protic and Aprotic solvents - Amphiprotic / Amphoteric solvents - Aqueous and Non-aqueous solvents - Liquid Ammonia as a solvent.

UNIT-II

2.1 Carbon family – Group study - Comparative study of Elements with respect to Valency, Oxides, Halides, Hydrides and Oxyacids - Catenation - Comparison of Properties of Carbon and Silicon – Silicates - Classification and Structure - Silicones- Preparation, Properties and Uses.

2.2 Nitrogen family - Group study - Comparative study of N, P, As, Sb and Bi with respect to Oxides, Oxyacids, Halides and Hydrides – Hydrazine and Hydroxylamine - Preparation, Properties, Structure and Uses.

2.3 Oxygen family - Group study - Comparative study of O, S, Se and Te with respect to Catenation, Oxides, Halides, Hydrides and Oxyacids - Anomalous Behaviour of Oxygen - Oxyacids of Sulphur (Structure only) - Peracids of Sulphur - Preparation, Properties and Structure - Differences Between Permonosulphuric Acid and Perdisulphuric Acid.

UNIT-III

3.1 Aromaticity - Modern Theory of Aromaticity - Huckel's (4n +2) Rule and Its Simple Applications to Benzenoid and Non- benzenoid Compounds.

3.2 Electrophilic substitution reactions in Aromatic Compounds - Mechanisms of Nitration, Halogenations, Sulphonation, Friedel-Crafts Acylation and Alkylation.

3.3 Directive influence - Orientation - Ortho/Para ratio - Nuclear and Side chain Halogenation.

UNIT-IV

4.1 Aliphatic Nucleophilic Substitutions - Mechanisms of S_N1, S_N2 and S_Ni Reactions – Effect of Structure of Substrate, Solvent, Nucleophile and Leaving Group.

4.2 Elimination reactions - Mechanism of E1 and E2 reactions - Hoffmann and Saytzeff''s rules - Cis and Trans Eliminations.

4.3 Aromatic Nucleophilic Substitutions - Unimolecular Nucleophilic Substitution, Bimolecular Nucleophilic Substitution and their Mechanism.

UNIT-V

5.1 Second Law of Thermodynamics - Need for the II Law of Thermodynamics - Spontaneous Process – Criteria of Spontaneity - Different Forms of Statements of the Second Law – Cyclic Process – Definition - Heat Engines.

5.2 Carnot's cycle - Efficiency - Carnot's theorem (Statement only) - Concept of Entropy - Definition and Mathematical Statement - Randomness and Entropy – Standard Entropy - Derivation of Entropy from Carnot Cycle.

5.3 Entropy change of an Ideal Gas during Isothermal Process - Entropy changes in Cyclic, Reversible and Irreversible Processes - Entropy Changes in Physical Transformations - Calculation of Entropy Changes with Changes in T, V and P - Entropy of Mixing of Ideal Gases – Physical Significance of Entropy.

ALLIED

1. PHYSICS - I

UNIT – I: PROPERTIES OF MATTER

Elasticity : Hooke's Law – Elastic Constants – bending of beam – Bending moment – Cantilever Depression at the loaded end of a cantilever – determination of Young's modulus by non-uniform bending.

Torsion : Torsion couple – Potential energy in a twisted wire – Torsional pendulum – Time period – Determination of rigidity modulus by Torsional oscillation (without masses).

Viscosity: Viscosity of a liquid – Viscous force – Co-efficient of viscosity of a liquid – Poiseuille's formula .

Surface Tension: Surface Tension – Surface Tension and interfacial surface tension by the method of drops.

UNIT – II: HEAT

Heat: Specific heat – Newton's law of cooling – determination of specific heat of a liquid using Newton's law of cooling – Emissivity and Emissive Power.
Low Temperature: J.K. Effect – Positive Effect – Negative Effect – Temperature of Inversion – Super conductors. Type I and II – Meisner Effect – Helium I and II.

UNIT – III: ELECTRICITY AND MAGNETISM

Electricity: Potentiometer – Principle – Calibration of low range voltmeter – Measurement of internal resistance of cell – measurement of an unknown resistance.

Magnetism – Moment and pole strength of a magnet – Deflection magnetometer – Tan C position – Vibration magnetometer – Theory – Period of Oscillation – Determination of M and B_H using the deflection magnetometer in Tan C position and the vibration magnetometer.

UNIT – IV: SOUND AND ACOUSTICS OF BUILDING

Sound: Transverse vibration of strings – Velocity and frequency of vibrations of a stretched string – laws – sonometer – A.C. Frequency – Steel Wire – Brass wire.

Ultrasonics – Production by Piezo – electric method – properties and uses.
Acoustics of buildings: Reverberation – Reverberation time – Sabine's formula (definition only) – Sound absorption co-efficient of surface – conditions for the perfect acoustics.

UNIT – V: OPTICS

Interference: Air Wedge – Description – Test for optical flatness of glass plate – Determination of diameter of a thin wire by air wedge.

Diffraction: Theory of transmission grating – Normal Incidence – Determination of Wavelength of monochromatic source and Wavelength of mercury line using a grating by normal Incidence.

Fibre optics: principle-classification of optical fibres-fibre optic communication system block diagram.

Books for Study & Reference

9. Allied Physics – R. Murugesan S. Chand & Co. First Edition (2005).
10. Allied Physics – Dr. K. Thangaraj, Dr. D. Jayaraman Popular Book Department, Chennai.
11. Allied Physics – Prof. Dhanalakshmi and others.
12. Elements of Properties of Matter – D.S. Mathur, S. Chand & Co. (1999).
13. Heat and Thermodynamics – N. Brijlal and Subramaniam S. Chand & Co.
14. A text book of Sound – by M. Narayanamoorthy and other National Publishing Companies (1986).
15. Modern Physics – R. Murugesan S. Chand & Co. (2004).
16. Introduction to Fibre optics- K.Thyagarajan and Ajay Ghatak,Cambridge,University Press(1999).

ALLIED

3.ZOOLOGY I

Objective:

To acquire knownledge about different kinds of animal species.

To study the systematic and fuctional morphology of invertebrates and chordates.

UNIT – I:
Type study includes life history.

Protozoa - Entamoeba, **Porifera** - Sycon. **Coelenterata** - Obelia geniculata. **Platyhelminthes** - Teania solium.

UNIT - II

Annelida - Earthworm, **Arthropoda** - Prawn, **Mollusca** - Fresh water mussel, **Echinodermata** - Sea star.

UNIT – III:
Type study includes Morphology, digestive system, respiratory system, circulatory system and urinogenital system of Chordate.

Chordata - Genaral charters, **Prochordata:** Morphology of Amphioxus. **Vertebrates: Pisces** - Shark.

UNIT - IV

Amphibia: Frog, **Reptiles:** Calotes

UNIT - V

Aves: Pigeon, **Mammalia:** Rabbit.

4. BIOCHEMISTRY I

UNIT-I: Chemistry of Carbohydrates

Definition and Classification of carbohydrate. Monosaccharides - occurrence, structure; physical and chemical properties, linear and ring forms (Haworth formula) for glucose and fructose. Disaccharides - occurrence, structure; physical and chemical properties of sucrose and lactose. Polysaccharides - occurrence, structure, physical and chemical properties of starch.

UNIT-II: Chemistry of amino acids

Definition and classification of amino acids. Reaction with ninhydrin, common properties of amino acids, amphoteric nature, isoelectric point, isoelectric pH and Zwitter ion.

UNIT-III: Chemistry of Proteins

Classification based on solubility, shape and size. Physical properties: salting in and salting out, denaturation, peptide bond. Structure of protein: primary, secondary, tertiary and quaternary structure.

UNIT-IV: Chemistry of Lipids

Definition, classification and functions of lipids. Occurrence, chemistry and biological functions of simple lipids, compound lipids (e.g. phospholipids) and derived lipids: steroids (e.g. cholesterol). Physical property-emulsification. Chemical property-saponification. Functions of bile acids and bile salts.

UNIT-V: Chemistry of Nucleic acids

Definition - nucleoside, nucleotide and polynucleotide. Double helical model of DNA and its biological functions. Structure, types and functions of RNA: tRNA, mRNA and rRNA. Differences between DNA and RNA.

5.MATHEMATICS – I*

Objectives of the Course:

To Explore the Fundamental Concepts of Mathematics

UNIT-I: ALGEBRA

Partial Fractions - Binomial, Exponential and logarithmic Series (without Proof) - Summation - Simple problems

UNIT-II : THEORY OF EQUATIONS

Polynomial Equations with real Coefficients - Irrational roots - Complex roots- Transformation of equation by increasing or decreasing roots by a constant - Reciprocal equations - Newton's method to find a root approximately - Simple problems.

UNIT-III : MATRICES

Symmetric - Skew-Symmetric - Orthogonal and Unitary matrices - Eigen roots and eigen vectors – Cayley - Hamilton theorem (without proof)-Verification and computation of inverse matrix

UNIT-IV: TRIGONOMETRY

Expansions of $\sin^n \theta$, $\cos^n \theta$, $\sin n\theta$, $\cos n\theta$, $\tan n\theta$ - Expansions of $\sin \theta$, $\cos \theta$, $\tan \theta$ in terms of θ.

UNIT-V: DIFFERENTIAL CALCULUS

Successive differentiation upto third order, Jacobians -Concepts of polar co-ordinates-Curvature and radius of curvature in Cartesian co-ordinates and in polar co-ordinates.

SKILL BASED SUBJECT

PAPER – 1

WATER TREATMENT AND ANALYSIS

Objective:

- To impart knowledge about the various methods of Water Analysis and Treatment of Water.

UNIT-I

1.1 Introduction - Characteristics of water - Alkalinity - Hardness - Unit of hardness – Total solids - Oxidation - Transparency - Silica content.

1.2 Purification of Water for drinking purpose - Potability of water – Clarification - Coagulation - Contact and Electrochemical Coagulation.

1.3 Sterilisation and Disinfection of water - Precipitation - Aeration - Ozonisation - Chlorination.

UNIT-II

2.1 Water Softening Methods - Clark's process - Lime soda process - Modified lime soda process - Permutit or Zeolite process - Ion exchange process - Demineralisation of water.

2.2 Determination of Hardness of water - Titration method - Complexometric method using EDTA - Expressing Hardness.

2.3 Equivalents of Calcium Carbonate - Problems to determine Temporary and Permanent Hardness.

UNIT-III

3.1 Hard water and Industries - Industrial water treatment - Boiler feed water method of Softening - Prevention of plumbo solvency - Scales in boilers - Consequences - Internal conditioning methods.

3.2 Desalination of Brackish water - Elecrodiaysis - Reverse osmosis - Removal of Fe, Mn and Silicic acid.

3.3 Effluent Treatment of Water from Paper Industry, Petrochemicals, Fertilizer industry and Power station.

UNIT-IV

4.1 Water analysis - Sampling of Water for analysis - Chemical Substances affecting Potability - Colour, Turbidity, Odour, Taste, Temperature, pH and Electrical Conductivity.

4.2 Analysis of Solids present in water - Suspended Solids - Dissolved Solids - Total Acidity - Alkalinity - Free CO_2 - Free Chlorine - Ca, Mg, Fe, Mn, Ag and Zn.

4.3 Water in Industry – Pollution of Water by Fertilisers, Detergents, Pesticides and Industrial wastes.

UNIT-V

5.1 Analysis of Chemical Substances Affecting Health - NH_3, Nitrate, Nitrite, Cyanide, Sulphate, Sulphide, Chloride and Fluoride.

5.2 Measurement of Toxic Chemical Substances - Analysis of Chemical Substances indicative of Pollution - Dissolved oxygen - Biochemical Oxygen Demand (BOD) - Chemical Oxygen Demand (COD)

5.3 Bacteriological Examination of Water - Total Count Test - E. coli test - E. coli index - Most Probable Number method - Biological Examination of Water - Physical Examination of Water - Radioactivity of Water - Methods of removing Radioactivity from Water.

Reference Books

1. Industrial Chemistry (Including Chemical - Engineering) - B. K. Sharma - Goel Publishing House, Meerut (1987).

3. Water Pollution and Management - C. K. Varashney - Wiley Eastern Ltd., Chennai -20 (1991).

NON-MAJOR ELECTIVE

PAPER – 1

MEDICINAL CHEMISTRY

Objectives:

- To learn the basic idea of Drugs and Names of Common Drugs, Blood, Blood Pressure, Diabetes, AIDS, Vitamins, Indian Medicinal Plants and First Aid.

UNIT-I

1.1 Clinical Health and Biochemical Analysis - Definition of Health - WHO standard.

1.2 Sterilisation of Surgical Instruments - Biochemical Analysis of Urine and Serum.

1.3 Blood – Composition of Blood - Blood grouping and Rh factor.

UNIT-II

2.1 Common Drugs - Antibiotics, Antipyretics and Analgesics - Examples, Uses and Side effects.

2.2 Anti-inflammatory agents, Sedatives, Antiseptics and Antihistamines - Examples, Uses and Side effects.

2.3 Tranquilizers, Hypnotics and Antidepressant drugs - Definition, Examples, Uses and Side effects.

UNIT-III

3.1 Vital Ailments and Treatment - Blood pressure - Hypertension and Hypotension.

3.2 Diabetes, Cancer, AIDS - Causes, Symptoms and Treatment.

3.3 Vitamins – Classification of Vitamins – Sources and Deficiency diseases caused by Vitamins.

UNIT-IV

4.1 Indian Medicinal Plants - Palak, Vallarai, Kizhanelli and Thumbai - Chemical Constituents and Medicinal Uses.

4.2 Hibiscus, Adadodai, Thoothuvalai – Chemical Constituents and Medicinal Uses.

4.3 Nochi, Thulasi, Aloe Vera - Chemical Constituents and Medicinal Uses.

UNIT- V

5.1 First Aid and Safety - Treatment of Shock, Haemorrage, Cuts and Wounds.

5.2 Burns - Classification - First Aid.

5.3 Asbestos, Silica, Lead Paints, Cement, Welding fumes and Gases - Hazard alert and Precautions for Safety.

Reference Books

1. Applied Chemistry, Jayashree Ghosh - S. Chand and Company Ltd., 2006

4. Hawk's Physiological Chemistry, B. L. Oser - Tata-McGraw Hill Publishing Co. Ltd.

5. Practical Pharmaceutical Chemistry, A. H. Beckett and J. B. Stenlake - Vol. I - CBS Publishers and Distributors, 2000.

SEMESTER – IV

PAPER – 4

GENERAL CHEMISTRY – IV

OBJECTIVE:

Noble gases, Carboxylic Acids, Amines, Alcohols, Phenols, Naphthols, Important Name Reactions, Mechanism, Thermodynamics, Derivation of Equations, Partial Molar Properties, Chemical Potential, Related Problems and Applications are to be taught for IV semester.

UNIT-I

1.1 Noble gases - Electronic Configurations – Position of Noble Gases in the Periodic Table - Chemical inertness of Noble gases – Reason.

1.2 Compounds of Xenon - Hybridization and Geometry of XeF_2, XeF_4, XeF_6 and $XeOF_4$ (Preparation, Properties – Not necessary).

1.3 Clathrates - Definition and Applications - Uses of Noble gases.

UNIT-II

2.1 Monocarboxylic acids – Acetic acid and Benzoic acid – Preparation by Grignard method – Conversion of Acids to their derivatives – Amide, Ester, Anhydride and Acid Chloride – Strength of Carboxylic Acids – Effect of Substituents on the Strength of Acids.

2.2 Dicarboxylic acids – Oxalic acid, Malonic acid, Succinic acid, Glutaric acid and Adipic acid - Preparation – Properties – Action of Heat on Dicarboxylic acids.

2.3 Amines – Ethylamine and Aniline – Preparation – Basicity of Amines – Effect of Substituents on Basicity - Reactivity of Amines – Distinction between Primary, Secondary and Tertiary Amines.

UNIT-III

3.1 Alcohols – Preparation by Grignard method – Oxidation of alcohols – Difference between Primary, Secondary and Tertiary alcohols – Preparation and Properties of Allyl alcohol.

3.2 Phenols - Acidic character of phenols - Kolbe's reaction, Reimer-Tiemann reaction, Gattermann , Lederer-Manasse, Houben-Hoesh, Friedel-Crafts, Schotten-Baumann and Liebermann's Nitroso Reaction.

3.3 Preparation, Properties and Uses of Alpha- and Beta- Naphthols.

UNIT-IV

4.1 Free energy and Work function - Gibbs free energy – Helmholtz free energy – Relationship between Gibbs free energy and Helmholtz free energy – Their variations with Temperature, Pressure and Volume – Free energy change as criteria for Equilibrium and Spontaneity.

4.2 Maxwell's Relations – Thermodynamic Equation of State.

4.3 Gibbs-Helmholtz equation - Derivation and Applications - Clausius-Clapeyron equation - Derivation and Applications.

UNIT-V

5.1 Third Law of Thermodynamics - Entropy at Absolute Zero - Nernst Heat Theorem – Statement of III law of thermodynamics – Planck's formulation of III law of thermodynamics.

5.2 Evaluation of Absolute Entropy from Heat Capacity Measurements - Exceptions to III law – Applications of III law.

5.3 Partial molar properties - Chemical Potential – Definition - Effect of Temperature and Pressure on Chemical Potential - Gibbs-Duhem equation.

CORE PRACTICAL

PAPER – 2

INORGANIC QUALITATIVE ANALYSIS AND PREPARATION

Analysis of mixture containing two cations and two anions (One will be an interfering anion). Semimicro methods using the conventional scheme are to be adopted.

Cations to be studied

Lead, Copper, Bismuth, Cadmium, Iron, Aluminium, Zinc, Manganese, Cobalt, Nickel, Barium, Calcium, Strontium, Magnesium and Ammonium.

Anions to be studied

Carbonate, Sulphide, Sulphate, Nitrate, Chloride, Bromide, Fluoride, Borate, Oxalate and Phosphate.

Preparation of Inorganic compounds

- Tetraamminecopper(II) Sulphate
- Tris(thiourea)copper(I) Chloride
- Potassium trioxalatoferrate(II)
- Ferrous Ammonium Sulphate
- Microcosmic Salt
- Manganese(II) Sulphate

References

- Vogel's Text Book of Quantitative Chemical Analysis, 5th Edition, ELBS/ Longman, England, 1989.
- Inorganic Semimicro Qualitative Analysis, V. V. Ramanujam.

ALLIED – 4

1.PHYSICS II

UNIT – I: WAVE MECHANICS

Wave Mechanics – De Broglie Waves – Dual Nature – Experimental Study of Matter Waves – Davission and Germer's Experiment – G.P. Thomson's Experiment _ Heisenberg's uncertainty Principle – The position and moment of a particle.

UNIT – II : NUCLEAR PHYSICS

Particle accelerators – cyclotron, particle detectors – GM Counter Artificial Transmutation – Rutherford's Experiment – The Q value equation for nuclear reaction – Threshold energy – Nuclear Reactions.

Conservation Laws: Conservation of Charge – Conservation of Nucleons – Conservation of Mass – Energy – Conservation of Parity – Quantities conserved and quantities not conserved in a nuclear reaction.

UNIT – III : ENERGY PHYSICS

Sources of conventional energy – Need for non-conventional energy resources – solar energy utilization – solar water heater – solar drier – conversion of light into electrical energy – solar cell – merits and demerits of solar energy – wind energy – its conversion systems – energy from Bio mass – Bio gas generation – Industrial and space application.

UNIT – IV: CRYSTALLOGRAPHY

Crystallography : The crystal structure – Unit Cell –Bravais lattice- structures of simple cubic-BCC and FCC- co ordination number, packing factor calculation for the above structures –Hexogonal closed packed(HCP) structure -Miller indices – concept of Reciprocal Vectors.

UNIT – V: ELECTRONICS

Electronics: Transistor characteristics in common base and common emitter mode- Transistor single stage amplifier- Expression for input impedence, output impedence and current gain.
Digital Electronics : NAND and NOR as universal building blocks- De Morgan's theorem –statement and proof- Fabrication of diodes and transistors using Monolithic technology– limitations.

Books for Study & Reference

11. Allied Physics – R. Murugesan S. Chand & Co. First Edition (2005).
12. Allied Physics – Dr. K. Thangaraj, Dr. D. Jayaraman Popular Book Department, Chennai.
13. Allied Physics – Prof. Dhanalakshmi and others.
14. Elements of Properties of Matter – D.S. Mathur, S. Chand & Co. (1999).
15. Heat and Thermodynamics – N. Brijlal and Subramaniam S. Chand & Co.
16. A text book of Sound – by M. Narayanamoorthy and other National Publishing Companies (1986).
17. Modern Physics – R. Murugesan S. Chand & Co. (2004).
18. Electronic Principles and Applications – A.B. Bhattacharya, New Central Book Agency, Calcutta.
19. Introduction to Solid State Physics – C. Kittel, 5^{th} Edition Wiley Eastern Ltd.
20. Renewable & Sustainable energy sources – Agarwal.

3. ZOOLOGY II

Objective:

To study the principles of cell biology, genetics, developmental biology, physiology, ecology and evolution.

UNIT - I

Cell Biology - structure of animal cell, **Genetics:** molecular structure of gene - gene function, sex linked inheritance. Genetic Engineering and its application.

UNIT - II

Embryology - cleavage and gastrulation of Amphioxus.

Human Physiology: Digestion, Circulation - blood components, structure of heart, heart function.

UNIT - III

Diseases of Circulatory system - blood pressure, heart disease - Ischemia, Myocardial Infarction, Rheumatic heart disease, stroke.

Excretion - structure of kidney and mechanism of urine formation.

UNIT - IV

Environmental Biology - Biotic factors and Abiotic factors, food chain and food web. Pollution - Environmental degradation, (Air, Water and Land) - Green house effect - Bioremediation, Biodegradation - Global warming - acid rain.

UNIT - V

Evolution: Theories of Lamarkism & Darwinism.

4.BIOCHEMISTRY II

UNIT-I: Metabolism

Glycolysis, TCA cycle and its energetics, HMP shunt pathway. Deamination, transamination reaction, transaminase enzymes, Urea cycle.

UNIT-II: Metabolic Disorders

Diabetes mellitus, Glycogen storage diseases, Glycosuria, Ketosis, Jaundice, Phenyl ketonuria, Alkaptonuria. Dehydration: definition, causes, symptom and prevention.

UNIT-III: Enzymes

Definition, classification of enzymes with one example. Mechanism of enzyme action - Lock and key mechanism, Induced Fit theory. Michaleis-Menton equation. Enzyme inhibition: competitive, uncompetitive and non competitive. Biological functions of enzymes.

UNIT-IV: Molecular Biology

Central dogma of molecular biology. DNA and RNA act as genetic material. Replication: Definition, types, mode of action of replication, mechanism of replication. General mechanism of transcription and translation. Genetic code.

UNIT-V: Vitamins

A brief outline of source, requirement, biological function and deficiency of Vitamins (fat soluble and water soluble vitamins).

5.MATHEMATICS – II*

Objectives of the Course

To Explore the Fundamental Concepts of Mathematics

UNIT-I: Application of Integration

Evaluation of double, triple integrals - Simple applications to area, volume -Fourier series for functions in $(0,2\pi)$ and $(-\pi, \pi)$.

UNIT-II: Partial Differential Equations

Formation, complete integrals and general integrals - Four standard types, Lagrange's equations.

UNIT-III: Laplace Transforms

Laplace Transformations of standard functions and simple properties - Inverse Laplace transforms - Applications to solutions of linear differential equations of order 1 and 2-simple problems

UNIT-IV: Vector Analysis

Scalar point functions - Vector point functions - Gradient, divergence, curl - Directional derivatives - Unit to normal to a surface.

UNIT-V: Vector Analysis (continued)

Line and surface integrals - Guass, Stoke's and Green's theorems (without proofs) - Simple problem based on these Theorems.

ALLIED PRACTICAL - 2

1.PHYSICS

(Any 15 Experiments)

21. Young's modulus – non uniform bending – pin and microscope.
22. Rigidity modulus – Static Torsion Method Using Scale and Telescope.
23. Ridigity modulus – Torsional oscillation method (without symmetric masses).
24. Determination of Co-efficient of Viscosity – Graduated Burette.
25. Surface Tension and Interfacial Tension – By drop weight method.
26. Specific Heat Capacity of a liquid – by Newton's Law of Cooling.
27. Sonometer – Determining A.C. Frequency. (Screw Gauge is given).
28. Sonometer – frequency of tuning fork.
29. Newton's Rings – Radius of Curvature.
30. Air Wedge – Determination of thickness of thin wire.
31. Spectrometer Grating – Minimum Deviation – Mercury Lines.
32. Spectrometer – Refractive Index of a liquid – Hollow Prism.
33. Potentiometer – Calibration of High Range Ammeter.
34. Potentiometer – Calibration of Low Range Voltmeter.
35. Determination of M and B_H using Deflection Magnetometer in Tan C position and vibration magnetometer.
36. Figure of merit and voltage sensitiveness of table galvanometer.
37. Construction of AND, OR gates using diodes and NOT by transistors.
38. Zener diode – Voltage Regulation.
39. NAND / NOR as universal gate.
40. Demorgan's theorem verification.

Allied Practical
3. ZOOLOGY

I - MAJOR PRACTICAL

DISSECTIONS

Cockroach: Digestive and nervous system

Prawn: Nervous system

II - MINOR PRACTICAL

MOUNTING

1. Mouth parts of **Mosquito** and **Honey bee**

2. **Earthworm** - Body setae

3. Placoid scales of **shark**

III - SPOTTERS

Entamoeba, Sycon, Obelia, Taenia solium (entire, scolex) earthworm (entire, Pineal setae) Prawn (entire), Fresh water mussel, Sea star, Amphioxus - Entire, Amphioxus - T.S. through pharynx, Shark, Frog, Calotes, Pigeon, feathers of pigeon and Rabbit.

Sphygnomanometer, Stethoscope, Rain gauge.

4. BIOCHEMISTRY I & II

PRACTICAL I

Volumetric Estimation

1. Estimation of HCl using Na2CO3 as link and NaOH as primary standard.

2. Estimation of Iron in Ferrous Ammonium Sulphate using potassium permanganate as link solution and oxalic acid as primary standard.

3. Estimation of Glucose by Benedict's method.

4. Estimation of Glycine by formal titration.

5. Estimation of Ascorbic acid.

SKILL BASED SUBJECT

PAPER – 2

FOOD CHEMISTRY

Objective:

- To impart knowledge about Different Foods, Their Nutritive Values and Food Preservation.

UNIT-I

1.1 Cereals - Definition – Classification - Processing - Structure of Cereals - Composition and Nutritive value – Pulses - Definition - Classification - Processing - Structure of Pulses - Composition and Nutritive Value - Toxic Constituents in Pulses - Medicinal value of Cereals and Pulses.

1.2 Sugar - Structure and Properties - Nutritive value - Sugar composition in different food items.

1.3 Sugar related products - Classification and Nutritive value - Artificial sweeteners – Examples – Saccharin and Cyclamate - Advantages and Disadvantages.

UNIT-II

2.1 Vegetables and Fruits - Classification - Composition and Nutritive values.

2.2 Fungi and Algae as food - Enzymatic Browning and Non- enzymatic Browning.

2.3 Nutritive value of some common foods - Milk, Egg and Soyabeans.

UNIT-III

3.1 Beverages - Definition - Examples – Classification.

3.2 Fruit Beverages - Milk Based Beverages - Malted Beverages - Examples – Alcoholic and Non-Alcoholic Beverages – Examples.

3.3 Appetizers - Definition - Classification - Examples - Water - Functions and Deficiency.

UNIT-IV

4.1 Food Preservatives - Definition - Classification - Food Spoilage - Definition - Prevention.

4.2 Methods of Preservation - Classification - Low and High temperature – Preservatives – Examples.

4.3 Dehydration - Osmotic pressure - Food irradiation.

UNIT-V

5.1 Food Additives - Definition – Artificial sweeteners – Saccharin and Cyclamate - Classification - Their functions - Chemical substances.

5.2 Packaging of Foods – Classification - Materials used for Packaging.

5.3 Food Colours – Restricted use – Spurious Colours – Taste Enhancers – MSG – Vinegar.

PAPER – 2

CHEMISTRY IN EVERY DAY LIFE

Objectives:

- To know the basics of Chemistry in our life
- To know about the Food Colours, Plastics, Drugs etc.,

UNIT- I

1.1 General Survey of Chemicals used in everyday life.

1.2 Cosmetics - Talcum Powder, Tooth pastes, Shampoos, Nail Polish and Perfumes - General formulation - Preparation - Hazards of Cosmetic use.

1.3 Soaps and Detergents – Types - Preparation and Uses.

UNIT-II

2.1 Food and Nutrition - Carbohydrates, Proteins, Fats and Minerals – Examples.

2.2 Vitamins – Definitions – Classification - Sources and their Physiological importance - Balanced diet.

2.3 Adulterants in Milk, Ghee, Oil, Coffee Powder, Tea, Asafoetida, Chilli Powder, Pulses and Turmeric Powder - Identification.

UNIT-III

3.1Food colours used in food - Soft drinks and its Health hazards.

3.2 Food Preservatives – Definition – Examples - Methods of preservation - Low and High temperature.

3.3 Dehydration - Osmotic pressure - Food irradiation.

UNIT-IV

4.1 Plastics, Polythene, PVC, Bakelite, Polyesters, Resins and their Applications.

4.2 Natural Rubber - Synthetic rubbers - Vulcanisation - Preparation and its Applications.

4.3 Antipyretics, Analgesics, Anaesthetics, Sedatives – Definition - Examples and Uses.

UNIT-V

5.1 Gobar gas – Production – Feasibility and Importance of Biogas with special reference to Rural India.

5.2 Fertilizers – Definition – Classification - Urea, NPK and Super phosphates - Need - Uses and Hazards.

5.3 Sweetening agents – Sucrose and Glucose – Artificial Sweetening agents – Saccharin – Cyclamate – Advantages and Disadvantages.

Reference Books

1. Chemical Process Industries - Norris Shreve Joseph A. Brine .Jr.

2. Perfumes, Cosmetics and Soaps - W. A. Poucher (Vol 3).

3. Environmental Chemistry - A. K. DE.

4. Industrial Chemistry, B. K. Sharma- Goel publishing house Meerut.

5. Food Science - B. Srilakshmi - III Edition - New Age International Publishers, 2005.

6. Food Chemistry, Lillian Hoagland Meyer - CBS publishers & distributors, 2004.

7. Fundamental Concepts of Applied Chemistry - Jayashree Ghosh, S. Chand & Co

Ltd., New Delhi – 2010.

8. Applied chemistry - K. Bagavathi Sundari - MJP Publishers (2006).

SEMESTER – V
PAPER – 5
INORGANIC CHEMISTRY – I

Objectives:

- To study about the Halogens and Related compounds.
- To give students a firm grounding in Co-ordination chemistry and Solid state Chemistry.

UNIT-I

1.1 Halogens – Group discussion - Comparative study of F, Cl, Br, I and At - Reactivities – Comparison of Fluorine with Oxygen.

1.2 Classification of Halides - Exceptional properties of Fluorine - Oxyacids of Halogens (Structure only).

1.3 Interhalogen compounds - Preparation, Properties and Geometry of AX, AX_3, AX_5 and AX_7 type of Compounds – Pseudohalogens - Cyanogen and Thiocyanogen – Comparison of Pseudohalogens and Halogens - Basic Properties of Iodine - Evidences.

UNIT-II

2.1 Coordination compounds - Definition of terms used - Classification of Ligands - Chelation and Effect of Chelation - Applications of Complexes - Coordination Number and Stereochemistry of Complexes.

2.2 IUPAC Nomenclature of Complexes - Isomerism in Complexes - Ionisation isomerism, Hydrate Isomerism, Linkage Iomerism, Ligand Isomerism, Coordination Isomerism and Polymerisation Isomerism.

2.3 Geometrical and Optical Isomerism in 4- and 6- Coordinated Complexes – Werner's theory of Coordination Compounds.

UNIT-III

3.1 Sidgwick's Theory - EAN rule - Theory of Bonding - Valence Bond Theory – Postulates of VBT – Hybridisation, Geometry and Magnetic properties - Failure of VBT.

3.2 Crystal field theory - Spectrochemical series - Splitting of d - orbitals in Octahedral, Tetrahedral and Square Planar Complexes - Crystal Field Stabilisation Energy - Calculation of CFSE In Octahedral and Tetrahedral Complexes.

3.3 Low Spin and High Spin Complexes – Explanation of Magnetic Properties, Colour and Geometry Using CFT.

UNIT-IV

4.1 Comparison of VBT and CFT.

4.2 Applications of Coordination Compounds in Qualitative and Quantitative Analysis - Estimation of Nickel using DMG and Aluminium using Oxine – Detection of Potassium ion – Separation of Copper and Cadmium ions.

4.3 Bonding, Hybridization and Structure of Carbonyls of Ni, Cr, Fe, Co, Mn, W and V.

UNIT-V

5.1 The nature of the Solid State – Amorphous and Crystalline – Differences - Close Packing in Crystals – Examples for Cubic, BCC and FCC Lattices - Bragg's law – Application of XRD to Crystal studies – Structure of NaCl, CsCl, CaF_2 and ZnS.

5.2 Band theory of Solids, Metals, Semiconductors and Insulators.

5.3 Defects in solids – Scottky Defect and Frenkel Defect – Metal Excess and Metal Deficiency Defects - Conductors in Ionic Solids – Electrical and Magnetic properties.

PAPER – 6

ORGANIC CHEMISTRY – I

Objectives:

- To effectively impart knowledge about Carbohydrates, Stereochemistry, Conformational Analysis, Nitroalkanes and Heterocyclic chemistry.
- To make the students more inquisitive in learning the Mechanistic details in Organic Chemistry through the teaching of the named reactions.

UNIT- I

1.1 Carbohydrates - Classification – Aldoses and Ketoses, Reducing and Non-reducing Sugars - Reactions of Glucose and Fructose - Osazone formation, Mutarotation and their Mechanism - Structural elucidation of Glucose and Fructose - Pyranose and Furanose forms – Haworth's method.

1.2 Determination of Ring Size- Haworth Projection Formula - Configuration of Glucose and Fructose - Epimerization - Chain lengthening and chain shortening of Aldoses - Inter conversion of Aldoses and Ketoses – Uses of Glucose.

1.3 Disaccharides and Polysaccharides - Reactions and Structural elucidation of Sucrose and Maltose - Properties, Structure and Uses of Starch and Cellulose.

UNIT- II

2.1 Stereoisomerism – Definition - Classification into Optical and Geometrical isomerism. Conditions for Optical Activity – Asymmetric centre – Chirality – Achiral molecules - Meaning of (+) and (-) and D- and L- notations – Elements of symmetry - Projection formulae - Fischer, Flying Wedge, Sawhorse and Newmann projection formulae - Notation

of optical isomers - Cahn - Ingold - Prelog rules - R, S notation of Optical isomers with one Asymmetric carbon atoms – Erythro and Threo representations.

2.2 Optical activities in Compounds not containing Asymmetric Carbon Atoms - Biphenyl, Allenes and Spiranes - Racemisation - Methods of Racemisation (By substitution and Tautomerism) – Resolution - Methods of Resolution (Mechanical, Biochemical and Conversion To Diastereomers) - Asymmetric Synthesis (Partial and Absolute Synthesis) - Walden inversion.

2.3 Geometrical isomerism - Cis - Trans, Syn - Anti and E-Z Notations - Geometrical Isomerism In Maleic and Fumaric Acids and Unsymmetrical Ketoximes - Methods of Distinguishing Geometrical Isomers using Melting Points, Dipole Moment, Dehydration, Cyclisation, Heat of Hydrogenation and Combustion.

UNIT- III

3.1 Conformational analysis - Introduction of terms - Conformations, Configuration, Dihedral Angle, Torsional Strain - Differences between Conformational isomers and Configurational isomers.

3.2 Conformational analysis of Ethane and n-Butane including energy diagrams.

3.3 Conformations of Cyclohexane (Chair, Boat and Twist-Boat forms) - Axial and Equatorial bonds - Ring flipping showing Axial and Equatorial bonds Interconversions – Conformations of Methyl Cyclohexane, Dimethyl Cyclohexane and their stability - 1,2 and 1,3 - Interactions.

UNIT- IV

4.1 Nitroalkanes – Preparation – Properties – Structure – Nitro-Acinitro Tautomerism – Uses of Nitroalkanes – Differences between Primary, Secondary and Tertiary Nitroalkanes.

4.2 Reagents and their Applications in Organic Chemistry – Anhydrous $AlCl_3$, P_2O_5, H_2/ Pd- $BaSO_4$, Zn/ Hg- HCl and Ag_2O.

4.3 Mechanism of Aldol, Perkin and Benzoin condensations - Knoevenagel, Claisen, Wittig, Cannizzaro, Reformatsky and Michael addition reactions.

UNIT- V

5.1 Heterocyclic compounds - Huckel's rule – Aromaticity of Heterocyclic compounds - Preparation, Properties, Structure and Uses of Furan, Pyrrole and Thiophene.

5.2 Preparation and properties of Pyridine and Piperidine - Comparative study of Basicity of Pyrrole, Pyridine and Piperidine with Amines – Nucleophilic and Electrophilic substitution reactions of Pyridine.

5.3 Condensed Five and Six Membered Heterocyclic Compounds - Preparation of Indole, Quinoline and Isoquinoline – Fischer-Indole synthesis, Skraup Quinoline synthesis and Bischler-Napieralski synthesis - Electrophilic substitution reactions.

PAPER- 7

PHYSICAL CHEMISTRY – I

Credits: 4 **Hours/ Week: 4**

Objectives:

- To impart knowledge about the Solutions, Phase Rule and its Applications, Colligative properties, Chemical Equilibrium, Phase Rule and its Applications, Electrochemistry and its Applications.

Unit-I Solutions

1.1 Solutions of liquids in liquids - Raoult's law – Vapour pressure of ideal solutions – Activity of a component in an ideal solution – Gibbs-Duhem-Margules equation – Thermodynamics of Ideal Solutions.

1.2 Vapour pressure of Non-ideal solutions – Fractional distillation of Binary liquid solutions – Azeotropic mixtures - Distillation of immiscible liquids - Partially miscible liquids - Phenol - Water, Triethylamine – Water and Nicotine – Water systems.

1.3 Nernst distribution law – Definition - Thermodynamic derivation – Applications.

Unit-II Phase rule

2.1 Definition of the terms - Phase, Components and Degrees of freedom – Derivation of Gibbs phase rule

2.2 Applications of phase rule - One component system - Water and Sulphur system – Reduced phase rule - Two components system - Simple eutectic system – Lead-silver system, KI-water system - Freezing mixtures.

2.3 Thermal analysis and cooling curves, Compound formation with congruent melting point – Zn-Mg, $FeCl_3$- Water system - Compound formation with incongruent melting point - Na-K System.

Unit-III Colligative properties and Chemical Equilibrium

3.1 Colligative properties - Lowering of vapour pressure - Osmosis and osmotic pressure - Thermodynamic Derivation of Elevation of boiling point and Depression of freezing point – Determination of molar mass – Van't Hoff factor.

3.2 Chemical Equilibrium - Law of Chemical Equilibrium - Thermodynamic derivation of Law of Chemical Equilibrium.

3.3 Van't Hoff Reaction Isotherm - Temperature Dependence of Equilibrium Constant – Van't Hoff Isochore - Le Chatelier's Principle and Its Applications.

UNIT-IV Electrochemistry - I

4.1 Specific conductance and Equivalent conductance - Measurement of equivalent conductance - Variation of Equivalent Conductance and Specific Conductance with Dilution – Ostwald's Dilution Law and Its Limitations.

4.2 Debye-Huckel's theory of Strong Electrolytes - Onsagar equation (No derivation) - Verification and Limitations - Kohlrausch law and its Applications.

4.3 Migration of ions - Ionic Mobility - Ionic Conductance - Transport Number and its determination – Hittorff's method and Moving Boundary method.

UNIT- V Electrochemistry - II

5.1 Applications of Conductometric Measurements - Determination of Degree of Dissociation of Weak Electrolytes, Ionic Product of water - Solubility Product of sparingly soluble salt - Conductometric Titrations.

5.2 Concept of pH - Buffer solutions, Buffer action - Henderson equation - Applications of Buffer Solutions.

5.3 Hydrolysis of Salts - Expressions for Hydrolysis Constant, Degree of Hydrolysis and pH of aqueous salt solutions.

ELECTIVE

PAPER – 1

A. ANALYTICAL CHEMISTRY – 1

Objective:

- To impart knowledge about Data Analysis, Purification of organic compounds, Different Spectroscopic Techniques and their Application.

UNIT – I

1.1. Data analysis – Types of errors – Correction of determinate errors - Idea of Significant Figures and their Importance with examples – Precision and Accuracy – Methods of expressing Accuracy.

1.2. Error analysis – Minimising errors – Methods of expressing Precision – Average deviation – Standard Deviation and Confidence Limit.

1.3. Purification of Solid Organic Compounds – Solvent extraction – Recrystalisation - Use of immiscible solvents – Soxhlet extraction – Crystallisation – Use of miscible solvents – Fractional Crystallisation and Sublimation.

UNIT – II

2.1 Purification of liquids – Experimental Techniques of Distillation – Fractional Distillation – Vacuum Distillation – Steam Distillation – Tests of Purity.

2.2 Gravimetric Analysis – Characteristics of Precipitating Agents – Condition of Precipitation – Types of Precipitants – Purity of Precipitate – Co-precipitation and Post precipitation – Precipitation from Homogeneous Solution – Digestion and Washing of precipitate – Ignition of precipitate – Uses of Sequestering Agents.

2.3 Definition of spectrum – Electromagnetic radiation – Quantization of different forms of energies in molecules (Translational, Rotational, Vibrational and Electronic) – Born-Oppenheimer approximation – Condition of energy of absorption of various types of spectra.

.**UNIT – III**

3.1 Microwave Spectroscopy – Theory of Microwave Spectroscopy – Selection Rule – Calculation of Moment of Inertia and Bond Lengths of Diatomic molecules – Effect of Isotopic Substitution.

3.2 UV – Visible Spectroscopy – Absorption laws - Calculations involving Beer- Lambert's law – Instrumentation – Photocalorimeter and Spectrophotometer – Block diagrams with description of components – Theory of Electronic Spectroscopy.

3.3 Types of Electronic Transitions – Chromophore and Auxochromes – Absorption bands and Intensity – Factors influencing Position and Intensity of Absorption Bands - Frank-Condon Principle – Applications.

UNIT – IV

4.1 IR Spectroscopy – Principle – Theory of IR spectra – Vibrational Degrees of Freedom - Modes of Vibration of Diatomic Molecules –Triatomic linear (CO_2) and Non-linear Molecules (H_2O) - Stretching and Bending vibrations – Symmetric and Asymmetric Stretching vibrations - Selection rules.

4.2 Expression for Vibrational Frequency (Derivation not needed) – Calculation of Force constant – Factors influencing Vibrational Frequencies - IR Spectrophotometer - Instrumentation – Source, Monochromator, Cell, Detectors, Recorders and Sampling Techniques.

4.3 Applications of IR Spectroscopy – Identification of Functional Groups - Interpretation of the spectra of Alcohols, Aldehydes, Ketones and Esters (Aliphatic and Aromatic) - Hydrogen bonding.

UNIT – V

5.1 Raman Spectroscopy - Rayleigh and Raman scattering – Selection rule – Raman shift - Stokes and Anti-stokes lines - Differences between Raman and IR Spectroscopy.

5.2 Raman Spectrophotometer - Instrumentation – Block diagram – Components and their Functions – Advantages of using Laser in Raman Spectroscopy – Applications – Structural elucidation in the study of Inorganic and Organic Compounds.

5.3 Rotational-Raman spectra of Non - Centrosymmetric molecules - Mutual exclusion principle (CO_2 and N_2O) - Applications – Structural diagnosis.

PAPER – 1

B. BASICS OF COMPUTER PROGRAMMING IN C AND ITS APPLICATIONS IN CHEMISTRY

Objective:

- To introduce the basics of computers.
- To learn C language and its applications in solving problems in Chemistry.

Unit-I

1.1 Basic Computer Organisation, Processor and Memory – Main Memory, Secondary Storage Devices and Storage Hierarchy.
1.2 Software – Relationship between Hardware and Software – Types of Software.
1.3 Planning the Computer Program – Algorithm and Flowcharts - Basics of Operating Systems.

Unit-II

2.1 Computer Languages – Machine Language, Assembly Language, Assembler, Compiler, Interpreter and Programming Languages.
2.2 C language – Introduction - C Compiler - Operating Systems and Preprocessor Directives.
2.3 Variables, Constants, Operators, Input and Output Functions.

Unit-III

Control Structures – Conditional, Looping, Goto, Break, Switch and Continue Statements, Functions, Arrays And Pointers.

Unit-IV

4.1 Applications in Chemistry – Calculation of the Radius of the first Bohr orbit for an Electron.

4.2 Calculation of Half-life Time for an integral order reaction - Calculation of Molarity, Molality and Normality of a solution.

4.3 Calculation of Pressure of Ideal Gases and Van der Waal's gases - Calculation of Electronegativity of an Element using Pauling's relation.

Unit-V

5.1 Applications in Chemistry - Calculation of Empirical Formulae of Hydrocarbons - Calculation of Reduced Mass of a few Diatomic Molecules.

5.2 Determination of the Wave Numbers of Spectral lines of Hydrogen atom - Calculation of Work of Expansion in Adiabatic Process.

5.3 Calculation of pH, Solubility Product and Bond Energy using Born-Lande equation - Calculation of Standard Deviation and Correlation Coefficient.

Reference Books

- Computers in Chemistry, K. V. Raman, 8th Edition, Tata McGraw Hill Publishers, 2005.
- Programming with C, Venugopal and Prasad, 11th Edition, 1971. .

PAPER – 1

C. ORGANIC SYNTHESIS

Objectives

- To know the Basics of Retrosynthesis.
- To impart knowledge about the Ring Synthesis.

UNIT-I

DISCONNECTION APPROACH

1.1 An introduction to Synthons and Synthetic Equivalent.

1.2 Disconnection Approach - Functional Group Interconversions.

1.3 The importance of the Order of Events in Organic Synthesis - One group C-X and Two group C-X disconnections – Chemoselectivity - Reversal of Polarity.

UNIT-II

PROTECTING GROUPS

2.1 Principle of Protection of Alcoholic group and Amino group.

2.2 Principle of Protection of Carbonyl group and Carboxyl group.

2.3 Activation of Functional Groups.

UNIT-III

ONE GROUP C-C DISCONNECTIONS

3.1 Alcohols and Carbonyl Compounds.

3.2 Regioselectivity and Alkene Synthesis.

3.3 Uses of Acetylenes and Aliphatic Nitro Compounds in Organic Synthesis.

UNIT-IV

TWO GROUP C-C DISCONNECTIONS

4.1 Diels-Alder Reaction - 1, 3 - Difunctionalised Compounds.

4.2 α, β- Unsaturated Carbonyl Compounds - Control in Carbonyl Condensations.

4.3 1, 5 - Difunctionalised Compounds - Michael Addition and Robinson Annulation reactions.

UNIT-V

RING SYNTHESIS

5.1 Saturated Heterocyclic Compounds.

5.2 Synthesis of 3-, 4- and 6- Membered Rings Aromatic Heterocycles in Organic Synthesis.

5.3 Application of the above in the Synthesis of Camphor, Longifoline, Cortisone and Reserpine.

Reference Books

- Some Modern Methods of Organic Synthesis, W. Carruthers, Cambridge University Press, UK.
- Advanced Organic Chemistry, F. A. Carey and R. J. Sundberg, Part- B, Plenium Press.
- Modern Synthetic Reactions. H. O. House and W. A. Benjamin,

ELECTIVE

PAPER – 2

A. PHARMACEUTICAL CHEMISTRY

Objective:

- To effectively impart knowledge about Various Diseases and Their Treatment, Importance of Indian Medicinal Plants and Different Types of Drugs. Preparation, Synthesis and Structural Determination are not required for the Compounds mentioned.

UNIT-I

1.1 Definition of the following terms - Drug, Pharmacophore, Pharmacology, Pharmacopoeia, Bacteria, Virus, Chemotherapy and Vaccine.

1.2 Causes, Symptoms and Treatment for Jaundice, Cholera, Malaria and Filaria - First Aid for Accidents - Antidotes for Poisoning.

1.3 Organic Pharmaceutical Aids - Their Role as Preservatives, Antioxidants, Colouring, Flavouring and Sweetening agents – Examples.

UNIT-II

2.1 Causes, Detection and Control of Anaemia and Diabetes - Diagnostic tests for Sugar, Salt and Cholesterol in Serum and Urine.

2.2 Blood - Composition of Blood and Blood Plasma – RBC – Structure and Functions - Functions of Haemoglobin – WBC - Structure and Functions - Rh Factor – Blood Coagulation – Identification and Estimation of Cholesterol in Blood - Blood Pressure – Hypertension and Hypotension - Normal, High and Low to Control.

2.3 Indian Medicinal Plants and Their Uses - Tulasi, Neem, Kizhanelli, Mango, Semparuthi, Adadodai and Thoothuvelai.

UNIT-III

3.1 Antibacterials - Sulpha drugs – Sulphanilamide Derivatives – Mode of action of Sulpha drugs - Examples - Prontosil, Sulphathiazole and Sulphafurazole – Uses - Antibiotics - Definition – Gram positive and Gram negative bacteria - Uses of Ampicillin, Streptomycin and Tetracyclines.

3.2 Antiseptics and Disinfectants - Definition and Distinction - Phenolic compounds, Chloro compounds and Cationic surfactants.

3.3 Vitamins – Definition – Classification of Vitamins – Sources and Uses – Deficiency Diseases caused by Vitamins.

UNIT-IV

4.1 Analgesics – Definition - Classification - Narcotic and Non- narcotic – Antipyretic analgesics – Mechanism of action - Morphine and its derivatives - Pethedine and Methadone - Salicylic acid derivatives – Antipyretics and Antiinflammatory Agents - Definition and Actions – Aspirin, Paracetamol, Ibuprofen - Disadvantages and Uses.

4.2 Anaesthetics – Definition – Classification - Local and General – Volatile – Uses of volatile liquids as Inhalation Anaesthetics – Chloroform - Gaseous Anaesthetics - Nitrous Oxide, Ether and Cyclopropane - Uses and Disadvantages – Intravenous Anaesthetic Agents – Thiopental sodium, Methohexitol and Propanidid.

4.3 Drugs affecting CNS - Definition, Distinction and Examples for Tranquilizers, Sedatives (Phenobarbital, Diazepam) - Hypnotics, Psychedelic Drugs – LSD, Hashish- Their effects.

UNIT-V

5.1 Antineoplastic Drugs - Causes and Types of Cancer - Treatment of Cancer – Antineoplastic Agents – Antimetabolites - AIDS - AZT, DDC.

5.2 Hormones – Definition - Classification – Physiological Functions of Insulin, Adrenaline, Thyroxin and Oxytacin.

5.3 Sex hormones – Androsterone, Testosterone, Progesterone and Estrogen - Biological functions – Disorders of Hyposecretion and Hypersecretion of Hormones.

Reference Books

1. A Text Book of Pharmaceutical Chemistry - Jayashree Ghosh - S. Chand Company Ltd, 2015.
2. Pharmaceutical Chemistry - S. Lakshmi - Sultan Chand, 2011.
3. Pharmacology and Pharmatherapeutics - R. S. Satoskar - Popular Prakashan - Vol.I and Vol. II.
4. Medicinal Chemistry - Asuthosh Kar - New Age International Publishers, 2007.
5. A Text Book of Synthetic Drugs - O. D. Tyagi - Ammol Publications.
6. Introduction to Biological Chemistry - J. Awapara, Prentice Hall.
7. A Text Book of Biochemistry - Ambika.S.
8. Biochemistry - A. L. Leninger, II Edition, Kalyani Publishers, Ludhiana, 1998.
9. Essentials of Biological Chemistry - James Fanley - East West Press.
10. Medicinal Chemistry - Gurdeep Chatwal – Himalaya Publishers House, 2012.
11. Medicinal Chemistry - Ahluwalia – Ane Books, 2008.
12. A Text Book of Pharmaceutical Chemistry – Viva Books Private Ltd., New Delhi, 2009.
13. Medicinal Plants of India – Rasheeduz Zafar – CBS Publishers and Distributors, 2000.

ELECTIVE

PAPER – 2

B. POLYMER CHEMISTRY

Objective:

- To impart Knowledge about the Types of Polymers, Polymerization Techniques, Commercial Polymers and their Applications.

UNIT-I

1.1 Introduction to Polymers – Monomers, Oligomers, Polymers and their Characteristics - Classification of Polymers – Addition and Condensation Polymers – Natural and synthetic – Linear, Branched, Cross-Linked and Network – Plastics – Elastomers – Fibres – Homopolymers and Copolymers.

1.2 Bonding in Polymers – Primary and Secondary bond forces in Polymers – Cohesive energy and Decomposition of Polymers.

1.3 Chain Growth Polymerisation – Cationic, Anionic and Free radical polymerisation – Stereoregular polymers – Ziegler Natta polymers – Step Growth Polymers.

UNIT-II

2.1 Polymerization Techniques - Bulk, Solution, Suspension and Emulsion Polymerisation - Melt Polycondensation - Polymer Processing – Calendering - Die Casting and Rotational Casting.

2.2 Molecular weight of polymers – Number average – Weight average – Sedimentation and Viscosity – Average molecular weight - Molecular weight and Degree of Polymerisation – Methods of determination of Molecular Weight – Gel permeation chromatography – Ultracentrifugation.

2.3 Reactions – Hydrolysis – Hydrogenation –Addition – Substitution –Cross linking – Vulcanisation – Cyclisation.

UNIT-III

3.1 Plastics and Resins – Definitions – Thermoplastic and Thermosetting Resins – Constituents of Plastic Fibres – Dyes, Pigments, Plasticisers, Lubricants and Catalysts.

3.2 Important Thermoplastic Resins – Acrylics, Polyvinyl and Cellulose Derivatives - Important Thermosetting Resins – Phenolic resins – Epoxy resins.

3.3 Adhesives – Shellac resins – Vegetable glues and Animal glues.

UNIT-IV

4.1 Chemistry of Commercial Polymers - General methods of Preparation and Uses of the following - Teflon, Polyethylene, PTFE, Polystyrene, Polycarbonates and PVC.

4.2 Textile fibres – Definition and Polymer requirement for fibres – Polyamides – Nylon 66 - Nylon 6 – Polyesters – Terylene – Cellulose acetate – Viscose rayon.

4.3 Natural and Synthetic Rubber – Constitution of Natural rubber – Natural Rubber – Isoprene – Synthetic Rubber - Butyl, Buna, Buna- S, SBR, Thiocol, Neoprene, Polyurethane and Silicone Rubber – Ebonite.

UNIT-V

5.1 Advances in Polymers - Biopolymers, Biomaterials, Polymers in Medical Field, High temperature and Fire Resistant Polymers – Applications of Silicones.

5.2 Conducting Polymers – Elementary idea – Examples – Polysulphur Nitriles,

Polyparaphenylene, Polypyrrole, Polythiophene, Polyaniline and Polyacetylene.

5.3 Acrylic polymers – Polmers of Acrylic Acid, Methacrylic Acid and Polyacrylates.

Reference Books

1. Text Book of Polymer Science, F. W. Bill Meyer, Jr. John, Wiley & Sons - 1984.
2. Polymer Science – V, R. Gowarikar, N. V. Viswanathan, Jayader Sreedhar - Wiley Eastern Ltd., New Delhi - 2005
3. Polymer Chemistry, B. K. Sharma - Goel Publishing House, Meerut - 1989.
5. Polymer Chemistry – M. G. Arora, M. S. Vadar - Anmol Publications (p) Ltd., New Delhi -1998.
6. Polymer Chemistry - An introduction - M. P. Stevens, Oxford - 2002.

ELECTIVE

PAPER – 2

C. GREEN CHEMISTRY

Objective:

- To impart knowledge about Green Solvents, Green Techniques, Green Catalysts and Green Reactions.

UNIT-I Green Chemistry – Introduction

1.1 Need for Green Chemistry – Principles of Green Chemistry – Atom economy – Definition with example (Ibuprofen synthesis) – Green oxidants – Hydrogen peroxide.

1.2 Green synthesis – Evaluation of the type of the reaction – Rearrangements (100 % Atom economic) - Addition reaction (100 % Atom economic).

1.3 Organic reactions by Sonication method – Apparatus required – Examples of Sonochemical Reactions (Heck, Hundsdiecker and Wittig reactions).

UNIT-II Green Solvents

2.1 Selection of Solvents – Aqueous Phase Reactions - Diels-Alder reaction in water – Catalysis in water (Aerobic Oxidation of Alcohols catalysed by Pd (II) / Bathophenanthroline).

2.2 Reactions in ionic liquids - Simple preparation – Types – Properties and Applications – Ionic liquids in Organic Reactions (Heck reaction, Suzuki reactions, Epoxidation), Industrial (Battery) and Analytical Chemistry (Matrices for MALDI-TOF MS, Gas Chromatography Stationary Phases) – Advantages and Disadvantages.

2.3 Solid Supported Synthesis - Supercritical CO_2 – Preparation, Properties and Applications (Decaffeination, Dry cleaning) – Environmental impact.

UNIT-III Green Techniques

3.1 Microwave and Ultrasound Assisted Green Synthesis – Apparatus required – Examples

of MAOS (Synthesis of Fused Anthroquinones, Leukart reductive Amination of Ketones) – Advantages and Disadvantages of MAOS – Aldol condensation – Cannizzaro condensation - Diel's-Alder reaction – Strecker's synthesis.

3.2 Photochemical reactions using Sunlight – Photoreduction of Benzophenone to Benzopinacol using Sunlight - Photochemical alternative to Friedel- Crafts reaction.

3.3 Nanoparticles - Introduction – Types of Nanoparticles – Techniques to prepare Nanoparticles – Top down and Bottom up approaches – Common growth methods.

UNIT-IV Green Catalysis

4.1 Green Catalysis - Heterogeneous catalysis – Uses of Zeolites, Silica, Alumina, Clay supported catalysis – Biocatalysis – Enzymes and Microbes.

4.2 Phase Transfer Catalysis (PTC) – Principles, Catalysts and Lipophility of ions – Two phase systems – Solid-Liquid, Liquid-Liquid, Gas-Liquid – Triphase systems – Inverted PTC – Applications in Synthesis.

4.3 Micellar Catalysis, Surfactants and Synthesis in water – Principles, Materials and Synthetic Applications.

UNIT- V Green Reactions

5.1 Acetylation of Primary Amine, Base catalysed Aldol condensation (Synthesis of Dibenzalpropanone), Halogen addition to C = C bond (Bromination of Trans- Stilbene), [4+2] Cycloaddition reaction (Diels-Alder reaction between Furan and Maleic acid).

5.2 Rearrangement reaction (Benzil- Benzilic acid rearrangement), Coenzyme catalyzed Benzoin condensation (Thiamine hydrochloride catalysed synthesis of Benzoin), Pechmann condensation for Coumarin synthesis (Clay catalysed Solid State Synthesis of 7- Hydroxy- 4- methylcoumarin).

5.3 Electrophilic Aromatic Substitution Reactions (Nitration of phenol, Bromination of Acetanilide) – Green oxidation reactions (Synthesis of adipic acid, Preparation of Manganese (III) acetylacetonate) – Zeolite catalyzed Friedel-Crafts acylation.

Books for Study

- Green Chemistry: Environmental Friendly Alternatives, Rs. Sanghi and M. M. Srinivatava, Narosa Publishing House, New Delhi.
- Green Chemistry, V. Ahluwalia, Narosa, New Delhi (2011).
- Nanotechnology, S. Shanmugam, MJP Publishers, Chennai. (2010).
- A Handbook on Nanochemistry, Patrick Salomon, Dominant Publishers and Distributers, New Delhi.
- Nanobiotechnology, S. Balaji, MJP Publishers, Chennai (2010).
- Nano: The Essentials, T. Pradeep, Tata Mc-Graw Hill, New Delhi (2007).

Books for Reference

- Methods and Reagents for Green Chemistry, P. Tundo, A. Perosa and F. Zechini, John Wiley & Sons Inc., New Jercy, (2007).
- The Chemistry of Nanomaterials: Synthesis, Properties and Applications, Vol. I and II, CNR Rao, Springer (2006).
- Nanotechnology: Basic Science and Emerging Technologies, Mick Wilson, Kamali Kannangara, Geoff Smith, Michelle Simmons, Burkhard Raguse, Overseas Press (2005).
- Nanochemistry, G. B. Segreev, Elsevier, Science, New York, (2006)

SKILL BASED SUBJECT

PAPER – 3

APPLIED CHEMISTRY

Objective:

- To impart Knowledge about Petrochemicals, Paper Technology, Sugar Industry, Explosives, Photography and Diary Chemistry,

UNIT I

1.1 Petroleum - Origin – Composition of Petroleum - Inorganic, Engler and Modern theories – Classification – Refining (Simple Refinery) – Cracking – Thermal and Catalytic – Knocking – Octane Rating – Antiknock Compounds – Cetane Rating – Synthetic Petrol – LPG.

1.2 Gobar Gas – Production – Feasibility and Importance of Biogas with special reference to Rural India.

1.3 Petrochemicals – Elementary study – Definition - Chemicals from Natural Gas, Petroleum, Light naphtha and Kerosene – Origin – Composition - Synthetic Gasoline.

UNIT II

2.1 Paper technology – Introduction – Manufacture of pulp – Various raw materials used for the preparation of pulp - Preparation of Sulphite pulp, Soda pulp and Rag pulp.

2.2 Various processes - Beating, Refining, Filling, Sizing and Colouring.

2.3 Manufacture of Paper – Calendering – Uses.

UNIT III

3.1 Sugar industry - Sugar industries in India – Sugarcane and sugar beet - Manufacture of cane sugar – Extraction of juice – Concentration – Separation of crystals.

3.2 Recovery of Glucose from Molasses – Defection – Sulphitation – Carbonation – Testing and Estimation of Sugar – Double Sulphitation Process.

3.3 Preparation of Bagasse – Use of Bagasse for Manufacture of Paper and Electricity -

Preparation of Alcohol from Molasses - Preparation of Absolute Alcohol - Manufacture of Wine, Beer, Methylated Spirit and Power Alcohol.

UNIT IV

4.1 Explosives – Primary, Low and High Explosives – Single compound explosives - Binary explosives – Plastic explosives – Dynamites – Blasting explosives - Preparation and Uses of Lead Azide, Nitroglycerine, Nitrocellulose, TNT, Cordite, Picric Acid and Gun Powder – Introduction to Rocket Propellants.

4.2 Photography – Chemical Principle – Preparation of Sensitive Emulsion – Exposure – Developing – Fixing and Printing – Colour photography – Xerographic copying.

4.3 Coal – Classification by rank – Proximate and Ultimate analysis – Low and High Temperature Carbonisation – Otto-Hoffmann's by-product - Distillation of Coal Tar.

UNIT V

5.1 Milk – Definition – Physico-Chemical properties of milk - Constituents of milk and Their Physico-chemical Properties.

5.2 Chemical change taking place in Milk due to Processing Parameters - Boiling, Pasteurisation, Sterilisation and Homogenisation.

5.3 Definition and Composition of Creams, Butter, Ghee and Ice Creams - Milk Powder - Definition, Need for making powder - Principles involved in Drying process - Spray drying and Drum drying.

Reference Books

1. Fundamental Concepts of Applied Chemistry - Jayashree Ghosh - 1st Edition, S. Chand & Co. Ltd, New Delhi, 2006.
2. Milk and Milk Products - Clarence Henry Eckles, Willes Barnes Combs, Harold Macy - 4th Edition, Tata McGraw Hill Publishing Company Ltd, Reprint 2002.
3. Industrial Chemistry - B. K. Sharma - 13th Edition, Goel Publishing House, 2008.

SEMESTER – VI
PAPER – 8
INORGANIC CHEMISTRY – II

Objectives:

- To impart knowledge about Nuclear chemistry, Radioactivity, Metallurgy, Chemistry of f- Block Elements, Organometallic Compounds and Bio-inorganic Chemistry.

UNIT-I NUCLEAR CHEMISTRY

1.1 Introduction - Composition of Nucleus – Fundamental Particles of Nucleus - Nuclear Forces operating between the Nucleons - N/P ratio – Nuclear Stability - The whole number rule and Packing fraction.

1.2 Isotopes, Isobars and Isotones – Detection and Separation of isotopes

1.3 Nuclear Binding Energy - Mass defect - Simple calculations involving Mass Defect and Binding Energy per Nucleon - Magic Numbers – Liquid drop model - Shell model.

UNIT-II RADIOACTIVITY

2.1 Natural Radioactivity – Properties of Alpha, Beta and Gamma rays - Detection and measurement of Radioactivity - Radioactive series including Neptunium series – Soddy's Group Displacement Law.

2.2 Rate of disintegration and Half - Life period – Derivation - Average life period - Artificial Radioactivity - Induced Radioactivity - Uses of Radioisotopes - Hazards of radiations.

2.3 Nuclear fission - Nuclear energy - Nuclear reactors - Nuclear fusion -Thermonuclear reactions - Energy source of the Sun and Stars – Comparison of Nuclear Fission and Nuclear Fusion.

UNIT-III METALLURGY

3.1 General metallurgy and Metallurgical processes – Methods of Concentration – Gravity separation, Froth floatation process, Magnetic separation – Reduction methods – Smelting, Calcination, Goldschmidt Aluminothermic process - Purification methods – Zone refining, Van Arkel method and Electrolytic refining.

3.2 Comparative study of Ti, V, Cr, Mn and Fe group elements with special reference to Occurrence, Oxidation States, Magnetic Properties and Colour.

3.3 Ocurrence and Extraction of Ti, Mo, W and Co - Preparation and Uses of Ammonium Molybdate and $V_2 O_5$.

UNIT-IV INNER TRANSITION ELEMENTS

4.1 General Characteristics of f- Block elements – Position of Lanthanides in the periodic table – Separation of Lanthanides (Ion exchange method).

4.2 Comparative study of Lanthanides and Actinides - Occurrence, Oxidation states, Magnetic properties, Colour and Spectra.

4.3 Lanthanide Contraction – Causes and Consequences - Comparison between Lanthanides and Actinides – Positon of Actinides in the periodic table – Extraction of Thorium and Uranium

UNIT-V ORGANOMETALLIC COMPOUNDS AND BIOINORGANIC CHEMISTRY

5.1 Organometallic Compounds - Definition - Nomenclature – Classification – Organo-Lithium and Organo-Boron Compounds - Preparation, Properties, Structure and Uses.

5.2 Biological Functions of Iron, Copper and Zinc – Biologically Important Compounds – Myoglobin, Cytochrome, Haemoglobin and Ferritin.

5.3 Binary Metallic Compounds – Hydrides, Borides, Carbides and Nitrides – Classification - Preparation, Properties, Structure and Uses.

CORE PRACTICAL

PAPER – 3

GRAVIMETRIC ESTIMATION

1. Estimation of Sulphate as Barium Sulphate.
2. Estimation of Barium as Barium Sulphate.
3. Estimation of Barium as Barium Chromate.
4. Estimation of Lead as Lead Chromate.
5. Estimation of Calcium as Calcium Oxalate Monohydrate.

References

- Qualitative Inorganic Analysis, A.I. Vogel – 7th Edition, Prentice Hall.
- Quantitative Chemical Analysis, A.I. Vogel – 6th Edition, Prentice Hall.

PAPER - 9

ORGANIC CHEMISTRY – II

Objectives:

- To kindle interest in students in learning Bio-organic chemistry through the introduction of topics such as Proteins, Nucleic acids, Terpenes, Alkaloids etc.
- To generate Keen Interest and Thinking in Understanding the Mechanisms of Molecular Rearrangements and Synthetic Applications of Acetoacetic Ester, Benzene Diazonium Chloride, Grignard Reagents and Diazomethane.

UNIT- I Molecular rearrangements

1.1 Rearrangements - Classification – Anionotrpic, Cationotropic and Free Radical Rearrangements - Intermolecular and Intramolecular Rearrangements – Examples – Cross over experiment – Differences between Intermolecular and Intramolecular rearrangements.

1.2 Mechanisms, Evidences, Migratory Aptitude, Intermolecular or Intramolecular nature of the following rearrangements - Pinacol-Pinacolone, Benzil-Benzilic acid and Beckmann rearrangement.

1.3 Mechanism of Hoffmann, Curtius, Baeyer-Villiger, Claisen (Sigmatropic), Fries rearrangement, Cope and Oxy-Cope rearrangements.

UNIT-II Amino acids and Polypeptides

2.1 Amino acids – Classification - Essential and Non- Essential amino acids – Acidic, Basic and Neutral Amino Acids – Alpha, Beta and Gamma- Amino acids - Preparation of alpha amino acids – Gabriel's Phthalimide synthesis, Strecker synthesis and Erlenmeyer Azlactone synthesis - Glycine, Alanine and Tryptophan.

2.2 General properties of Amino acids - Reactions of Amino acids due to Amino group and Carboxyl group - Zwitterions - Isoelectric point.

2.3 Peptides - Synthesis - Bergmann Method - Structural Determination of Polypeptides - End Group Analysis – N-Terminal and C-Terminal Amino Acids Determination.

UNIT- III Proteins and Nucleic Acids

3.1 Proteins - Definition - Classification based on Physical Properties, Chemical Properties and Physiological Functions - Primary and Secondary Structure of Proteins - Helical and Beta Sheet Structures (Elementary Treatment Only) – Denaturation of Proteins.

3.2 Nucleic acids – Nucleoproteins - Definition - Types of Nucleic Acids – RNA and DNA - Nucleoside, Nucleotide, Degradation of Nucleotide Chain - Components of RNA and DNA.

3.3 Differences between DNA and RNA - Structures of Ribose and 2- Deoxyribose – Double Helical Structure of DNA - Biological functions of Nucleic Acids - Elementary ideas on Replication and Protein Synthesis.

UNIT-IV Chemistry of Natural Products

4.1 Antibiotics – Definition – Structural elucidation of Penicillin and Chloramphenicol – Uses of Penicillin and Chloramphenicol.

4.2 Alkaloids – Classification – Isolation of alkaloids – General methods of Determination of structure of Alkaloids - Synthesis and Structural Elucidation of Piperine, Coniine and Nicotine.

4.3 Terpenoids – Definition - Classification - Isoprene rule - Synthesis and Structural elucidation of Citral, Menthol and Alpha- pinene.

UNIT- V Organo-Synthetic Reagents

5.1 Acetoacetic ester – Preparation by Claisen ester condensation – Reactions – Synthetic Applications.

5.2 Benzene diazonium chloride – Preparation from aniline – Synthetic Applications – Coupling reactions.

5.3 Grignard Reagents – Preparation – Synthetic Applications – Diazomethane – Preparation by Von-Pechmann method – Synthetic Applications.

CORE PRACTICAL

PAPER – 4

ORGANIC QUALITATIVE ANALYSIS AND PREPARATIONS

Analysis of organic compounds containing one functional group and characterisation with a derivative.

Reactions of the following Functional Groups:

Aldehyde, Ketone, Carboxylic Acid (Mono and Di), Ester, Carbohydrate (Reducing and Non-Reducing), Phenol, Aromatic Primary Amine, Amide, Nitro Compounds, Diamide and Anilide.

Organic Preparations

Acylation

1. Acetylation of Salicylic acid or Aniline.
2. Benzoylation of Aniline or Phenol.

Nitration

3. Preparation of m- Dinitrobenzene
4. Preparation of p- Nitroacetanilide

Halogenation

5. Preparation of p- Bromoacetanilide
6. Preparation of 2,4,6-Tribromophenol

Diazotisation /Coupling

7. Preparation of Methyl Orange

Oxidation

8. Preparation of Benzoic Acid from Toluene or Benzaldehyde.

Hydrolysis

9. Hydrolysis of Ethyl Benzoate (Or) Methyl Salicylate (Or) Benzamide.

Reference Books

- Vogel's Text Book of Chemical Analysis
- Practical Chemistry - A. O. Thomas - Scientific Book Center, Cannanore.
- Practical Chemistry - 3 Volumes - S. Sundaram and others.
- Text Book of Practical Organic Chemistry – A. I. Vogel, A. R. Tatchell, B. S. Furnis, A. J. Hannaford and P.W. G. Smith – 5^{th} Edition - 1996.
- Comprehensive Practical Organic Chemistry - Preparation and Quantitative Analysis - V. K. Ahluwalia, Renu Agarwal – Universities Press – 2013.

PAPER- 10

PHYSICAL CHEMISTRY – II

Objectives:

- To impart Knowledge about Electrochemistry, Surface Chemistry, Photochemistry, Chemical Kinetics and Theories of reaction rates.

UNIT- I Electrochemistry - III

1.1 Galvanic cells - Daniel cell - Reversible and Irreversible Cells – EMF of a Cell and its Measurement - Standard Weston Cadmium Cell – Evaluation of Thermodynamic Quantities.

1.2 Derivation of Nernst equation for Electrode Potential and Cell emf –Types of reversible electrodes - Electrode reactions - Electrode potentials.

1.3 Reference electrodes - Standard Hydrogen Electrode - Standard Electrode Potential - Sign conventions - Electrochemical Series and its Applications.

UNIT- II Electrochemistry - IV

2.1 Liquid Junction Potential - Concentration cells With Transference and Without Transference.

2.2 Applications of Concentration cells - Valency of ions, Solubility and Solubility Product - Activity Coefficient of electrolytes - Determination of pH using Hydrogen, Quinhydrone and Glass electrodes – Potentiometric titrations.

2.3 Polarisation - Overvoltage – Storage Cells - Decomposition potential - Lead Storage Battery - Fuel Cells (H_2-O_2 Cell) - Mechanism of Discharging and Recharging Fuel Cells.

UNIT- III Chemical Kinetics

3.1 Definitions of the terms – Order and Molecularity – Rate of the reaction - Derivations of expressions for Zero, First, Second and Third order rate equations - Study of kinetics by Volumetric, Polarimetric and Spectrophotometric methods - Methods of Determination of Order of a reaction.

3.2 Effect of Temperature on reaction rate - Arrhenius equation - Theories of reaction rates – Bimolecular Collision Theory – Lindmann's theory of Unimolecular Reactions.

3.3 ARRT - Thermodynamic treatment of ARRT – Eyring equation - Comparison of Collision Theory and ARRT.

UNIT- IV Surface Chemistry

4.1 Adsorption – Characteristics of adsorption – Physisorption and Chemisorption – Differences between Physical and Chemical Adsorption - Applications of Adsorption – Adsorption of Gases by Solids – Different Types of Isotherms - Freundlich adsorption isotherm - Langmuir theory of adsorption – Derivation.

4.2 Catalysis – Definition - General Characteristics of Catalytic Reactions – Acid-Base catalysis – Enzyme catalysis – Michaelis-Menton Equation – Effect of Temperature and pH on Enzyme Catalysis.

4.3 Homogeneous catalysis – Function of a catalyst in terms of Gibb's free energy of activation - Heterogeneous catalysis - Kinetics of Unicellular Surface Reactions.

UNIT- V Photochemistry

5.1 Laws of photochemistry - Grothus-Draper law, Stark-Einstein's law – Primary and Secondary processes – Quantum yield and its determination.

5.2 Qualitative description of Fluorescence, Phosphorescence, Luminescence, Chemiluminescence, Bioluminescence and Photosensitized Reactions.

5.3 Kinetics of Photochemical Reactions - H_2-Cl_2 and H_2-Br_2 reactions - Photodimerisation of Anthracene

CORE PRACTICAL

PAPER – 5

PHYSICAL CHEMISTRY EXPERIMENTS

1. Kinetics

Determination of the Order of the following reactions

a) Acid catalysed Hydrolysis of an Ester (Methyl or Ethyl acetate)

b) Saponification of an Ester (Methyl or Ethyl Acetate)

c) Iodination of Acetone.

2. Molecular weight of a solute - Rast's method using Naphthalene or Diphenyl as Solvents.

3. Heterogeneous equilibria

a) *Phenol-Water system – CST

b) Effect of impurity – 2 % NaCl or Succinic acid solutions on Phenol -Water system - Determination of the Concentration of the given solution

4. **Determination of the Transition Temperature** of the given salt hydrate. $Na_2S_2O_3.5H_2O$, $CH_3COONa.3H_2O$, $SrCl_2.6H_2O$, $MnCl_2.4H_2O$

5. **Electrochemistry**

Conductivity

a) Determination of Cell Constant and Equivalent Conductivities ofthe solutions of two different concentrations.
b) Conductometric titration of a Strong Acid against a Strong Base.

6. Potentiometric titration of a Strong Acid against a Strong Base.

7. Colorimetry- Determination of unknown concentration using Photoelectric colorimeter.

8. Determination of pKa of acetic acid using pH Meter.

***Need not be given in examination.**

Students must write Short Procedure / Formula with explanation in Ten Minutes for evaluation during the university practical examination.

ELECTIVE

PAPER – 3

A. ANALYTICAL CHEMISTRY – II

Objective:

- To impart knowledge about Different Chromatographic and Spectroscopic Techniques.

UNIT – I

1.1Chromatography – Principles and Techniques of Column, Paper and Thin Layer Chromatography – Column Chromatography – Preparation of Column - Adsorption - Adsorbents – Elution – Recovery of Substances.

1.2 TLC - Choice of Adsorbent and Solvents – Preparation of Chromatogram and Applications - R_f value - Paper Chromatography – Solvents used – Factors affecting R_f value – Separation of Amino Acid Mixtures – Radial Paper Chromatography - Applications.

1.3 lon exchange chromatography – Principle – Experimental Techniques – Types of Resins – Reqirement of a Good Resin – Action of Ion Exchange Resins – Experimental Techniques and Applications – Separation of Zinc- Magnesium, Cobalt - Nickel and Cadmium - Zinc ions.

UNIT – II

2.1 High Pressure Liquid Chromatography and Gas Chromatography – Principle and Applications.

2.2 Gas Chromatography – Mass Spectrophotometer (GC-MS) - Liquid Chromatography - Mass Spectrophotometer (LC-MS) - Principle and Applications.

2.3 Polarography – Principle – DME – Advantages and Disadvantages – Ilkovic equation and its significance (No Derivation) - Polarography as an Analytical tool in Quantitative and Qualitative Analysis – Amperometric Titrations.

UNIT – III

3.1 NMR Spectroscopy – Principle of Nuclear Magnetic Resonance – Basic Instrumentation.

3.2 Number of Signals – Chemical Shift – Shielding and Deshielding – Factors influencing Chemical Shift - Spin-Spin Coulpling and Coupling constants - TMS as NMR standard.

3.3 Splitting of Signals – NMR Spectra of simple Organic Molecules – Applications in Structural Elucidation.

UNIT – IV

4.1 Mass Spectroscopy – Basic principles of Mass Spectrum - Instrumentation – Molecular ion peak- Base peak - Metastable peak - Isotopic peak and their Uses.

4.2 Fragmentation – Factors affecting Cleavage Patterns - Nitrogen rule – Ring rule – McLafferty rearrangement - Determination of Molecular Formulae with examples.

4.3 Mass spectrum of simple organic compounds – Identification – Alcohols, Aldehydes and Aromatic hydrocarbons.

UNIT – V

5.1 ESR Spectroscopy – Condition – Selection Rule for Transition - Theory of ESR Spectra – Basic Instrumentation - ESR Spectrometer – Components and their Functions - Hyperfine splitting – ESR Spectra of simple radicals – CH_3, CD_3, Naphthalene radical ions only – Applications in structural elucidation.

5.2 Thermoanalytical methods – Principle involved in Thermogravimetric analysis (TGA) and Differential Thermal Analysis (DTA) – Instrumentation- Discussion of Various Components with Block Diagram.

5.3 Characteristics of TGA ($CaC_2O_4.H_2O$, $CuSO_4.5H_2O$) and DTA curves – Factors Affecting TGA and DTA Curves – Thermometric Titrations – Principle and Applications.

17. Elementary Organic Spectroscopy – Principles and Chemical Applications – Y. R. Sharma, S. Chand & Company Private Limited, V Revised Edition – 2013.

ELECTIVE PAPER – 2

B. TEXTILE CHEMISTRY

Objective:

- To impart knowledge about the Production, Properties and Applications of Natural and Synthetic Fibres, Colour and Constitution, Classification of Dyes and Concept of Dyeing in Textile Industry.

UNIT – I

1.1 General Classification of Fibres – Chemical structure – Production – Properties – Count, Denier, Tex, Staple Length, Spinning Properties, Strength, Elasticity and Creep.

1.2 Applications of the following Natural Cellulose Fibres (Cotton and Jute).

1.3 Natural Protein Fibres (Wool and Silk) – General characteristics.

UNIT – II

2.1 Chemical Structure, Production and properties of the following Synthetic Fibres - Man-made Cellulose Fibres (Rayon and Modified cellulose fibres).

2.2 Polyamide Fibres (Different types of Nylons) - Preparation – Nylon degradation – Polyester Fibres – Preparation - Degradation – Polyacrylonitrile fibre - Preparation and Properties – Viscose fibre - Preparation and Properties.

2.3 Identification tests for Cellulose, Cotton, Wool, Silk, Rayon, Acrylic, Viscose, Polyamide and Polyester Fibres.

UNIT – III

3.1 Impurities in Raw Cotton and Grey Cloth, Wool and Silk.

3.2 General principles of the Removal, Scouring - Purpose, Alkali Scouring and Acid Scouring – Bleaching (Methods - Hypochlorite, Peroxide and Bleaching Powder) - Desizing (Hydrolytic and Enzymatic), Kier Boiling and Chemicking.

3.3 Dyeing of Polyester and Blends – Functions of Dispersing agents - Fibre swelling – Carrier dyeing - High temperature dyeing - Selection of dyestuff.

UNIT – IV

4.1 Colour and Constitution – A general treatment – Chromophores – Auxochromes - Bathochromes and Hypsochromes.

4.2 Classification of dyes – Acidic, Basic, Direct, Mordant, Azoic, Ingrain, Vat and Reactive Dyes - Classification as per Chemical constitution – Azo dyes – Triphenyl Methane Dyes, Phthalein Dyes, Indigo and Anthraquinone Dyes.

4.3 Structure, Preparation and Uses – Methyl Orange, Phenolphthalein and Malachite Green.

UNIT – V

5.1 Dyeing - Dyeing of Wool and Silk – Fastness properties of dyed materials.

5.2 Dyeing of Nylon, Terylene and other Synthetic Fibres – Finishing – Finishes given to Fabrics – Mechanical finishes on Cotton, Wool and Silk.

5.3 Method used in process of Mercerizing – Anticrease and Antishrink finishes – Water Proofing.

ELECTIVE

PAPER – 3

C. NANO CHEMISTRY

Objectives:

- To introduce the Basics of Nanotechnology.
- To learn the Instrumental Techniques used in Characterisation of Nanomaterials.

UNIT-I Basics of Nanochemistry

Introduction – Definition – Length scales – Importance of Nanoscale and its Technology – Self Assembly of Materials – Self Assembly of Molecules – Porous solids, Nanowires, Nanomachines and Quantum Dots.

UNIT-II Nanoparticles

Introduction – Types of Nanoparticles – Preparation, Properties and Uses of Gold, Silicon, Silver, Zinc Oxide, Iron Oxide, Alumina and Titania Nanoparticles.

UNIT-III Synthetic Techniques

Techniques to Synthesise Nanoparticles – Top down and Bottom up Approaches – Common Growth Methods – Characterisation of Nanoparticles – Applications and Toxic effects of Nanomaterials.

UNIT-IV Nanomaterials

Preparation, Properties and Applications of Carbon Nanotubes, Nanorods, Nanofibres and Nanoclays.

UNIT-V Instrumental Techniques

Electron Microscopes – Scanning Electron Microscopes (SEM) – Transmission Electron Microscopes (TEM) – Scanning Probe Microscopy – Atomic Force Microscopy (AFM) – Scanning Tunneling Electron Microscope (STEM) – Basic Principles only.

Books for Study

SKILL BASED SUBJECT

PAPER – 4

AGRICULTURE AND LEATHER CHEMISTRY

OBJECTIVE:

- To learn about Soil fertility and Productivity, Soil Chemistry, Insecticides, Leather Industry and Treatment of Tannery Effluents.

Unit-I Soil Chemistry

1.1 Soil – Introduction - Classification - Properties of Soil – Physical properties – Components – Structure and Texture - Soil-Water, Soil-Air and Soil-Temperature.

1.2 Chemical properties - Soil Minerals, Soil Colloids, Soil Reaction and Buffering – Analysis of Soil - Soil pH – Determination of Soil pH – Effect of pH on Plants – Buffering of soil - Soil acidity, Soil salinity and Soil alkalinity.

1.3 Soil Fertility – Carbon and Nitrogen cycle - Acid, Alkaline and Saline soils – Their Formation - Reclamation – Liming agents.

UNIT-II Fertilisers and Manures

2.1 Fertilisers – Definition - Classification – Requirements of a Good fertiliser - Nitrogen fertiliser – Urea – Preparation and Uses – Potash fertiliser – KCl, K_2SO_4 and KNO_2 - Preparation and Uses – Phosphorus fertiliser – Phosphatic slag, Superphophate of lime and Triple Superphosphate - Preparation and Uses- NPK fertiliser - Advantages– Role of Micronutrients.

2.2 Manures – Compost – Composting - Methods of Composting - Farmyard Manure, Vermicompost, Composted Coconut Coir Pith, Press mud and Poultry manure – Applications.

2.3 Types of pollutions caused by Fertilisers - Ill effects of Fertilisers and their Control.

UNIT-III Insecticides and Fungicides

3.1 Insecticides – Definition - Classification of Insecticides - Stomach poisons - Contact poisons and Fumigants - Insecticides - Organic Insecticides - DDT - Gammexane - Malathion – Parathion.

3.2 Fungicides – Inorganic Fungicides – Sulphur compounds – Copper compounds – Mercuric compounds – Organic Fungicides – Dithiocarbamates – Dithane M – Bordeaux mixture.

3.3 Herbicides - Rodenticides - Pesticides in India - Adverse Environmental Effects of Pesticides.

UNIT- IV Leather Chemistry

4.1 Introduction - Constituents of Animal Skin - Preparing Skins and Hides – Leather processing – Process before Tannage – Flaying, Curing, Drying, Pickling, Cleaning and Soaking - Liming and Degreasing.

4.2 Manufacture of Leather - Leather Tanning methods - Vegetable Tanning – Chemistry of Chrome Tanning and Mineral Tanning – Deliming.

4.3 Dyeing of Leather and Fat Liquoring - Leather Finishing - Oil Tanning - By products.

UNIT- V Tannery Effluents

5.1 Tannery effluents - Pollution and its control - Water pollution and Air pollution - Waste Management.

5.2 Treatment of Tannery Effluents - Primary, Secondary and Tertiary treatment - Pollution Prevention.

5.3 Effect of Tannery Effluents on Agriculture – Organic Amendments - Reclamation of Tannery Effluents Affected Soil.

Reference Books

SCHEME OF VALUATION FOR PRACTICAL EXAMINATIONS

PRACTICAL – I

VOLUMETRIC ANALYSIS

Internal assessment: 25 Marks

External assessment: 75 Marks

Total: 100 marks

Record: 15 Marks

Procedure: 10 Marks

Error upto 2 % : 50

2.1 – 3 % : 40

3.1 – 4 % : 30

4.1 – 5 % : 20

>5 % : 10

For incomplete or wrong calculation deduct 20 % of total marks scored.

For no calculation deduct 40 % of total marks scored.

For each arithmetic error deduct 1 mark.

CORE PRACTICAL – II

INORGANIC QUALITATIVE ANALYSIS AND PREPARATION

Internal assessment: 25 Marks

External assessment: 75 Marks

Total: 100 marks

Record: 15 Marks

Preparation: 20 (Quantity- 15 Marks; Quality- 5 marks)

Analysis: 40 Marks.

Each radical with procedure: 10 Marks

(Spotting for each radical - 5 Marks; Fixing the group - 5 Marks)

PRACTICAL - III

GRAVIMETRIC ANALYSIS

Internal assessment: 25 Marks

External assessment: 75 Marks

Total: 100 marks

Record: 15 Marks

Procedure: 10 Marks

Error upto 2 % : 50

2.1 – 3 % : 40

3.1 – 4 % : 30

4.1 – 5 % : 20

>5 % : 10

a. Among the duplicate results, the value more favorable to the candidate must be taken.

b. When no duplicate result is given deduct 5 marks.

c. If the two results differ by more than 2 % deduct 5 marks.

d. For each independent arithmetical error deduct 1 mark.

e. For incomplete or wrong calculation deduct 20 %.

f. For no calculation deduct 40 %.

g. If the experiment is not completed due to an accident, award 5 marks.

PRACTICAL - IV

ORGANIC ANALYSIS

Internal assessment: 25 Marks

External assessment: 75 marks

Total: 100 marks

Record: 15 Marks

Preparation: 15 (quantity: 10 & quality: 5)

Analysis: 45

Preliminary reaction: 4

Aliphatic/ Aromatic: 4

Saturated/ Unsaturated: 4

Tests for elements: 9

Functional groups: 10

Confirmatory tests: 10

Derivative/Coloured reaction: 4

PHYSICAL CHEMISTRY PRACTICALS

Internal assessment: 25 Marks

External assessment: 75 Marks

Total: 100 Marks

Record: 15 Marks

Experiment: 45 Marks

Manipulation, Tabulation and Calculation: 15 Marks

1) **Kinetics**

Graph	: 10 Marks
Below a factor of 10	: 35
By a factor of 10	: 25
More than a factor of 10	: 15

2) <u>Molecular weight</u>

Error upto 10 %: 45

20 %: 35

30 %: 25

> 30 %: 15

3) <u>Effect of electrolyte on CST</u>

Graph: 10

Error upto 10 %: 35

20 %: 25

30 %: 15

> 30: 10

4) <u>Transition temperature</u>

Graph: 10

Error upto 2^{o}C difference: 35

7^{o}C difference: 25

> 7^{o}C difference: 15

5) <u>Conductance</u>

<u>Equivalent conductance: 25 marks</u>		**<u>Cell constant : 20 marks</u>**	
Error upto 10 %	: 25	Error upto 10 %	: 20
Upto 15 %	: 15	Upto 15 %	: 15
>15 %	: 10	>15 %	: 10

6) <u>Conductometric titration</u>

Graph: 10

Upto 2 % : 35

2.1 to 3 % : 30

3.1 to 4 % : 25

4.1 to 5 % : 20

> 5% : 15

THIRUVALLUVAR UNIVERSITY

B.Sc. COMPUTER SCIENCE

SYLLABUS
UNDER CBCS
(with effect from 2017 - 2018)

SEMESTER I

PAPER – 1
Digital Logic & Programming in C

Objective:

Provide basic knowledge on Digital Electronics to understand the working principles of Digital computer and to develop programming skill using C language.

UNIT I: Number systems and Boolean algebra

Number Systems - Decimal, Binary, Octal, Hexadecimal and their inter conversions, - Binary Arithmetic -1's complement, 2's complement and 9's complement .Binary codes - BCD, Excess-3, Graycode.

Boolean Algebra: Boolean Laws - Simplification of Boolean Functions - Logic gates and Truth Table – Universal Gates (NAND and NOR) - The K-map method up to five variables, don't care conditions, POS & SOP forms.

UNIT-II: Combinational and Sequential Circuits

Combinational Logic: Half/Full adder/subtractor, code conversion, Multiplexers, de multiplexers, encoders, decoders, Combinational design using MUX & DEMUX. BCD adder, magnitude comparator.

Sequential logic: Flip flops (RS, Clocked RS, D, JK, JK Master Slave)-Counters & types Synchronous and Asynchronous counters- Registers, Shift registers and their types.

UNIT –III: C Basics and Control constructs

C fundamentals- Operators- Constants- Expression – Library functions- Decision making and branching- Switch- FOR,WHILE, DO WHILE loops-continue-break

Unit IV: Arrays, Functions and Structures

Arrays-Multi dimensional arrays- User defines functions- Call by Value and reference-Recursion- Storage classes- Structures and Union –Self referential structures

Unit – V: Pointers and Files

Pointers- Pointer operations and Arithmetic- File management in C : File opening and closing- - I/O operations on files - Error handling during I/O operations - Random access to files - Command line arguments

Text Book:

1. Morris Mono M. "**Digital Logic and Computer Design**",PHI Latest Pub. Ed. (Unit I and 2)
2. ReemaThareja,**" Programming in C "** Oxford University Press 2014

Reference Book

1. Albert Paul Malvino, Donald P Leach, **Digital principles and applications** TMH, 1996.
2. Balagurusamy," Programming in C" TMH

CORE PRACTICAL – I

PROGRAMMING IN C - LAB

1. Summation of Series: Sin(x) (Compare with built in functions)
2. Summation of Series Cos(x) (Compare with built in functions)
3. Counting the no. of vowels, consonants, words, white spaces in a line of text
4. Reverse a string & check for palindrome without built in string function
5. ${}^{n}P_{r}$, ${}^{n}C_{r}$ in a single program using function
6. Matrix Addison, subtraction and multiplication
7. Linear Search of a number in an array
8. Sorting an array in ascending and descending order
9. Finding maximum and minimum of list of numbers
10. Call by value and call by reference of functions
11. Employee pay bill using structure
12. Preparing an EB bill using file

ALLIED

1. MATHEMATICS – I

Objectives of the Course:

To Explore the Fundamental Concepts of Mathematics

UNIT-I: ALGEBRA

Partial Fractions - Binomial, Exponential and logarithmic Series (without Proof) - Summation - Simple problems

UNIT-II : THEORY OF EQUATIONS

Polynomial Equations with real Coefficients - Irrational roots - Complex roots- Transformation of equation by increasing or decreasing roots by a constant - Reciprocal equations - Newton's method to find a root approximately - Simple problems.

UNIT-III : MATRICES

Symmetric - Skew-Symmetric - Orthogonal and Unitary matrices - Eigen roots and eigen vectors – Cayley - Hamilton theorem (without proof)-Verification and computation of inverse matrix

UNIT-IV: TRIGONOMETRY

Expansions of $\sin^n \theta$, $\cos^n \theta$, $\sin n\theta$, $\cos n\theta$, $\tan n\theta$ - Expansions of $\sin \theta$, $\cos \theta$, $\tan \theta$ in terms of θ.

UNIT-V: DIFFERENTIAL CALCULUS

Successive differentiation upto third order, Jacobians - Concepts of polar co-ordinates - Curvature and radius of curvature in Cartesian co-ordinates and in polar co-ordinates.

Recommended Text:

P.Duraipandian and S.Udayabaskaran,(1997) *Allied Mathematics,* Vol. I & II.Muhil Publishers, Chennai.

Reference Books:

1. P.Balasubramanian and K.G.Subramanian,(1997) *Ancillary Mathematics.* Vol. I & II. Tata McGraw Hill, New Delhi.
2. S.P.Rajagopalan and R.Sattanathan,(2005) *Allied Mathematics* .Vol. I & II. VikasPublications, New Delhi.
3. P.R.Vittal (2003) *Allied Mathematics* .Marghan Publications, Chennai
4. P.Kandasamy, K.Thilagavathy (2003) Allied Mathematics Vol-I, II S.Chand& company Ltd., New Delhi-55.
5. Isaac, Allied Mathematics. New Gamma Publishing House, Palayamkottai.

2. MATHEMATICAL FOUNDATIONS - I

Objectives

To know about Logical operators, validity of arguments, set theory and set operations, relations and functions, Binary operations, Binary algebra, Permutations & Combinations, Differentiation, Straight lines, pair of straight lines, Circles, Parabola, Ellipse, Hyperbola.

UNIT-I: SYMBOLIC LOGIC

Proposition, Logical operators, conjunction, disjunction, negation, conditional and bi-conditional operators, converse, Inverse, Contra Positive, logically equivalent, tautology and contradiction. Arguments and validity of arguments.

UNIT-II: SET THEORY

Sets, set operations, venndiagram, Properties of sets, number of elements in a set, Cartesian product, relations & functions,

Relations : Equivalence relation. Equivalence class, Partially and Totally Ordered sets,

Functions: Types of Functions, Composition of Functions.

UNIT-III: BINARY OPERATIONS

Types of Binary Operations: Commutative, Associative, Distributive and identity, Boolean algebra: simple properties. Permutations and Combinations.

UNIT-IV: DIFFERENTIATION

Simple problems using standard limits,

$\lim_{x \to a} \frac{x^n - a^n}{x - a}$, $\lim_{x \to 0} \frac{\sin x}{x}$, $\lim_{x \to 0} \frac{\tan x}{x}$, $\lim_{x \to 0} \frac{e^x - 1}{x}$, $\lim_{n \to \infty} (1+1/n)^n$, $\lim_{n \to 0} (1+n)^{1/n}$

Differentiation, successive differentiation, Leibnitz theorem, partial differentiation, Applications of differentiation, Tangent and normal, angle between two curves.

UNIT-V: TWO DIMENSIONAL ANALYTICAL GEOMETRY

Straight Lines - Pair Straight Lines

Text Book.

P.R. Vittal, Mathematical Foundations – Maragham Publication,

Chennai.

Reference Books

1. U. Rizwan, Mathematical Foundation - SciTech, Chennai
2. V.Sundaram& Others, Dircrete Mathematical Foundation - A.P.Publication, sirkali.
3. P.Duraipandian& Others, Analytical Geometry 2 Dimension - Emerald publication 1992 Reprint.
4. Manicavachagompillay&Natarajan. Analytical Geometry part I - Two Dimension - S.Viswanathan (printers & publication) Put Ltd., 1991.

SEMESTER II

CORE THEORY PAPER – 2

C++ AND DATA STRUCTURE

Objective: To develop Object oriented programming skills using C++ and to introduce data structure concepts.

UNIT-I: Object Oriented Concepts and C++

C++ Fundamentals - Operators, Expressions and Control Structures: If,If..Else, Switch - Repetitive Statements- for,while,do..while - Input and Output in C++ - manipulators-manipulators with parameters. - Pointers and arrays

UNIT-II: Functions and Classes

Functions in C++ - Main Function - Function Prototyping - Parameters Passing in Functions - Values Return by Functions - inline Functions - Function Overloading.
Classes and Objects; Constructors and Destructors; and Operator Overloading - Type of Constructors

UNIT – III: Inheritance, Polymorphism & Files

Inheritance : Single Inheritance - Multilevel inheritance - Multiple inheritance - Hierarchical Inheritance - Hybrid Inheritance - Polymorphism - Working with Files : Classes for File Stream Operations - Opening and Closing a File - End-of-File Detection - Updating a File - Error Handling during File Operations .

UNIT-IV: Fundamental Data Structures

Definition of a Data structure - primitive and composite Data Types, Stacks (Array) - Operations –Linked Stack-Operations- Applications of Stack (Infix to Postfix Conversion).

Queue (Array)- operations-Linked Queue- Operations- - Singly Linked List - Operations, Application of List (Polynomial Addition)-. Doubly Linked List - Operations.

UNIT-V : Trees and Graphs

Trees: Binary Trees –Binary Search Tree- Operations - Recursive Tree Traversals-Recursion. Graph - Definition, Types of Graphs, Graph Traversal –Dijkstras shortest path- DFS and BFS.

Text Books

1. Mastering in C++, K.R.Venugopal, Raj Kumar, T.Ravisankar – McGraw Hill, 2011.
2. C++ Plus Data Structure by Nell Dale, Narosa Publications, 2000

Reference Books:

1. Reema Thareja, Object Oriented Programming with C++, Oxford University Press, 2015
2. Balagurusamy, C++ programming, TMH.
3. Fundamentals of Data Structures in C++ by Ellis Horowitz, Sartaj Sahni and Dinesh Mehtha, Second Edition, University Press
4. Data Structures using C++ by Varsha H.Patil. Oxford University Press, 2012

PRACTICAL – II

C++ & DATA STRUCTURE - LAB

1. Implementing classes, object, constructors and member functions for calculating area and perimeter of a circle.
2. Implementing function overloading (Find area/volume of rectangle, circle, sphere, cylinder, cone etc).
3. Implementing operator over loading(Addition, subtraction, multiplication of matrices)
4. Implementing single, multiple, hierarchical inheritance.
5. Implementing sequential file operations using error handling functions.
6. Implementing PUSH, POP operations of stack using Arrays.
7. Implementing add, delete operations of a queue using Arrays.
8. Implementing Infix to postfix conversion of an expression using stack
9. Implementing Binary search tree recursive traversals (in-order, pre-order, post-order).
10. Implementing Polynomial addition using linked list.

ALLIED - 2

1. MATHEMATICS – II

Objectives of the Course

To Explore the Fundamental Concepts of Mathematics

UNIT-I: Application of Integration

Evaluation of double, triple integrals - Simple applications to area, volume - Fourier series for functions in $(0,2\pi)$ and $(-\pi, \pi)$.

UNIT-II: Partial Differential Equations

Formation, complete integrals and general integrals - Four standard types, Lagrange's equations.

UNIT-III: Laplace Transforms

Laplace Transformations of standard functions and simple properties - Inverse Laplace transforms - Applications to solutions of linear differential equations of order 1 and 2-simple problems

UNIT-IV: Vector Analysis

Scalar point functions - Vector point functions - Gradient, divergence, curl - Directional derivatives - Unit to normal to a surface.

UNIT-V: Vector Analysis (continued)

Line and surface integrals - Guass, Stoke's and Green's theorems (without proofs) - Simple problem based on these Theorems.

Recommended Text

P.Duraipandian and S.Udayabaskaran,(1997) *Allied Mathematics*, Vol. I & II.Muhil Publishers, Chennai

Reference Books:

3. P.R.Vittal(2003). *Allied Mathematics* .Marghan Publications, Chennai.
4. P.Kandasamy, K.Thilagavathy (2003) Allied Mathematics Vol-I, II S.Chand& company Ltd., New Delhi-55.
5. Isaac, Allied Mathematics. New Gamma Publishing House, Palayamkottai

2. MATHEMATICAL FOUNDATIONS II

Objectives

To know about Matrix Operations, Symmetric, Skew-Symmetric, Hermitian, Skew-Hermitian, Orthogonal, Unitary Matrices. Rank of a Matrix Solutions of linear equations Consistency and Inconsistency, Characteristic roots and Characteristics Vectors, Cayley - Hamilton Theorem, Integration of rational functions, Integration by parts, Reduction formulae, Area and volume using integration, Planes, Straight lines, Spheres, Curves, Cylinders.

UNIT-I: MATRICES

Multiplication of matrices, Singular and Non-Singular matrices, Adjoint of a Matrix, Inverse of a matrix Symmetric and Skew-Symmetric, Hermitian and Skew-Hermition, Orthogonal and unitary matrices, Rank of a matrix, Solution of Simultaneous Linear equations by

(i) Cramer's rule.

(ii) Matrix Inversion Method.

UNIT-II: MATRICES

Test for Consistency and Inconsistency of linear equations, (Rank Method), characteristic roots and characteristic vectors, Cayley - Hamilton theorem, matrix of linear transformations: reflection about the x, y axes and the line y=x, rotation about the origin through an angle, expansion or compression, shears, translation.

UNIT-III

Integration Simple problems, integration of rational function involving algebraic expressions of the form

$$\frac{1}{\sqrt{ax^2+bx+c}}, \frac{1}{\sqrt{ax^2+bx+c}\sqrt{ax^2+bx+c}}, \frac{px+q}{\sqrt{ax^2+bx+c}}, \frac{px+q}{\sqrt{ax^2+bx+c}\sqrt{ax^2+bx+c}}, \sqrt{px+q}$$

integrations using simple substitutions integrations involving trigonometric functions of the form

$$\frac{1}{a+b\cos x}, \frac{1}{a^2\sin^2 x+b^2\cos^2 x},$$ Integration by parts.

UNIT-IV

Properties of definite integrals. Reduction formulae for

$\int x^n e^{ax} dx$, $\int \sin^n x dx$, $\int \cos^n x dx$, $\int x^m (1-x)^n dx$, applications of integration for (i) Area under plane caurves, (ii) Volume of solid of revolution.

UNIT-V: ANALYTICAL GEOMETRY OF THREE DIMENSION

Planes, straight lines.

Text Book.

P.R.Vittal, Mathematical Foundations - Margham Publication, Chennai.

Reference Books

1. U. Rizwan, Mathematical Foundation - SciTech, Chennai
2. V.Sundaram& Others, Dircrete Mathematical Foundation - A.P.Publication, sirkali.
3. P.Duraipandian& Others, Analytical Geometry 3 Dimension – Emerald publication 1992 Reprint.
4. Manicavachagompillay&Natarajan. Analytical Geometry part II - three Dimension - S.Viswanathan (printers & publication) Put Ltd., 1991.

SEMESTER III

CORE THEORY PAPER – 3

JAVA Programming

Objectives:

To improve Object Oriented Programming gathered already through an independent platform.

Unit – I: BASICS, ESSENTIALS, CONTROL STATEMENT AND CLASSES & OBJECTS

Computer and its Languages – Stage, Origin and Features for Java - JDK–OOP; Java Essentials: Program – API - Variables& Literals - Data Types - String Class – Operators - Type conversion - Constants - Scope – Comments - Keyboard Input; Control Statements: Conditional Statements – Looping Statements - Break and Continue Statements; Classes and Objects: Modifiers - Arguments - Constructors - Packages and import - Static Class - Overloaded Methods and Constructors - Returning Objects – to String() - this reference –Enumeration - Garbage Collection.

Unit – II: ARRAYS, INHERITANCE, INTERFACES AND PACKAGES

Arrays - Three or More Dimensions; Inheritance: Basics - Calling the Super class Constructor - Overriding Super class Methods - Inheritance from Subclasses – Polymorphism -Abstract Classes and Methods - Interfaces: Fields - Multiple inheritance - Interface inheritance; Packages: Creating packages – Accessing package from other packages- Access Specifier.

Unit – III: STRING HANDLING, EXCEPTION HANDLING AND MULTI THREADING

String Handling: Basics - Operations –String Methods - String Buffer class - String Builder – to String method -String Tokenizer class. Exception Basics: try and catch block - Multiple catch block - Nested try - throws keyword - Throw vs Throws - Final Vs Finally Vs Finalize - Method Overriding - Custom Exception - Multithreading: Life Cycle - Methods in Thread - thread application – Thread priority – Synchronization - Inter-thread communication - Suspending, Resuming, and Stopping Threads;

Unit – IV: APPLET AND GUI APPLICATION

Applets: Basis - Lifecycle - Applet classes - Application – Graphics; AWT-I: GUI Programming - AWT classes - Windows fundamentals- Creating Windows - Dialog Boxes - Layout Managers - Radio Buttons and Check Boxes – Borders- Swing

Unit – V: JAVA DATABASE CONNECTIVITY

JDBC - Types of Drivers- Architecture- Classes and Interfaces - Developing JDBC Application - New Database and Table with JDBC - Working with Database Metadata.

Core Practical

Practical 3- JAVA Programming LAB

List of Practical's

1. Implementing Package, inheritances and interfaces
2. Implementing Flow, Border and Grid Layouts
3. Implementing Dialogs , Menu and Frame
4. Implementing User defined Exception Handling
5. Implementing Multithreading
6. Implementing I/O Stream File handling
7. Implementing a Calculator using Swing
8. CRUD operation Using JDBC
9. Client Server using TCP and UDP Socket
10. GUI application with JDBC

1. PHYSICS - I

UNIT – I: PROPERTIES OF MATTER

Elasticity : Hooke's Law – Elastic Constants – bending of beam – Bending moment – Cantilever Depression at the loaded end of a cantilever – determination of Young's modulus by non-uniform bending.

Torsion : Torsion couple – Potential energy in a twisted wire – Torsional pendulum – Time period – Determination of rigidity modulus by Torsional oscillation (without masses).

Viscosity: Viscosity of a liquid – Viscous force – Co-efficient of viscosity of a liquid – Poiseuille's formula .

Surface Tension: Surface Tension – Surface Tension and interfacial surface tension by the method of drops.

UNIT – II: HEAT

Heat: Specific heat – Newton's law of cooling – determination of specific heat of a liquid using Newton's law of cooling – Emissivity and Emissive Power.
Low Temperature: J.K. Effect – Positive Effect – Negative Effect – Temperature of Inversion – Super conductors. Type I and II – Meisner Effect – Helium I and II.

UNIT – III: ELECTRICITY AND MAGNETISM

Electricity: Potentiometer – Principle – Calibration of low range voltmeter – Measurement of internal resistance of cell – measurement of an unknown resistance.

Magnetism – Moment and pole strength of a magnet – Deflection magnetometer – Tan C position – Vibration magnetometer – Theory – Period of Oscillation – Determination of M and B_H using the deflection magnetometer in Tan C position and the vibration magnetometer.

UNIT – IV: SOUND AND ACOUSTICS OF BUILDING

Sound: Transverse vibration of strings – Velocity and frequency of vibrations of a stretched string – laws – sonometer – A.C. Frequency – Steel Wire – Brass wire.

Ultrasonics – Production by Piezo – electric method – properties and uses.
Acoustics of buildings: Reverberation – Reverberation time – Sabine's formula (definition only) – Sound absorption co-efficient of surface – conditions for the perfect acoustics.

UNIT – V: OPTICS

Interference: Air Wedge – Description – Test for optical flatness of glass plate – Determination of diameter of a thin wire by air wedge.

Diffraction: Theory of transmission grating – Normal Incidence – Determination of Wavelength of monochromatic source and Wavelength of mercury line using a grating by normal Incidence.

Fibre optics: principle-classification of optical fibres-fibre optic communication system block diagram.

Books for Study & Reference

1. Allied Physics – R. Murugesan S. Chand & Co. First Edition (2005).
2. Allied Physics – Dr. K. Thangaraj, Dr. D. Jayaraman Popular Book Department, Chennai.
3. Allied Physics – Prof. Dhanalakshmi and others.
4. Elements of Properties of Matter – D.S. Mathur, S. Chand & Co. (1999).
5. Heat and Thermodynamics – N. Brijlal and Subramaniam S. Chand & Co.
6. A text book of Sound – by M. Narayanamoorthy and other National Publishing Companies (1986).
7. Modern Physics – R. Murugesan S. Chand & Co. (2004).
8. Introduction to Fibre optics- K.Thyagarajan and Ajay Ghatak,Cambridge,University Press(1999).

ALLIED

2. STATISTICAL METHODS AND THEIR APPLICATIONS I

Objective
To understand and computing statistical Methods by which to develop the programming Skills.

UNIT-I
Introduction - scope and limitations of statistical methods - classification of data - Tabulation of
data - Diagrammatic and Graphical representation of data - Graphical determination of Quartiles ,Deciles and Percentiles.

UNIT-II
Measures of location : Arithmetic mean, median, mode, geometric mean and Harmonic mean and their properties.

UNIT-III
Measures of dispersion : Range, Quartile deviation, mean deviation, Standard deviation, combined Standard deviation, and their relative measures.

UNIT-IV
Measures of Skewness Karl Pearson's, Bowley's, and kelly's and co-efficient of Skewness and kurtosis based on moments.

UNIT-V
Correlation - Karl Pearson - Spearman's Rank correlation - concurrent deviation methods.
Regression Analysis: Simple Regression Equations.

Note : The proportion between theory and problems shall be 20:80

Books for Reference:
1. Fundamental of Mathematical Statistics - S.C. Gupta & V.K. Kapoor - Sultan Chand
2. Statistical Methods - Snedecor G.W. & Cochran W.G. oxford & +DII
3. Elements of Statistics - Mode . E.B. - Prentice Hall
4. Statistical Methods - Dr. S.P. Gupta - Sultan Chand & Sons

Skill Based Subject –Paper 1

DESIGN AND ANALYSIS OF ALGORITHMS

Objective: To build a solid foundation of the most important fundamental subject in computer science. Creative thinking is essential to algorithm design and mathematical acumen and programming skills.

UNIT -I: ALGORITHM AND ANALYSIS

What is an Algorithm? - Algorithm Specification- Performance Analysis- Randomized Algorithms.

UNIT - II: DIVIDE AND CONQUER

General Method - Binary Search - Finding the Maximum and Minimum-Merge Sort - Quick Sort - Selection Sort- Stassen's Matrix Multiplications.

UNIT - III: THE GREEDY METHOD

The General Method - Knapsack Problem – Tree Vertex Splitting - Job Sequencing with Deadlines - Minimum Cost Spanning Trees - Optimal Storage on Tapes - Optimal Merge Pattern - Single Source Shortest Paths.

UNIT - IV: DYNAMIC POGRAMMING

The General Method – Multistage Graphs - All pair shortest path - String Editing - 0/1 Knapsack – Reliability Design - The Traveling Salesperson Problem

UNIT - V: TRAVERSAL, SEARCHING & BACKTRACKING

Techniques for Binary Trees- Techniques for Graphs - The General Method - The 8-Queens Problem – Sum of Subsets- Graph Colouring- Hamiltonian Cycles

TEXT BOOK

Fundamentals of Computer Algorithms, Ellis Horowitz, SartajSahni, SanguthevarRajasekaran, Galgotia Publications, 2015.

REFERENCE BOOKS:

1. Introduction to Algorithms ,Coremen T.H.,Leiserson C.E. and Rivest R.L., PHI 1998.

2. Introduction to the Design and Analysis of Algorithms, AnanyLevitin, Pearson Education, 2nd Edition.

Non- Major Elective-1 Paper-1

Introduction to Information Technology

Objectives:

To enable the student to be proficient with Information Technology with a better knowledge of Computer

UNIT – I Introduction to Computers:

Definition - Characteristics of a Computer - Classification of Computers - Basic Anatomy of the Computer - Applications / Uses of Computers in different fields

UNIT – II Input and Output Devices:

Input Devices - Output Devices - Data Representation - Programming Languages / Computer Languages - Software: System Software - Application Software

UNIT – III Data Communication and Computer Networks:

Data Communication - Computer Network - The Uses of a Network - Types of Networks - Network Topologies- Transmission Media: Guided Transmission Media - Wireless Transmission

UNIT – IV Internet and its Applications:

History of Internet - Uses of Internet - Advantages of Internet - ISP - Internet Services - IP Address - Web Browser - URL - DNS - Internet Explorer - Types of internet connections - E-mail - Search Engine.

UNIT – V Operating System:

Evolution of operating systems - Function of Operating System - Classification of Operating –System - Example of Operating System – DOS –Windows – UNIX - Linux

TEXT BOOKS:

1. Alexis Leon and Mathews Leon, "Fundamentals of Information Technology", Vikas Publishing House Pvt. Ltd.
2. Introduction to Information Technology, P.Rizwan Ahmed, Second Edition, Margham Publications, 2016
3. Introduction to Information Technology, PelinAksoy, Laura DeNardis, Cengage Learning India Private Limited.

.

SEMESTER IV

CORE THEORY PAPER – 4

DATABASE MANAGEMENT SYSTEM

Objective: To incorporate a strong knowledge on databases to students

UNIT - I Database Basics

Introduction: Flat File – Database System – Database – Actionable for DBA. The Entity – Relationship Model: Introduction – The Entity Relationship Model. Data Models: Introduction – Relational Approach – The Hierarchical Approach – The Network Approach.

UNIT – II Relational Algebra

Structure of Relational Databases – Fundamental Relational Algebra Operations – Additional Relational Algebra Opearations - Extended Relational Algebra Operations - Null Values - Modification of the Database - The Tuple Relational Calculus – The Domain Relational Calculus

UNIT – III Normalization

Normalization: Introduction - Normalization – Definition of Functional Dependence (FD) – Normal Forms: 1NF, 2NF, 3NF and BCNF.

UNIT – IV Structured Query Language

Structured Query Language: Features of SQL – Select SQL Operations – Grouping the Output of the Query – Querying from Multiple Tables – Retrieval Using Set operators – Nested Queries. T-SQL – Triggers and Dynamic Execution: Transact-SQL..

UNIT – V Procedural Language

Procedural Language- SQL: PL/SQL Block Structure – PL/SQL Tables. Cursor Management and Advanced PL/SQL: Opening and Closing a Cursor – Processing Explicit Cursor – Implicit Cursor – Exception Handlers – Sub Programs in PL/SQL – Functions – Precaution While Using PL/SQL Functions – Stored Procedure – Object Oriented Technology.

Text Book

1. Rajesh Narang, "Database Management Systems", PHI Learning Private Limited, New Delhi, sixth printing, 2010.

Reference

1. S.K. Singh, "Database Systems – Concepts, Design and Appplications", Dorling Kindersley (India) Pvt. Ltd., Second Impression, 2008

2. Database System Concepts , Abraham Silberchatz, Henry F Korth , S.Sudarshan, McGraw-Hill - 5th Edition - 2006.

Core Practical

Practical 4- RDBMS LAB

1. Table creation and simple Queries
2. Queries using Aggregate Function and Set Operations
3. Table creation with various Joins
4. Nested Sub queries and correlated Sub queries
5. View creation and manipulation
6. PL/SQL program for cursor
7. PL/SQL program for packages
8. PL/SQL program for triggers and its type
9. PL/SQL program for procedures and functions

ALLIED - 2

1. PHYSICS II

UNIT – I: WAVE MECHANICS

Wave Mechanics – De Broglie Waves – Dual Nature – Experimental Study of Matter Waves – Davission and Germer's Experiment – G.P. Thomson's Experiment _ Heisenberg's uncertainty Principle – The position and moment of a particle.

UNIT – II : NUCLEAR PHYSICS

Particle accelerators – cyclotron, particle detectors – GM Counter Artificial Transmutation – Rutherford's Experiment – The Q value equation for nuclear reaction – Threshold energy – Nuclear Reactions.

Conservation Laws: Conservation of Charge – Conservation of Nucleons – Conservation of Mass – Energy – Conservation of Parity – Quantities conserved and quantities not conserved in a nuclear reaction.

UNIT – III : ENERGY PHYSICS

Sources of conventional energy – Need for non-conventional energy resources – solar energy utilization – solar water heater – solar drier – conversion of light into electrical energy – solar cell – merits and demerits of solar energy – wind energy – its conversion systems – energy from Bio mass – Bio gas generation – Industrial and space application.

UNIT – IV: CRYSTALLOGRAPHY

Crystallography : The crystal structure – Unit Cell –Bravais lattice- structures of simple cubic-BCC and FCC- co ordination number, packing factor calculation for the above structures –Hexogonal closed packed(HCP) structure -Miller indices – concept of Reciprocal Vectors.

UNIT – V: ELECTRONICS

Electronics: Transistor characteristics in common base and common emitter mode- Transistor single stage amplifier- Expression for input impedence, output impedence and current gain.
Digital Electronics : NAND and NOR as universal building blocks- De Morgan's theorem –statement and proof- Fabrication of diodes and transistors using Monolithic technology–limitations.

Books for Study & Reference

1. Allied Physics – R. Murugesan S. Chand & Co. First Edition (2005).
2. Allied Physics – Dr. K. Thangaraj, Dr. D. Jayaraman Popular Book Department, Chennai.
3. Allied Physics – Prof. Dhanalakshmi and others.
4. Elements of Properties of Matter – D.S. Mathur, S. Chand & Co. (1999).
5. Heat and Thermodynamics – N. Brijlal and Subramaniam S. Chand & Co.
6. A text book of Sound – by M. Narayanamoorthy and other National Publishing Companies (1986).
7. Modern Physics – R. Murugesan S. Chand & Co. (2004).
8. Electronic Principles and Applications – A.B. Bhattacharya, New Central Book Agency, Calcutta.
9. Introduction to Solid State Physics – C. Kittel, 5^{th} Edition Wiley Eastern Ltd.
10. Renewable & Sustainable energy sources – Agarwal.

ALLIED

2. STATISTICAL METHODS AND THEIR APPLICATIONS II

Objective
To understand and computing statistical Methods by which to develop the programming Skills.

UNIT-I
Curve fitting by the methods of least squares -
$Y = a x + b$, $Y = a x^2 + b x + c$, $Y = a x^b$, $Y = a e^{bx}$

UNIT-II
Sample Space - events - probability - Addition and Multiplication Theorem - conditional probability -Baye's Theorem. Mathematical expectation Addition and Multiplication theorem, Chebychev's Inequality.

UNIT-III
Standard distributions - Binomial, Poisson, Normal distribution and fitting of these distributions.

UNIT-IV
Test of Significance- small sample and large sample test based on mean, S.D. correlation and
proportion - confidence interval.

UNIT-V
Analysis of variance - One and Two way classifications - Basic principle of design of Experiments - Randomisation, Replication and Local control - C.R.D., R.B.D. and L.S.D.

Books for Reference:
1. Fundamental of Mathematical Statistics - S.C. Gupta & V.K. Kapoor - Sultan Chand
2. Fundamental of Applied Statistics - S.C. Gupta & V.K. Kapoor – Sultan Chand
3. Statistical Methods - Snedecor G.W. & Cochran W.G. oxford & +DII
4. Elements of Statistics - Mode . E.B. – Prentice Hall

ALLIED PRACTICAL

1. PHYSICS
(Any 15 Experiments)

1. Young's modulus – non uniform bending – pin and microscope.
2. Rigidity modulus – Static Torsion Method Using Scale and Telescope.
3. Ridigity modulus – Torsional oscillation method (without symmetric masses).
4. Determination of Co-efficient of Viscosity – Graduated Burette.
5. Surface Tension and Interfacial Tension – By drop weight method.
6. Specific Heat Capacity of a liquid – by Newton's Law of Cooling.
7. Sonometer – Determining A.C. Frequency. (Screw Gauge is given).
8. Sonometer – frequency of tuning fork.
9. Newton's Rings – Radius of Curvature.
10. Air Wedge – Determination of thickness of thin wire.
11. Spectrometer Grating – Minimum Deviation – Mercury Lines.
12. Spectrometer – Refractive Index of a liquid – Hollow Prism.
13. Potentiometer – Calibration of High Range Ammeter.
14. Potentiometer – Calibration of Low Range Voltmeter.
15. Determination of M and B_H using Deflection Magnetometer in Tan C position and vibration magnetometer.
16. Figure of merit and voltage sensitiveness of table galvanometer.
17. Construction of AND, OR gates using diodes and NOT by transistors.
18. Zener diode – Voltage Regulation.
19. NAND / NOR as universal gate.
20. Demorgan's theorem verification.

ALLIED PRACTICAL

2. STATISTICAL METHODS AND THEIR APPLICATIONS - Practical

ALLIED PRACTICAL

1. Formation of uni-variate and bi-variate frequency distribution
2. Diagrams and Graphs
3. Measures of Location
4. Measures of Dispersion
5. Skewness and Kurtosis
6. Correlation and Regression
7. Curve Fitting : $y = ax+b$, $y=ax^2+bx+c$, $y=ax^b$, $y=ae^{bx}$
8. Fitting of distributions - Binomial, Poisson, Normal
9. Test of significance small sample and large sample tests
10. Analysis of Variance: one way classification, Two way classification and Design of Experiments - C.R.D, R.B.D & L.S.D

BOOKS FOR REFERENCE:

1. Statistical Methods by S.P. Gupta, Sultan chand & Sons
2. Fundamental of Applied Statistics - S.C. Gupta & V.K. Kapoor

Note:
Use of Scientific Calculator shall be permitted for Practical Examination. Statistical Table may be provided to the students at the Examination Hall.

Skill Based Subject II –Paper 2

Computer Organisation and Architecture

Objective: To enable the student to have a better understanding of architecture of computer and prepare the student for higher level of programming

UNIT - I

Instruction Codes – Computer Registers – Computer Instructions – Timing and Control – Instruction Cycle – Memory Reference Instructions – Input-Output and Interrupts.

UNIT - II

Control Memory – Address Sequencing – Micro program Examples – Design of Control Unit.

UNIT - III

Introduction – General Register Organization – Instruction Formats – Addressing Modes.

UNIT – IV

Peripheral Devices – I/O interface – Asynchronous Data Transfer – Modes of Transfer - Direct Memory Access – Input Output Processor (Excluding IBM and Intel IOPs).

UNIT - V

Auxiliary Memory – Main Memory – Auxiliary Memory - Associative Memory – Cache Memory -Virtual Memory.

NON MAJOR ELECTIVE II PAPER II

INTERNET AND ITS APPLICATIONS

Objective: To equip students to basics of Internet usage and prepare them for digital world

UNIT - I Internet Basics

Introduction to Computers Programming Language types History of Internet Personal computers History of World Wide Web- Micro software .NET Java-Web resources.

UNIT - II Web Browsers

Web Browsers - Internet Explorer - connecting to Internet Features of Internet explorer6 Searching the Internet- online help and tutorials - File Transmission Protocol (FTP) Browser settings.

UNIT - III E-Mail

Attaching a file, Electronic mail creating an E-mail id sending and Receiving mails - attaching a file - Instance messaging - other web browsers.

UNIT - IV HTML

Introduction to HTML headers – Linking - Images-special characters and line breaks unordered lists- simple HTML programs.

UNIT - V Digital Cash

E-marketing consumer tracking Electronic advertising search engine – CRM - credit card payments Digital cash and e-wallets micro payments- smart card

Text book

Internet and World Wide Web Third edition H.M.Deitel, P.J. Deitel and A.B.Goldberg - PHI Reference

The Internet- Complete Reference Harley hahn, Tata McGraw Hill

SEMESTER V

CORE THEORY PAPER – 5

MOBILE APPLICATIONS DEVELOPMENT

Objective:

This course aims to provide the students with a detailed knowledge on Mobile Application and Development and covers Android programming from fundamentals to building mobile applications for smart gadgets.

UNIT I Introduction to Mobile Applications:

Native and web applications - Mobile operating systems and applications - Mobile Databases. Android: History of Android - Android Features – OSS – OHA - Android Versions and compatibility - Android devices - Prerequisites to learn Android -– Setting up software – IDE - XML. Android Architecture: Android Stack - Linux Kernel - Android Runtime - Dalvik VM - Application Framework - Android emulator - Android applications.

UNIT II Android development:

Java - Android Studio – Eclipse – Virtualization – APIs and Android tools – Debugging with DDMS – Android File system – Working with emulator and smart devices - A Basic Android Application - Deployment. Android Activities: The Activity Lifecycle – Lifecycle methods – Creating Activity. Intents – Intent Filters – Activity stack.

UNIT III Android Services:

Simple services – Binding and Querying the service – Executing services.- Broadcast Receivers: Creating and managing receivers – Receiver intents – ordered broadcasts. Content Providers: Creating and using content providers – Content resolver. Working with databases: SQLite – coding for SQLite using Android – Sample database applications – Data analysis.

UNIT IV Android User Interface:

Android Layouts – Attributes – Layout styles - Linear – Relative – Table – Grid – Frame. Menus: Option menu – context menu - pop-up menu – Lists and Notifications: creation and display. Input Controls: Buttons-Text Fields-Checkboxes-alert dialogs-Spinners-rating bar-progress bar.

UNIT V Publishing and Internationalizing mobile applications :

Live mobile application development: Game, Clock, Calendar, Convertor, Phone book. App Deployment and Testing: Doodlz app – Tip calculator app – Weather viewer app.

3. http://www.developer.android.com

CORE THEORY PAPER - 6

OPERATING SYSTEM

Objective: Enable the student to get sufficient knowledge on various system resources.

Unit – I Operating System Basics

Basic Concepts of Operating System - Services of Operating System-Classification of Operating System- Architecture and Design of an Operating System-Process Management -Introduction to Process-Process State -PCB - Process Scheduling - Interprocess Communication

Unit –II Operating System Scheduling

CPU Scheduling**:** Introduction - Types of CPU Scheduler - Scheduling Criteria - Scheduling Algorithms - FCFS Scheduling – SJF Scheduling;-Priority Scheduling - Round-Robin Scheduling- Multilevel Queue Scheduling - Deadlock - Basic Concept of Deadlock- Deadlock Prevention - Deadlock Avoidance- Deadlock - Detection and Recovery

Unit- III Memory management

Memory Management - Basic Concept of Memory - Address Binding; Logical and Physical Address Space- Memory Partitioning - Memory Allocation-Protection-Fragmentation and Compaction

Unit – IV Swapping

Swapping- Using Bitmaps - Using Linked Lists- Paging-Mapping of Pages to Frames - Hierarchical Page Tables- Segmentation - Virtual Memory - Basic Concept of Virtual Memory- Demand Paging - Transaction Look aside Buffer (TLB) - Inverted Page Table-Page Replacement Algorithms

Unit –V File Management

File Management - Basic Concept of File-Directory Structure-File Protection-Allocation Methods – Various Disk Scheduling algorithms

Text Books:

Abraham Silberschatz Peter B. Galvin, G. Gagne, “Operating System Concepts”, Sixth Edition, Addison Wesley Publishing Co., 2003.

Reference

1. Operating systems - Internals and Design Principles, W. Stallings, 6th Edition, Pearson
2. Willam-Stalling “Operating System” Fourth Edition, Pearson Education, 2003.

CORE THEORY PAPER – 7

DATA COMMUNICATION & NETWORKS

Objective:

To equip students to basics of Data Communication and prepare them for better computer networking

UNIT I

Introductory Concepts - Network hardware - Network software – Network Architecture - Physical layer - Guided transmission media - Cable television.

UNIT II

Data Link Layer - Design issues - Channel allocation problem - Multiple access protocols - Ethernet - Wireless LAN - 802.11 architecture.

UNIT III

Network Layer : Design issues, Routing Algorithms, Shortest path routing, Flooding, Broadcast & Multicast routing congestion, Control & internetworking.

UNIT IV

Transport Layer - Transport service - Elements of transport protocols - User Datagram Protocol - Transmission Control Protocol.

UNIT V

Application Layer - DNS - Electronic mail - World Wide Web - Multimedia - Network security.

TEXT BOOK

2. Black: Data Network, Prentice Hall of India.
3. W. Stallings, "Data and Computer Communication", Pearson Education, Fifth Edition, 2001

Core Practical – 5

Mobile Applications Development – Lab

1. Intent and Activity
2. Using Controls
3. Alert Dialogs
4. List View
5. Options Menu
6. Seek Bars
7. Shared Preferences
8. Status Bar Notifications
9. Tab Widgets Talking Clock.
10. Tween Animation
11. Grid View
12. Internal Storage - Files
13. SQlite - Database
14. Google Map
15. Permissions

Core Practical – 6

Operating System Lab

1. Implementing the Process system calls.
2. Implementing I/O system calls.
3. Implementing IPC using message queues.
4. Implementing CPU& scheduling algorithm for first come first serve scheduling.
5. Implementing CPU scheduling algorithm for shortest job first scheduling.
6. Implementing perform priority scheduling.
7. Implementing CPU scheduling for Round Robin Scheduling.
8. Implementing pipe processing.
9. Implementing first fit, best fit algorithm for memory management.
10. A program to simulate producer-consumer problem using semaphores.
11. A Shell Program to find factorial of a given number
12. A shell program to generate Fibonacci number

Elective – 1 Paper – 1

A. DATA MINING

Objective: Enable the student to get sufficient knowledge on various system resources.

UNIT - I: Data Mining Basics

Introduction: Definition of data mining - data mining vs. query tools - machine learning - steps in data mining process - overview of data mining techniques.

UNIT - II: Data Models

Multidimensional Data Model - Data Cube - Dimension Modeling - OLAP Operations - Meta Data - Types of Meta Data.

UNIT - III: Data Editing

Data Pre-Processing and Characterization: Data Cleaning - Data Integration and Transformation - Data Reduction - Data Mining Query Language - Generalization - Summarization - Association Rule Mining

UNIT - IV: Classification

Classification: Classification - Decision Tree Induction - Bayesian Classification - Prediction - Back Propagation - Cluster Analysis - Hierarchical Method - Density Based Method - Grid Based Method - Outlier Analysis.

UNIT - V: Analysis

Cluster analysis: Types of data - Clustering Methods - Partitioning methods - Model based clustering methods - outlier analysis. Advanced topics: Web Mining - Web Content Mining - Structure and Usage Mining - Spatial Mining - Time Series and Sequence Mining.

TEXT BOOKS:

1. PaulrajPonnaiah, “Data Warehousing Fundamentals”, Wiley Publishers, 2001.

2. Jiawei Han, MichelineKamber, “Data Mining: Concepts and Techniques”,Morgan Kaufman Publishers, 2006.

REFERENCES:

4. Margaret Dunham, "Data Mining: Introductory and Advanced Topics", Prentice Hall, 2002.
5. Daniel T. Larose John Wiley & Sons, Hoboken, "Discovering Knowledge in Data: An Introduction to Data Mining", New Jersey, 2004

B. COMPUTER GRAPHICS

Objectives: To equip students to basics of computer drawing and prepare them for computer modelling of objects

UNIT – I : OVERVIEW OF GRAPHICS SYSTEMS AND OUTPUT PRIMITIVES

Video Display Devices- Raster Scan System- Random Scan Systems- Hard Copy Deices- Graphic Software- Line Drawing Algorithms: DDA- Bresenham's Line -Circle Generating Algorithms

UNIT – II : ATTRIBUTES AND TWO DIMESIONAL TRANSFORMATIONS

Line Attributes- Curve Attributes-Color And Gray Scale Level- Area Fill Attributes- Character Attributes- Inquiry Functions- Basic Transformations - Composite Transformation – Other transformation

UNIT – III : TWO DIMENSIONAL VIEWING AND CLIPPING

The Viewing Pipeline- Window To Viewport Transformation –Clipping Operations- Point Clipping- Line Clipping: Cohen Sutherland- Liang Barsky-Sutherland Hodgeman Polygon Clipping- Text Clipping- Exterior Clipping- Logical Classification Of Input Devices- Interactive Picture Construction

UNIT – IV : THREE DIMENSION TRANSFORMATION, VIEWING AND CLIPPING

Translation-Rotation-Scaling-Viewing Pipeline- Viewing Coordinates- Projections -View Volumes and General Projection Transformation- Clipping -

UNIT – V : VISIBLE SURFACE DETECTION METHODS

Classification of Visible Surface Detection Algorithms - Back Face Detection - Depth Buffer Method - A Buffer Method - Scan Line Method - Depth Sorting Method- BSP Tree Method -Area Sub Division Method - Octree Methods - Ray Casting Method

TEXT BOOK:

Computer Graphics(C version) , Donald Hearn and M.Pauline Baker, Pearson- 2nd Edit. 2012.

REFERENCE BOOKS:

1. Interactive Computer Graphics–A top down approach using Open GL, Edward Angel , Pearson, 5th Edition.

2. Computer Graphics, Peter Shirley, Steve Marschner, Cengage Learning, Indian Edition,2009

C. INFORMATION SECURITY

Objective: To enable the student to understand various methodology available for securing information

UNIT I Information Security Basics

INTRODUCTION -History, What is Information Security?, Critical Characteristics of Information, NSTISSC Security Model, Components of an Information System, Securing the Components, Balancing Security and Access, The SDLC, The Security SDLC

UNIT II Security Investigation

SECURITY INVESTIGATION - Need for Security, Business Needs, Threats, Attacks, Legal, Ethical and Professional Issues

UNIT III Security Analysis

SECURITY ANALYSIS-Risk Management: Identifying and Assessing Risk, Assessing and Controlling Risk

UNIT IV Security Models

LOGICAL DESIGN-Blueprint for Security, Information Security Poicy, Standards and Practices, ISO 17799/BS 7799, NIST Models, VISA International Security Model, Design of Security Architecture, Planning for Continuity

UNIT V Security Physical Design

PHYSICAL DESIGN-Security Technology, IDS, Scanning and Analysis Tools, Cryptography, Access Control Devices, Physical Security, Security and Personnel.

Text Book

3. Matt Bishop, “Computer Security Art and Science”, Pearson/PHI, 2002.

Skill Based Subject 3 Paper – 3

SOFTWARE ENGINEERING

Objective:
This course introduces the concepts and methods required for the construction of large software intensive systems.

UNIT-I:
Introduction - Evolving Role of Software - Changing Nature of Software – Software Myths; A Generic View of Process: Layered Technology - Process Models: Waterfall Model - Evolutionary Process Models.

UNIT-II:
Requirements Engineering: Tasks - Initiating the Requirements Engineering Process - Eliciting Requirements - Building the Analysis Model - Requirements Analysis - Data Modelling Concepts.

UNIT-III:
Data Engineering: Design Process and Design Quality - Design Concepts - The Design Model Creating an Architectural Design: Software Architecture - Data Design - Architectural Design - Mapping Data Flow into Software Architecture; Performing User Interface Design: Golden Rules.

UNIT-IV:
Testing Strategies: Strategic Approach to Software Testing- Test Strategies for Conventional and Object Oriented Software - Validation Testing - System Testing -Art of Debugging. Testing Tactics: Fundamentals - White Box- Basis Path - Control Structure - Black Box Testing Methods

UNIT-V:
Project Management: Management Spectrum - People - Product - Process - Project. Estimation: Project Planning Process - Resources - Software Project Estimation - Project Scheduling - Quality Concepts - Software Quality Assurance - Formal Technical Reviews.

TEXT BOOK:
Roger S Pressman, ”Software Engineering - A Practitioner’s Approach”, Sixth Edition, McGraw Hill International Edition, New York: 2005.

SEMESTER VI

CORE THEORY PAPER – 8

CLOUD COMPUTING

Objective:

To enable the students to learn the basic functions, principles and concepts of cloud Systems.

UNIT I: UNDERSTANDING CLOUD COMPUTING

Cloud Computing – History of Cloud Computing – Cloud Architecture – Cloud Storage – Why Cloud Computing Matters – Advantages of Cloud Computing – Disadvantages of Cloud Computing – Cloud Services.

UNIT II: DEVELOPING CLOUD SERVICES

Types of Cloud Service Development – Software as a Service – Platform as a Service – Web Services – On-Demand Computing – Discovering Cloud Services Development Services and Tools – Amazon Ec2 – Google App Engine – IBM Clouds.

UNIT III: CLOUD COMPUTING FOR EVERYONE

Centralizing Email Communications – Collaborating on Schedules – Collaborating on To-Do Lists – Cloud Computing for the Community – Collaborating on Group Projects and Events.

UNIT IV: PROGRAMMING MODEL

Parallel and Distributed Programming Paradigms – Map Reduce, Twister and Iterative Map Reduce – Hadoop Library from Apache – Mapping Applications - Programming Support - Google App Engine, Amazon AWS - Cloud Software Environments -Eucalyptus, Open Nebula, Open Stack, Aneka, CloudSim.

UNIT V: SECURITY IN THE CLOUD

Security Overview - Cloud Security Challenges and Risks - Software-as-a-Service Security- Security Governance - Risk Management - Security Monitoring - Security Architecture Design - Data Security - Application Security - Virtual Machine Security - Identity Management and Access Control - Autonomic Security.

TEXT BOOK:

CORE THEORY PAPER – 9

OPEN SOURCE PROGRAMMING

Objective:
To discuss techniques that can be effectively applied in practice about HTML5, JavaScript, PHP, CSS and Linux

UNIT I: INTRODUCTION TO HTML 5, JAVA SCRIPT, PHP AND CSS
Introduction to Dynamic Web content- HTTP and HTML- Request and Response Procedure- The Benefits of PHP, JAVA Script, CSS, and HTML5- Introduction to HTML5- The Canvas -The HTML5 Canvas- HTML5 Audio and Video- Introduction to CSS- CSS Rules-Style Types- CSS Selectors- CSS Colors.

UNIT-II: LINUX

Introduction : Linux Essential Commands – File system Concept – Standard Files – The Linux Security Model – Vi Editor – Partitions Creation – Shell Introduction – String Processing – Investigation and Managing Processes – Network Clients – Installing Application.

UNI- III: MYSQL

Introduction to MY SQL – The show Databases and Table – The USE command – Create Database and Tables – Describe Table – Select, Insert, Update, and Delete statement – Some Administrative detail – Table Joins – Loading and Dumping a Database.

UNIT-IV: PHP

PHP Introduction – General Syntactic Characteristics – PHP Scripting – Commenting your code – Primitives, Operations and Expressions – PHP Variables – Operations and Expressions Control -statement – Array – Functions.

UNIT – V PHP

Basic Form Processing – File and Folder Access – Cooking – Sessions – Database Access with PHP – MySQL - MySQL Functions – Inserting Records – Selecting Records – Deleting Records – Update Records.

Text Books

1. "Learning PHP, MySQL, Java Script, CSS and HTML5", Robin Nixon, O'Reilly Publications, 3rd Edition, 2014.
2. Steven Holzner, "HTML Black Book", Dreamtech Press &Paraglyph Press Publishers, 2007

Reference Books

Open Source Software, P.Rizwan Ahmed, Margham Publication, Chennai, 2015

Core Practical

PRACTICAL – VII

ASP.NET Lab

1. Implement Validation Controls
2. Write a Program to implement ad rotator control
3. Write a Program to implement state management techniques
4. Write a Program to implement view State and Session State.
5. Write a Program to displaying data with the grid view
6. Write a Program to implement ASP.Net Server Side Controls.
7. Write a Program to implement ASP.Net Master Pages, Themes and Skins.
8. Write a Program working with forms using ASP.Net
9. Write a Program working with pages using ASP.Net.
10. Write a Program to access data sources through ADO.NET

Core Practical

PRACTICAL – VIII

Open Source Programming Lab

1. Create a web page with Frames and Tables.
2. Create a web page incorporating CSS (Cascading Style Sheets)
3. Write a shell program to find the factorial of an integer positive number
4. Write a shell program for checking whether a given string is a palindrome or not.
5. Create a simple calculator in Java script.
6. Write a JavaScript program to scroll your name in the scroll bar.
7. Develop a program and check message passing mechanism between pages.
8. Develop a program and check file system functions, date &time functions.
9. Create a student database table in MYSQL and manipulate records (insert, delete, update) records in a web browser.
10. Develop a program using cookies and session.

Elective II PAPER – 2

(A) SOFTWARE TESTING

Objective: To make the student more proficient with error free software development

UNIT-I PRINCIPLES OF TESTING

A test in time - The cat and the saint - Test the tests first - The Policemen on the bridge - Phase of software project - Quality, Quality Assurance and Quality Control - Testing, Verification and Validation -Process model to represent different phases - Life cycle models.

UNIT-II BLACK BOX AND WHITE BOX TESTING

White box testing - Challenges - Static testing - Structural testing - Black box testing.

UNIT-III INTEGRATION, SYSTEM AND ACCEPTANCE TESTING

Integration testing - Types - Phase of testing - Scenario testing - Defect bash - System and Acceptance testing: Overview - Functional vs. Non-Functional testing - Functional system testing - Non-functional testing-Acceptance testing.

UNIT-IV PERFORMANCE AND REGRESSION TESTING

Introduction - Factors Governing - Methodology for Performance testing - Tools and Process for Performance Testing - Regression Testing - Types of Regression testing - How to do Regression Testing?

UNIT-V INTERNATIONALIZATION AND ADHOC TESTING

Introduction to Internationalization - Primer on Internationalization - Test phases for Internationalization testing - Enabling testing - Locale testing - Internationalization Validation- Fake language testing - Language testing - Localization testing - Tools used for Internationalization - Challenges and Issues - Overview of Ad Hoc testing - Buddy, Pair, Exploratory, Iterative, Agile and Extreme Testing - Defect Seeding.

TEXT BOOK:

1. Srinivasan Desikan, Gopalaswamy Ramesh, “Software Testing: Principles and Practices”, Pearson Publications, 2006.

REFERENCES:

1. Renu Rajani, Pradeep Oak, “Software Testing- Effective Methods, Tools and Techniques”, Tata McGraw Hill, 2004.
2. Boris Beizer, “Software Testing Techniques”, Dream Tech Press, Second Edition, 2003.

(B) MOBILE COMPUTING

Objective: To impart good knowledge of wireless communication to students

UNIT I :WIRELESS COMMUNICATION FUNDAMENTALS

Cellular systems- Frequency Management and Channel Assignment- types of handoff and their characteristics, dropped call rates & their evaluation -MAC – SDMA – FDMA – TDMA – CDMA – Cellular Wireless Networks.

UNIT II :TELE COMMUNICATION NETWORKS & WIRLESS LAN

Telecommunication systems – GSM – GPRS - Satellite Networks ,Wireless LAN – IEEE 802.11 - Architecture – services – MAC – Physical layer – IEEE 802.11a -802.11b standards – HIPERLAN – Blue Tooth.

UNIT III: MOBILE NETWORK LAYER & TRANSPORT LAYER

Mobile IP – Dynamic Host Configuration Protocol - Routing – DSDV – DSR – Alternative Metrics. Traditional TCP, Mobile TCP

UNIT IV: APPLICATION LAYER

WAP Model- Mobile Location based services -WAP Gateway –WAP protocols – WAP user agent profile- caching model-wireless bearers for WAP - WML – WML Scripts

UNIT V: DATABASE ISSUES

Database Issues: Hoarding techniques, caching invalidation mechanisms, client server computing with adaptation, power-aware and context-aware computing, transactional models, query processing, recovery, and quality of service issues.

TEXT BOOKS:

1. Jochen Schiller, “Mobile Communications”, Second Edition, Pearson Education, 2003.
2. William Stallings, “Wireless Communications and Networks”, Pearson Education, 2002.

REFERENCE BOOKS:

1. KavehPahlavan, PrasanthKrishnamoorthy, “Principles of Wireless Networks”, PHI/Pearson Education, 2003.

2. UweHansmann, LotharMerk, Martin S. Nicklons and Thomas Stober, “Principles of Mobile Computing”, Springer, 2003..

(C) MICROPROCESSORS AND ITS APPLICATIONS

Objective:
To learn the architecture, programming, interfacing and rudiments of system design of microprocessors.

Unit-I: 8085 MICROPROCESSOR AND ARCHITECTURE
Microprocessors - Memory - I/O Devices - Memory Mapped I/O - Pin diagram and internal architecture of 8085 - Registers, ALU, Control & Status Registers - Instruction and Machine Cycles. Interrupts

Unit II: PROGRAMMING THE 8085
Introduction to 8085 Assembly language programming - 8085 instructions - Programming techniques with Additional instructions - Counters and Time Delays - Stack and Subroutines - Code Conversions

Unit-III: 8086 MICROPROCESSOR AND ARCHITECTURE
Pin Details and Internal Architecture of 8086 - Register organization, Bus interface unit, Execution unit, Memory addressing, Memory segmentation. Operating modes - Hardware and Software interrupts - Addressing Modes.

Unit-IV: PROGRAMMING THE 8086
8086 Assembly Language Programming - Implementing Standard Program Structures - String - Procedure and Macros. Instruction Description and Assembler Directives

Unit-V: INTERFACING PERIPHERALS
8255 PPI , 8253/8254 PIT, 8237 DMAC,8259 PIC, 8251 USART.

TEXT BOOK

1. Microprocessor Architecture, Programming and Aplications with 8085, Ramesh S. Gaonkar, Penram International Publishing (India) Pvt. Ltd. 4th Ed. (for Units I,II and V)
2. Microprocessors and Interfacing, Douglas V. Hall, Tata McGraw Hill, 2nd Ed. (for Units III and IV)

REFERENCE BOOKS:

1. Assembly Language Programming the IBM PC ,Alan R. Miller, SubexInc, 1987.
2. Advanced Microprocessors and Peripherals, Ray A K ,Bhurchandi K M , TMH.

Elective III PAPER – 3

(A) Internet of Things

Objective: To prepare the student for better application of internet technology.

Unit – I IoT Introduction

Introduction to Internet of Things: Definition – Characteristics of IOT – Physical Design of IoT – Things in IoT – IoT Protocols – Logical Design of IoT – Iot Functional Blocks – IoT Communication Models – IoT Communication APIs – IoT Enabling Technologies

Unit – II Domain Specific IoT - 1

Domain Specific IoT – I : Smart Lighting – Smart Appliances – Intrusion Detection – Smoke / Gas Detection – Smart Parking – Smart Roads – Structural Health Monitoring – Surveillance – Emergency Response – Weather Monitoring –

Unit – III Domain Specific IoT II

Domain Specific IoT – II : Air Pollution Monitoring – Noise Pollution Monitoring – Forest Fire Detection – River Flood Detection – Smart Grids- Smart Vending Machines – Route Generation & Scheduling – Fleet Tracking – Shipment Monitoring –

Unit – IV Domain Specific IoT III

Domain Specific IoT – III: Remote Vehicle Diagnostics – Smart Irrigation - Green House Control – Machine Diagnosis & Prognosis – Indoor Air Quality Monitoring – Health & Fitness Monitoring – Wearable Electronics

Unit – V IoT and M2M

IoT And M2M: M2M – Difference Between Iot And M2M – SDN And NFV For IoT – IoT System Management With NETCONF – YANG : Need For Iot Systems Management – SNMP- Network Operator Requirements – NETCONF – YANG-IoT Systems Management With NETCONF - YANG

Text Books:

1. Interconnecting Smart Objects with IP: The Next Internet, Jean-Philippe Vasseur, Adam

Dunkels, Morgan Kuffmann.

Reference

1. Internet of Things, P.Rizwan Ahmed, Margham Publications, Chennai.

2. Designing the Internet of Things, Adrian McEwen (Author), Hakim Cassimally

(B) System Software

Objective: To make the student to become more proficient with system programming

Unit – I LANGUAGE PROCESSORS

Language Processing Activities – Fundamentals of Language Processing – Fundamentals of Language Specification – Language Processor Development Tools.

UNIT II ASSEMBLERS AND MACRO

Elements of Assembly Language Programming – Overview of Assembly Process - Design of a Two – Pass Assembler - Macro Definition and Call – Macro Expansion – Nested Macro Calls.

UNIT III COMPILER I

Scanning: Finite State Automate – Regular Expressions – Building DFA – Performing Semantic Action – Writing a Scanner – Parsing: Parse Tree and Abstract Syntax Trees – Top Down Parsing – Bottom-Up Parsing.

UNIT IV COMPILER II AND INTERPRERTERS

Aspects of Compilation –Memory Allocation - Compilation of Expressions-Compilation of Control Structure-Code Optimization - Interpreters.

UNIT V LINKERS

Relocation and Linking Concepts – Design of a Linker – Self-Relocating Programs – Linking for Overlays - Loader.

TEXT BOOK

D.M. Dhamdhere, “System Programming And Operating Systems”, New Delhi: Tata McGraw-Hill Publishing Company Limited, 1993.

(C) Multimedia Systems

Objective :

This course presents the Introduction to Multimedia, Images & Animation and enable the students to learn the concepts of Multimedia.

UNIT I Introduction to Multimedia:

Introduction to Multimedia PCs – Components of Multimedia – Multimedia Tools Sound and Graphics : Digital Sound – Editing and Mixing sound files – MIDI creation – Tracking Procedure – Interactive and Non Interactive Graphics – High Resolution Graphics – Difference between TV and Computer Display.

UNIT II Video and Animation:

Digital Image concepts – Video Capturing – Scanning Images – Digital Filters Morphing and Warping – Two Dimensional and Three dimensional animation – Animation Tools – Layering technique – Blue Screen technique – Latest movie technologies – Motion Tracking System – Motion Capturing System.

UNIT III Creating Presentation:

Script Writing and creating interactive and non-interactive presentation – Linear and Non Linear Editing – Authoring Tools – File Formates SOUND, VIDEO, ANIMATION, Presentation Images. Multimedia Programming: Text Links – Hyper Text system – Form Creation – File storing - Error Trapping.

UNIT IV Sound Links:

Multimedia interfaces – MCI- API- High Level Multimedia Functions – WAVE, MIDI file processing. Animation: Color Palette – Events – ROPs.

UNIT V Imaging Special Visual Effects:

Bitmap – Brushes – Dissolve –Hotspot Editor – Scorlling. Media Control Interface: Simple Commands – API functions – CD Player – Video Capturing – Form – AVI Play Form.

Text Books :

1. Kaliyaperumal Karthikeyan,“Introduction to Multimedia System”, LAP Lambert Academic Publishing, 2011
2. TayVaughan,“Multimedia Making It Work Eighth Edition”,Tata McGraw-Hill Publishing Company, 2011
3. ParagHavaldarand Gerald Medioni,“Multimedia Systems”, Cengage Learning, 2011
4. S. K. Bansal,“Multimedia Systems”,Aph Publishing Corporation, 2011

Skilled Based Subject IV

ASP .NET

UNIT I : ASP.NET Basics

Introduction to ASP.NET: .NET Framework (CLR, CLI, BCL), ASP.NET Basics, ASP.NET Page Structure, Page Life Cycle. Controls: HTML Server Controls, Web Server Controls, Web User Controls, Validation Controls, Custom Web Controls.

UNIT II: Form

Form validation: Client side validation, Server side validation, Validation Controls: Required Field Comparison Range, Calendar Control, Ad rotator Control, Internet Explorer Control. State Management: View State, Control State, Hidden Fields, Cookies, Query Strings, Application State, Session State.

UNIT III: ADO.NET

Architecture of ADO .NET, Connected and Disconnected Database, Create Database, Create connection Using ADO.NET Object model, Connection Class, Command Class, Data Adapter Class, Dataset Class, Display data on data bound controls and Data Grid.

UNIT IV: Database accessing

Database accessing on Web Applications: Data Binding Concept with web, Creating Data Grid, Binding standard web server controls, Display data on web form using Data Bound Controls.

UNIT V: XML

Writing Datasets to XML, Reading datasets with XML. WEB services: Remote method call using XML, SOAP, Web service description language, Building and Consuming a web service, Web Application deployment.

Textbook:

Professional ASP.NET 1.1 Bill Evjen , Devin Rader , Farhan Muhammad, Scott Hanselman , Srivakumar

REFERENCE BOOKS:

1. Introducing Microsoft ASP .NET 2.0 Esposito PHI
2. Professional ADO.NET BipinJoshi,Donny Mack, Doug Seven , Fabio Claudio Ferracchiati, Jan D NarkiewiezWrox
3. Special Edition Using ASP.NET Richard Leineker Person Education
4. The Complete Reference ASP.NET Matthew MacDonald TMH
5. ASP.NET Black Book Dream Tech

ELECTIVE SUBJECTS

Students can choose any one of the groups (Elective I, II & III)

GROUP A

Elective 1: Digital Electronics
Elective 2: Applied Electronics
Elective 3: Microprocessor and its Applications – 8085

GROUP B

Elective 1: Materials Science
Elective 2: Applied Electronics
Elective 3: Laser and Fibre Optic Communication

GROUP C

Elective 1: Fundamentals of Nano Materials and its Characterization
Elective 2: Applied Electronics
Elective 3: Medical Physics

THIRUVALLUVAR UNIVERSITY

BACHELOR OF SCIENCE

B.Sc. PHYSICS

SYLLABUS
UNDER CBCS
(With effect from 2017 - 2018)

SEMESTER I

PAPER – 1

PROPERTIES OF MATTER AND ACOUSTICS

UNIT – I: ELASTICITY

Hooke's law – Stress-strain diagram – Elastic moduli – Relation between elastic constants – Poisson's Ratio – Expression for Poisson's ratio in terms of elastic constants – Work done in stretching and work done in twisting a wire – Twisting couple on a cylinder – Determination of Rigidity modulus by static torsion – Torsional pendulum – Determination of Rigidity modulus and moment of inertia and q, n, σ by Searles method.

UNIT – II: BENDING OF BEAMS

Bending of beams – Expression for bending moment – Cantilever – Expression for depression at the loaded end – oscillations of a Cantilever – Expression for time period – Determination of Young's modulus by cantilever oscillations Non-uniform bending – Determination of young's modulus by Koenig's method – Uniform bending – Expression for elevation – Experiment to determine young's modulus using pin and microscope method.

UNIT – III : FLUIDS

Surface Tension: Synclastic and anticlastic surface – Excess of pressure – Application to spherical and cylindrical drops and bubbles – variation of surface tension with temperature – Jaegar's method-Applications of surface tension.

Viscosity : Viscosity – Rate flow of liquid in a capillary tube – Poiseuille's formula – Determination of coefficient of viscosity of a liquid – Variations of viscosity of a liquid with temperature- lubrication- Applications of viscosity.

SOUND

UNIT – IV : WAVES AND OSCILLATIONS

Simple harmonic motion – free, damped, forced vibrations and resonance – Fourier's Theorem – Application to saw tooth wave and square wave – Intensity and loudness of sound – Decibels – Intensity levels – musical notes – musical scale.

Acoustics of buildings : Reverberation and time of reverberation – Absorption coefficient – Sabine's Formula – measurement of reverberation time – Acoustic aspects of halls and auditoria.

UNIT – V: ULTRASONICS

Ultrasonic waves – Production – Piezo electric crystal method – Magnetostriction Method – Properties – Deductions – Attenuation – Diffraction – Acoustic Grating – Velocity of ultrosonics in liquids – application of ultrasonics – Medical, Industrial and Scientific – Non destructive testing (NDT) – Classification of ultrasonic testing – Pulse echo method – Sources of ultrasound – clinical applications of different scans.

Books for study:

1. Properties of matter by Murugeshan R, S Chand & Co. Pvt. Ltd., New Delhi.
2. Properties of matter by Brij Lal & Subramaniam, N Eurasia Publishing Co., New Delhi, 1989.
3. Text book of sound by Brij Lal & Subramaniam, N Vikas Publishing House, New Delhi, 1982.
4. Text book of sound by M N Srinivasan – Himalaya Publications (1991).
5. Science and Technology of Ultrasonics by Baldevraj, Narosa [2004].

Books for reference:

1. Elements of Properties of Matter by Mathur D S, Shymlal Charitable Trust, New Delhi, 1993.
2. Fundamentals of General Properties of Matter by Gulati H R, R Chand & Co. New Delhi, 1982.
3. Waves & Oscillations by Subrahmanyam N & Brij Lal, Vikas Publishing House Pvt. Ltd., New Delhi, 1994.
4. A Textbook of Sound by Khanna D R & Bedi R S, Atma Ram & Sons, Jew Delhi 1985.
5. Fundamentals of Physics, 6^{th} Edition by D Halliday, R Resnick and J Walker, Wiley NY 2001.
6. Physics, 4^{th} Edition vols, I, II & II Extended by D Halliday, R Resnick and K S Krane, Wiley NY 1994.
7. CRC Handbook of Physics & Chemistry, 80^{th} ED., CR5 Press, NY, 1999.
8. The Feynman Lectures on Physics, Vols. I, II and III, by R P Feynman, RB Leighton and M Sands, Narosa, New Delhi, 1998.

ALLIED

PAPER – 1

CHEMISTRY – I

OBJECTIVE:

- Basic knowledge on Metallurgy, Cycloalkanes, Polarising Effects, Stereochemistry, Chemical Kinetics, Catalysis, Photochemistry, VSEPR Theory, Fuels, Osmosis, Nuclear Chemistry, Petroleum Chemistry, Chemistry of Naphthalene, Conductors and Applications wherever necessary are to be taught for I- Semester.

UNIT – I

1.1General Metallurgy - Extraction of Metals - Minerals and Ores- Difference between Minerals and Ores – Minerals of Iron, Aluminum and Copper - Ore Dressing or Concentration of Ores - Types of Ore Dressing- Froth Floatation process, Gravity separation and Magnetic separation.

1.2 Calcination, Smelting, Roasting, Fux, Slag - Definition - Reduction methods - Goldschmidt Aluminothermic process and Carbon Reduction method - Refining of Metals - Electrolytic, Van Arkel and Zone Refining.

1.3 Ores of Titanium and Cobalt - Extraction of Titanium and Cobalt.

UNIT – II

2.1 Cycloalkanes - Preparation – Wurtz reaction and Dieckmann's condensation - Properties of Cycloalkanes – Substitution and Ring opening reactions.

2.2 Polarisation - Inductive effect, Mesomeric effect and Steric effect (Acid and Base Strength).

2.3Stereoisomerism – Types - Cause of Optical Activity – Enantiomers - Diastereomers - Meso form - Optical Activity of Lactic acid and Tartaric acid - Racemisation and Resolution – Definition and Methods - Geometrical isomerism – Definition and example - Maleic and Fumaric acid – Differences.

UNIT – III

3.1 Chemical Kinetics – Rate of a reaction – Definition of Order and Molecularity – Distinction between Order and Molecularity - Derivation of First order rate equation - Half Life Period of first order reaction.

3.2 Catalysis - Catalyst - Autocatalyst - Enzyme catalyst - Promoters - Catalytic poisons – Active Centre - Differences between Homogeneous and Heterogeneous Catalysis - Industrial Applications of Catalysts.

3.3 Photochemistry – Grothus-Draper's law – Stark-Einstein's law - Quantum yield – Photosynthesis - Phosphorescence – Fluorescence.

UNIT – IV

4.1 VSEPR Theory – Hybridisation and Shapes of simple molecules BF_3, PCl_5, SF_6 and XeF_6.

4.2 Fuels – Classification of Fuels - Calorific value of Fuels – Water gas, Carbureted Water gas and Producer gas – Composition and Uses - Non-Conventional fuels - Need of Solar Energy - Applications - Biofuels – Oil gas, Natural gas and LPG – Uses.

4.3 Osmosis - Osmotic pressure - Reverse osmosis – Definition - Desalination of Sea water.

UNIT – V

5.1Nuclear Chemistry – Atomic number, Mass number - Isotopes, Isobars and Isotones – Definition and Examples - Definition of Half life period - Nuclear Binding Energy, Mass Defect and N/P ratio - Nuclear Fission and Nuclear Fusion (Elementary idea) - Applications of Radioisotopes in Medicine, Agriculture and Industries – Carbon Dating.

5.2 Crude Oil - Petroleum - Petroleum Refining - Cracking - Applications of Cracking – Naphthalene – Preparation – Haworth's method – Properties – Oxidation, Reduction and Uses of Naphthalene - Structure of Naphthalene (Structural elucidation not necessary).

5.3 Conductors, Insulators, Semiconductors, N- and P- Type Semiconductors – Definitions and Examples.

ALLIED - 1

PAPER - 1

BIOCHEMISTRY I

UNIT-I: Chemistry of Carbohydrates

Definition and Classification of carbohydrate. Monosaccharides - occurrence, structure; physical and chemical properties, linear and ring forms (Haworth formula) for glucose and fructose. Disaccharides - occurrence, structure; physical and chemical properties of sucrose and lactose. Polysaccharides - occurrence, structure, physical and chemical properties of starch.

UNIT-II: Chemistry of amino acids

Definition and classification of amino acids. Reaction with ninhydrin, common properties of amino acids, amphoteric nature, isoelectric point, isoelectric pH and Zwitter ion.

UNIT-III: Chemistry of Proteins

Classification based on solubility, shape and size. Physical properties: salting in and salting out, denaturation, peptide bond. Structure of protein: primary, secondary, tertiary and quaternary structure.

UNIT-IV: Chemistry of Lipids

Definition, classification and functions of lipids. Occurrence, chemistry and biological functions of simple lipids, compound lipids (e.g. phospholipids) and derived lipids: steroids (e.g. cholesterol). Physical property-emulsification. Chemical property-saponification. Functions of bile acids and bile salts.

UNIT-V: Chemistry of Nucleic acids

Definition - nucleoside, nucleotide and polynucleotide. Double helical model of DNA and its biological functions. Structure, types and functions of RNA: tRNA, mRNA and rRNA. Differences between DNA and RNA.

References:

1. Lehninger Principles of Biochemistry-David L. Nelson, Michael M. Cox, Macmillan worth Publishers.
2. Harper's Biochemistry-Rober K. Murray, Daryl K. Grammer, McGraw Hill, and Lange Medical Books. 25th edition.
3. Fundamentals of Biochemistry-J.L. Jain, Sunjay Jain, Nitin Jain, S. Chand & Company.
4. Biochemistry-Dr. Amit Krishna De, S. Chand & Co., Ltd.
5. Biochemistry-Dr. Ambika Shanmugam, Published by Author.
6. Biomolecules-C. Kannan , MJP Publishers,Chennai-5.

SEMESTER II

PAPER – 2

THERMAL AND STATISTICAL PHYSICS

UNIT – I : TRANSMISSION OF HEAT

Conduction in solids : Thermal conduction – thermal conductivity of a good conductor – theory and determination – Forbe's method – thermal conductivity of a poor conductor – theory and determination – Lee's disc method – Derivation of Wiedmann – Franz law and its limitations – practical applications of conduction of heat.

Black body radiation : Stefan – Boltzmann law – determination of Stefan's constant – laboratory method – distribution of energy in the spectrum of a black body – results – Planck's quantum theory of radiation – solar constant – temperature of the Sun – Solar Spectrum.

UNIT – II: LOW TEMPERATURE PHYSICS

Joule – Kelvin effect – liquefaction of hydrogen – liquefaction of helium – Kammerling – Onne's method – Helium I and II – Lambda point – production of low temperatures – adiabatic demagnetization – practical applications of low temperature – refrigerators and air-conditioning machines – super fluidity – application of super fluidity – elementary ideas and applications – Superconductivity – Type I and II superconductors – Meissner effect – applications of superconductors – superconducting magnets.

UNIT – III: THERMODYNAMICS I

Thermodynamics Potentials – Zeroth law, First and Second law of thermodynamics – Carnot's theorem – thermodynamic scale of temperature – Perfect gas scale of temperature – internal combustion engines – Otto engine and Diesel engine – working and efficiency.

UNIT - IV: THERMODYNAMICS II

First latent heat equation (Clausius-Clapeyron equation) – effect of pressure on melting point and boiling point – second latent heat equation – Third law of thermodynamics – concepts of entropy – temperature entropy diagram – entropy of perfect gas – Maxwell's thermo dynamical relations – derivation – applications – i) Clausius – Clapeyron equation, ii) Specific heat Relation.

UNIT – V: STATISTICAL PHYSICS

Phase space, Micro and Macro – canonical – Ensembles – Different types of ensembles – Definition of Probability – Relation between entropy & probability – Degrees of Freedom – Statement of theorem of equipartition of energy – Classical Statistics – Group Velocity and Phase velocity – Maxwell – Boltzmann law-distribution of velocity-Quantum statistics-Fermi-Dirac distribution law-Bose-Einstein distribution law-comparison of three statistics.

Books for study:

1. Heat and thermodynamics – Brijlal and Subramaniyam, S Chand & Co.
2. Heat and thermodynamics – J B Rajam, S Chand & Co., New Delhi.
3. Thermal Physics – R Murugeshan and Kiruthiga Sivaprasad, S Chand & Co., New Delhi.

Books for Reference:

1. Heat and thermodynamics – D S Mathur, S Chand & Co., New Delhi
2. Elements of Statistical Mechanics – Gupta and Kumar, Pragati Prakashan, Meerut.
3. Statistical Mechanics – Sathya Prakash and J P Agarwal, Kedar Nath & Ram Nath & Co., Meerut.
4. Introduction to Solid State Physics – C Kittel, Prentice Hall of India.

CORE PRACTICAL – I

(Any 16 Experiments)

1. Youngs modulus – non uniform bending – pin and microscope.
2. Youngs modulus – non uniform bending – optic lever.
3. Young's modulus cantilever – depression – dynamic method – Mirror Scale and Telescope.
4. Rigidity modulus – torsional pendulum – without masses.
5. Rigidity modulus and moment of inertia – torsional pendulum – with identical masses.
6. Surface tension and interfacial surface tension – drop weight method.
7. Coefficient of viscosity of liquid – graduated burette – Radius of capillary tube by mercy pellet method.
8. Comparison of viscosities – (η_1/η_2).
9. q, n, σ by Searle's method.
10. Rigidity modulus – Static torision – Mirror scale and telescope.
11. Compound Pendulum – Determination of 'g' and 'k'.
12. Thermal conductivity of a bad conductor – Lee's disc method.
13. Thermal conductivity of a good conductor-Forbe's method.
14. Specific heat of liquid – Newtons law of cooling.
15. Sonometer – frequency of tuning fork.
16. Sonometer – RD of a solid and liquid.
17. Focal length – R and μ of a long focus convex lens.
    i Auto collimination method
    ii Auxillary Lens Method
18. Focal length – R and μ of a concave lens.
    i Combination Method
    ii Auxillary Lens Method
19. Spectrometer – solid prism- μ of material of prism.
20. Spectrometer- Hollow prism - μ of a liquid.
21. Potentiometer – Calibration of low range voltmeter.
22. Potentiometer – Internal resistance.
23. Post office box – temperature coefficient of resistance.

ALLIED

PAPER – 2

CHEMISTRY – II

OBJECTIVE:

- Basic knowledge on Coordination Chemistry, Industrial Chemistry, Carbohydrates, Aminoacids, Proteins, Electrochemistry, Paints and Pigments, dyes, Vitamins, Medicinal Chemistry, Corrosion and Applications wherever necessary are to be taught for II- semester.

UNIT – I

1.1 Coordination Chemistry - Nomenclature of Coordination Compounds - Ligands, Central Metal Ion and Complex Ion – Definition and Examples – Coordination Number - Werner's Theory of Coordination Compounds - Chelates - Functions and Structure of Haemoglobin and Chlorophyll.

1.2 Industrial Chemistry - Fertilisers and Manures – Biofertilisers - Organic Manures and their importance - Role of NPK in plants - Preparation and Uses of Urea, Ammonium Nitrate, Potassium Nitrite and Super Phosphate of Lime.

1.3 Contents in Match Sticks and Match Box - Industrial making of Safety Matches – Preparation and Uses of Chloroform, DDT, Gammexane and Freons.

UNIT – II

2.1 Carbohydrates - Definition and Examples - Classification – Oxidation and Reduction Reactions of Glucose - Structure of Glucose (Structural elucidation not necessary) - Uses of Starch - Uses of Cellulose Nitrate and Cellulose Acetate.

2.2 Amino Acids – Definition and Examples - Classification of Amino Acids - Preparation - Gabriel Phthalimide Synthesis – Properties – zwitterion and Isoelectric point - Structure of Glycine.

2.3 Proteins – Definition - Classification of Proteins based on Physical properties and Biologcal functions - Primary and Secondary Structure of Proteins (Elementary Treatment only) – Composition of RNA and DNA and their Biological role - Tanning of Leather - Alum (Aluminum chloride tanning) - Vegetable tanning – Chrome Tanning.

UNIT – III

3.1 Electrochemistry - Electrolytes – Definition and Examples – Classification - Specific and Equivalent Conductance - their determination – Variation of Specific and Equivalent conductance with Dilution – Ostwald's Dilution Law and its Limitations.

3.2 Kohlrausch's Law - Determination of Dissociation Constant of weak Electrolytes using Conductance measurement - Conductometric titrations.

3.3 pH – Definition and pH determination by indicator method - Buffer solutions - Buffer action - Importance of buffers in the living systems.

UNIT – IV

4.1Paints - Components of Paint – Requisites of a Good Paint - Pigments – Classification of Pigments on the basis of Colour – Examples - Dyes – Definition – Chromophores and Auxochromes – Examples - Colour and Dyes - Classification based on Constitution and Application – Examples.

4.2 Vitamins – Definition – Classification – Water Soluble and Fat Soluble – Occurrence - Biological Activities and Deficiency Diseases caused by Vitamin A, B, C, D, E and K - Hormones – Definition and Examples – Biological Functions of Insulin and Adrenaline.

4.3 Chromatography - Principles and Applications of Column and Paper chromatography- R_f value.

UNIT – V

5.1 Drugs - Sulpha Drugs – Preparation and Uses of Sulphapyridine and Sulphadiazine - Mode of Action of Sulpha Drugs - Antibiotics - Uses of Penicillin, Chloramphenicol and Streptomycin - Drug Abuse and Their Implication - Alcohol – LSD.

5.2 Anaesthetics - General and Local Anaesthetics - Antiseptics - Examples and their Applications - Definition and One Example each for Analgesics, Antipyretics, Tranquilizers, Sedatives - Causes, Symptoms and Treatment of Diabetes, Cancer and AIDS.

5.3 Electrochemical Corrosion and its Prevention – Electroplating – Applications.

ALLIED

PAPER - 2

BIOCHEMISTRY II

UNIT-I: Metabolism

Glycolysis, TCA cycle and its energetics, HMP shunt pathway. Deamination, transamination reaction, transaminase enzymes, Urea cycle.

UNIT-II: Metabolic Disorders

Diabetes mellitus, Glycogen storage diseases, Glycosuria, Ketosis, Jaundice, Phenyl ketonuria, Alkaptonuria. Dehydration: definition, causes, symptom and prevention.

UNIT-III: Enzymes

Definition, classification of enzymes with one example. Mechanism of enzyme action - Lock and key mechanism, Induced Fit theory. Michaleis-Menton equation. Enzyme inhibition: competitive, uncompetitive and non competitive. Biological functions of enzymes.

UNIT-IV: Molecular Biology

Central dogma of molecular biology. DNA and RNA act as genetic material. Replication: Definition, types, mode of action of replication, mechanism of replication. General mechanism of transcription and translation. Genetic code.

UNIT-V: Vitamins

A brief outline of source, requirement, biological function and deficiency of Vitamins (fat soluble and water soluble vitamins).

References:

4. Biochemistry-Dr. Amit Krishna De, S. Chand & Co., Ltd.
5. Biochemistry-Dr. Ambika Shanmugam, Published by Author.
6. Biomolecules-C. Kannan, MJP Publishers, Chennai-5.

SEMESTER III
PAPER – 3

ELECTRICITY AND MAGNETISM

UNIT – I : ELECTROSTATICS

Gauss' Law – Electric Field due to uniformly charged sphere – Electric Intensity - Electrostatic potential – electric potential as line integral of electric field – relation between electric potential and electric field in vector form – capacitance – capacitance of a spherical and cylindrical capacitor – energy of a charged capacitor – loss of energy due to sharing of charges - Dielectric medium, Polarisation, Displacement vector. Gauss's theorem in dielectrics - Parallel plate capacitor completely filled with dielectric.

UNIT – II : CURRENT ELECTRICITY & TRANSIENT CURRENT

Carey Foster bridge – theory – determination of temperature coefficient of resistance – calibration of ammeter and voltmeter using a potentiometer.
Growth and decay of current in a circuit containing resistance and inductance. Growth and decay of charge in circuit containing resistance and capacitor – measurement of high resistance by leakage – growth and decay of charge in a LCR circuit – condition for the discharge to be oscillatory – frequency of oscillation.

UNIT – III : THERMO ELECTRICITY

Seeback, Peltier and Thomson effects – laws of thermoelectric circuits – Peltier coefficient – Thomson coefficient – application of thermodynamics to a thermocouple and expressions for Peltier and Thomson coefficients - thermo electric power and thermo electric diagrams.

UNIT – IV : ELECTRO MAGNETIC INDUCTION

Faraday's laws of electromagnetic induction in vector form – Lenz'z law - determination of self-inductance by Anderson's bridge method and absolute mutual inductance by BG – Ruhmkorff's induction coil – induction coil and its uses – Coefficeint of coupling – Earth inductor - Eddy Currents - Energy stored in a magnetic field.

UNIT – V : MAGNETISM

Magnetostatics: Biot-Savart's law & its applications- straight conductor, circular coil, solenoid carrying current. Divergence and curl of magnetic field. Magnetic vector potential. Ampere's circuital law.
Magnetic properties of materials: Magnetic intensity, magnetic induction, permeability, magnetic susceptibility. Brief introduction of dia-, para- and ferro-magnetic materials.

Books for study:

1. R Murugeshan – Electricity and magnetism, 8th Edn, 2006, S Chand & Co., New Delhi.
2. M Narayanamurthy & N Nagarathnam, Electricity & Magnetism 4th Edn, National Publishing Co., Meerut.
3. Duggal and Chhabra, Electricity and Magnetism.
4. Brijlal, N Subramanyan and Jivan Seshan, Mechanics and Electrodynamics [2005], Eurasia Publishing House [Pvt.] Ltd., New Delhi.

Books for reference:

1. Sehgal D L, Chopra K L, Sehgal N K – Electricity and Magnetism, Sultan Chand & Sons, New Delhi. Brijlal and Subramanian, Electricity and Magnetism, 6th Edn., Ratan & Prakash, Agra.
2. David J Griffiths, Introduction to Electrodynamics, 2nd Edn. 1997, Prentice Hall of India pvt. Ltd., New Delhi.
3. Electricity & Magnetism by K K Tewari, S Chand & Co., 3rd Edition, 2001.

ALLIED

MATHEMATICS – I

Objectives of the Course:

To Explore the Fundamental Concepts of Mathematics

UNIT-I: ALGEBRA

Partial Fractions - Binomial, Exponential and logarithmic Series (without Proof) - Summation - Simple problems

UNIT-II : THEORY OF EQUATIONS

Polynomial Equations with real Coefficients - Irrational roots - Complex roots- Transformation of equation by increasing or decreasing roots by a constant - Reciprocal equations - Newton's method to find a root approximately - Simple problems.

UNIT-III : MATRICES

Symmetric - Skew-Symmetric - Orthogonal and Unitary matrices - Eigen roots and eigen vectors – Cayley - Hamilton theorem (without proof)-Verification and computation of inverse matrix

UNIT-IV: TRIGONOMETRY

Expansions of $\sin^n \theta$, $\cos^n \theta$, $\sin n\theta$, $\cos n\theta$, $\tan n\theta$ - Expansions of $\sin \theta$, $\cos \theta$, $\tan \theta$ in terms of θ.

UNIT-V: DIFFERENTIAL CALCULUS

Successive differentiation upto third order, Jacobians -Concepts of polar co-ordinates-Curvature and radius of curvature in Cartesian co-ordinates and in polar co-ordinates.

SKILLED BASED SUBJECT

PAPER – 1

ELECTRICAL APPLIANCES

UNIT – I

Resistance and its types – capacitance and its types – Colour codes-inductance and its units – Transformers – Electrical Charge – Current – Electrical Potential

UNIT - II

Ohm's law – Galvanometer, Ammeter, Voltmeter and Multimeter Analog and Digital - Electrical Energy – Power – Watt – kWh – Consumption and electrical power.

UNIT – III

AC and DC – Single phase and three phase connections – RMS and peak values, House wiring – Star and delta connection – overloading – earthing – short circuiting – Fuses – Colour code for insulation wires

UNIT - IV

Inverter – UPS – generator and motor – types – different types of windings – circuit breaker-Electrical switches and its types.

UNIT – V

Electrical bulbs – Fluorescent lamps – Street Lighting – Flood lighting – Electrical Fans – Wet Grinder – Mixer – Water Heater – Storage and Instant types, electric iron box, microwave oven – Stabilizer, fridge.

Books for study:

1. A text book in Electrical Technology – B L Theraja – S chand & Co.
2. A text book in Electrical Technology – A K Theraja.
3. Performance and design of AC machines – M G Say ElBS Edn.

NON – MAJOR ELECTIVE

PAPER – 1

RENEWABLE ENERGY SOURCES

Unit - I: Conventional Energy Sources

The fossil fuels - commercial energy sources and their availability – various forms of energy – renewable and conventional energy system – comparison – Coal, oil and natural gas – applications– Merits and Demerits – fuel cells.

Unit - II: Solar Energy

Renewable energy sources – solar energy – nature and solar radiation – components – solar heaters – crop dryers – solar cookers – water desalination (block diagram) Photovoltaic generation – merits and demerits

Unit - III: Biomass energy fundamentals

Biomass energy – classification – photosynthesis – Biomass conversion process

Unit - IV: Biomass Utilization

Gobar gas plants – wood gasification – advantages & disadvantages of biomass as energy source

Unit - V: Other forms of energy sources

Geothermal energy – wind energy – Ocean thermal energy conversion – energy from waves and tides (basic ideas)

Books for Study:

"Renewable energy sources and emerging Technologies", by D.P. Kothari, K.C. Singal & Rakesh Ranjan, Prentice Hall of India pvt. Ltd., New Delhi (2008)

Books for Reference:

"Renewable Energy sources and their environmental impact" – S.A. Abbasi and Nasema Abbasi PHI Learning Pvt. Ltd., New Delhi (2008).

SEMESTER IV

PAPER – 4

MECHANICS

UNIT – I : DYNAMICS

Rigid body – moment of inertia – radius of gyration – moment of inertia of a solid cylinder, cylindrical shell, solid sphere, spherical shell - Compound pendulum – theory – equivalent simple pendulum – reversibility of centers of suspension and oscillation

UNIT – II : STATICS AND HYDROSTATICS

Centre of pressure – centre of pressure of a vertical rectangular lamina and vertical triangular lamina- laws of floatation- meta centre and metacentric height of a ship- production of low pressure- rotary pump- diffusion pump- pirani gauge

UNIT – III : ROCKETS AND SATELLITES

Rockets and Satellites – Basic Principles of rocket motion – Rocket Equation, thrust and acceleration – Escape velocity multistage rockets – liquid, solid and cryogenic – propellant rockets
– space shuttle - Orbital velocity – launching of a satellite, types of satellite orbits.

UNIT – IV : CLASSICAL MECHANICS I

Lagrangian formulation of classical mechanics – Mechanics for a system of particles – Generalised co-ordinates – transformation equations – configuration space – Principles of virtual work – D'Alembert's principle – Lagrange's equation – Applications of Lagrange's equation – Simple pendulum.

UNIT – V : CLASSICAL MECHANICS II

Hamiltonian formulation of classical mechanics – phase space – Hamiltonian function – Hamilton's canonical equations of motion – Applications of Hamilton's equations of motion – Simple pendulum.

Books for study:

1. Mechanics and mathematical methods by R Murugeshn, S Chand. Elements of mechanics by Gupta.
2. Dynamics by Naranamurthi, National Publishing Company, Chennai. Classical Mechanics by Gupta Kumar and Sharma.
3. Classical Mechanics by B D Gupta and Sathya Prakash, Kedar Nath Ram Nath & Co.,

Books for Reference:

1. Mechanics by D S Mathur.
2. Classical Mechanics by Goldstein, Narosa.
3. Mechanics and Properties of Matter, C.L. Arora, S. Chand & Co.

CORE PRACTICAL – II

(Any 16 Experiments)

1. Young's modulus uniform bending Pin and microscope.
2. Young's modulus uniform bending Scale and Telescope.
3. Sonometer – AC frequency – steel and brass wires.
4. Melde's String – Frequency of the vibrator – Both modes.
5. Spectometer – μ of a prism – i-d curve.
6. Spectometer – grating – N and **λ** – Normal incidence method.
7. Spectometer – grating – N and **λ** – Minimum deviation method.
8. Air wedge – thickness of a thin wire.
9. Carey Foster's bridge – Temperature coefficient of resistance.
10. Potentiometer – Calibration of high range ammeter.
11. Potentiometer – resistance and specific resistance of a wire.
12. Figure of merit of a galvanometer – Table Galvanometer.
13. BG – Figure of merit – Charge sensitiveness.
14. BG – Comparison of capacitances.
15. BG – Comparison of emf of two cells.
16. m and B_H – Tan C – deflection magnetometer and vibration magnetometer.
17. Low range power pack – using two diodes.
18. Transistor Characteristics – CE / CB modes.
19. Zener diode as a Voltage regulator.
20. IC Voltage regulator using 7805.

ALLIED

MATHEMATICS – II

Objectives of the Course

To Explore the Fundamental Concepts of Mathematics

UNIT-I: Application of Integration

Evaluation of double, triple integrals - Simple applications to area, volume -Fourier series for functions in (0,2□) and (-□, □).

UNIT-II: Partial Differential Equations

Formation, complete integrals and general integrals - Four standard types , Lagrange's equations.

UNIT-III: Laplace Transforms

Laplace Transformations of standard functions and simple properties - Inverse Laplace transforms - Applications to solutions of linear differential equations of order 1 and 2-simple problems

UNIT-IV: Vector Analysis

Scalar point functions - Vector point functions - Gradient ,divergence, curl - Directional derivatives - Unit to normal to a surface.

UNIT-V: Vector Analysis (continued)

Line and surface integrals - Guass, Stoke's and Green's theorems(without proofs) - Simple problem based on these Theorems.

SKILL BASED SUBJECT

PAPER – 2

ELECTRONIC APPLIANCES

UNIT – I

Passive devices – Resistors – types – characteristics – colour coding – capacitors – type – characteristics – colour coding star and delta connection of a resistors and capacitors.

UNIT - II

chokes – Transformers – testing of diodes, transistors and ICs – CRO – Waveforms and Lissajoue's figures – A/F and R/F oscillators – usage of bread board.

UNIT – III

Semiconductor diode – Zener diode – Transistor – Transistor configurations – diode rectifier – half wave and full wave – Bridge retifier – Diode voltage doublers and multiplier.

UNIT – IV

Regulated power supply, Zener diode voltage regulator (Series and Shunt type) IC Voltage regultors: fixed positive – fixed negative – adjustable.

UNIT – V

Basic concepts of radio transmitter and receiver – Basic concepts of TV Transmitter and receiver – TV antennas: Resonance antennas and their characteristics – Dipole Antenna – Folded dipole – Yagi antenna – Yagi antenna design – Dish Antenna – DTH system – Mobile communication system - MODEM.

Books for study:

1. Principles of Electronics by V K Metha, S Chnd & Co., 5th edition 2001.
2. Functional Electronics by Ramanan.
3. Elements of Electronics by Bagde and Singh.
4. Monochrome and Colour TV by Gulati.
5. Basic Electronics, 6th Edition by B Grob, McGraw Hill NY 1989.

NON MAJOR ELECTIVE

PAPER – 2

BASIC PHYSICS

UNIT – I: MECHANICS

Force – Weight – Work – Energy – Power – Horsepower – Centrifuge – Washing Machine.

UNIT – II: HEAT

Variation of boiling point with pressure – Pressure cooker – Refrigerator – Air Conditioner – Principle and their capacities – Bernoulli Principle – Aero plane.

UNIT – III: SOUND AND OPTICS

Sound waves – Doppler effect – Power of lens – Long sight and short sight – Microscope – Telescope – Binocular - Camera.

UNIT – IV: GEO PHYSICS AND MEDICAL PHYSICS

Earthquake – Richter scale – thunder and lightning – Lightning arrestors – Cosmic showers – X-rays– Ultrasound scan – CT scan – MRI scan.

UNIT – V: SPACE SCIENCE AND COMMUNICATION

Newton's law of gravitation – Weather forecasting and communication satellites – Indian Satellites– Electromagnetic spectrum – Radio Waves – AM and FM transmission and reception.

Books for study:

1. The Learner's Series – Everyday Science – Published by INFINITY BOOKS, New Delhi.
2. The Hindu speaks on Science, Vol I & II, Kasturi & Sons, Chennai.

Books for Reference:

1. Fundamentals of Physics by D. Hallidy, R. Rensick and J. Walker, 6^{th} Edition, Wiley, NY (2001).
2. Physics, Vols I, II, III by D. Halliday, R. Rensick and K.S. Krane, 4^{th} Edition, Wiley, New York (1994).
3. The Feymann Lectures on Physics Vols, I, II, III by R.P. Feynmann, R.B. Leighton & M. Sands, Narosa, New Delhi (1998).

SEMESTER V

PAPER – 5

OPTICS

UNIT – I : GEOMETRICAL OPTICS

Spherical aberration in lenses – Methods of minimizing sphericl aberration – Condition for minimum spherical aberration in the case of two lenses separated by a distance – Chromatic aberration in lenses – Condition for achromtism of two thin lenses (in contact and out of contact)
– coma – astigmatism – Ramsden's and Huygen's eyepieces – Constant deviation spectrometer – Calculation of characteristic wave number of spectral lines.

UNIT – II : INTERFERENCE

Theory of thin films – Air wedge – Determination of diameter of a thin wire by air wedge – Michelson's Interferometer – Theory – Applications – wave length, thickness of thin transparent material and resolution of spectral lines – Brewster's fringes – Refractive index of gases – Jamin's & Rayleigh's Interferometers.

UNIT – III : DIFFRACTION

Fresnel's diffraction – Diffraction at circular aperture, straight edge and single slit – Plane diffraction grating – theory and experiment to determine wavelength – normal incidence – oblique incidence – Fraunhofer's diffraction – Missing orders – Overlapping spectra Rayleigh's criteria – Resolving power of telescope, prism, microscope and grating.

UNIT – IV : POLARIZATION

Introduction to polarisation – Double refraction – Huygen's explanation of double refraction in uniaxial crystal – Dichroism – Polaroids and their uses Plane, elliptically and circularly polarized light – Production and detection – Optical Activity – Fresnel's explanation of optical activity – Specific Rotatory Power – Determination using Laurent's Half Shade Polarimeter – Kerr effect and Faraday effect.

UNIT – V : FIBRE OPTICS

Introduction – Structure of an optical fibre - Classification of fibres based on Refractive index and number of modes of transmission – Theory of transmission of electromagnetic wave through fibres – Acceptance angle - Numerical aperture – absorbtion and scattering losses – optical fibre communication system - Application of optical fibres as wave guide and sensors.

Books for study:

1. Optics by Subramaniam N & Brij Lal, S Chand & Co. Pvt. Ltd., New Delhi, 1990.
2. Optics by Khnna D R & Gulati H R, R Chand & Co. Pvt. Ltd., New Delhi, 1979.
3. Optics and Spectroscopy by Murugeshn, S Chand & Co. Pvt. Ltd., New Delhi.
4. Optical fiber communications –Principles and Practice by John M Senior, Second edition, Prentice Hall, Pearson New Delhi.
5. Optical fiber communications by Gerd Keiser, Second edition, McGraw Hill

Books for Reference:

1. Fundamentals of Optics by Jenkins Francis and White E Harvey, McGraw Hill Inc., New Delhi, 1976.
2. Optical Physics by Lipson. S G, Lipson H and Tannhauser D S, Cambridge University Press (1995).
3. Fundamental of Optics by Raj M G, Anmol Publications Pvt. Ltd., (1996), New Delhi.
4. Fundamentals of Physics, 6^{th} Edition, by D Halliday, R Resnick and J Walker. Wiley NY 2001.
5. Physics, 4^{th} Edition Vols I, II & II Extended by D Halliday, R Resnick and K S Krane, Wiley, Ny, 1994.
6. CRC Handbook of Physics & Chemistry, 80^{th} Ed., CRS Press, Ny, 1999.
7. The Feynman Lectures on Physics, Vols. I, II and III by R P Feynman, R B Leighton and M Sands, Narosa, New Delhi 1998.
8. Fibre Optic Communication System, Govind P. Agarwal, John –Willey & Sons.

PAPER – 6

ATOMIC PHYSICS AND SPECTORSCOPY

UNIT – I : DISCHARGE PHENOMENON THROUGH GASES

Moving of a charge in transverse electric and magnetic fields – specific charge of an electron – Dunnington's method – Magnetron method – Positive rays – Thomson prabola method – Aston and Dempster's mass spectrograph.

UNIT – II : ATOMIC STRUCTURE

Vector atom model – Pauli's exclusion principle – explanation of periodic table – various quantum numbers – angular momentum and magnetic moment – coupling schemes – LS and JJ coupling – spatial quantisation – Bohr magnetron – Stern and Gerlach experiment.

Spectral terms and notations – selection rules – intensity rule and interval rule – fine structure of sodium D lines – alkali spectra – fine structure of alkali spectra – spectrum of Helium.

UNIT – III : IONISATION POTENTIAL AND SPLITTING OF ENERGY LEVELS

Excitation and ionization potential – Davis and Goucher's method – Zeeman effect – Larmor's theorem – Debye's explanation of normal Zeeman effect – Anamalous Zeeman effect – theoretical explanation. Lande's 'g' factor and explanation of splitting of D_1 and D_2 lines of sodium – Paschen back effect-theory – Stark effect (qualitative treatment only).

UNIT-IV: INFRARED AND RAMAN SPECTROSCOPY

The energy of a Diatomic molecule - The simple harmonic oscillator - The Diatomic vibrating rotator - The vibration - rotation spectrum of carbon monoxide - Techniques and Instrumentation (outline).

Quantum theory of Raman effect - Molecular Polarizability - Pure rotational Raman spectra of linear molecules - Vibrational Raman spectra - Structured determination from Raman and Infrared spectroscopy - Techniques and Instrumentation (outline).

UNIT V: LASER PHYSICS

Lasers: Population inversion, Laser pumping, Resonators - Vibrational modes of resonators, number of modes/unit volume - Open resonators, Control resonators, Q Factor, Losses in the cavity, Threshold condition, Quantumyield. Ruby Laser – 3 level system, Pumping power, Spiking U^{3+} in CaF_2 laser, four level laser, Neodymium laser - Nd:YAG, Applications of Lasers in Industry, Medicine & Communication.

Books for study:

1. Modern physics by R Murugesan, S Chand & Co., New Delhi - 2004.
2. Atomic and Nuclear physics by N Subramanian and Brij Lal, S Chand & Co. - 2000.
3. Atomic physics by J B Rajam.
4. Spectroscopy by Gupta & Kumar
5. Spectroscopy by Banewell
6. Laser Fundamentals, by William T. Silfvast , Cambridge University Press,

Books for Reference:

1. Atomic physics by A B Gupta and Dipak Ghosh – Books and Allied Publishers.
2. Modern physics by J H Hamilton and Yang, McGraw Hill Publication 1996.
3. Concepts of Modern physics by A Beiser, Tata McGraw Hill, New Delhi 1997.
4. Fundamentals of physics, 6^{th} edition, by D Halliday, R Resnick and J Walker, Wiley NY 2001.
5. Laser and Non Linear Optics by B.B.Laud, New Age international.
6. Laser systems and applications by Niyanad Choudhary and Richa Verma, PHI,New Delhi

PAPER – 7

BASIC ELECTRONICS

UNIT – I : SEMICONDUCTOR THEORY DEVICES AND CHARACTERISTICS

Classification of solids in terms of forbidden energy gap Fermi level – Fermi-Dirac function – Carrier concentration intrinsic and extrinsic semi conductors – effect of temperature on Fermi level – PN junction diode – Zener diode – Tunnel diode – photo diode – PIN – APD – Photo transistor – JFET construction and working – types of JFET – biasing – V-I characteristics in common source mode – JFET as amplifier.

UNIT – II : RECTIFIERS AND AMPLIFIERS

Half-wave, Full-wave and bridge rectifier – Two port representation of a transistor – ***h***-parameters– AC equivalent circuit using ***h***-parameters – analysis of an amplifier using h-parameters – Expressions for current gain, voltage gain input impedance, output impedance and power gain for common emitter only. RC coupled amplifier – frequency response curve – classification of amplifiers – class A power amplifier – Push-pull, class B power amplifier – Darlington pair - Emitter follower.

UNIT – III : FEEDBACK OSCILLATORS

Voltage gain of a feedbck amplifier – Barkhausen criterion – Hartley, Colpitt's, phase shift and Weinbridge oscillators – expressions for frequency of oscillations and condition for sustained oscillations in each case – crystal oscillator – frequency stability.

UNIT – IV : WAVE SHAPING CIRCUITS AND MULTI VIBRATORS

Clipping and clamping circuits – biased clipper – integrating and differentiating circuits.

Multivibrators – Astable – Mono stable and bi-stable multivibrators-Schmitt trigger.

UNIT – V : RADIO COMMUNICATION AND TELEVISION

Principles of transmission and reception – Modulation – types of modulation – amplitude modulation – frequency modulation and phase modulation – theory and mathematical analysis for AM, FM and PM – detector – AM Detector – FM Discriminator – AM and FM transmitter and receiver – RADAR – Range equation – Applications of RADAR.

Books for study:

1. Principles of electronics by V K Mehta, S Chand & Co., 5th edition 2001. Elements of electronics by Bagde and S P Singh.
2. Functional electronics by Ramanan. Monochrome and Colour TV by Gulati.
3. Basic and applied electronics by M Arul Thalapathi, Comptek, Publishers, Chennai 2005.
4. Electronic Communication systems, by George Kennedy, Bernard Davis , S R M Prasanna, 5th edn, Tata McGraw Hill, India

Books for reference:

1. Electronic principles by Malvino.
2. Electronic devices and circuits by Allen Mottershed.
3. Monochrome and colour TV Gulati.
4. Basic Television and videosystems by B Grob.
5. Solid State Electronics by Manna, Tata McGraw Hill.
6. Basic electronics, 6th Edition by B Grob, McGraw Hill, NY 1989.
7. Introduction to Radar systems, by Merrill I Skolnik, McGraw Hill.

SKILL BASED SUBJECT

PAPER – 3

ASTRO PHYSICS

UNIT – I: ASTRONOMICAL INSTRUMENTS

Optical telescope - reflecting telescope - types of reflecting telescope - advantages of reflecting telescopes - radio telescope - astronomical spectrographs - photographic photometry - photoelectric spectrometry- detectors and image processing.

UNIT – II : SPACE

Introduction – Hubble's Law – Big bang theory – Shape of Universe – Expanding universe in space – Galaxies – Types of Galaxies – Spiral, Elliptical and Irregular Galaxies – Clusters of Galaxies – Milky Way – Quasars.

UNIT – III : STARS

Birth of Stars – Colour and Age – Life of Stars – Red giant stars – With dwarf star – Neutron Star – Black hole – Supernovae – Constellations - Zodiac.

UNIT – IV : SOLAR SYSTEM

Introduction – Sun – Structure of Sun – Nuclear reactions in sun – Sun spot and solar flares – Earth – Structure of earth – Atmosphere – Moon and its structure – Inner planets – Outer planets – Asteroids – Meteors – Meteorites - Comets.

UNIT – V : SPACE DISTANCE, UNITS AND CO-ORDINATES

Cislunar space – Translunar space – Inter planetary distance – Interesteller space – Inter galactic space – Light Year – Astronomical Unit – Astronomical Map. Astronomical Systems – Astronomical co-ordinates – Celestial Sphere – Celestial Equators – Celestial Poles - Celestic.

Books for study:

1. BaidyanathBasu / An introduction to Astrophysics / second printing, Prentice Hall of India Private limited New Delhi – 2001
2. Hewish. A / Physics of the universe / CSIR publication, New Delhi, 1992.
3. Biman Basu / Inside Stars / CSIR Publication, New Delhi, 1992.
4. Biman Basu / Cosmic Vistas / National Book Trust of India, 2002.
5. Krishnasamy K.S. / Astro Physics a modern perspective / New Age International / New Delhi.
6. Murugesan. R / Modern Physics / S. Chand & Co. / New Delhi, 2003.

Books for reference:

1. Mohan Sundara Rajan / Space today / National Book Trust of Indi, 2000.
2. William K. Hartmann / The Cosmic Voyage through time and space / Wads worth Publishing company, Californi, 1990.

SEMESTER VI

PAPER – 8
NUCLEAR AND RADIATION PHYSICS

UNIT – I : NUCLEAR STRUCTURE

Nuclear spin – determination of magnetic dipole moment, electric quadruple moment, parity of nuclei, isospin, theories of nuclear composition, proton and electron hypothesis, proton – neutron hypothesis, nuclear forces – meson theory of nuclear forces.

Liquid drop model – Bethe – Weizacker's mass formula – application to alpha decay – Bohr – Wheeler theory – Shell model – evidences – theory o energy level diagram – spin orbit interaction
– magic numbers – nuclear stability.

UNIT – II : NUCLEAR DECAY

Radioactive disintegration – law of successive disintegration – transient and secular equilibrium – radioactive series – Geiger – Nuttal law – Age of earth – alpha particle disintegration energy – alpha particle spectra – theory of alpha decay (qualitative treatment). Beta ray spectra – origin – neutrino theory of beta decay – electron capture – gamma rays – determination of wavelength by Dumond – crystal spectrometer – nuclear isomerism.

UNIT – III : PARTICLE ACCELERATORS AND DETECTORS

Cyclotron – synchrocyclotron – Betatron – electron synchrotron – proton synchrotron (Bevatron) GM counter – ionization chamber – bubble chamber – scintillation counter – photographic emulsion techniques.

UNIT – IV : RADIATION PHYSICS

Nuclear fission – Chain reaction – four-factor formula – reactor theory – critical size of a reactor – general aspect of reactor design – reactor shielding – reactor control – classification of reactors – pressurized heavy water reactor – fast breeder reactor – Radiation hazards – biological effects of radiation – radiation sickness – radiation units and operational limits – radiation survey meters – pocket dosimeter – control of radiation hazards – radiation therapy – radioisotopes used for therapy – nuclear medicine – industrial applications – food preservatives.

UNIT – V : ELEMENTARY PARTICLES

Classification – types of interaction – symmetry and conservation laws – hadrons – leptons – baryons – mesons – strangeness – hyperons – antiparticles – antimatter – basic ideas about quarks – types of quarks.

Books for study:

1. Modern physics by R Murugeshan S Chand & Co.
2. Introduction to Modern Physics by Rich Meyer, Kennard, Coop Tata McGraw Hill Publishing Co.
3. Atomic and nuclear physics by Littlefeld & Thorley.
4. Modern physics by R Murugeshan & Kiruthiga, Sivaprasath S Chand & Co. (2006).

Books for reference:

1. Nuclear Physics S N Ghoshal – S Chand & Co. Edition 2003.
2. Nuclear Physics D G Tayal – Himalayan Publishing House.
3. Elements of Nucler Physics – M L Pandya & R P S Yadav Kedar Nath Ram Nath (2000).
4. Nuclear Physics – Irving Keplan.
5. Nuclear Physics – J B Rajam, S Chand Publishing Co.

PAPER – 9

RELATIVITY, QUANTUM MECHANICS & MATHEMATICAL PHYSICS

UNIT – I : RELATIVITY

Frames of reference – Michelson – Morley experiment – Significance of negative result – postulates of special theory of relativity – Lorentz transformation equations – Length contraction – Time dilation – Relativity of simultaneity – Law of addition of velocities – variation of mass with velocity – relativistic kinetic energy equations – postulates of general theory of relativity – gravitational red shift.

UNIT – II : WAVE MECHANICS

Matter waves – de Broglie wavelength – wave velocity and group velocity – Heisenberg's Uncertainty principle – proof of Uncertainty principle for one dimensional wave packet – Postulates of wave mechanics – properties of wave functions – operator formalism – eigen functions – eigen values – expectation values.

UNIT – III : SCHRODINGER EQUATIONS AND ITS APPLICATIONS

Schrodinger equation – time dependent and time independent – application of Schrodinger equations – linear harmonic oscillator – zero point energy – particle in a one dimensional box – barrier penetration and tunnelling effect – rigid rotator – hydrogen atom.

UNIT – IV : MATHEMATICAL PHYSICS

Gauss divergence theorem – Stoke's theorem – Green's theorem – applications of vectors to hydrodynamics.

Orthogonal curvilinear coordinates – spherical polar coordinates – differential operators in terms of orthogonal curvilinear coordinates – expressions for gradient, div, curl and $\tilde{\mathbf{N}}^2$ in Cartesian, spherical and cylindrical coordinates.

UNIT – V : SPECIAL FUNCTIONS

Beta and gamma functions – problems – relation between beta and gamma functions – Bessel's differential equations – Legendre's differential equations – Hermite's differential equations – Laguerre's differential equations – series solutions – Dirac delta functions - properties.

Books for study:

1. Quantum Mechanics by V. Devanathan, Narosa, Chennai, 2005.
2. Modern Physics by R Murugeshan, Kiruthiga, Sivaprasath S Chand & Co. (2007).
3. Quantum Mechanics by V K Thangappan, Wiley Eastern.
4. A Text Book of Quantum Mechanics by P M Mathews and Venkatesan, McGraw Hill. Mathematical Physical by Sathya Prakash.
5. Mechanics and Mathematical Methods by Murugeshan, S Chand Publishing & Co.

Books for reference:

1. Mathematical Physics by B D Gupta.
2. Quantum Mechanics by Ghatak and Loganathan, McMillan.
3. Basic Quantum Mechanics by A Ghatak, McMillan India (2002).

PAPER – 10

SOLID STATE PHYSICS

Unit - I

Crystallography: Distinction between crystalline and amorphous solids – Different features of the crystal – Crystal lattice – Basis – Primitive and Unit cell – Number of lattice points per unit cell - Seven Classes of Crystals - Bravais lattices – Miller indices – Elements of Symmetry – Structure of KCl and NaCl crystal - Diamond Structure – Atomic Packing – Atomic radius –-Lattice constant and density- Crystal structure (sc; hcp; fcc;bcc.)

Unit - II

Types of Bonding in Crystals - Ionic, Valence, Metallic, vanderwaal's and Hydrogen Bonding – Optical properties of solids – Specific heat capacity of solids – Dulong and Pettit's law – Einstein's and Debye's theory – Explanation for the Occurrence of Super Conductivity - General Properties of Superconductors - Types of Superconductors – Meissner effect -Application of Superconductors.

Unit - III

Diffraction of x-Rays by Crystals - Bragg's Law In one Dimension - Experimental Method in x- Ray Diffraction - Laue Method, Rotating Crystal Method - Powder Photograph Method - von Laue's equations. Point Defects, Line Defects - Surface Defects - Volume Defects - effects of Crystal Imperfections.

Unit - IV

Different Type of Magnetic materials - Classical Theory of Diamagnetism (Langevin's Theory) - Langevin's Theory of Paramagnetism - Weiss Theory of Paramagnetism - Qualitative Explanation of Heisenberg's Internal Field and Quantum Theory of Ferromagnetism.

Unit - V

Fundamental Definitions in Dielectrics - Different types of Electric polarization - Frequency and Temperature Effects on Polarization - Dielectric Loss - Local Field on Internal Field Clausius-Mosotti Relation - Determination of Dielectric Constant Dielectric Breakdown - Properties of Different Types of Insulating Materials.

Books for Study:

1. Solid State Physics Gupta and Kumar
2. Modern Physics R Murugesan
3. Material Science by M. Arumguarn, Anuradha Publishers.
4. Material Science and Engineering by V.Raghavan, PHI
5. Introduction to Solids by Azaroff, TMH.
6. Concepts of Modern Physics by Beiser, Tata Mc.Graw Hill, 5^{th} Edition,1997.

Books for Reference:

1. Introduction to Solid State Physics by Kittel, Wiley and Sons, 7^{th} Edition.
2. Solid State Physics A J Dekker

CORE PRACTICAL – III

(Any 20 Experiments)

1. Bifilar Pendulum – Parallel Threads – Verification of Two Theorems.
2. Young's modulus – Koenig's method - non uniform bending.
3. Young's modulus – Koenig's method - uniform bending.
4. Newton's rings – R_1, R_2 and – μ of material a convex lines.
5. Spectrometer i – I' Curve.
6. Spectrometer – narrow angled prism – angle of deviation – normal incidence and normal emergence – refractive index.
7. Dispersive power of a prism.
8. Dispersive power of a grating.
9. Spectrometer – Cauchy's constants.
10. Lasers – Determination of Numerical aperture of a fiber
11. Lasers - diffraction at a straight wire – determination of thickness of the wire.
12. Field along the axis of circular coil – deflection magnetometer – M and B_H – Null Method.
13. Field along the axis of circular coil – Vibrating magnetic needle - B_H.
14. EMF of a thermocouple – Mirror galvanometer – Direct deflection method.
15. Potentiometer – emf of a thermocouple.
16. Potentiometer – calibration of high range voltmeter.
17. Potentiometer – Conversion of galvanometer into voltmeter.
18. Potentiometer – Conversion of galvanometer into ammeter.
19. BG – absolute capacitance of a capacitor.
20. BG – comparison mutual inductances.
21. BG – High resistance by leakage.
22. BG – internal resistance of a cell.
23. Hartley Oscillator.
24. Colpitt's oscillator.
25. RC Coupled single stage amplifier (without feedback).

CORE PRACTICAL – IV

ELECTRONICS

1. FET – Characteristics.
2. UJT – Characteristics.
3. UJT – Relaxation oscillators.
4. Differentiating and integrating circuits – using op-amp.
5. NAND, NOR as universal gates.
6. Verification of De Morgan's Theorems.
7. Transistor – Phase shift oscillator.
8. Transistor – Wien bridge oscillator.
9. Emitter Follower.
10. Op – Amp – Voltage follower, adder, subtractor, averager (inverting mode).
11. Op – Amp – Inverting amplifier with frequency gain response.
12. Half adder and Full adder – using NAND gate only.
13. Half subtractor and Full subtractor – using NAND gate only.
14. RS, Clocked RS, and D Flip Flops using NAND gate only.
15. Four bit ripple counter – 7473 / 7476.
16. Shift Register – Four bit left / right – 7473 / 7476.
17. Microprocessor – 8 bit addition, Subtraction – using BCD & Hexadecimal.
18. Number conversion – 8 bit – BCD to binary, Binary to BCD, Hex to ASCII using 8085.
19. Square and Square root of Hex numbers – 8 bit – using 8085.
20. Microprocessor – Sum of N elements

SKILL BASED SUBJECT

PAPER – 4

INSTRUMENTATION TECHNIQUES

UNIT – I : ELECTRICAL INSTRUMENTATION

AC bridges – Measurement of Inductance by Maxwell's Inductance Bridge – Measurement of Capacitance by De Sauty's Bridge – Measurement of Mutual Inductance by carry Foster bridge – ac differential voltmeter – dc differential voltmeter – Analog multimeter.

UNIT – II : ELECTRONIC INSTRUMENTATION

Analog to Digital converters – Dual slop ADC and Successive approximation ADC – Digital counter (four bit) – Digital voltmeter – Digital Frequency Meter – Digital Multimeter – Digital Thermometer.

UNIT – III : ANALYTICAL INSTRUMENTATION

CRO – measurement of time period and frequency – Distortion analyzer – Wave analyzer – Spectrum analyzer – IR spectrometer – UV spectrometer – Fast Fourier Transform (FFT) analyzer – Ultrasound scanner.

UNIT – IV : BIO-MEDICAL INSTRUMENTATION

Bioelectric potentials – resting and action potential – Half cell potential – surface needle and micro electrodes – principle, description, function and recording of ECG, EMG and EEG artificial pace maker – simulators – heart lung machine – kidney machine – pH meter – laser blood flow meter.

Strain gauge and measurement of strain – Measurement of pressure using electrical transducer – Measurement of seismic vibration using seismic transducer – Piezo – electric accelerometer – Measurement of temperature using semiconductor device – Radiation measurement by GM counter.

Books for study:

1. Arumugam M / Biomedical instrumention / Anuradha Publications, Kumbakonam / 2011.
2. Sawhney A K / A course in Electrical and Electronics Measuremens and Instrumentation / Dhanpat Rai & Co., Delhi / 2003.
3. Alan S Morris / Measurement & Instrumentation Principles / Elsevier / 2006.
4. Anand M.M.S. / Electronics Instruments and Instrumentation Technology / PHI, New Delhi / 2006.

ELECTIVE SUBJECTS

Students can choose any one of the groups (Elective I, II & III)

GROUP A

Elective 1: Digital Electronics
Elective 2: Applied Electronics
Elective 3: Microprocessor and its Applications – 8085

GROUP B

Elective 1: Materials Science
Elective 2: Applied Electronics
Elective 3: Laser and Fibre Optic Communication

GROUP C

Elective 1: Fundamentals of Nano Materials and its Characterization
Elective 2: Applied Electronics
Elective 3: Medical Physics

ELECTIVE

GROUP A

PAPER – 1

DIGITAL ELECTRONICS

UNIT – I : DIGITAL FUNDAMENTALS AND LOGIC GATES

Number systems – decimal, binary, octal and hexadecimal system – Conversion from one number system to another. Codes – BCD code – Excess 3 code, Gray code – ASCII code - Binary arithmetic –Binary addition – subtraction – unsigned binary numbers – sign magnitude numbers – 1's and 2's complement – Binary multiplications and division - AND, OR circuits using diodes and transistors – NOT using transistors – NAND, NOR and EXOR – functions and truth tables. NAND & NOR as universal gates.

UNIT – II : BOOLEAN ALGEBRA AND SIMPLIFICATION OF LOGIC CIRCUITS

Laws and theorems of Boolean algebra – De Morgan's theorems and their circuit implications - Simplification of Boolean equations – Karnaugh map – pairs, quads, octets – 2,3 and 4 variables - Arithmetic building blocks – Half adder – Full adder – parallel binary adder – Half subtractor – Full subtractor – The adder-subtractor – digital comparator – parity checker / generator.

UNIT – III : DATA PROCESSING CIRCUITS AND SEQUENTIAL LOGICS

Multiplexers – Demultiplexers – Decoders – 1 of 16 decoder BCD to decimal decoder – seven segment decoder – Encoders – Flip Flops – RS Flip Flop – Clocked RS Flip-flop – D flip-flop – JK flip-flop – JK master slave flip-flop – T type flip-flop.

UNIT – IV : SHIFT REGISTERS AND COUNTERS

Types of registers – serial in serial out – serial in parallel out – parallel in serial out – parallel in parallel out – ring counter – asynchronous counter – decoding gates – omitted states – modulus counters –BCD counter – up down counter – synchronous counter – combination counters – decade counter – cascaded counters.

UNIT – V : D/A AND A/D CONVERTERS

Introduction – variable resistor network – binary ladder – D/A converter – D/A accuracy and resolution – A/D converter – simultaneous conversion – A/D accuracy and resolution.

Books for study:

1. Malvino and Leech, (2000), Digital Principles and Application, 4th Edition, Tata McGraw Hill, New Delhi.
2. Millman and Halkias, (1972), Integrated Electronics, International Edition, McGraw Hill, New Delhi.
3. Arul Thalapapathi, Fundamentals of digital computers, Comptek publishers, Chennai, 1995.

Books for Reference:

1. Computer architecture and logic design by T C Bartee, McGraw Hill, 1991.2.
2. Solid state electronics by 1 Agarwal and Anit Agarwal.
3. Digital integrated electronics by Herbert Taub and Donald Schilling, McGraw Hill.
4. Anokh Singh and A K Chhabra, (2005), Fundamentals of Digital Electronics and Microprocessors, 2nd revised and enlarged Ed., S Chand & Co. Ltd., New Delhi.
5. Digital fundamentals – Floyd – Pearson Education 8th Edition 2004 S Chand Publications.

PAPER – 2

APPLIED ELECTRONICS

UNIT – I : SPECIAL DEVICES AND APPLICATIONS

FET – Characteristics – parameter FET as amplifier – FET as VVR – MOSFET – Depletion and enhancement – UJT characteristics – UJT as relaxation oscillator – SCR characteristics – SCR as half wave rectifier and full wave rectifier. SCR as static current switch – Firing of SCR using UJT.

UNIT – II : OPERATIONAL AMPLIFIER AND APPLICATIONS

OPAMP – Parameters – Inverting and Non-inverting amplifier – gain – Miller effect – Virtual ground – Offset voltage – offset current – PSRR – CMRR.

OPAMP – Sign and Scale changer – adder, subtractor and averager – Integrator and differentiator – DC voltage follower – ac voltage follower –

UNIT – III : OTHER APPLICATION OF OPAMP

OP AMP logarithmic amplifier – antilogarthmic amplifier – Logarithmic multiplier – Logarithmic divider. Comparator – Schmitt trigger – astable multivibrator – monostable multivibrator – Bistable multivibrator.

UNIT – IV : 555 TIMER AND PLL

555 block diagram and work monostable operation – Astable operation – Schmitt trigger. Phase – Locked Loops (PLL) : Basic principles – Phase Detector.

Comparator – Analog phase detector – Digital phase detector – voltage controlled oscillator (VCO).

UNIT – V : D/ A AND A/D CONVERTER

Weighted resistor D/A converter – 4-bit R-2R ladder DAC – Analog to Digital converter – Stair case ADC – tracking or servo ADC – Successive approximation ADC – Flash ADC Duel slope ADC.

Books for Study:

1. Basic and Applied Electronics by M. Arul Thalapathi – Comtec Publisher Chennai – 2005.
2. Digital principles and applications – Malvino Leach – 4th Edn. – Tata McGraw Hill 1992.
3. Integrated Electronics by Jacob Millman and Christos C. Halkias – McGraw Hill International 1971.
4. Linear Integrated Circuits by D. Roy Choudhury and Shail Jain – New age international (P) Ltd. OP-AMPS and linear integrated circuits – by Ramakant A. Gayakward – Printice Hall of India 1994.

Books for Reference:

1. Digital Computer electronics by Albert Paul Malvino – TMH Edition 1992.
2. Electronics – Analog and Digital – IJ Jagrath – Prentice – Hall of India – New Delhi – 1999.
3. Operational amplifier and linear integrated circuits – Prentice Hall Inc. N.J. 1977.

PAPER - 3

MICROPROCESSOR AND ITS APPLICATIONS - 8085

UNIT – I : MICROPROCESSOR ARCHITECTURE AND ITS OPERATIONS

Microprocessors – Architecture of 8085 – pin out configurations of 8085 – Bus organization and timings: buses – buffer – address bus, data bus, multiplexing address / data bus and control & status signals – ALU – registers in 8085 – flags – decoding and execution of instruction – Interrupts and its types.

UNIT – II : PROGRAMMING MODEL OF 8085

Classification of instructions and format – 8-bit data transfer, arithmetic, logical and branch instructions – Addressing modes – 16 bit data transfer and memory related instructions – stack and subroutine instructions – comparison of stack and subroutine instructions – Logical rotate and compare instructions – RIM and SIM interrupt instructions – 8-bit code conversion: Binary to BCD, BCD to binary, binary to ASCII, ASCII to binary.

UNIT – III : TIME DELAY, DESIGN OF COUNTERS AND MEMORY INTERFACE

Counters – time delay using one and pair of registers – Instruction timings of 8085 – T-states – delay routines and delay calculations.

Memory interface : 2K x 8, 4K x 6 ROM and RAM interface – timing diagram for memory read and memory write cycles – instructions cycle, machine cycle.

UNIT – IV : INTERFACING I/O DEVICES

Interfacing concepts – peripheral I/O instructions – interfacing input and output using decoders – interface of LED output display for binary data – Memory mapped I/O – LED display of binary data – comparison of peripheral I/O and memory mapped I/O.

UNIT – V : INTERFACING DATA CONVERTERS AND PERIPHERAL DEVICES

Concepts of D/A and A/D converters and circuits – illustration of interfacing 8-bit D/A - successive approximation A/D converters – interfacing of programmable peripheral device 8255 – Programming 8255A MODE zero – interfacing with ports of 8255 with LED’s to run various counters.

Books for study:

1. Microprocessor Architecture, Programming and Applications with the 8085 – R.S. Goankar, 3rd Edn. Prentice Hall.
2. Fundamental of Microprocessor – 8085 – Architecture, Programming and interfacing – V. Vijyendra, S. Viswanathan, Pvt. Ltd., 2003.

Books for reference:

1. Digital computer electronics: an introduction to microcomputers – Malvino, 2nd Edn., Tata McGraw Hill.
2. Fundamental of Microprocessor and Microcomputers – B. Ram.
3. Computer System Architecture – Moris Mano, 3rd Edn., Prentice Hall India.
4. Introduction to Microprocessors : Software, Hardware, Programming – Lance A. Leventhal, Prentice Hall India.

ELECTIVE

GROUP B

PAPER – 1

MATERIALS SCIENCE

UNIT – I : MATERIALS SCIENCE

Classification of materials – Properties of Engineering materials – Materials Structure – Types of Bonds – Bonds Formation – Ionic Bond – Covalent Bond – Metallic Bond – Comparison of Bonds – Secondary Bonds.

UNIT – II : PHASE DIAGRAM AND TRANSFORMATION

Basic terms – Solid Solution – Hume – Rothery's rule – Intermediate Phase – Phase Diagrams – Gibb's Phase Rule – Time – Temperature cooling curves – Construction of Phase Diagrams – The Lever Rule – Equilibrium Binary System – Eutectic System – Mechanism of Phase Transformation.

UNIT – III : VACUUM AND OXIDATION

History of vacuum technology – units of Vaccum – Kinetic aspects of Gases – Application of Vaccum – Gas flow in vaccum systems – production of vaccum – Measurement of vaccum – Thermal conductivity gauges – Penning Gauge – Oxidation – Oxidation Resistant Materials.

UNIT – IV : NON-DESTRUCTIVE TESTING (NDT)

NDT and its advantages – Defects in materials – Selection of the NDT Method – Visual Inspection – Basic Principle – Liquid Penetration Testing – Physical Principle – Magnetic Particle Testing (MPT) – Principle of MPT – Sensitivity – Limitation – Eddy Current Testing (ECT) – Principle – Instrument for ECT – Applications – Limitations – Radiography – Basic Principle – Application – Limitations.

UNIT – V : ELECTRICAL AND MAGNETIC PROPERTIES OF MATERIALS

Dielectrics – Polarization – Temperature and frequency effects – Electric Breakdown – Ferroelectric materials – Electrostriction – Piezoelectricity – Uses of Dielectrics – Magnetic Properties – Classification – Magnetostriction – Soft and Hard Magnetic Materials.

Books for study:

1. Materials Science by G.K.Narula, K.S. Narula, V.K. Gupta, Tata McGraw Hill Publishing, 1994.

2. Materials Science and Engineering by V. Raghavan, Prentice Hall of India, 2004.

Books for reference:

1. Practical Non-Destructive Testing by Baldevraj,T. Jayakumar, M. Thanvasimuthu, Narosa Publishing House, Chennai, 2002.

2. Testing of Metallic Materials by A.V.K. Suryanarayana, B.S. Publications, Giriraj lane, Sultan Bazar, Hyderabad – 95, 2003.

PAPER – 2

APPLIED ELECTRONICS

UNIT – I: SPECIAL DEVICES AND APPLICATIONS

FET – Characteristics – parameter FET as amplifier – FET as VVR – MOSFET – Depletion and enhancement – UJT characteristics – UJT as relaxation oscillator – SCR characteristics – SCR as half wave rectifier and full wave rectifier. SCR as static current switch – Firing of SCR using UJT.

UNIT – II: OPERATIONAL AMPLIFIER AND APPLICATIONS

OPAMP – Parameters – Inverting and Non-inverting amplifier – gain – Miller effect – Virtual ground – Offset voltage – offset current – PSRR – CMRR.

OPAMP – Sign and Scale changer – adder, subtractor and averager – Integrator and differentiator – DC voltage follower – ac voltage follower –

UNIT – III: OTHER APPLICATION OF OPAMP

OP AMP logarithmic amplifier – antilogarthmic amplifier – Logarithmic multiplier – Logarithmic divider. Comparator – Schmitt trigger – astable multivibrator – monostable multivibrator – Bistable multivibrator.

UNIT – IV: 555 TIMER AND PLL

555 block diagram and work mono stable operation – A stable operation – Schmitt trigger. Phase – Locked Loops (PLL): Basic principles – Phase Detector.

Comparator – Analog phase detector – Digital phase detector – voltage controlled oscillator (VCO).

UNIT – V: D/A AND A/D CONVERTER

Weighted resistor D/A converter – 4-bit R-2R ladder DAC – Analog to Digital converter – Stair case ADC – tracking or servo ADC – Successive approximation ADC – Flash ADC Duel slope ADC.

Books for Study:

1. Basic and Applied Electronics by M. Arul Thalapathi – Comtec Publisher Chennai – 2005. Digital principles and applications – Malvino Leach – 4th Edn. – Tata McGraw Hill 1992.
2. Integrated Electronics by Jacob Millman and Christos C. Halkias – McGraw Hill International 1971.
3. Linear Integrated Circuits by D. Roy Choudhury and Shail Jain – New age international (P) Ltd. OP-AMPS and linear integrated circuits – by Ramakant A. Gayakward – Printice Hall of India 1994.

Books for Reference:

1. Digital Computer electronics by Albert Paul Malvino – TMH Edition 1992.
2. Electronics – Analog and Digital – IJ Jagrath – Prentice – Hall of India – New Delhi – 1999.
3. Operational amplifier and linear integrated circuits – Prentice Hall Inc. N.J. 1977.

PAPER – 3

LASER AND FIBRE OPTIC COMMUNICATION

UNIT – I: LASER PHYSICS

Basic Principle of Laser – Einstein Coefficients – Condition for light amplification – Population Inversion – Threshold Condition – Line Shape Function – Optical Resonators – Three level and four level systems.

UNIT – II: TYPES OF LASERS AND OUTPUT MODULATION METHODS

Solid State Lasers – Ruby and Nd-YAG Laser – Gas Lasers – He-Ne and Co2 lasers – semiconductor lasers – Hetero junction Lasers – Liquid Dye Lasers – Q switching and mode locking.

UNIT – III: APPLICATIONS OF LASER

Application of laser in industry – cutting and welding – Drilling – Surface Hardening – Medical applications – Laser as diagnostic and therapeutic tool – Holography – Theory of recording and reconstruction – application of Holography.

UNIT – IV: OPTIC FIBERS

Fiber optic revolution – basic characteristics of optical fiber – acceptance angle – numerical aperture – propagation of light through optical fiber – theory of mode formation – classification of fibers – step index and graded index fibers – single mode and multi mode fibers – losses in fibers – fabrication techniques of fibers.

UNIT – V: FIBER OPTIC COMMUNICATION

Source and detectors for fiber optic communication – Laser and LED – Analog and digital modulation methods – Principle of optical detection – Pin APD photo detectors – Noise – Design consideration of a fiber optic communication system.

Books for study:

1. Laser theory and applications by K. Thyagarajan and Ajoy Ghatak, Cambridge University Press, 1999.
2. Introduction to Fiber optics by K. Thyagarajan and Ajoy Ghatak, Cambridge University Press, 1999.
3. Optical Fiber Communications by John M. Senior, Cambridge University Press, 1996.
4. Fiber-Optic Communication Systems, Govind P. Agarwal, John-Willey & Sons,

Books for Reference:

1. An Introduction to laser : Theory and Applications by M. N. Avadhanulu, S. Chand and Co., New Delhi 2001.
2. P.K. Palanisamy, Physics for Engineering, Scitech Publishing Pvt. Ltd., Chennai

ELECTIVE

GROUP C

PAPER – 1

FUNDAMENTALS OF NANO MATERIALS AND CHARACTERIZATION

UNIT – I : INTRODUCTION TO NANOTECHNOLOGY

Definition of Nanoscale system – Feymann theory of Nanotechnology – types of nanotechnology – Molecular Nanotechnology – Molecular and atomic size – Surface and dimensional space – opportunities at the Nanoscale.

Unit – 2: NANO PROPERTIES

Forces between atoms and molecules, particles and grain boundaries – Vander Waals and electrostatic forces between surface – Nano and Mesopores – size dependent variation in magnetic, electronic transport, resistivity, optical and etc – Misnomers and misconception of Nanotechnology.

Unit – 3 : QUANTUM CONFINEMENT

Quantum confinement in one dimension – Quantum walls – Quantum confinement – In two dimensions – Quantum wires – Quantum confinement in three dimensions – Quantum dots – Super lattices band – Band offsets – Quantum dot layers.

Unit – 4: SYNTHESIS OF NANOMATERIALS AND ITS CHARACTERIZATION

Basic approaches of synthesis nanomaterials – Bottom up and top down process – fundamental of sol – gel process – Sol – Gel synthesis methods for oxides – Mechanical milling – thermal evaporation – XRD with Debye Scherrer formula – SEM- TEM – FTIR – UV.

Unit – 5: APPLICATION OF NANOMATERIALS

Implications of Drug delivery – Polymeric Nanoparticles as Drug carriers and controlled release implant devices – Magnetic Data Storage – Magneto optics and magneto – optic recording – Nano Sensors – Physical sensor and chemical sensors.

Books for Study & Reference:

1. Nanotechnology : Basic Science and Emergic Technologies – Mick Wilson, Kamli Kannangara, Geoff smith , Michelle Simmons, Burkhard Raguse, overseas press (2005)

2. Nanotechnology : A Gentle introduction to the next big idea, Mark A. Rather, Daniel Rather, Mark Rather, prentice Hall PTR; 1st edition (2002)

3. Robert W. Kel Sall, Mark Geoghenan, In W. Hamley, Nano Scale Science and technology, John Wiley and sons, 2005 ISBN 0470850868.

4. Recent advances I the liquid phase synthesis of inorganic nanoparticals Brain L. Cushing, Valdimir L. Kolesnichenko, Charles J. O* Connor, Chem Rev 104 (2004)3893- 3946.

5. Nano composite science and technology, Palical M. Ajayan, Linda S. Schadles, Paul V. Braues, Wiley – VCH Verlag WEileim (2003).

6. ww.eng.vcedu/Ngbeaucag/calsses/XRD/Neutron_diffraction_atLNL.pdf

7. Nano particulates as Dring Carriers , Edited by Vladimir P. Torchilin, Imperiacal college press, North Einstein university, USA (2006), ISBN 1 – 86094 – 630 – 5.

8. Magnetic materials: Fundamental and device applications Nichola. Ann spaldin, Cambridge University press (2003) ISBN 0521016584.

PAPER – 2

APPLIED ELECTRONICS

UNIT – I : SPECIAL DEVICES AND APPLICATIONS

FET – Characteristics – parameter FET as amplifier – FET as VVR – MOSFET – Depletion and enhancement – UJT characteristics – UJT as relaxation oscillator – SCR characteristics – SCR as half wave rectifier and full wave rectifier. SCR as static current switch – Firing of SCR using UJT.

UNIT – II: OPERATIONAL AMPLIFIER AND APPLICATIONS

OPAMP – Parameters – Inverting and Non-inverting amplifier – gain – Miller effect – Virtual ground – Offset voltage – offset current – PSRR – CMRR.

OPAMP – Sign and Scale changer – adder, subtractor and averager – Integrator and differentiator – DC voltage follower – ac voltage follower –

UNIT – III: OTHER APPLICATION OF OPAMP

OP AMP logarithmic amplifier – antilogarthmic amplifier – Logarithmic multiplier – Logarithmic divider. Comparator – Schmitt trigger – astable multivibrator – monostable multivibrator – Bistable multivibrator.

UNIT – IV: 555 TIMER AND PLL

555 block diagram and work monostable operation – Astable operation – Schmitt trigger. Phase – Locked Loops (PLL) : Basic principles – Phase Detector.

Comparator – Analog phase detector – Digital phase detector – voltage controlled oscillator (VCO).

UNIT – V: D/A AND A/D CONVERTER

Weighted resistor D/A converter – 4-bit R-2R ladder DAC – Analog to Digital converter – Stair case ADC – tracking or servo ADC – Successive approximation ADC – Flash ADC Duel slope ADC.

Books for Study:

1. Basic and Applied Electronics by M. Arul Thalapathi – Comtec Publisher Chennai – 2005. Digital principles and applications – Malvino Leach – 4th Edn. – Tata McGraw Hill 1992.
2. Integrated Electronics by Jacob Millman and Christos C. Halkias – McGraw Hill International 1971.
3. Linear Integrated Circuits by D. Roy Choudhury and Shail Jain – New age international (P) Ltd.
4. OP-AMPS and linear integrated circuits – by Ramakant A. Gayakward – Printice Hall of India 1994.

Books for Reference:

1. Digital Computer electronics by Albert Paul Malvino – TMH Edition 1992.
2. Electronics – Analog and Digital – IJ Jagrath – Prentice – Hall of India – New Delhi – 1999.
3. Operational amplifier and linear integrated circuits – Prentice Hall Inc. N.J. 1977.

PAPER – 3

MEDICAL PHYSICS

UNIT – I: X – RAYS

Electromagnetic spectrum – production of x- rays – s-rys spectra – Brehmsstrahlung – Characteristic x-ray – X-ray tubes – Coolidge tube – x-ray tube design – tube cooling – stationary mode – Retting anode x-ray tubes – Tube rating – quality and intensity of x-ray. X-ray generator circuits – half wave and full wave fectification.

UNIT – II: RADIATION PHYSICS

Radiation units – exposure – absorbed dose – rad gray – kera relative biological effectivenss – effective dose – slevert - inverse square law – Interaction of radiation with matter – linear attenuation coefficient. Radiation Detectors.

UNIT – III: MEDICAL IMAGING PHYSICS

Radiological imaging – Radiography – Filters – grids – cassette – X-ray film – film processing – fluoroscopy – computed tomography scanner –principle function display – generations – mammography. Ultrasound imaging – magnetic resonance imaging – thyroid uptake system – Gamma camera [Only Principle, function and display]

UNIT – IV: RADIATION THERAPHY PHYSICS

Radio theraphy – kilo voltage machines – deep theraphy machines – tele-cobalt machines – Medical linear accelerator. Basic of Teletherapy units – deep x-ray, telecobalt units, medical linear accelerator – radiation protection – external beam characteristics – phantom –does maximm and build up – bolus – percentage depth dose – tissue – air ration – back scatter factor.

UNIT – V: RADIATION PROTECTION

Principles of radiation protection – protective materials – radiation effects – somatic, genetic stochastic and deterministic effect, Personal monitoring devices – TLD film badge – pocket dosimeter.

Book for Study:

1. Basic Radiological Physics Dr. K. Thayalan – Jayapee Brothers Medical Publishing Pvt. Ltd. New Delhi (2003)

2. Christensen's Physics of Diagnostic Radiology : Curry, Dowdey and Murrey – Lippincot Williams and Wilkins (1990)

3. Physics of Radiation Theraphy : FM Khan – Williamd and Wilkins, Third edition (2003)

4. The essential physics of Medical imaging : Bushberg, Seibert, leidholdt and Boone Lippincot Williams and Wilkins, Second Edition (2002)

5. HE Johns and Cunningham – The Physics of Radiology.

Books for Refernece :

1. Nuclear medicine Physics : Chandra – Lippincot Willams and Wilkins (1998)

2. The Physics of radiology : John R. Gunni ingham and Johns – Charles C Thomas USA (19190)

3. Medical Imaging Physics : William R Hendee – Mosby , 3rd edition (1992)

4. Advanced Medical Radiation Dosimetry : Govindarajan KN Prentice – Hall of India Pvt. Ltd. New Delhi (1992)

5. Erric Hall Radio Biology for the Radiologist – Lippincott Williams & Wilkins.

6. The modern Technology of Radiation oncology – Jake VanDyk – Medical Physics Publishing.

ALLIED

PHYSICS - I

UNIT – I: PROPERTIES OF MATTER

Elasticity : Hooke's Law – Elastic Constants – bending of beam – Bending moment – Cantilever Depression at the loaded end of a cantilever – determination of Young's modulus by non-uniform bending.

Torsion : Torsion couple – Potential energy in a twisted wire – Torsional pendulum – Time period – Determination of rigidity modulus by Torsional oscillation (without masses).

Viscosity: Viscosity of a liquid – Viscous force – Co-efficient of viscosity of a liquid – Poiseuille's formula .

Surface Tension: Surface Tension – Surface Tension and interfacial surface tension by the method of drops.

UNIT – II: HEAT

Heat: Specific heat – Newton's law of cooling – determination of specific heat of a liquid using Newton's law of cooling – Emissivity and Emissive Power.
Low Temperature: J.K. Effect – Positive Effect – Negative Effect – Temperature of Inversion – Super conductors. Type I and II – Meisner Effect – Helium I and II.

UNIT – III: ELECTRICITY AND MAGNETISM

Electricity: Potentiometer – Principle – Calibration of low range voltmeter – Measurement of internal resistance of cell – measurement of an unknown resistance.

Magnetism – Moment and pole strength of a magnet – Deflection magnetometer – Tan C position – Vibration magnetometer – Theory – Period of Oscillation – Determination of M and B_H using the deflection magnetometer in Tan C position and the vibration magnetometer.

UNIT – IV: SOUND AND ACOUSTICS OF BUILDING

Sound: Transverse vibration of strings – Velocity and frequency of vibrations of a stretched string – laws – sonometer – A.C. Frequency – Steel Wire – Brass wire.

Ultrasonics – Production by Piezo – electric method – properties and uses.
Acoustics of buildings: Reverberation – Reverberation time – Sabine's formula (definition only) – Sound absorption co-efficient of surface – conditions for the perfect acoustics.

UNIT – V: OPTICS

Interference: Air Wedge – Description – Test for optical flatness of glass plate – Determination of diameter of a thin wire by air wedge.

Diffraction: Theory of transmission grating – Normal Incidence – Determination of Wavelength of monochromatic source and Wavelength of mercury line using a grating by normal Incidence.

Fibre optics: principle-classification of optical fibres-fibre optic communication system block diagram.

Books for Study & Reference

1. Allied Physics – R. Murugesan S. Chand & Co. First Edition (2005).
2. Allied Physics – Dr. K. Thangaraj, Dr. D. Jayaraman Popular Book Department, Chennai.
3. Allied Physics – Prof. Dhanalakshmi and others.
4. Elements of Properties of Matter – D.S. Mathur, S. Chand & Co. (1999).
5. Heat and Thermodynamics – N. Brijlal and Subramaniam S. Chand & Co.
6. A text book of Sound – by M. Narayanamoorthy and other National Publishing Companies (1986).
7. Modern Physics – R. Murugesan S. Chand & Co. (2004).
8. Introduction to Fibre optics- K.Thyagarajan and Ajay Ghatak,Cambridge,University Press(1999).

ALLIED

PHYSICS II

UNIT – I: WAVE MECHANICS

Wave Mechanics – De Broglie Waves – Dual Nature – Experimental Study of Matter Waves – Davission and Germer's Experiment – G.P. Thomson's Experiment _ Heisenberg's uncertainty Principle – The position and moment of a particle.

UNIT – II : NUCLEAR PHYSICS

Particle accelerators – cyclotron, particle detectors – GM Counter Artificial Transmutation – Rutherford's Experiment – The Q value equation for nuclear reaction – Threshold energy – Nuclear Reactions.

Conservation Laws: Conservation of Charge – Conservation of Nucleons – Conservation of Mass – Energy – Conservation of Parity – Quantities conserved and quantities not conserved in a nuclear reaction.

UNIT – III : ENERGY PHYSICS

Sources of conventional energy – Need for non-conventional energy resources – solar energy utilization – solar water heater – solar drier – conversion of light into electrical energy – solar cell – merits and demerits of solar energy – wind energy – its conversion systems – energy from Bio mass – Bio gas generation – Industrial and space application.

UNIT – IV: CRYSTALLOGRAPHY

Crystallography : The crystal structure – Unit Cell –Bravais lattice- structures of simple cubic-BCC and FCC- co ordination number, packing factor calculation for the above structures –Hexogonal closed packed(HCP) structure -Miller indices – concept of Reciprocal Vectors.

UNIT – V: ELECTRONICS

Electronics: Transistor characteristics in common base and common emitter mode- Transistor single stage amplifier- Expression for input impedence, output impedence and current gain.
Digital Electronics : NAND and NOR as universal building blocks- De Morgan's theorem –statement and proof- Fabrication of diodes and transistors using Monolithic technology– limitations.

Books for Study & Reference

1. Allied Physics – R. Murugesan S. Chand & Co. First Edition (2005).
2. Allied Physics – Dr. K. Thangaraj, Dr. D. Jayaraman Popular Book Department, Chennai.
3. Allied Physics – Prof. Dhanalakshmi and others.
4. Elements of Properties of Matter – D.S. Mathur, S. Chand & Co. (1999).
5. Heat and Thermodynamics – N. Brijlal and Subramaniam S. Chand & Co.
6. A text book of Sound – by M. Narayanamoorthy and other National Publishing Companies (1986).
7. Modern Physics – R. Murugesan S. Chand & Co. (2004).
8. Electronic Principles and Applications – A.B. Bhattacharya, New Central Book Agency, Calcutta.
9. Introduction to Solid State Physics – C. Kittel, 5^{th} Edition Wiley Eastern Ltd.
10. Renewable & Sustainable energy sources – Agarwal.

ALLIED PRACTICAL

PHYSICS
(Any 15 Experiments)

1. Young's modulus – non uniform bending – pin and microscope.
2. Rigidity modulus – Static Torsion Method Using Scale and Telescope.
3. Ridigity modulus – Torsional oscillation method (without symmetric masses).
4. Determination of Co-efficient of Viscosity – Graduated Burette.
5. Surface Tension and Interfacial Tension – By drop weight method.
6. Specific Heat Capacity of a liquid – by Newton's Law of Cooling.
7. Sonometer – Determining A.C. Frequency. (Screw Gauge is given).
8. Sonometer – frequency of tuning fork.
9. Newton's Rings – Radius of Curvature.
10. Air Wedge – Determination of thickness of thin wire.
11. Spectrometer Grating – Minimum Deviation – Mercury Lines.
12. Spectrometer – Refractive Index of a liquid – Hollow Prism.
13. Potentiometer – Calibration of High Range Ammeter.
14. Potentiometer – Calibration of Low Range Voltmeter.
15. Determination of M and B_H using Deflection Magnetometer in Tan C position and vibration magnetometer.
16. Figure of merit and voltage sensitiveness of table galvanometer.
17. Construction of AND, OR gates using diodes and NOT by transistors.
18. Zener diode – Voltage Regulation.
19. NAND / NOR as universal gate.
20. Demorgan's theorem verification.

THIRUVALLUVAR UNIVERSITY

PART-IV

ENVIRONMENTAL STUDIES

SYLLABUS

(For all UG Degree Courses)

(with effect from 2017-2018)

SEMESTER I

UNIT-I: INTRODUCTION TO ENVIRONMENTAL SCIENCES: NATURAL RESOURCES :

Environmental Sciences - Relevance - Significance - Public awareness - Forest resources - Water resources - Mineral resources - Food resources - conflicts over resource sharing - Exploitation - Land use pattern - Environmental impact - fertilizer - Pesticide Problems - case studies.

UNIT-II: ECOSYSTEM, BIODIVERSITY AND ITS CONSERVATION:

Ecosystem - concept - structure and function - producers, consumers and decomposers - Food chain - Food web - Ecological pyramids - Energy flow - Forest, Grassland, desert and aquatic ecosystem.

Biodiversity - Definition - genetic, species and ecosystem diversity - Values and uses of biodiversity - biodiversity at global, national (India) and local levels - Hotspots, threats to biodiversity - conservation of biodiversity - Insitu & Exsitu.

UNIT-III: ENVIRONMENTAL POLLUTION AND MANAGEMENT

Environmental Pollution - Causes - Effects and control measures of Air, Water, Marine, soil, solid waste, Thermal, Nuclear pollution and Disaster Management - Floods, Earth quake, Cyclone and Land slides. Role of individuals in prevention of pollution - pollution case studies.

UNIT-IV: SOCIAL ISSUES - HUMAN POPULATION

Urban issues - Energy - water conservation - Environmental Ethics - Global warming - Resettlement and Rehabilitation issues - Environmental legislations - Environmental production Act. 1986 - Air, Water, Wildlife and forest conservation Act - Population growth and Explosion - Human rights and Value Education - Environmental Health - HIV/AIDS - Role of IT in Environment and Human Health - Women and child welfare - Public awareness - Case studies.

UNIT-V: FIELD WORK

Visit to a local area / local polluted site / local simple ecosystem - Report submission

THIRUVALLUVAR UNIVERSITY, SERKADU

FOUNDATION ENGLIAH PART II

REVISED SYALLABUS
(w.e.f 2017-2018)

SEMESTER I

UNIT 1-PROSE

1. My greatest Olympic Priize -Jesse Owens
2. The Tree Speaks – Rajagopalachari.C
3. Snake in the Garden – R.K.Narayan
4. Futurology - Aldous Huxley

UNIT 2 -POETRY

1. The River - Parthasarathy
2. Ode to Nightingale – John Keats
3. "O Captain, My Captain - Walt Whitman
4. Paper Boat – Rabindranath Tagore

UNIT 3 -SHORT STORY AND ONE ACT PLAY

1. A Day's Wait – Ernest Miller Hemingway
2. Little Girls Wiser Than Men - Tolstoy

One act play

3. The Bishop's Candlestick – Morman Mckinnel

UNIT- 4 GRAMMAR AND COMPOSITION

1. Correct usage of Words
2. Vocabulary – Synonyms & Antonyms
3. Abbreviations
4. English for Excellence – Parts of Speech -Modern Avenue
5. Functional English: Creative Writing
   College Grammar
   Letter of Application
   Writing a Resume

UNIT-5 COMMUNICATION SKILLS

1. Listening Conversation –(i) Agreeing and Disagreeing..
   (ii) Seeking and giving permission
   (iii) Greetings
   (iv) Introducing Oneself to others

SEMESTER II

UNIT – 1 **PROSE**

1. Ant and Grasshopper - Somerset Maugham
2. Early Influences - A.P.J. Abdul Kalam
3. Forgetting – Robert Lynd
4. The Unity of Indian Culture – Humayan Kabir

UNIT -2 POETRY

1. The Soul's Prayer.- Sarojini Naidu
2. The Lotus - Toru Dutt
3. Nutting – William Wordsworth
4. Ozymandias- P.B.Shelley

UNIT-3 SHORT STORY AND ONE ACT PLAY

4. The Doll's House - Katherine Mansfield
5. Karma - Kushwant Singh

One Act Play

6. Hijack -Charles Wills

UNIT -4 Vocabulary

6. Functional Grammar
7. Functional English

UNIT-5 COMMUNICATION SKILLS

8. Making Request
9. Offering Help
10. Inviting Someone
11. Asking Permission

SEMESTER III

UNIT -1 PROSE

1. The Right to Public Amnesia – Santhosh Desai
2. On saying "Please" – .A.G. Gradiner.
3. With the Photographer – Stephen Leacock
4. Indian Women -Dr.S.Radhakrishnan

UNIT -2 POETRY

1. Time and Love -William Shakespeare
2. Satan's Speech – John Milton
3. Obituary -A.K.Ramunujam
4. The Professor – Nissim Ezekiel

UNIT -3 DRAMA

1. Lady Macbeth soliloquy- Act I scene V
2. Women's Monologue- Antony & Cleopatra Act IV scene ii and Act V scene xiii

BIOGRAPHY

1. Mother Teresa -F.G.Herod

UNIT -4 VOCABULARY

1. Lexical Skills
2. Functional Grammar
3. Functional English

UNIT -5 COMMUNICATION SKILLS

1. Asking for Advice
2. Expressing Gratitude
3. Complementing and Congratulating
4. Complaining

SEMESTER IV

UNIT -1 PROSE

1. What is Courage - J.B.Priestly
2. Travel By Train - J.B.Priestly
3. Nobel Lecture - C.Malala Yousafjai
4. I won"t Let him Go -Mathavan Kutty

UNIT -2 POETRY

1. Stooping by Woods on Snowy Evening – Robert Frost
2. Refugee Mother and Child -Chinua Achebe
3. An Octobere Morning - Jayanta Mahapatra
4. Lyric No.1-XX11 (From Gitanjali) – Rabindranath Tagore

UNIT -3 DRAMA

Selected Scenes from Shakespeare

1. Hamlet (Soliloquy) Act III Scene I
2. Funeral Oration – Julius Caesar Act III Scene II

BIOGRAPHY

1. Rabindranath Tagore – E.M. Carter

UNIT -4 VOCABULARY

1. Lexical Skills
2. Functional Grammar and English Grammar

UNIT -5

1. E-mail
2. Presentation Skills
3. Curriculum Vitae and Covering Letter
4. Facing an Interview

இளநிலைப் பட்டப்படிப்பு

அடித்தளப் படிப்பு : பகுதி - 1 தமிழ்
முதலாமாண்டு - முதற்பருவம்

அலகு - 1 கவிதை

1. பாரதியார் - 1. உறுதிவேண்டும், 2. புதுமைப்பெண்
2. பாரதிதாசன் - புரட்சிக்கவி "பேரன்பு கொண்டவரே" என்ற பாடல் முதல் "கவிஞனுக்கும் காதலிக்கும்" என்ற பாடல் வரை.
3. கவிமணி - ஆசியஜோதி - புத்தரும் ஏழைச் சிறுவனும்
4. கண்ணதாசன் - நீ மணி, நான் ஒலி!
5. கவிஞர் அறிவுமதி - நட்புக் காலம்
6. வைரமுத்து - தமிழுக்கு நிறமுண்டு - கூடு
7. மு. மேத்தா - வாழை மரத்தின் சபதம்
8. செ. அன்னகாமு - நாட்டுப்புறப் பாடல்கள் - தாலாட்டு, ஒப்பாரி
9. அப்துல் ரகுமான் - கனவு நாயகன் - அப்துல் கலாம்

அலகு - 2 உரைநடை

1. உள்ளுணர்வு கனவாக வெளிப்படுகிறது - எம்.எஸ். உதயமூர்த்தி
2. வீழ்ந்த ஆலமரம் - கல்கி
3. ஏழாவது அறிவு (போரின்றி வெற்றி மட்டும்) - வெ. இறையன்பு

அலகு - 3 நாடகம்

1. மாங்கல்யப் பிச்சை - டி.என். சுகி. சுப்பிரமணியம்
2. சாபம் விமோசனம் - மு. இராமசாமி

அலகு - 4 சிறுகதை

1. வளையாத பனைகள் - இரா. நந்தகோபால்
2. ஒரு சிறு இசை - வண்ணதாசன்

அலகு - 5 மொழித்திறன்

1. அகர வரிசைப்படுத்தல்
2. ண-ன-ந, ல-ள-ழ, ர-ற வேறுபாடு அறிதல்
3. தன் விவரக் குறிப்பு தயாரித்தல்
4. கலைச் சொல்லாக்கம்
5. ஒற்றுப்பிழை, தொடர்ப்பிழை நீக்கி எழுதுதல்

இலக்கிய வரலாறு

பாடப்பகுதியை ஒட்டிய இலக்கிய வரலாறு : 20-ஆம் நூற்றாண்டுக் கவிஞர்களும் கவிதைகளும், உரைநடை, நாடகம், சிறுகதை.

இளநிலைப் பட்டப்படிப்பு

அடித்தளப் படிப்பு : பகுதி - 1 தமிழ்
முதலாமாண்டு - இரண்டாம் பருவம்

அலகு - 1

அ. திருஞானசம்பந்தர் - தேவாரம் - திருவீழிமிழலை - வாசிதீரவே (முழுவதும்)

ஆ. மாணிக்கவாசகர் - திருவாசகம் - பிடித்த பத்து (அம்மையே, அருளுடை, ஒப்புனக்கு, பாசவேர், பால்நினைந்து)

இ. திருமூலர் - திருமந்திரம் - (உடம்பினை முன்னம், யாவர்க்குமாம், ஒன்றே குலமும், உள்ளம் பெருங்கோயில், ஆர்க்கும்)

அலகு - 2

அ. ஆண்டாள் - திருப்பாவை (முதல் 5 பாடல்கள்)

ஆ. தொண்டரடிப் பொடியாழ்வார் - திருப்பள்ளியெழுச்சி (முதல் 5 பாடல்கள்)

இ. குலசேகராழ்வார் - பெருமாள் திருமொழி, 4-ஆம் திருமொழி, ஊனேறு செல்வம் ... (முதல் 5 பாடல்கள்)

அலகு - 3

அ. தமிழ்விடுதூது - கண்ணி 69 முதல் 90 வரை

ஆ. திருக்கயிலாய ஞான உலா - 1 முதல் 10 கண்ணிகள் வரை

இ. தஞ்சைவாணன் கோவை - 1 முதல் 5 பாடல்கள்

அலகு - 4

அ. இராமலிங்க அடிகள் - திருவருட்பா - பிள்ளைச் சிறுவிண்ணப்பம்

ஆ. எச்.ஏ. கிருஷ்ணப்பிள்ளை - இரட்சண்ய யாத்திரிகம் - குமாரப்பருவம் - இரட்சணிய சரிதப் படலம்

இ. குணங்குடி மஸ்தான்சாகிபு - மஸ்தான் சாகிபு பாடல்கள் - பராபரக் கண்ணி (1-40 கண்ணிகள்)

ஈ. முத்தொள்ளாயிரம் - 9 பாடல்கள்

அலகு - 5

அ. நேர்காணல்

ஆ. பொதுக்கட்டுரைகள்

இளநிலைப் பட்டப்படிப்பு

அடித்தளப் படிப்பு : பகுதி - 1 தமிழ்

இரண்டாமாண்டு - மூன்றாம் பருவம்

அலகு I **திருக்குறள்**

1. மக்கட்பேறு
2. விருந்தோம்பல்
3. இறைமாட்சி
4. காலமறிதல்
5. நெஞ்சோடு புலத்தல்

அலகு II **சிலப்பதிகாரம்**

மதுரைக்காண்டம் - ஏழாவது காதை
ஆய்ச்சியர் குரவை

மணிமேகலை - பத்தொன்பதாவது காதை
சிறைக்கோட்டம் அறக்கோட்டம் ஆக்கிய காதை.

அலகு III **சீவகசிந்தாமணி**

காந்தருவதத்தையார் இலம்பகம்

கம்பராமாயணம்

கிட்கிந்தா காண்டம் - வாலிவதைப் படலம்

அலகு IV **பெரியபுராணம்** - முதற்காண்டம்
தடுத்தாட்கொண்ட புராணம்

சீறாப்புராணம் - இரண்டாம் காண்டம் -
நுபுவ்வத்துக் காண்டம் - சதைக்கட்டியைப்
பெண்ணுருவமைத்த படலம்

தேம்பாவணி - முதற்காண்டம் - வளன் சனித்த படலம்

அலகு V **மொழித்திறன்**

1. கடிதம் வரைதல்
2. விண்ணப்பம் எழுதுதல்
3. தன் விவரம் எழுதுதல்
4. நிகழ்ச்சி நிரல் (அறிக்கை தயாரித்தல்)

இலக்கிய வரலாறு

பதினெண்கீழ்க்கணக்கு நூல்கள், அற இலக்கியங்கள்,
காப்பிய இலக்கியங்கள்.

இளநிலைப் பட்டப்படிப்பு

அடித்தளப் படிப்பு : பகுதி - 1 தமிழ்

இரண்டாமாண்டு - நான்காம் பருவம்

அலகு I

1. குறுந்தொகை (பாடல்கள் - 7, 8, 58, 94, 103)
2. நற்றிணை (பாடல்கள் - 1, 226, 238, 249, 380)
3. ஐங்குறுநூறு (குரக்குப்பத்து 1-5, சிறுவெண்காக்கைப்பத்து 1-5)

அலகு II

4. புறநானூறு (பாடல்கள் - 10, 18, 206, 212, 278)
5. பதிற்றுப்பத்து (பாடல்கள் - 20, 59)

அலகு III

6. கலித்தொகை (பாடல்கள் - 8, 59, 84, 108, 120)
7. பரிபாடல் திருமால் - 1:36-73
   செவ்வேள் - 5:55-81
   வையை - 6:1-24

அலகு IV

8. பத்துப்பாட்டு - முல்லைப்பாட்டு (முழுவதும்)

அலகு V

9. சங்க இலக்கிய வரலாறு
   (1) எட்டுத்தொகை நூல்கள்
   (2) பத்துப்பாட்டு நூல்கள்

10. மொழிபெயர்ப்பு
    (1) கொடுக்கப்பட்டுள்ள ஆங்கிலப் பகுதியைத் தமிழில் மொழிபெயர்த்தல்.
    (2) அலுவலகக் கடிதம் - தமிழில் மொழி பெயர்த்தல்

THIRUVALLUVAR UNIVERSITY

HUMAN RIGHTS

COMPULSORY PAPER

(For all PG Degree Courses)

(with effect from 2017-2018)

UNIT-I

Definition of Human Rights - Nature, Content, Legitimacy and Priority - Theories on Human Rights - Historical Development of Human Rights.

UNIT-II

International Human Rights - Prescription and Enforcement upto World War II - Human Rights and the U .N .O. - Universal Declaration of Human Rights - International Covenant on Civil and Political Rights - International Convenant on Economic, Social and Cultural Rights and Optional Protocol.

UNIT-III

Human Rights Declarations - U.N. Human Rights Declarations - U.N. Human Commissioner.

UNIT-IV

Amnesty International - Human Rights and Helsinki Process - Regional Developments - European Human Rights System - African Human Rights System - International Human Rights in Domestic courts.

UNIT-V

Contemporary Issues on Human Rights: Children's Rights - Women's Rights -Dalit's Rights - Bonded Labour and Wages - Refugees - Capital Punishment.

Fundamental Rights in the Indian Constitution - Directive Principles of State Policy - Fundamental Duties - National Human Rights Commission.

Books for Reference:

International Bill of Human Rights, Amnesty International Publication, 1988.

Human Rights, Questions and Answers, UNESCO, 1982

Mausice Cranston- What is Human Rights

Desai, A.R. - Violation of Democratic Rights in India

Pandey - Constitutional Law.

Timm. R.W. - Working for Justice and Human Rights.

Human Rights, A Selected Bibliography, USIS.

J.C.Johari - Human Rights and New World Order.

G.S. Bajwa - Human Rights in India.

Amnesty International, Human Rights in India.

P.C.Sinha & - International Encyclopedia of Peace, Security

K. Cheous (Ed) - Social Justice and Human Rights (Vols 1-7).

Devasia, V.V. - Human Rights and Victimology.

Magazines:

The Lawyer, Bombay

Human Rights Today, Columbia University

International Instruments of Human Rights, UN Publication

Human Rights Quarterly, John Hopkins University, U.S.A.

Aside – Catharsis – Chorus - Closet Drama – Comedy - Comedy of Humors - Comedy of Manners -Deus ex machina - Dramatic Irony – Epilogue – Farce – Hamartia – Masque – Melodrama – Mime - Morality Play - Mystery Cycle - New Comedy (Greek) - Ode (Greek drama) - Old Comedy (Greek) – Prologue – Protagonist Sentimental Comedy – Soliloquy - Stock Character - Strophe/Antistrophe – Tragedy - Tragicomedy– Unities

Unit IV: Fiction

Bildungsroman - Episodic plot - Epistolary Novel - First Person - Flat Character - Focalizing -Frame Tale - Free Indirect Style or Discourse - Gothic Novel - Interior Monologue – Metafiction – Narrator - Novel of Manners – Omniscient - Picaresque Novel – Plot - Point of View – Polyglossia - Romance (narrative) - Round Character - Stream of Consciousness - Third Person - Unreliable Narrator

(A) Rhetoric & Style

Allusions – Anticlimax – Antithesis – Aphorism – Apostrophe – Bathos – Epic – Epigram – Ethos – Hyperbole - Logos – Metaphor – Metonymy - Mock Heroic – Onomatopoeia – Oxymoron – Paradox – Pathos – Persona – Personification – Rhetoric - Rhetorical Appeal – Satire - Simile and Epic Simile - Symbol

(B)Literary Theory and critical Terms

Archetype - Author Function – Canon – Conventions – Deconstruction – Dialogic – Discourse - Feminist Criticism - Genre – Grotesque – Hermeneutics - Hybridity (postcolonial) - Intentional Fallacy – Intertextuality – Irony - Marxist Criticism – Metanarrative – Mimesis – Myth – Narratology - New Criticism - New Historicism– Orientalism - Pathetic Fallacy – Parody – Pastiche – Postcolonial – Poststructuralism – Psychoalytical Criticism - Queer Theory - Reader-Response Criticism – Semiotics - Signifier/Signified – Simulacra - Speech Act Theory - Structuralism – Subaltern - Verisimilitude

Unit V: History of English Language - English Language Teaching

HISTORY OF THE ENGLISH LANGUAGE

Origin of Language - Place of English in the Indo-European family - General Characteristics of Old and Middle English - The rise and growth of Modern English - Growth of vocabulary– Greek, Latin, French, Italian, Scandinavian and other

foreign influences – Word Formation - Change of Meaning - The Makers of English - The Bible, Spenser, Shakespeare, Milton and Dr.Johnson - American English - Indian English - Characteristics of Modern English - Spelling Reform - The English Lexicon.

LINGUISTICS

Definitions – The Nature and Scope of linguistics, Speech and Writing - Form and Meaning - Words, Clause and Phrase – Concord Government– Sentence Pattern – Phonology – Morphology - Idiolect - Dialect - Transformational Generative Grammar.

ENGLISH LANGUAGE TEACHING

The brief history of Language Teaching - English in India – Past, Present and Future

Approaches and Methods of English Language Teaching

Communicative Language Teaching Method - Total Physical Response – The Silent Way

The nature of Human language – Linguistics, Psychology and English Teaching

Outline of Examination:

- The test consists of approximately 75 objective questions on poetry, drama, biography, the essay, the short story, the novel, criticism, literary theory and the history of the language. The questions may be classified into two groups: factual and analytical.
- The analytical questions test the ability to read a literary text perceptively to answer questions about meaning, form and structure, literary techniques, and various aspects of language.
- The Examination is based on literature in English from the British Isles, the United States and other parts of the world. It also contains a few questions on works, translated from other languages.
- The Examination calls attention to authors, works, genres and movements. The factual questions may require a student to identify characteristics of literary or critical movements, to assign a literary work to the period in which it was written, to identify a writer or work described in a brief critical comment, or to determine the period or author of a work on the basis of the style and content of a short excerpt.

Total	**21**	**-**	**90**	**-**	**2100**

* Students have to choose either Project / Dissertation with *viva voce* or Paper-15 and Paper-16 instead of Project / Dissertation.

Project/Dissertation with viva voce:

Maximum Marks 200 Passing Minimum 100 marks

DISSERTATION : 150 Marks

Viva voce : 50 Marks

There will be a Project / Dissertation during the fourth Semester in lien of theory papers. Teachers may be assigned students based on the total strength of staff and students of the Department. Care should be taken to see that equal no of students are allotted for work assignment among the teachers concerned.

Duration of the Project / Dissertation - IV Semester - December to April

The general regulations will apply for project / dissertation exam / valuation.

There will not be Practicals for the Computer related papers offered as Electives under various groups in the respective Semesters. These Subjects may be handled by the teachers working in the Commerce Department of the affiliated Colleges.

THIRUVALLUVAR UNIVERSITY

MASTER OF COMMERCE

SYLLABUS

UNDER CBCS

(with effect from 2017-2018)

SEMESTER I

PAPER - 1

ADVANCED FINANCIAL MANAGEMENT

UNIT-I

Financial Management - Functions - Goals of Financial Management - Maximization Vs. optimizations - Risk-return trade off.

UNIT-II

Management of funds - Long term sources - shares and Debentures - Convertible securities and Term Loans - Working Capital financing - Sources and approaches- Bank credit-Basic principles and methods of assessment- Other sources of short term finance-Operating environment of working capital

UNIT-III

Capital structure planning: Concepts of cost of capital - cost of equity, debt, retained earning - Weighted average cost of capital - Capital structure theories - Net income, Net operating income, MM and Traditional Theories - Leverage - Types and significance. Dividend policy and practices - Dividend policies - Factors affecting dividend decision - Dividend theories - Graham, Gordon, Walter and MM Theories.

UNIT-IV

Management of fixed assets - Evaluation of capital investment decision: Payback period - ARR - IRR - NPV - CAPM.

UNIT-V

Working capital management-working capital cycle-forecasting of working capital requirements - Factors influencing working capital-Management of inventory, cash and accounts receivables-payables management-credit and collection policies.

Note: The proportion between Theory and Problems shall be 40:60

Reference Books

1. I M Pandey, Financial Management, Vikas Publishing House Pvt Ltd.
2. John H Hampton, Financial Decision Making, Prentice Hall of India Ltd.
3. Prasanna Chandra, Financial Management, Tata McGraw Hill Publishing Company Limited.
4. M.Y.Khan and P.K.Jain, Financial Management, Tata McGraw Hill Publishing Company Limited.
5. P.V.Ratnam, Financial Management Theory, Problems and Solutions, Kitab Mahal.

PAPER - 2

ACCOUNTING FOR MANAGERIAL DECISIONS

UNIT-I

Accounting for Decision making - Scope and Importance - Decision Accounting vs. Financial Accounting and Cost Accounting.

UNIT-II

Financial and Investment analysis - Analysis and Interpretation - Ratio Analysis-Leverage analysis-Budgeting and budgetary control - Functional Budgets- Master Budget - Flexible budgeting - Zero Base Budgeting-

UNIT-III

Understanding Financial statements-Construction and analysis of profit and loss account and balance sheet-Construction and analysis of Fund flow and cash flow statements.

UNIT-IV

Cost Management- Absorption and Marginal Costing - Cost - volume-profit analysis-Applications and techniques.

UNIT-V

Financial decisions-capital structure-dividend decisions (only simple problems).

Note: 80% of the total marks be allotted for problems and 20% for theory

Prescribed Text Book

Management Accounting and Financial Control - S.N.Maheswari, Sultan Chand & sons, New Delhi

Reference books

1. Management Accounting - Man Mohan and Goyal.
2. Management Accounting - Hingorani and Ramanathan.
3. Management Accounting - Charles Horngren.
4. Management Accounting - J.Batty.

PAPER - 3

GLOBAL MARKETING

UNIT-I

Global Marketing - Scope - Importance - Global vs. National Marketing - Global Marketing Environment - Social - Cultural - Political - Legal and Regulatory Environments.

UNIT-II

International infrastructure for global trade promotion - GATT/ WTO - Export Promotion Councils - Services Institutions - IIFT - NCTI - ECGC - EXIM Bank - Export Promotion Council - Directorate General of Shipping - Global pricing - Objectives and Strategies.

UNIT-III

Global Customers - Segmentation, Targeting and Positioning - Global Product Positioning - Product life Cycle in Global Marketing - Global pricing - Objectives and Strategies.

UNIT-IV

Global Marketing Channels and Physical Distribution - Channel Objectives and Constraints - Channel Strategy - Physical Distribution and Logistics - Global Advertising and Branding - Global Promotion.

UNIT-V

Global Trade Procedure - Export Documentation - Processing of Export Procedure - Payment terms and conditions - Letter of Credit - Pre-shipment and Post Shipment finance - Forfeiting - Buyers Credit - Global Trade Assistance.

Reference books

1. Varshney, R.L. and Bhattacharya B: International Marketing Management, Sultan Chand and Sons, New Delhi.
2. Warnen J.Keegan: Global Marketing Management, Prentice Hall of India, New Delhi.
3. Cherian and Jacob: Export Marketing, Himalaya Publishing House, Mumbai.
4. Duby V.K.: Export Marketing, Common Wealth Publishers, New Delhi

PAPER - 4

ADVANCED BUSINESS STATISTICS

Objective

To apply statistical techniques for interpreting and drawing conclusion for business problems.

UNIT-I

Partial correlation-Partial correlation coefficient-Partial correlation in case of four variables- Multiple correlation-Multiple regression.

UNIT-II

Theory of probability-probability rules-Bayes theorem-Probability distribution-Characteristics and application of Binomial, poission and normal distribution

UNIT-III

Sampling- sampling methods- sampling error and standard error- relationship between sample size and standard error. Testing hypothesis- testing of means and proportions-large and small samples- Z test and t test.

UNIT-IV

Chi square distribution- Characteristics and application- test of goodness of fit and test of independence- Test of Homogeneity

UNIT-V

F distribution- testing equality of population variances- Analysis of variance-one way and two way classification.

Note: The proportion between theory and problems shall be 20:80

5. Business statistics and operations research, Dr D Joseph Anbarasu,Lintech press Trichy

ELECTIVE

PAPER - 1

A. MANAGERIAL ECONOMICS

Objectives

Aims to provide a broader understanding of Managerial Economics and its managerial applications.

UNIT-I

Definition and scope of the subject-fundamental concepts and Methods-firm's objectives and the role of managerial economist.

UNIT-II

Demand analysis and Forecasting for consumer goods and capital goods-use of business indicators- type of elasticity.

UNIT-III

Concept and resources allocation- Cost Analysis- Short run and long run Cost functions-production functions- cost price- Output relations.

UNIT-IV

Economics of size and capacity Utilization - Input-Output analysis- Market Structure-Pricing and output general equilibrium.

UNIT-V

Pricing Objectives- pricing methods and approaches-price discrimination, Product line pricing-profit planning and Cost control- Business cycle and Policies.

Reference Books

1. Peterson, managerial economics, 4th edition - Pearson education - New Delhi.
2. Sampat Mokherjie, Business and Managerial Economics, New Central Book Agency, Calcutta.
3. Spencer M.H.Managerial Economics Text, Problems and short cases, Richard D.Inwin INC.
4. Sankaran.S, Managerial Economics Margham Publications, Chennai.
5. Dwivedi D.N , Managerial Economics, Vikas-New Delhi
6. Mankar & Denkar, Business Economics, Himalaya publishing House, Bombay
7. Joel Dean, Managerial Economics, Prentice Hall of India - New Delhi.
8. R.L. Varshney & K.L. Maheshwari, Managerial Economics-Sultan Chand & Sons, New Delhi.

B. COMPUTER APPLICATIONS IN BUSINESS

UNIT-I : COMPUTER HARDWARE

CPU, Input devices, Output Devices, Communication devices, storage devices Types of Computer system.

UNIT-II : INFORMATION TECHNOLOGY

Basic idea of LAN (Local Area Network), and WAN (Wide Area Net work) E-mail: Internet Technologies, Access Devices, Concept of World Wide Web and Internet browsing.

UNIT-III : WORD PROCESSING

Introducing and working with MS Word in MS-Office - Word Basic Commands, Formatting - Text and documents, Sorting and Tables, Working with graphics, introduction to Mail merge.

UNIT-IV : SPREAD SHEET

Working with EXCEL - Formatting functions, chart features, working with graphics in EXCEL using worksheets as database in accounting, Marketing, finance and personnel areas.

UNIT-V : PRESENTATION WITH POWER POINT

Power Point, basics creating Presentation of easy way: working with graphics in Power Point show time, sound effect and animation effects.

Reference Books

1. Date, C.J: An Introduction to Data base systems, Addison Wesley, Massachusetts.
2. Dienes, Sheih.S: Micro soft Office, Professional for Windows 95: Instant Reference: BPB Publication, New Delhi.

4. O.Brian...A: Management information System, Tala Mc Graw Hill, Delhi.
5. Ullman, J.O: Principles of Data base System, Galgoia publication, New Delhi.

C. INSURANCE AND RISK MANAGEMENT

UNIT-I

Risk and Risk management process - risk identification - evaluation-risk management techniques-Insurance and risk management techniques-selecting and implementing risk management techniques.

UNIT-II

Commercial risk management applications - property - liability-commercial property insurance - different policies and contracts-business liability and risk management insurance-workers compensation and risk financing.

UNIT-III

Personal risk management - applications-property and liability- risk management for auto owners- Lorry owners- risk management for homeowners.

UNIT-IV

Risk management applications-loss of health - medi-claim-retirement planning and annuities-employee benefits- financial and estate planning.

UNIT-V

Risk management environment - Insurance industry - functions and organization of insurers-Government regulation of insurance sector - IRDA-privatization of insurance business in India-changes in insurance act-Insurance intermediaries-insurance products-pricing-claim valuation-Foreign insurers in India

Reference Books

1. Anand Gangly, Insurance Management, New age International, 2002

5. Kuchhal, M.C. Mercantile Law, Vikas Publishing House, New Delhi.
6. Shukla, M.C. a Manual of Mercantile Law, S. Chand & Co.,New Delhi.

PAPER - 6

HUMAN RESOURCE MANAGEMENT

UNIT-I

Humans and other physical resources - development of the human potential - Implications of Behavioral Science theories to HRM - Link between organization planning and HR planning.

UNIT-II

Acquisitions and maintenance of personnel - recruitment and selection - purposes and methods of recruitment and selection - Maintenance of personnel - motivation for increased productivity - Q W L.

UNIT-III

Rewards and incentives - financial and non-financial incentives - Grievance procedure - conflict - process - stress vs. challenge - sources - resolution.

UNIT-IV

Performance appraisal - Ranking, rating scales, critical incident method - MBO as a method of appraisal - Removing subjectivity from evaluation - Criteria for promotions and job enrichment.

UNIT-V

Human development - training - need and importance - methods of training - designing training program - Evaluation of training program - Executive development. - Organization change - change agents - resistance to change - managing the resistance.

Reference Books

1. Dressler- Human Resource management, 8th Ed. Pearson Education, 2002

PAPER - 7

ADVANCED ACCOUNTS

Objectives

The primary objective of this subject is to enlighten the students the theoretical aspects of different topics and special attention to chapters like Inflation accounting, Holding Companies, Bank and Insurance Company accounts.

UNIT-I

Accounts of Banking Companies - Legal Provisions - Capital Adequacy Norms - Rebate on Bills Discounted - Asset Classification and Provisioning - Preparation of Final accounts.

UNIT-II

Insurance Company Accounts - Nature of Insurance Business - Distinction between Life and Non Life Insurance - Accounts of Life Insurance Business - Accounts of General Insurance Business - IRDA Regulations Regarding Preparation of Financial Statements.

UNIT-III

Holding Company Accounts - Consolidated Financial Statements - Consolidation of balance Sheets and Profit and Loss Accounts.

UNIT-IV

Inflation accounting - Need - Objections - Adjustments for General Price Changes - Current Purchasing Power Accounting (CPP) - CPP method of preparing financial statements.

UNIT-V

Human Resource Accounting - Need and Development - Importance of Human Resource Accounting - Objections against Human Resource Accounting - Human Resource Accounting in India. Corporate Social Reporting - Concept and objectives of social responsibility.

Reference Books

1. M C Shukla and T S Grewal, Advance accounts, S.Chand & Co New Delhi
2. Anjan Bhattacharya & Subrata Mukerjee, Advanced Practical Accounts, S. Chand & Co., New Delhi.

PAPER - 8

QUANTITATIVE TECHNIQUES FOR BUSINESS DECISIONS

UNIT-I

Linear programming and net work analysis- PERT and CPM- Simplex method-Application of simplex technique.

UNIT-II

Inventory models- General concepts and definitions-Various cost concepts-The technique of inventory control-EOQ models.

UNIT-III

Transportation model-Definitions-Formulation and solution of Transportation models-North west corner - MMM-VAM.

UNIT-IV

Assignment model - Definitions- Formulation and solution of Assignment models-simplex and Hungarian method.

UNIT-V

Queuing theory-meaning-objectives - Limitations-Elements of queuing system-Queuing models.

Note: The proportion between theory and practice shall be 20:80

Reference Books

1. C.R.Kothari, Quantitative Techniques, Vikas publishing house.
2. P.R.Gupta and man Mohan, Operation Research, Sultan Chand and sons,New Delhi.

ELECTIVE

PAPER - 2

RETAIL MANAGEMENT

COURSE OBJECTIVE:

The objective of the course is providing insights on retail operations. This will enable the students to become good retail planners and decision makers and help focus on change and adaption to change

Unit-I

Introduction to retail: retail in India; retail models and theories of retail development; understanding the retail consumers; ethical issues in retailing

Unit-II

Retail marketing strategy; retail franchising; retail store location and site selection; retail store design and visual merchandising; customer relationship management in retailing.

Unit-III

Basics of retail merchandising; the process of retail merchandising; the method of merchandise

Procurement; retail pricing and evaluating merchandise performance; retail communication mix

Unit-IV

Retail store operations; servicing the retail customers; retail human resource management; financial aspects of retail management; retail information system; supply chain management in retailing

Suggested Reading:

1. Pradhan, Swapna; Retaling Management; Tata McGraw Hill; New Delhi
2. Bajaj, Chetan, Tuli, Rajnish and Srivastava, Nidhi; Retail Management; OUP; New Delhi
3. Berman, Barry & Evans, Joel R.; Retail Management – A strategic approach; Pearson

1. Education/Prentice Hall of India; New Delhi

4. Levy, Michael & Weitz, Barton A.; Retailing Management; Tata McGraw Hill; New Delhi
5. Newman, Andrew J. & Cullen, Peter; Retailing – Environment and Operations; Thomson Asia Pvt. Ltd.; New Delhi
6. Dunne, Patrick M., Lusch, Robert F & Griffith, David A.; Retailing; Thomson Asia Pvt. Ltd; ND
7. Lamba, A.J.; The Art of Retailing; Tata McGraw Hill; New Delhi

A. E-COMMERCE

UNIT-I : ELECTRONIC COMMERCE

Meaning - Traditional Commerce - E. Commerce and its application in business. Basic Blocks of E. Commerce. E. Commerce consumer - Anatomy of E. Commerce.

UNIT-II : NETWORK INFRASTRUCTURE

Global Information Distribution Networks - Components of the I - way - Policy issues- Internet terminology - Internet Governance - An overview of Internet Applications.

UNIT-III : NETWORK LAYERS

Internet Protocol (IP) - Transmission Control Protocol (TCP) - Multimedia Concepts - Advantages of Internet. Electronic Data Interchange (EDI) - EDI and E. Commerce - EDI application in Business.

UNIT-IV : NETWORK SECURITY

Client Server Network security - Firewalls and Network Security - data and message Security - encrypted documents and Electronic Mail. Video conferencing.

UNIT-V : DIGITAL DOCUMENTS

Document Library - Types of Digital Documents - Corporate data warehouse - Electronic Payment Scheme - Intra-organizational Electronic Commerce.

References Books

SEMESTER III

PAPER - 9

Basics of GST

Unit I

GST - The Road Begins -Draft Model GST Law - Positives –Negatives- LEVY - Territorial jurisdiction of GST - Taxable Event - Consideration - Levy and collection of GST - Composition levy - PLACE AND TIME OF SUPPLY - Definitions of Goods & Services - Time of supply.

Unit II

VALUATION - Value of taxable goods and services- Valuation Rules -SPECIAL TRANSACTIONS - Job work - Electronic Commerce -INPUT TAX CREDIT - Input tax credit - Input Service Distributor -REFUNDS - Refund -Interest on refund.

Unit III

COMPLIANCES - Registration - Invoices, credit and debit notes - Payment of tax - Tax deducted at source - Returns - Accounts and Records - ASSESSMENT, AUDIT AND INSPECTION - Assessment - Audit - Inspection - INTEREST, PENALTY AND PROSECUTION - Interest - Offences and Penalties – Prosecution.

Unit IV

DEMAND AND APPEALS - Demand - Appeals - CGST - SGST -IGST-ALTERNATE DISPUTE RESOLUTION MECHANISM - Authority of Advance Ruling - Settlement of cases.

Unit V

RECOVERY AND LIABILITY TO PAY TAX - Recovery of tax - Liability to pay tax in specified cases - TRANSITIONAL PROVISIONS -Transitional Provisions.

Author : Nitya Tax Associates ,Taxmann Publications.

PAPER - 10

ORGANISATIONAL BEHAVIOUR

UNIT-I

Organizational Behavior - Fundamental concepts - nature and scope - OB in the new millennium - Foundations of Individual behavior - Personality, Perception, Learning, Values and Attitudes.

UNIT-II

Motivation - Early theories - Contemporary theories - Motivation at work - Designing and Motivating for jobs.

UNIT-III

Group Dynamics - Group Behaviour, - Inter-group relations - Communication and Group - Decision making.

UNIT-IV

Leadership - Trait, behaviour and contingency theories- Power and Politics - Conflict - causes, conflict management, Transactional Analysis (TA) - Work Stress.

UNIT-V

Organizational Structure And Design**:** Organizational changes and development - Organizational culture and climate -Organizational effectiveness.

Reference Books

1. Stephen Robbins, Organisational Behaviour, 0^{th} Ed. Pearson Education, 2001
2. Fred Luthans, Organizational Behavior, McGraw Hill, 1998

5. Dr. S. Shajahan & Linu shajahan, Organisational Behaviour, New age International Publishers, New Delhi.

PAPER - 11

ADVANCED COST ACCOUNTING

Objectives

The aim of the cost accounting is to acquaint the students with various concepts, methods of costing and decision making

UNIT-I

Nature and significance of cost accounts-Definition of Costing, Scope, Objectives, Functions and limitations of cost accounting-Installation of costing system-Elements of Cost- Cost centre and profit centre-Preparation of Cost sheet, tender of quotations.

UNIT-II

Methods of Costing-Process costing, Treatment of equivalent production- Inter process profit-Joint and by product Costing-Preparation of contract account, Cost plus contract and escalation clause.

UNIT-III

Standard Costing and Variance analysis-Material, Labor and Overheads -reporting of variances

UNIT-IV

Cost controland Cost Reduction-Control over wastages, Scrap, Spoilage and defectives– Methods of cost reduction.

UNIT-V

Activity based costing–Meaning and concept-Characteristics of ABC-Benefits from adoption of ABC-Just in Time Costing (JIT)

Note: The proportion between theory oriented and problem oriented questions in the university examination shall be 20:80

Reference Books

PAPER - 12

RESEARCH METHODOLOGY

UNIT-I : INTRODUCTION

Research - definition, characteristics, nature and scope. Various types of research - Formulation of research problem - Major steps in Research – Hypothesis - Research Design - Uses of social research.

UNIT-II : SAMPLING AND DATA COLLECTION

Sampling: Meaning, definition, need and types. Sampling errors - Merits and demerits of Sampling. Data collection: Sources of data; Primary and Secondary data. Procedure for data collection, Tool of data collection - Questionnaire – Interview-Schedule.

UNIT-III : DATA PROCESSING AND ANALYSIS

Processing of data: editing, coding and Tabulation - Problems - use of computer in social research. Analysis of data: Statistical analysis; diagrammatic and graphic representation. Interpretation of results.

UNIT-IV : STATISTICAL APPLICATIONS

Factor Analysis - bivariate and Multivariate Analysis. (Practical problems.)

UNIT-V : RESEARCH REPORTS

Structure and components - Types of Research Report, Good Research Report. Pictures and Graphs. Introduction to SPSS Package.

ELECTIVE
PAPER - 3
FINANCIAL SERVICES

UNIT – I : Indian Financial System

Introduction – Structure of the Indian Financial System – Recent Development – Financial Services – Concept – Objectives – Importance – Characteristics – Types of Financial Services – Regulatory Framework – Problems in Financial Services Sector.

UNIT – II : Mutual Funds concept of Regulations

Introduction – Types – Advantages and Disadvantages – Mechanics of Mutual Fund Operations – Asset Management Company (AMC) – Net Asset Value – SEBI's New Regulations to Mutual Funds (1990).

UNIT – III : Capital and Money Markets and Stock Exchanges

Capital Market: Meaning – Functions – Importance – Players in Capital Market – Primary and Secondary Capital Market. Money Market: Definition – Features – Money Market Instruments – Capital Market Versus Money Market etc., NSE – OTCEI.

UNIT – IV : Factoring Services and Consumer Finance

Factoring Services: Introduction – Mechanics of Factoring – Types – Advantages and disadvantages – Players in factoring services – Factoring Vs Bills Discounting – RBI Guidelines for factoring – Constrains of Factoring Services in India – Forfeiting. Consumer Finance: Definition – Types – Credit Cards – Debit Cards – Mechanics of consumer Financing – Sources – Modes.

UNIT – V : Venture Capital and Credit Rating

Venture Capital: Concept – Features – Forms of Venture Capital – Phases – Functions – Advantages – Venture Capital Institutions. Credit Rating: Introduction – Rating Process – Credit Rating Agencies – CRISIL, ICRA, CARE, Credit Rating symbols.

Text Books:

5. M.Y. Khan – Financial Services, 4th edition, Tata McGraw Hill, New Delhi, 2007.

A. Computer and Office management

Objectives:

To familiarize the students with the fundamental of computer and to implement the Principles of Computers in the business operations

UNIT-I

History of computers- Types-Generation- Features- Hardware-Software-CPU-Floppy drives- Hard disk-CD Rom- Keyboard- Printer- Magnetic tapes.

UNIT-II

External storage units-Net work attached storage device (NAS)-CD Media-Pen Drive-External Hard Disks-Classification -Applications-Use of computers in various fields

UNIT-III

Flow charting- data communication- LAN-WAN-INTERNET-INTRANET- E mail-Security of data- Anti virus programmes.

UNIT-IV

Word basics-Formatting- Working with Headers-Footers and footnotes-Tab and tables-working with graphics-Macros Mail merge.

UNIT-V

Excel basics-Formatting tips- Function- Chart features-Working with graphics-Excels command Macros using worksheet as data base- Power point Presentation.

Reference Books:

Sanchs H Donald, Computer concepts and applications, Sultan Chand & Sons, New Delhi.

Subash Mehta: Easy Computers, Wheeler Publishing company, New Delhi.

SERVICES MARKETING

UNIT-I

Growth of the Service Sector - Nature and Concept of Service - classification of services - Characteristics of Services and their marketing implications - Essential Elements of marketing mix in Service marketing.

UNIT-II

Marketing strategies for service firms with special reference to information, communication, consultancy, advertising, professional services, after sales service, recruitment training and tourism.

UNIT-III

Product support services - pricing of services - problems of Service quality management - Customer Expectations - innovation in services.

UNIT-IV

Marketing of financial services - nature - types - marketing of insurance - mutual fund - marketing for non - profit firms - Growth of financial services in India.

UNIT-V

CRM - identifying and Satisfying Customer needs - Relationship marketing - Customer Satisfaction - Managing Service Brands.

Reference Books

1. Christopher lovelock, Services Marketing, Pearson Education.
2. E.G. - Bateson, Managing Service marketing - Text and Readings, Dryden press, Hidsdale
3. Philip Kotler and Paul N.Bloom, Marketing professional Services, Prentice hall, New Jersey.

6. Mary Ann pezzallo, Marketing Financial Services, Macmillan.
7. Dr.S.Gurusamy, Financial and Markets Vijay Nicole imprints private limited, Chennai.
8. Dr.B.Balaji, Services, Services Marketing and Management, S.Chand & Company Ltd., New Delhi.

SEMESTER IV

PAPER - 13

DIRECT TAXES

UNIT-I

Basic concepts - Definitions - Assesses - Assessment year - Previous Year - Income - Residential Status - Scope of Total Income - Exempted income - Agricultural income - Capital income and expenditure - Revenue Income and expenditure.

UNIT-II

Heads of Income - Income from Salaries - Income from House property - Income from Business or Profession - Depreciation.

UNIT-III

Income under the head capital gains - Income from other sources - Deductions from Gross Total Income.

UNIT-IV

Computation of Total Income - Individual - Firm - Companies - MAT - Tax Deducted at Source - Advance Tax - Interest payable - Set off and Carry forward of losses - PAN - Rates of Tax.

UNIT-V

Assessment Procedure - Income tax Authorities - Penalties - Assessment of Fringe Benefit Tax - An outline of Wealth Tax - Computation of Net wealth.

Note: The ratio between theory and problems shall be 40:60.

Reference Books

1. Jayakumar A. & C.Dhanapal - Income Tax Theory, Law and Practice – Learnetech Press, Trichy,
2. Gaur V.P & Narang K.L, Income Tax Law and Practice, Kalyani Publishers, New Delhi.
3. Dr. Vinod Sighania, Direct Taxes, Tax Man Publications, New Delhi.
4. Dinkar Pagare, Income Tax Law and Practice, Sultan Chand & Sons, New Delhi.

PAPER - 14

INVESTMENT MANAGEMENT

UNIT-I

Properties of financial assets - Financial Markets - Investments - Types - Characteristics - Objectives - Types of investors - Investment vs. Gambling, Speculation, Speculation Vs. Gambling.

UNIT-II

Nature and Scope of Security Analysis - Concept of Risk and Return - Measurement of Risk

UNIT-III

Fundamental analysis-Economic analysis, Industry Analysis and company Analysis-Technical analysis- Trend indications- Indices and moving average applied in technical analysis.

UNIT-IV

Valuation of Securities - Equity shares - Preference shares - Debentures - Bonds

UNIT-V

Efficient market Hypothesis - Random Walk Theory - Markowitz Theory - Sharpe's optimization solution - Dow Theory - CAPM model - SML, CML.

Note: Only theory questions.

Reference Books

4. Sharpe, William and Gordon, Investments – Prentice hall of India, New Delhi.
5. Rustagi R.P, Investments Analysis and Portfolio management, Sultan Chand & Sons, New Delhi

PAPER - 15

PROJECT DEVELOPMENT

UNIT-I: PROJECT

Meaning and overview - Project Development Cycle - Capital Expenditure Decisions - Importance and Difficulties.

UNIT-II : PROJECT APPRAISAL

Aspects of Appraisal - Market Appraisal - Technical Appraisal - Financial Appraisal - Economic Appraisal. Project formulation. Feasibility Report.

UNIT-III : PROJECT COST AND MEANS OF FINANCE

Project cost - Social Cost and Social Benefit. Term Loans - Loans from Development banks - Assistance from Indian finance Corporations and international finance Corporations. External commercial borrowing.

UNIT-IV : PROJECT SELECTION

Selection of a suitable project - Programming - scheduling and Controlling Mechanism.

UNIT-V : PROJECT CONTROL

Time and cost control - Budgetary control - corrective and preventive actions. Risk Management functions.

References Books

1. Prasanna Chandra, Projects - Preparation, Appraisal, Budgeting and Implementation, 3rd ed. Tata McGraw- Hill Publishing Company Limited, New Delhi.

5. Jeevanandam, C. Foreign Exchange, Sultan Chand & sons, 1994, New Delhi.

PAPER - 16

MARKETING RESEARCH

Objectives

The aim of the subject is to impart knowledge to the students on Market Research and the method of conducting such research.

UNIT-I

Marketing research-Nature, Scope and importance-Research proposal- Steps in marketing research.

UNIT-II

Research design- Exploratory research-Descriptive research-survey research.

UNIT-III

Data collection-Secondary data- primary data-types, merits and Limitations-Methods of collection- Processing of collected data-Management Information System.

UNIT-IV

Ethics in marketing research-Treatment of respondents, buyer and Researchers-International code of marketing research practice.

UNIT-V

Application of marketing research-product research-motivation Research-presentation of research project - Future of Marketing Research in India.

Reference Books

1. Philip Kotler-Marketing Management and Control-Asian perspectives-Prentice Hall of India1999 (The Millennium Edition).
2. Boyd Harper W. and Ralph Westfall-marketing research-text and cases-Richard D. Irwin Inc. Indian Edition.
3. Schreir Fredric T. Modern Marketing research, World wide publishing company.Inc.
4. Dr.D.D Sharma - Marketing research-Sulthan Chand &Sons, New Delhi.
5. Donald Tull and Deli Hawkins, Marketing research, Macmillan.

ELECTIVE

PAPER - 4

A. BUSINESS ENVIRONMENT AND POLICY

UNIT-I

Business Environment**:** Cultural, social, political, technological, economic and legal environment - scanning - techniques of environmental forecasting - SWOT - Internal environment - their impact on policy formulation.

UNIT-II

Economic reforms in India - Liberalization - privatization and globalization - Competitive Strength of Indian industry - Impact of liberalization policy on different sectors - Foreign Investments policy in India.

UNIT-III

Multi-national corporations - Their participation in India - Their strategies, competitive strengths policies and performance.

UNIT-IV

Business policy and corporate strategy: Policies; Strategies and Tactics; Policies and procedures - Corporate strategy: alternatives - variations - Strategic choice, implementation.

UNIT-V

Business ethics and social responsibilities - relationship between business and society - Corporate power social accountability - Ethical issues and values in business - Corporate Social policies - issues and challenges - Ecological and environmental issues.

Reference Books

1. Wheelen, Concepts of Strategic Management and Business policy, 8th Ed. Pearson Education, New Delhi, 2002.
2. William Gluck & L R Jauch, Business Policy & Strategic Management,McGraw-Hill 2001.
3. Kazhmi Azhar , Business Policy, TMH,2002.
4. Gupta, Liberalisation - its impact on Indian Economy, Macmillan, 2002.

B. INTRODUCTION TO INFORMATION TECHNOLOGY

UNIT-I : INFORMATION TECHNOLOGY

Meaning - Definition - Types of Information System - Computer net works: Goals and uses of networks. Network Hardware and Software - Types of Networks - Protocols - Knowledge Management.

UNIT-II : ELECTRONIC BUSINESS

Computers - Internet business - Definition - Online Business - E.Business Categories - preparing to online business - Ethics of information technology. E. Business Applications - Business to Business (B2B) - Business to Customers (B2C) - Electronic Shopping.

UNIT-III : PAYMENT SYSTEM

Paying in the net: The Payment Business - Post-paid System - Instant-paid payment System - Pre-paid Payments System. The Open source Projects - Introduction to open hardware.

UNIT-IV : STORAGE AND DATA BASE

Foundation for interactivity - Multimedia and Knowledge storage Capacity - Compression and Decompression. Secondary Storage Devices Diskettes - Hard disks - Optical Disks - Magnetic tape.

UNIT-V : DATA BASE MANAGEMENT SYSTEM (DBMS)

Introduction to data base approach - objectives of data base and data base languages - Ethics of using Databases - Concerns about accuracy and privacy.

Reference Books

3. Marilyn Greenstein and Todd M. Fein Mann, Electronic Commerce, Security, Risk Management, Irwin McGraw Hill, 2000.
4. David Kosiur, understanding Electronic Commerce, Addison Wesley, 1996.

C. SALES AND ADVERTISING MANAGEMENT

UNIT-I

Sales management-Meaning and Scope-Functions Sales and Planning-Sales policy-Sales organization-Sales Territories-Sales Quota-Selling process-Responsibilities of Sales manager

UNIT-II

Need for sales force- Recruitment and Selection of sales force-Training of salesmen-Qualities of a Good salesman

UNIT-III

Advertising-Scope and Function- Need for Advertising classification-Advertisement Planning and Organization-Ethical Issues in Advertising

UNIT-IV

Advertising Media- Role of Media-Types of Media-Merits and Demerits- Media Research- Evaluation and Effectiveness of Advertising.

UNIT-V

The Advertising budget-Advertising Agencies- Types of Legal framework of advertising-Self regulation of Advertising.

Reference Books

1. Ramasamy : V S Marketing Management, Macmillan
2. Davar: Salesmanship and Advertising
3. Pillai and Bagavathi: Salesmanship.

THIRUVALLUVAR UNIVERSITY
M.Sc. APPLIED MICROBIOLOGY
SYLLABUS
UNDER CBCS
(with effect from 2017-2018)
SEMESTER I

PAPER – 1
GENERAL MICROBIOLOGY AND MICROBIAL PHYSIOLOGY

OBJECTIVES

To enable the students to understand the basic knowledge in Microbiology and Microbial diversity.

UNIT-I

Discovery of Microbial world. Controversy over spontaneous generation. Evolutions of Microbiology with its recent developments in Medicine. Modern trends in microbial taxonomy.

UNIT-II

Microscopy - Its principles and applications. Simple - Compound, Dark field, phase contrast, Fluorescent and Electron Microscopes - SEM, TEM. Principles, Operation and maintenance of autoclaves, Ovens, Centrifuges - refrigerated & ultra speed, calorimeters, spectrophotometers, lyophilizers, deep freezer. Staining methods - Gram, Acid Fast, metachromatic, granules, nuclear staining, capsule, silver impregnation, flagella and other special staining methods. Sterilization and disinfection methods and their quality control.

UNIT-III

Bacterial morphology, structure and characterization - cellular components of bacteria - sporulation and its mechanics - growth and nutrition - Nutritional requirements - Autotrophs, heterotrophs - enrichment culture - growth curve - Kinetics of Growth - Mathematical expression of exponential growth phase; Measurement of growth and growth yields - Batch Culture - Synchronous growth - Techniques of pure culture.

UNIT-IV

Classification of bacteria and salient features according to Bergey's manual of determinative Bacteriology. Microbial diversity in different ecosystems. Structure and function of viruses - classification of viruses - replication of viruses - bacteriophages, plant viruses- TMV, CMV, Alfalfa mosaic virus and animal viruses. Specialized somatic Structure and Classification of fungi. Reproduction in fungi - Life cycles of fungi. Structure and Classification of Algae - ultrastructure and life histories of microalgae belonging to various algal classes. Cyanobacteria.

UNIT-V

Basic concepts of metabolism. Carbohydrate metabolism - Glycolysis - HMD, TCA & ED and other pathways. Aerobic and anaerobic respirations - Generation of energy - substrate level and oxidation phosphorylation - Electron transport chain - Lipid metabolism - Beta oxidation - proteins - primary, secondary, tertiary and quaternary structures - Enzymes nomenclatures, classification and general properties - factors affecting enzyme synthesis and activities - Allosteric enzymes - photosynthesis - cyclic and non -cyclic photophosphorylation - Bioluminescence.

TEXT BOOKS:

PAPER-2

FOOD, AGRICULTURE AND ENVIRONMENTAL MICROBIOLOGY

OBJECTIVES

To enable students to understand the various microbes involved in food, agriculture and environment.

UNIT-I

Importance of studying food and dairy microbiology. Primary sources of microorganisms in foods. Factors influencing microbial growth in foods - extrinsic and intrinsic. Principles of food preservation - preservation methods - irradations - drying, heat processing, chilling and freezing, high pressure, modification of atmosphere and chemical preservatives. Nutritional value of fermented foods. SCP and their uses - contamination, preservation and spoilage of fruits vegetables, meat and poultry products.

UNIT-II

Microbiology of fermented milk - fermented milk products - Food sanitation in food manufacture and in the retail trade - Food control agencies and its regulations, HACCP Methods. Bacterial pathogens such as Brucella, Clostridium, Bacillus, E. coli, Listeria, Salmonella, Staphylococcus, Vibrio and Yersinia.

UNIT-III

Distribution of soil microorganisms in soil. Factors influencing the soil microflora - Role of microorganisms in soil fertility. Interactions among microorganisms, mutualisms, comensalism, competition, amensalism, parasitism, predation - Interactions between microbes and plants - rhizosphere, phyllosphere, mycorrhizae. Microbial interactions in animals-Rument microbiology - Microbial contribution to food digestion.

UNIT-IV

Biogeochemical - carbon cycle - role of microbes in carbon cycle - trophic relationships - mobilization and immobiilisation of carbon with rhizosphere. Nitrogen cycle - mechanism of biological nitrogen fixation - ammonification - nitrification - denitrificatioin and microorganisms involved in such processes. Phosphorous cycle - Sulphur cycle. Biofertilizer for sustainable agriculture *Rhizobium Azospirillium, Azotobacter,Azolla,* BGA -mass production methods - applications methods of biofertilizers - significance of biofertilizers.

UNIT-V

Air pollution - sources, major pollutants, adverse effect on living organisms -acid rain and its impact on ecosystem-gaseous emission - Green house effect -Global warming - Ozone layer depletion and its effect - Droplet neuclei -Aerosol - Assessment of air quality - Airbone disesases, their symptoms and preventive measures. Types of wastes, characterization of solid and liquid waste. Solid waste treatment - saccharification - pyrolysis - composting. Water pollution - sources and nature of pollutants in water - Sewage - industrial effluent - agrochemicals - Eutrophication - waterborne diseases. Potable water. Assessment of microbiological quality of water. Brief account on bioterrorism.

TEXT BOOKS:

1. Adams MR and Moss MO. (1995). Food Microbiology, The Royal Society of Chemistry, Cambridge.

2. Alexander M. (1977) Introduction to soil microbiology. John Wiley & Sons, Inc., New York.

3. Rajan. S and Selvi Christy (2015). Essentials of Microbiology, Anjanaa Book House Publishers, Chennai.

4. Andrews AT, Varley J. (1994) Biochemistry of milk products. Royal Society of Chemistry.

5. Banwart GJ. (1989), Basic food microbiology, Chapman & Hall, New York.

6. Ec Eldowney S, Hardman DJ, Waite DJ, Waite S. (1993). Pollution: Ecology and Biotreatment – Longman Scientific Technical.

7. Frazier WC and Westhoff DC. (1988) Food microbiology, TATA McGraw Hill Publishing Company Ltd. New Delhi.

8. Grant WD, Long PL. (1981) Environmental Microbiology. Blackie Glasgow and London.

9. Hobbs BC and Roberts D. (1993) Food poisoning and food hygiene, Edward Arnold (A division of Hodder and Stoughton), London.

10. Jay JM. (1987) Modern food microbiology, CBS Publishers and distributors, New Delhi.

11. Robinson RK. (1990) The microbiology of milk. Elsevier Applied Science, London.

12. Robinson RK. (1990) Dairy Microbiology, Elsevier Applied Science, London.

13. Rogers JE and Writman WB (1991) Microbial production and consumption and green house gases: Methane: Nitrogen oxides and Halomethanes. American Society for Microbiology, Washington DC.

14. Dirk J, Elas V, Trevors JT, Wellington, EMH (1997) Modern Soil Microbiology, Marcel Dekker INC, New York.

15. Ramanathan, and Muthukaruppan SM (2005) Environmental Microbiology. Om Sakthi Pathipagam, Annamalai Nagar.

PAPER-3
IMMUNOTECHNOLOGY

OBJECTIVES

To enable the students to understand the immunity and immune system.

UNIT-I

Introduction: Infection, immunity, types of immunity - innate and adaptive, phagocytosis and extracellular killing, immunity to specific infection, milestones in immunology - evolution of immunology.

Immune Systems: Anatomy of the lympho - reticular system, primary lymphoid organs - bone marrow & thymus, Secondary lymphoid tissues - spleen, lymph nodes & gut associated lymphoid tissue, immuno reactive cells - T and B lymphocytes, macrophages, granulocyte and NK cells.

UNIT-II

Antigens and Immunogenicity: Terminologies and definitions - antigen, immunogen, haptens, superantigens, tolerogen, epitope, paratope and antigenic determinants. Features associated with antigenicity and immunogenicity. Basis of antigen specificity.

Antigen receptors: Cell surface proteins of Major Histocompatibility Complex (MHC): types, - class I, II and III distribution and function, MHC in relation to transplantation and HLA typing. T cell receptor complex (TCR).

UNIT-III

Antibodies - B cell receptors. Three dimensional structure of immunoglobulin molecule - Types of immunoglobulins. Biological and chemical properties of immunoglobulin. Antigen, antibody attraction - forces, affinity, avidity and specificity. Monoclonal antibody production - Hybridoma technology.

Complement system: Basics of complement protein - different pathways of complement activation - the pathway of membrane attack (common pathway), classical and alternate.

UNIT-IV

Acquired immune response: Humoral immune response - various phases of humoral immune response. Cell mediated immune response - cell mediated cytotoxicity, delayed type hypersensitivity.

Immune regulation: Immune response - various events in induction of immune response. Means of immunosuppression - physical, chemical and biological. Tolerance - auto and acquired. Immunopotentiation - specific and non specific potentiations (adjuvants). Cytokines, Lymphokines and Chemokines.

UNIT-V

Prophylaxis: Vaccines - heat killed, attenuated, rDNA vaccine, synthetic peptide vaccine, plasma derived vaccine, anti - idiotypic vaccine and DNA vaccine. Active immunization - vaccines & toxoids – bacterial and viral. Passive immunization - antitoxins, immuno-globulin, specific immuno-globulin, hyper immuno-gamma globulin. Immuno Pathology - A brief account: Immunology of infectious diseases. Immunodeficiency disorders - primary and secondary. Autoimmune diseases.

TEXT BOOKS:

1. Sudha Gangal and Shubhangi Sontakke (2013) Textbook of Basic and Clinical Immunology, Universities Press (India) Private Ltd.
2. Ajoy Paul (2016). Text Book of Immunology, Books and Allied (P) Ltd, Kolkatha.

PAPER-4

HUMAN ANATOMY AND PHYSIOLOGY

OBJECTIVES

To enable the students to understand the importance of human anatomy

UNIT-I: Respiratory System (RS) and Special Sensory Organs (SSS)

Introduction to applied human anatomy and physiology.

Respiratory System (RS): Different organs of the Respiratory System. Functions of the different organs of the Respiratory System.

Special Sensory Organs (SSS): Introduction to special sensory organs. Function and functions of eye, ear, nose, tongue, and skin.

UNIT-II: Gastro Intestinal (GI) System and Lympho-reticular System (LRS)

Gastro Intestinal (GI) System: Different organs associated with the Gastro Intestinal system: (Salivary glands, Pancreas, Liver and Gall bladder and others).

Lympho-reticular System (LRS): Different organs of LRS (Lymph, Lymphatic vessels and Lymph nodes), Functions of the different organs of Lympho-reticular system.

UNIT-III: Musculoskeletal System (MSS), Skin and Nervous System (NS)

Musculoskeletal System (MSS) and Skin: Introduction of musculo-skeleton system. Different parts of involved in skeleton system. Function of muscular system. Parts and function of skin.

Nervous System (NS): Introduction to nervous system. Central nervous system (CNS) and peripheral nervous system PNS and related to infection

UNIT-IV: Circulatory System (CS) and Endocrine System (ES)

Circulatory System (CS): Blood: Site of formation, composition, functions of blood cells, Different parts of the circulatory system and its function.

Endocrine System (ES): Introduction to endocrine system, Different organs and Functions of endocrine system.

UNIT-V: Reproductive System (RS) and Urinary System (US)

Reproductive System (RS): Introduction Male reproductive system – physiological anatomy, spermatogenesis and its regulation, testicular hormones, composition of semen Female reproductive system – menstrual cycle, pregnancy and parturition, lactation and family planning.

Urinary System (US): Different organs and Functions of Urinary System. Mechanism of urine formation and composition of urine.

ELECTIVE
PAPER-1
(to choose 1 out of 3)
BIOFERTILIZER TECHNOLOGY

OBJECTIVES

To make the students to understand the microorganisms as potential biofertilizer, the technology of inoculums production and to make the students entrepreneurs.

UNIT-I

Introduction to biofertilizers - Structure and characteristic features of the following biofertilizer organisms: Bacteria: *Azospirillum, Azotobacter, Bacillus, Pseudomonas, Rhizobium* and *Frankia.* Cyanobacteria: *Anabaena, Nostoc, Hapalosiphon*. Fungi: *Glomus, Gigaspora, Sclerocystis, Amanita, Laccaria*.

UNIT-II

Biofertilization processes - Decomposition of organic matter and soil fertility and vermicomposting. Mechanism of phosphate solubilization and phosphate mobilization. Nitrogen fixation - Free living and symbiotic nitrogen fixation. Biotechnological application in nitrogen fixation.

UNIT-III

Nitrogenous Biofertilizers I: Bacteria - Isolation and purification of *Azospirillum* and *Azotobacter*, mass multiplication of *Azospirillum* and *Azotobacter*, formulation of inoculum of *Azospirillum* and *Azotobacter*, application of inoculants of *Azospirillum* and *Azotobacter*. Isolation and purification of *Rhizobium*, mass multiplication and inoculum production of *Rhizobium*, Methods of application of *Rhizobium* inoculants.

UNIT-IV

Isolation and purification of Cyanobacteria. Mass multiplication of cyanobacterial bioinoculants - Trough or Tank method, Pit method, Field method; methods of application of cyanobacterial inoculum. *Azolla* - mass cultivation and application in rice fields.

UNIT-V

Mycorrhizae - Ecto and endomycorrhizae and their importance in agriculture. Isolation of AM fungi - Wet sieving method and sucrose gradient method. Mass production of AM inoculants and field applications. Isolation and Purification of phosphate solubilizers. Mass multiplication and field applications of phosphate solubilizer (*Pseudomonas striata*). Biofertilizers - Storage, shelf life, quality control and marketing.

6. Tilak, K.V.B. 1991. Bacterial Biofertilizers, ICAR Pub., New Delhi.

PAPER-1
B. FUNDAMENTALS IN BIOLOGY

OBJECTIVES

Students completing this paper should be able to understand concepts of fundamentals in biology.

UNIT-I

Biology of cells: Cells as a unit of life, structure of prokaryotic and eukaryotic cells. An overview of organelles (Mitochondria, chloroplasts, ER, Golgi, ribosomes, lysosomes and peroxysomes, nucleus and nucleolus). Differences and similarities in plant and animal cells. Cellular membrane: structure, transport, channels, carriers, receptors, endocytosis, membrane potentials.

UNIT-II

DNA replication; Transcription and Translation.

Cell-cell interactions and signal transductions: Intercellular junctions, signaling by hormones and neurotransmitters; receptors, G-proteins, protein kinases and second messengers. Protein traffic in cells.

UNIT-III

Cell Cycle and regulation - Mitosis, Meiosis.

Mutation - Types of mutations, types of mutagenic agents and their molecular mechanism; DNA repair; Chromosomal types and structure; Mechanism by which genome undergoes changes, recombination, mutation, inversion, duplication, and transposition.

UNIT-IV

Molecules of Life: Introduction to carbohydrates-Monosaccharide and their derivatives, Disaccharides, Polysaccharides.

Proteins - Structure of amino acids, Different levels of organization-Primary, secondary tertiary and quaternary structures.

Nucleic acids - Purines, pyrimidines, Nucleosides and Nucleotides, Different structural form of DNA, denaturation and renaturation of DNA

Lipids-Structure and function of Fatty acids, Triacylglycerols, sphingolipids, steroids and glycerophospholipids.

Water, small molecules-Alkaloids, glycosides, phenols, oligopeptides, Flavonoids, and terpenoids.

UNIT-V

Enzymes: Units of Activity,coenzymes and metal cofactors, temperature and pH effects, Michaelis - Menten kinetics, inhibitors and activators, active site and mechanism of enzyme action, Isoenzymes, allosteric enzymes.

Metabolism of glucose: glycolysis, TCA cycle, glycogenesis, glycogenolysis and gluconeogenesis, pentophosphate shunt, ETC. Digestion of protein and protein metabolism, nitrogen balance: transamination, oxidative deamination and urea cycle. Lipid metabolism: beta oxidation. Interconnection of pathways, metabolic regulations.

7. Shanmughavel, P. 2005. Principles of Bioinformatics, Pointer Publishers, Jaipur, India.

PAPER-1
C. MICROBIAL BIOTECHNOLOGY

OBJECTIVES

To enable the students to understand the basic knowledge in Microbial Biotechnology

UNIT-I

Definition, Concepts - biotechnological potentials of microalgae - food - feed - Colourant - fuel and pharmaceutically valuable compounds.

UNIT-II

Production of microbial biofertilizers - Mass cultivation of cyanobacteria (Spirullina), Azolla and other N2 fixers (*Azospirillum, Azatobacter & Rhizobium*)

UNIT-III

Basic principle - antagonism, amensalism, parasitism, nematophagy. Microbial herbicides, microbial insecticides - bacterial insecticide Pseudomonas, Bacillus sp. - Bacillus thuringiensis - toxins - BT cotton - viral insecticide - entomopathogenic fungi.

UNIT-IV

Production microbial products - malt beverages - alcohol - vinegar - lactic acid- citric acid- penicillin - streptomycin- L-lysine- L-glutamic acid - protease - lipase - pectinase and riboflavin.

UNIT-V

Microbes in abatement of heavy metal pollution - heavy metal tolerant microbes - Mechanism of heavy metal and antibiotic resistance - role of biosorption - biotransformation of Xenobiotics - Superbug - rDNA application. Biodegradation of oil and petroleum products. Microbial leaching - Copper - Uranium.

SEMESTER II
PAPER-5
MEDICAL MICROBIOLOGY

OBJECTIVES

To create awareness of microbial diseases of human beings and causes and cures.

UNIT-I

Basics in Medical microbiology - Infectious diseases overview. Medically important microbes. Microbial diseases - sources, route of transmission. Pathogenesis - adhesion, invasion, host cell damage, release of pathogens. Microbial virulence and virulence factors - Signs and symptoms of microbial diseases. Treatment, Prevention and control of microbial infections. Immunity of microbial diseases.

UNIT-II

Diagnosis of microbial diseases - Collection, transport and preliminary processing of clinical pathogens. Clinical, microbiological, immunological and molecular diagnosis of microbial diseases. Modern methods of microbial diagnosis.

UNIT-III

Bacteriology - Characteristics, classification, pathogenesis, pathology, diagnosis, treatment, prevention and control of diseases caused by *Staphylococci, Streptococci, Bacillus, Clostridium, Corynebacterium, Escherichia, Salmonella, Shigella, Klebsiella, Proteus, Vibrio, Pseudomonas, Mycobacteria, Spirochaetes, Rickettsia*.

UNIT-IV

Virology - Structure, multiplication, classification and medical importance of DNA viruses - Pox, Herpes, Hepatitis, Adeno; RNA viruses - Picorna, Orthomyxo, Paramyxo, Rabdo and HIV virus. Viral vaccines and antiviral agents.

UNIT-V

Mycology - Human mycotic infections caused by Dermatophytes, *Histoplasma, Cryptococcus, Candida*, opportunistic mycoses. Mycotoxins. Parasitology - Medical importance of *Entamoeba, Giardia, Plasmodium, Taenia, Ascaris, Wucherhiria*. Laboratory techniques in parasitology.

PAPER-6

MICROBIAL PHARMACOLOGY

UNIT: I General principles of Microbial Pharmacology

Principles of pharmacokinetics and pharmacodynamics. Principles of toxicology and treatment of poisoning. Gene based therapy.

UNIT: II Systemic Pharmacology including recent advances of drug affecting:

Autonomic Nervous System- Neurohumoral transmission, Agonists and antagonist of cholinergic and adrenergic systems. Cardiovascular system- Cardiac electrophysiology, Drugs used in ischemic heart diseases, Hypertension C.C.F, Arrythmias and Hyperlipoproteineas. Renal- function, Physiology of urine formation. Diuretics and antidiuretics.

Central Nervous System- Neuro transmission in the central nervous system. General anaesthetics, Local anaesthetics, Sedatives and hypnotics, Antiepileptics, Analgesics- opioids non-opioids, Psychopharmacological agents, Drugs for CNS degenerative disorders and migrane.

UNIT: III Gastro Intestinal System- Drugs for peptic ulcer, Cathartics abd antidiarrhoeal agents, Emetics and antiemetics. Blood- Drugs affecting haemopoeitic system, Haematinics, coagulants, anticoagulants, fibrinolytics, antiplatelets. Autocoids- Histamine and antihistamine, 5-HT and its antagonists, Eicosanoides. Respiratory system - Drugs used for bronchial asthama and cough. Drugs affecting- uterine motility, Oxyocics and tocolytics. Heavy metals and chelating agents- Lead, mercury, iron, copper and arsenic. Drugs used for immunomodolation- Immunostimulants, Immunosuppresants.

UNIT: IV Hormones and Hormone Antagonists- Hypothalamic and pituitary hormones, Thyroid hormones and antithyroid drugs, Sex hormones and their antagonists, Adrenocorticosteroids and their antagonists, Antidiabetic drugs, Vit-D3. Chemotherapy of Microbial Diseases- Antimicrobial agents general considerations, Antimicrobial agents sulfonamides, Quinolones, β-lactum antibiotics, Aminoglycosides, Tetracyclines, chloramphenicol, Macrolide antibiotics, Miscellaneous antibiotics, Antimycobacterial agents, Antifungal agents, Antiviral agents, Antimalarial agents, Antiamoeibic agents, Antiprotozoal agents, Drugs for helminthiasis.

UNIT: V Chemotherapy of Neoplastic Diseases- Antihypertensives – Analgesics. Antiepileptics - Antiulcer drugs, antiinflammatory drugs, Principles and application of biostatics, Essential drug concepts, Drug addiction and drug abuse, important interactions and their mechanisms.

REFERENCE BOOKS:

6. The Pharmacology basis of Therapeutics by. Louis.S.Goodman and Alfred Gillman.
7. Handbook of experimental Pharmacology by S.K. Kulkarni, Vallabh Prakashan, Delhi.
8. ICH of technical requirements for registration of pharmaceutical for human use, ICH harmonized tripartite guidelines – guidelines for good clinical practice, E6, May 1996.
9. Good clinical practice – Guidelines for clinical trice on pharmaceutical products in India, central drugs standard control organization, New Delhi minister of health - 2001

PAPER-7
BIOINFORMATICS AND BIOSTATISTICS

OBJECTIVES

To enable the students to make use of the tools of bioinformatics and biostatistics to solve microbiological problems.

UNIT-I

Biology in the computer age - Computational Approaches to Biological questions.

Basics of computers - servers, workstations, operating systems, Unix, Linux. World Wide Web. Search engines, finding scientific articles - Pubmed - public biological databases.

UNIT-II

Sequence analysis - pairwise sequence comparison. Protein Data Bank, Swiss-prot, Genbank - sequence queries against biological databases - BLAST and FASTA - multifunctional tools for sequence analysis. Multiple sequence alignments, Phylogenetic alignment - profiles and motifs.

UNIT-III

Genomics and Proteomics - Sequencing genomes - sequence assembly - genome on the web - annotating and analysing genome sequences. Proteomics - biochemical pathway databases.

UNIT-IV

Predicting Protein structure and function from sequence - Determination of structure - feature detection - secondary structure prediction - predicting 3 D structure. Protein modelling.

UNIT-V

Biostatistics: Measures of Central tendency - mean (arithmetic, harmonic and geometric) median and mode; Correlation Co-efficient, Simple linear regression; basic idea of Significance Test, hypothesis tests, levels of significance, Student ‘t’, ‘Chi’ square and goodness of fit.

TEXT BOOKS:

1. Ruchi singh and Richa Sharma (2010). Bioinformatics Basics, Algorithms and Applications. Universities Press (India) Private Ltd.

4. Des Higgins & Willie Taylor (2002). Bioinformatics: Sequence, structure and databanks, Oxford University Press.

5. Baxevanis A.D & Ouellette B.E.F (2001) Bioinformatics: A practical guide to the analysis of genes and proteins, Wiley Interscience - New York

6. Arora P.N & Malhon P.K (1996). Biostatistics Imalaya Publishing House, Mumbai.

7. Sokal & Rohif (1973). Introduction to Biostatistics, Toppan Co. Japan.

8. Stanton A & Clantz, Primer of Biostatistics - The McGraw Hill Inc., New York.

9. Chavali (2009). Bioinformatics and Bioprogramming in C. Universities Press (India) Private Ltd.

MAIN PRACTICAL
PAPER-1
(Subjects covering Paper 1, 2 and 3)

OBJECTIVES

To enable the students to get hands-on training on various aspects of general, food, agricultural and environmental microbiology and immunotechnology.

UNIT-I

1. Cleaning of glassware and sterilization.

2. Preparation and use of glassware cleaning solutions, sterilization.

3. Micrometry - counting and measurements.

4. Isolation of anaerobic and aerobic bacteria - cyanobacteria, actinomycetes and fungi.

5. Pure and axenic culture techniques - serial dilution - pour plate, spread plate, streak plate methods and stab culture techniques.

UNIT-II

1. Bacterial Staining methods - simple, Gram's, acid fast, flagella, capsule and spore.

2. Fungal Staining methods - Lacto-phenol cotton blue.

3. Motility of bacteria.

4. Determination of growth - growth curve - generation time - synchronous and asynchronous growth - estimation of growth - microscopic - plate - membrane filter - turbidometry - dry weight - wet weight - chlorophyll.

5. Study of virus infected plant samples

UNIT-III (Microbial Physiology)

Isolation and Colorimetric estimation of

Hands on:

1. Amino acids - ninhydrin method

2. Protein - Biuret method/Lowry's method

3. Carbohydrate reducing sugars - Anthrone method/Benedicts method.

Isolation and Colorimetric estimation of

Hands on:

1. DNA - Diphenylamine method

2. RNA - Orcinol method

3. Pigments (chlorophyll - carotenoids - phycobiliproteins)

(Human anatomy and physiology)

1. Absolute Eosinophil Count. Demonstration of ECG/Echo and its interpretation techniques. Demonstration of lymphoid organs. Determination of Erythrocyte Sedimentation Rate. Determination of Specific Gravity of Blood.

2. Hair perforation Test. Measurement of Pulse, BP. Preparation and Examination of Blood smear. Blood Sugar analysis. Study of different histological slides. Total Platelet count

UNIT-IV

1. Microbial analysis of food products - bacterial and fungal

2. Microbial spoilage of refrigerated food

3. Extracellular enzyme activities - cellulase, protease, lipase and phosphatase

4. Milk microbiology - direct microscopic count - standard plate count - reductase test (resazurin/methylene blue) - isolation of microbes from yoghurt, curd.

5. Quantification of microorganisms in air - solid and liquid impingement techniques

6. Microbial flora from different soil types and habitats - isolation of nitrogen fixing bacteria, cyanobacteria and phosphate solubilizing organisms- development of Winogradsky Column

7. Field trip to dairy, food industries, sewage treatment plants.

UNIT-V

1. Precipitation techniques
Hands on: Agar gel diffusion - Ouchterlony's method.
Theory: Single radial immunodiffusion - staining.
Counter immuno electrophoresis & Rocket Immuno Electrophoresis.
2. Agglutination techniques
Hands on: Blood grouping and Rh factor - Latex agglutination - RF & ASLO. Theory: Heme agglutination RPHA / IHA.

14. Wilson K, Walker J. (1995) Practical Biochemistry Principles and Techniques, Cambridge University Press.

MAIN PRACTICAL
PAPER-2
(Subjects covering Paper 4, 5 and 6)

OBJECTIVES

To impart knowledge on microbial diseases, metabolism and hands on training on computer applications in biology.

UNIT-I (Medical Microbiology)

1. Collection and transport of pathological specimens for microbiological examinations.

2. Bacteriological methods: Microscopic examination - blood - feaces - pus - sputum - throat swab and nose swab - urine - body fluids

3. Isolation and identification of the pathogen - culture and biochemical tests.

UNIT-II (Medical Microbiology)

1. Mycological methods: Macroscopic observation - microscopic observation - culture

2. Identification of *Mucor, Rhizopus, Aspergillus, Penicillium, Candida, Trichophyton, Microsporum, Epidermophyton* - SDA/Corn Meal Agar - Slide culture method - Germ tube method - Sugar assimilation/fermentation tests. Examination of parasites in clinical specimens - ova/cyst in feaces.

UNIT-III (Medical Microbiology)

1. Clinical - observation: Theory: a) X ray chest 2) Mantoux test for Mycobacterium tuberculosis infection.

2. Haematology: Total count (TC): RBC and WBC, - Differential count (DC) - Haemoglobin level, - Bleeding time - Clotting time – ESR

3. Biochemical : Serum - SGOT, SGPT, cholestrol, creatinine bilirubin and protein. Urine - colour, turbidity, sugar, albumin, bile salt, - phenylketone urea, bence Jones protein, RBC, pus cells, pH, acidity and alkalinity.

UNIT-IV (Microbial Pharmacology)

Antimicrobial assay - sensitivity test - Stokes and Kirby Bauer methods - Disc diffusion - agar dilution - broth dilution - MBC/MIC. Quality control for antibiotics.

UNIT-V (Bioinformatics - Demonstration only)

1. Basics of computers - basic commands - file creation, copying, moving & deleting in Linux & Windows. Using email - Using browsers - search engines, - Pubmed.

2. Using biological databases - Swissprot - Protein Data Bank and Genbank.

3. Different types of sequence analysis queries in BLAST and FASTA.

4. Multiple sequence alignments and Phylogenetic alignments.

5. Protein structure prediction software.

6. Genomes and Proteomes available on the web and their use.

7. Statistical software available on the web and their use.

ELECTIVE
PAPER - 2
(to choose 1 out of 3)
A. FOOD ANALYSIS AND QUALITY CONTROL

OBJECTIVES: The paper focuses on physical, chemical, microbial and sensory analysis of food, concepts of quality control and quality management, national and international food loss and adulterants in various food products

UNIT-I

Sampling – Sampling techniques and preparation of food samples.

Techniques used in food analysis – Chromatography, Electrophoresis, Electrometric determinations, Refractometry and Polarimetry Spectrophotometry, Fluorimetry, Radio - active tracer techniques, Atomic absorption

UNIT-II

Physico chemical methods for food analysis - Moisture and Total solids, Carbohydrates, Proteins, Fats, Fiber, Ash and its types, Minerals, Vitamins. Enzymatic methods

Biological methods of food analysis - Standard plate count; Plate loop method; Spiral plate; Droplet technique; Dye reduction; Catalase test and ELISA. Testing of food for organisms such as *B. cereus, C. botulinum, E. coli, L. monocytogenes, S.aureus, Salmonella* and *Shigella.*

UNIT-III

Sensory assessment of food quality –Appearance of food, Flavor of food, Texture of food. Sensory Tests – Difference, Rating and Sensitivity tests. Types of panels, Testing area and schedule.

Quality control of following food products – Milk and milk products, Oils and Fats, Cereal grains and flours, Fruits and vegetable products, Canned foods, Egg and egg products, Meat and Meat products

UNIT-IV

Food quality management – Objectives, Importance and Functions of quality control. Total quality, management, Good manufacturing practices, seven principles of HACCP and codex in food. Quality control, methods of – a. raw materials, b. manufacturing process and c. finished products.

UNIT-V

Food Safety – Role of voluntary agencies and legal aspects of consumer protection. National and International food laws – PFA, FDA, BIS, AGMARK, Essential Commodity Act, Export (quality and inspection act, Consumer protection act), Nutritional labeling requirements of foods. Food adulteration.

INDUSTRIAL VISIT: Food and Pharmaceuticals Industry and Report.

PAPER - 2
B. GENETIC ENGINEERING

OBJECTIVES

To enable the students to understand the basic knowledge in Genetic Engineering.

UNIT-I

Gene as a unit of mutation and recombination. Mutagenesis, mutations and mutants - biochemical basis of mutations, spontaneous and induced mutations, isolation of mutants, mutagenesis, reversion, suppression, genetic analysis of mutants. Recombination methods
- conjugation and transformation.

UNIT-II

Enzymes in Genetic Engineering - DNA Polymerase, Polynucleotide kinase, T4 DNA ligase, Nick translation system, Terminal deoxynucleotidyl transferase, Reverse transcriptase Restriction endonucleases Type I & II. Vectors - plasmid, bacteriophage and other viral vectors, cosmids, Ti plasmid, yeast artificial chromosome.

UNIT-III

Strategy of recombinant DNA technology; Gene library - Genomic library, cDNA library - Cloning strategies - Use of linkers, adoptors, homopolymer tails - Nucleic acid hybridization - Colony hybridization, plaque hybridization; Blotting techniques - Southern, Northern, Western and dot blotting.

UNIT-IV

PCR - principles, techniques and applications. Gene isolation, cloning and expression, DNA sequencing, oligonucleotide synthesis, Southern and Northern hybridization, FISH, RAPD, PCR-RFLP, STRR, LTRR. DNA fingerprinting and their applications for diagnosis of disease, site-directed mutagenesis, Gene silencing, Gene transfer technologies.

UNIT-V

DNA chips and microarray gene screen technology; site directed mutagenesis, transgenic animals and gene knockout techniques, cell culture based techniques Genetic diagnosis. Applications in medical field, biology, transgenic plants, transgenic animals, Recombinant vaccines development. Gene therapy; Molecular basis of genetic diseases, genetic counseling.

TEXT BOOKS:

PAPER - 2
C. MICROBIAL BIONANOTECHNOLOGY

OBJECTIVES

To enable the students to understand the basic knowledge in Microbial Bionanotechnology.

UNIT-I

History - bionanotechnology - concept and future prospects - application in Life Sciences. Terminologies - nanotechnology, bionanotechnology, nanomedicine, nanowires, quantum Dots, nanocomposite, nanoparticles.

UNIT- II

Molecular nanotechnology - nanomachines - collagen. Uses of nanoparticles - cancer therapy - manipulation of cell and biomolecules. Cytoskeleton and cell organelles. Types of nanoparticles production - physical, chemical and biological. Microbial synthesis of nanoparticles

UNIT-III

Nanoparticles - types, functions - Silver, Gold and Titanium. Physical and chemical properties of nanoparticles. Characterization of nanoparticles - UV-Vis spectroscopy, Electron Microscopy - HRTEM, SEM, AFM, EDS, XRD.

UNIT-IV

Uses of nanopartcles in biology: Drug delivery - protein mediated and nanoparticle mediated. Uses of nanoparticles in MRI, DNA and Protein Microarrays. Nanotechnology in health sectors. Toxicology in nanoparticles - Dosimetry.

UNIT-V

Advantages of nanoparticles - drug targeting, protein detection, MRI, development of green chemistry - commercial viability of nanoparticles. Disadvantages - health risk associated with nanoparticles, inadequate knowledge on nanoparticles research.

TEXT BOOKS:

1. Parthasarathy, B.K. (2007). Introduction to Nanotechnology, Isha Publication.

2. Elisabeth Papazoglou and Aravind Parthasarathy (2007). Bionanotechnology. Morgan & Claypool Publishers.

4. David E. Reisner, Joseph D. Bronzino (2008). Bionanotechnology: Global Prospects. CRC Press.

5. Ehud Gazit (2006). Plenty of Room for Biology at the Bottom: An Introduction to Bionanotechnology. Imperial College Press.

SEMESTER III
PAPER-8
MICROBIAL GENETICS AND MOLECULAR BIOLOGY

OBJECTIVES

To enable the students to understand the basic and applied aspects of molecular biology and microbial genetics.

UNIT-I

Introduction to identification of Genetic Material (Griffith, Avery and Hershy and Chase Experiments). Gene as a unit of mutation and Recombination. Mutagenesis, Mutations and Mutants - Biochemical basis of Mutation, Spontaneous and induced mutations, Isolation of mutants, mutagenesis, reversion, suppression, genetic analysis of mutants.

UNIT-II

Gene Transfer Mechanisms - Transformation - competence cells, regulation, general process; Transduction - general and specialized; conjugation - Hfr, Triparental mating, self transmissible and mobilizable plasmids, pili.

UNIT-III

Biology of Plasmids - Extrachromosomal heredity - biology of bacterial plasmids, structure of the plasmids, F1,ColE1, pSC101 and Ti plasmids, - replication, control, partitioning, incompatibility and gene transfer.

UNIT-IV

Transposable genetic elements and Gene Mapping - Introduction - Discovery, insertion sequences, complex and compound transposons - T10, T5, and retroposon. Genetic mapping - Ecoli - Virus T4 phage – using r II system.

UNIT-V

Concept of gene and Gene regulation - Organization of gene in prokaryotes and Eukaryotes - Introduction, Operon concept, lac and Trp operons, promoters and repressors, regulation of gene expression - Transcriptional control - promoters, terminators, attenuators and anti terminators; Induction and repression; the lac operon - catabolite repression; Biosynthesis; trp operon - upstream activator sequences and enhancers, two component regulatory systems. Translational control - ribosome binding, codon usage, antisense RNA; post- translational modification (epigenetics).

2. Ajoy Paul (2011). Text Book of Genetics- from Genes to Genomes, Books and Allied (P) Ltd, Kolkatha.

3. Basu. S.B and Hossain. M (2016), Principles of Genetics, Books and Allied (P) Ltd, Kolkatha.

PAPER-9
RECOMBINANT DNA TECHNOLOGY

UNIT-I

Basics of DNA cloning: Simple cloning and cloning using linkers and adaptors. Cloning into various kinds of vectors – plasmids, phages lambda and M13, phagemids, cosmids, BACs and YACs. Selection and screening of clones.

UNIT-II

Methods of DNA and protein analysis: Isolation and purification of DNA. Agarose, polyacrylamide and pulsed field gel electrophoresis of DNA. Southern and Northern Blotting. Radiolabelling probes. RFLP analysis. DNA fingerprinting and its application in forensic sciences. Native PAGE, SDS-PAGE and two-dimensional PAGE analysis of proteins. Blotting techniques.

UNIT-III

Polymerase Chain Reaction: Concept of PCR and various thermophilic enzymes used in PCR. Gradient PCR versus Touchdown PCR. Designing primers. Cloning PCR products. Differential Display PCR, RAPD fingerprinting of micro-organisms, Overlap PCR, Rolling Circle Amplification Technology.

Construction of cDNA and genomic DNA libraries: Vectors used in the construction of cDNA versus genomic DNA libraries. Steps and enzymes involved in the construction of cDNA versus genomic DNA libraries.

UNIT-IV

Genome sequencing: DNA sequencing by Enzymatic and chemical method – traditional and cycle sequencing. STS mapping. E-PCR. Whole genome shotgun cloning methods. Clone-by-clone shotgun sequencing of genome map construction, clone selection,

Transcriptional analysis of gene expression and transcriptomics: Gene expression analysis by Northern Blotting, RT-PCR, EST analysis and the use of reporter genes. Enzymatic and bioluminescent reporters. Reporters used in protein localization and trafficking studies. Transcriptome analysis by DD-PCR and EST analysis, DNA microarrays (cDNA arrays and oligo arrays), Serial Analysis of Gene Expresion (SAGE).

UNIT-V

Protein engineering and proteome analysis: Proteome analysis by 2D gel electrophoresis coupled to mass spectrometric analysis. Protein arrays and their applications.

Pharmaceutical products of DNA technology: Human protein replacements – insulin, hGH and Factor VIII. Human therapies – TPA, interferon, antisense molecules. Vaccines – Hepatitis B, AIDS, and DNA vaccines. Good hygienic procedure (GHP), Good manufacturing procedure (GMP), Good laboratory procedure (GLP) and ISO-9ooo-HACCP.

Transgenics and animal cloning: Creating transgenic animals and plants**.** Animal cloning.

TEXT BOOKS:

1. Molecular Biology by David P. Clarke, 1st edition; Elsevier Academic Press; 2005.
2. Satyanarayana.U, Biotechnology, Books and Allied (P) Ltd, Kolkatha: 2005.
3. Molecular Cloning: A laboratory manual by Joseph Sambrook & David Russell, 3rd edition; CSHL Press; 2001.
4. DNA Technology: The Awesome Skill by I. Edward Alcamo, 2nd edition; Hardcourt Academic Press; 2001.
5. Molecular Biology of the Gene by James Watson, Tania Baker, Stephen Bell, Alexander Gann, Michael Levine & Richard Losick , 6th Edition; CSHL Press; 2007

PAPER-10
INDUSTRIAL BIOTECHNOLOGY

OBJECTIVES

To enable the students to understand the microbial processes applicable in industries and scale-up processes.

UNIT-I

Industrially important microorganisms: Screening techniques - Detection and assay of fermentation products - Strain improvements - Mutations, protoplast fusion and rDNA techniques for strain development.

UNIT-II

Industrial fermentation : Primary and secondary metabolites; Microbial Growth kinetics; Basic functions of fermenter - body construction, aeration, agitation, theories of aeration, oxygen transfer kinetics; Concepts of Newtonian and non - newtonian fluids - antifoam - Submerged and solid state fermentation - Scale up; Fermentation Biosensors; Downstream Processing.

UNIT-III

Industrial Production: Typical Fermentation processes for the industrial production of Wine, Beer, Bacitracin, Streptomycin, Riboflavin, B-carotene, Gibberellins, glutamic acid and surfactants. Commercially useful non-microbial products produced through microbes - insulin, interferons, B-cell growth factors, tissue plasmonogen activator. Microbial Enzymes - Enzyme immobilization, Microbial Insecticides. Production of SCP - Spirulina and yeast.

UNIT-IV

Algal biotechnology: Biotechnological potential of microalgae, food, feed and fuel production - pharmaceutically valuable of microalgae, pigments and H2 gas from BGA.

UNIT-V

Nanobiotechnology: Introduction - history and recent developments - sources of nanoparticles - microbial producers of nanoparticles -advantages of microbial nanoparticles - applications - social and ethical implications - ethical concerns about patenting of living organisms and genetic materials.

ELECTIVE
PAPER - 3
(to choose 1 out of 3)
A. BIOLOGICAL TECHNIQUES

OBJECTIVES

To enable the students to understand the basic biological techmiques.

UNIT-I

Microscopy and Related Techniques - Light Microscopy : Microscopic optics, components of microscopes. Basic principles and method of Bright field, Dark field, Phase contrast. Fluorescence, Polarization and confocal microscopes. Applications of various types of microscopy such as immunofluorescence - In situ hybridization. Electron Microscopy - Principle, Techniques and applications of Transmission Electron microscope (TEM) and Scanning Electron Microscope (SEM), Atomic Force Microscope (AFM). Photomicrography and Video micrography Developing and printing of microphotographs.

UNIT-II

Analytical Techniques - Spectroscopic methods - UV-Visible, Atomic Absorption Spectrophotometer, Atomic Emission Spectroscopy. Centrifugation - Principles, various types including centrifugation Electroanalytical methods - electrolytic all 4 golvanic cell - Potentiometric, conductimetric, coulometric & voltametric analysis. Biosensors. Radioactive Analysis : Principles of radioactivity, GM counter & LS counter.

UNIT-III

Principles & Applications of Chromatographic Techniques : Adsorption - Ion exchange and gel permeation - affinity chromotography for separation of compounds including GC and HPLC.

UNIT-IV

Electrophoresis Techniques - protein - nucleic acid - immuno - two dimensional electrophoresis.

UNIT-V

Molecular Biological Techniques

a) Microbiological techniques - purification, storage, measurement of microbial growth rate.

b) Isolation and amplification of nucleic acid - Plasmid isolation, chromosomal DNA isolation.

Polymerase chain reaction

c) Gene cloning techniques - Restriction digestion and Phosphatase treatment of cloning vectors. Cloning technique, separation and staining of DNA, qualification of DNA, gene transfer mechanisms - chemical and electroporation.

d) Methods of detection of clones - Nucleic acid transfer by blotting, Hybridization plaque, colony hybridization, histochemical detection of A -galactosidase, antibody screening including colour development reaction.

PAPER - 3
B. HERBAL TECHNOLOGY

OBJECTIVES

To enable the students to understand the basic knowledge in Herbal technology.

UNIT - I

Pharmacognosy: Pharmacology - Definition and history, Indian systems of medicine - Siddha, ayurvedha, and Unani systems. Taxonomy of locally available medicinal plants, their chemical constituents and medicinal uses - Classification of Crude drugs - Chemistry of Drugs - Future of pharmacognosy.

UNIT - II

Classification of medicinal plants - Vernacular name and family - Geographical source, cultivation, collection, and processing for market and commerce in crude drugs. Morphological and histological studies, chemical constituents - Therapeutic and other pharmaceutical uses. Underground stem - ginger, Alpinia - Roots - Rauolfia - Belladona - Aerial parts - Bark - Cinchona.

UNIT - III

Leaves - Adathoda, Eucalyptus - Flower - Clove fruits seeds - Nux vomica Nutmegs, Gooseberry - unorganized drugs - Gum - Acacia - Resin - Turpentine, fixed oil - castor oil.

UNIT - IV

Herbal medicines for Human ailments - Drugs acting on cardiac diseases, cerebral diseases, Nasal, diseases - Blood pressure Drugs acting on Nervous system - Depressants. - stimulants - Respiration and Drugs - Urogenital system and drugs - Psychoactive plants.

UNIT - V

Propagation of medicinal plants - Micro and macro propagation conservation of rare medicinal plants Role of biotechnology in medicinal plants banks - cultivation of medicinal and aromatic plants - Drug adulteration - methods of Drug evaluation, Herbal food - Food processing - packaging - Herbal sale and Export of medicinal plants - marketing - Intellectual property rights - Export laws.

PAPER - 3
C. VACCINE BIOTECHNOLOGY

OBJECTIVES

To enable the students to understand the basic knowledge in Vaccine Biotechnology.

UNIT-I

Immune system - recognition of nonself and self ; Humoral Immunity - immunoglobulins, basic structure, classes and subclasses; Cellular Immunity, lymphocytes, lymphokines, cytokines and interferon; Antigen Recognition-membrane. Receptors for antigens, MHC classification and functions, super antigen.

UNIT-II

Recombinant vaccines; polynucleotide as vaccines; vector vaccines; naked DNA vaccines; biosynthetic and chemically synthesized vaccines; subunit vaccine; antiidiotype vaccines; fusion vaccines; mixed particle vaccines; human mucosal vaccines; Combination vaccines; Edible vaccines produced in transgenic plants and microencapsulation.

UNIT- III:

EPI vaccines - production and testing of tetanus toxoid, diphtheria toxoid, pertussis vaccine, BCG vaccines; preparation of Hepatitis B vaccine and tissue culture derived rabies vaccine and AIDS vaccine.

UNIT-IV

Adjuvants - classification and properties; carriers - types and functions - vehicles - types, functions and mode of action ; biodegradable polymers - microspheres, liposomes and ISCOM ; immunostimulators (IS) - classification and mechanism of action of IS.

UNIT-V

Germ free, Axenic, Monoxenic, dixenic, Gnotobiotic, conventional, xyloxenic, SPF; isolators, Gnotobiotic technique, gene knockout mice; transgenic and SCID mouse; Athynic nude mouse; animal models of human diseases and techniques of experimentations.

SEMESTER IV
PAPER - 11
RESEARCH METHODOLOGY

OBJECTIVES

To enable the student to understand the principles and applications of classical and modern techniques in Biology develop skill in preparation of reports, writing research communications and thesis interpret and analyze the experimental data using different biostatistical tools.

UNIT-I

Microscopy: light microscope - basic principles, types, (phase contrast, dark field and fluorescent microscope). Electron microscopy - principles, working function, electron probe, transmitted electron, image formation, back scattering, secondary electrons. X-ray diffraction, Auger electron, cathode luminescence. Types of EM: TEM, SEM, STEM - sample preparation for EM analysis. Camera Lucida - Principles and uses.

UNIT-II

Electromagnetic radiation: definition, components, biological effective wavelength (UV and visible), Spectrophotometry: principles and working function of spectrophotometers, types (single beam, double beam, Atomic absorption spectrophotometer, IR and NMR. Applications of various spectrophotometers.

UNIT-III

Radioactivity: nature of radioactivity, types of radioisotopes, half-life, Unit of radioactivity, detection and measurements. Geiger Muller counter, liquid scintillation counter, principles and working function. Autoradiography, application of radioisotopes in biological research. Centrifugation: Basic principles, sedimentation coefficient, centrifugal forces. Types of centrifuges - clinical, high speed, refrigerated, ultra. Types of centrifugation - rotar types, density gradient, differential centrifugation. Applications of centrifugation.

UNIT-IV

Chromatography - Principle, types and working function (Paper chromatography, TLC, GC, GC-MS and HPLC), Applications. Electrophoresis - Principle, types and methods. Horizontal, vertical, PAGE, Agarose electrophoresis, Applications. Pulse Field gel electrophoresis (PFGE) - Principle and applications. Gel documentation and molecular weight analysis.

UNIT-V

Molecular Techniques - DNA and plasmid isolation. Amplification of 16S rRNA or specific genes using PCR techniques, RAPD, STRR and LTRR analysis using PCR, RFLP analysis cloning strategies, DNA sequencing - Sanger's Dideoxy and Maxam and

Gilbert's methods. Automated DNA sequencing, Blotting techniques - southern, western, Dot blot- hybridization. Immunoblotting, ELISA - Applications in biological research.
Thesis writing; defining research problem, research design, general format, literature survey, primary source - articles, reviews, abstract, current contents (both text and CCOD), reference card, data analysis, data interpretation, report writing, proof correction.

MAIN PRACTICAL
PAPER-3
(Subjects covering Paper 7, 8 and 9)

OBJECTIVES

To impart practical knowledge on various aspects of molecular biology, microbial genetics, gene technology and industrial biotechnology.

UNIT-I

1. Isolation of DNA and RNA from microbial system - quantification - chemical methods dinitrophenol, orcinol - physical methods - UV absorption.
2. Isolation of plasmid DNA from bacteria (mini preparation).
3. Isolation of plasmid DNA from cyanobacteria (mini preparation)
4. Size characterization of DNA by agarose gel electrophoresis.
5. Enzyme immobilization technique.

UNIT-II

1. Isolation of antibiotic resistant microbes.
2. Induction of mutation by ultra-violet radiation and chemical mutagens.

UNIT-III

1. Protoplast / Spheroplast isolation.
2. Purification of plasmids - large scale.

UNIT-IV

1. Preparation of competent E. coli cells.
2. Transformation of Plasmid DNA to the E. coli cells.
3. PCR amplification - 16S rRNA and RAPD.
4. Southern blotting
5. Northern blotting.

UNIT-V

1. Separation of proteins by coloum chromatography, ion exchange - gel exclusion - adsorption
2. Separation of proteins by SDS - PAGE and native gel.
3. Production of proteases - optimization of conditions - pH - temperature.
4. Antibiotic assays - MIC - antibiotic resistance
5. Lipid separation using TLC.

MAIN PRACTICAL
PAPER-4
(Subjects covering Paper-10)

OBJECTIVES

To impart practical knowledge on various aspects of research methodology.

1. Analysis of microorganisms using Bright field, Dark field, Phase contrast and Fluorescent microscopy.
2. Microscopic diagram using camera Lucida.
3. Measurement of microbes using micrometry.
4. Preparation of samples for Density gradient.
5. Separation of pigments using paper chromatography.
6. Separation of compounds from crude extracts using TLC.
7. Separation of DNA, proteins using electrophoretic techniques.
8. Molecular weight analysis of DNA and proteins using gel documentation.
9. DNA and plasmid isolation - small scale.
10. RAPD finger printing using PCR.
11. Blotting techniques - Southern and western blotting and hybridization.
12. ELISA test.

ELECTIVE
PAPER-4 (to choose 1 out of 3)
A. BIOREMEDIATION

OBJECTIVES

To enable the students to understand the aspects of bioremediation.

UNIT-I

Definition of Bioremediation - Types of pollution - organic, inorganic in soil, water and air - Remediation by bacteria, fungi, microalgae and green plants.

UNIT-II

Bioaccumulation and biomagnification processes - microbial remediation by natural attenuation - biostimulation - bioaugmentation.

UNIT-III

Application of immobilized microbes in soil decontamination - use of genetically engineered microorganism and bioremediation.

UNIT-IV

Biodegradation of organic compounds - humification and polymerization reaction - bio-transformation of metal and metal compounds - phyto -remediation use of microalgae, green plants to remove pollutants.

UNIT-V

Phyto-extraction - Types of phytoextraction - induced phyto-extraction and continuous phyto-extraction - phyto-degradation - rhizofiltration - phyto-stabilisation - phyto-volatisation of metals - phyto-remediation of organic. Bioavailability and uptake. Biotransformation and compartmentalisation.

2. Wainwright, M. 1999. An introduction to environmental biotechnology. Boston, Mass. Klumer Academic Publishers.

PAPER-4
B. MARINE MICROBIOLOGY

UNIT-I

Marine environment - see-benthic & littoral zone, saltpan, mangroves and estuarine microbes, microbial loop - marine microbial community - planktons, bacteria, fungi, protozoa.

UNIT-II

Survival at extreme environments - starvation - adaptive mechanisms in thermophilic, alkalophilic, asmophilic and barophilic, psychrophilic microorganisms - hyperthermophiles and halophiles - importance in biotechnology.

UNIT-III

Microbe-microbe interactions - Lichens, antagonistic interactions - amensalism, mycoparasitism - Animal-microbe interaction - Ectosymbiosis of Protozoa, Runinant symbiosis - Plant-microbe interaction - Rhizobium, Mycorrhizae, Anabaena - sponge.

UNIT-IV

Marine food borne pathogens & Water borne pathogens - Aeromonas, Vibrio, Salmonella, Pseudomonas, Leptospira, Cornybacter.

UNIT-V Production and applications of marine microbial products - pigments - Astaxanthin, β carotene - enzyme - antibiotics - polysaccharide - sea food preservation methods.

PAPER-4
C. CLINICAL MICROBIOLOGY

UNIT -I

Infection and Immunity: General principles of Infection, Antigens, Antibodies, Antigen- antibody reactions, complement system

UNIT -II

Immune system - structure and functions, immune response, immunodeficiency disease, hypersensitivity, autoimmunity, Immunology of transplantation and malignancy, immunohematology

UNIT -III

Pathogenic/parasitic organisms: Bacterial, viral and protozoal infections of the gastrointestinal system, nervous system, lung, liver and eye; Sexually transmitted diseases, skin infections, zoonoses, arthropod borne diseases. Transmission and spread of diseases - Disease epidemiology.

UNIT -IV

Control and prevention of infections - drugs and antibiotics - drug resistance, Mycobacteria, leprosy and malarial parasite - importance, lifecycle, spread and control.

Biochemical changes due to infections - Blood test and tissue analysis. Isolation and identification of organisms from tissue samples. Disease detection - conventional and molecular techniques.

UNIT -V

Normal microbial flora of human body, Laboratory control of antimicrobial therapy, Immunoprophylaxis. Vaccines - types and methods of action. Biotechnological approaches to disease control and vaccine production. Genetic disorders and Gene therapy. Control of vectors - Mosquito control - Biotechnological approaches.

Industrial Visit (IV)

Factory Industrial Visit (M. Sc. Applied Microbiology)

Course Objectives: Students will be exposed to professional work environment to acquire the knowledge, independent working capacity and leadership so that at the end of the course they will be able to manage the laboratory and research work with full responsibility and reliability.

Factory Industrial Visit Guide Line: Internship will be conducted in an institute under the supervision of supervisor/s.

During the **Industrial Visit**, students should his/her visiting work should be submitted to the supervisor/department. A report of an industrial Visit should be submitted to the department after completion of the work should be authorized by the concerned supervisor of the institute/factory.

Project / Dissertation with viva voce (M. Sc. Applied Microbiology)

Course Objectives: This course is designed to provide the knowledge and practice for the students of public health research activity, to enable them to carry out researches and solve research related problems and to help them in writing thesis and defend their work. Upon successful completion of the course, the students shall be able to: 1. Search relevant scientific literature 2. Develop a research proposal 3. They find appropriate data collection techniques and tools 4. Manage collected data 5. Analyze data with appropriate statistical techniques 6. Write thesis 7. Defend the findings

Proposal Development: At the beginning of Second year (Fourth Semester), students should carry out with the consultation of designated faculties. Extensive literature survey will develop research proposal during the initial 3 months period.

Data Collection/ Thesis Writing Students will carry out data collection, data management, data analysis, and thesis writing during the remaining period (Fourth Semester).

The Dissertation should have following format: 1. Title 2. Introduction 3. Materials and Methods 4. Results 5. Discussion 6. Conclusion 7. Recommendation 8. References 9. Appendix

THIRUVALLUVAR UNIVERSITY

M.Sc. BIOCHEMISTRY

SYLLABUS

UNDER CBCS

(With effect from 2017-2018)

SEMESTER I

PAPER-1

CELL DYNAMICS AND ENVIRONMENTAL BIOLOGY

UNIT-I : CELLULAR ORGANIZATION, DIVISION AND CYTOSKELETONS

Cell types - organization of prokaryotic and eukaryotic cells, cell division - mitosis and meiosis, cell cycle - phases of cell cycle, and regulation of cell growth and cell cycle, cell motility - molecular motors, microtubules, structure and composition, micro tubular associated proteins - role in intracellular motility.

UNIT-II : CELLULAR ORGANELLES, CELLULAR COMMUNICATION AND TRANSPORT

Cellular organelles – morphology and function. Differentiation of cell membrane - microvilli, epithelia, Bell and sqot desmosomes - mechanical function, cell-cell interaction, cell adhesion proteins, cell junctions, tight junction and gap junction, cell surface of plant cells and cancer cells.
Overview of membrane protein - peripheral and integral, molecular model of cell membrane - fluid mosaic model and membrane fluidity, solute transport across membrane - passive transport, active transport by ATP powered pumps, types of transport systems.

UNIT-III : ENVIRONMENT AND ECOLOGICAL SUCCESSION

Physical environment – Biotic and abiotic environment; concept of habitat and niche, niche width and overlap, fundamental and realized niche, resource partitioning, character displacement. Ecological succession - types, mechanisms, and changes involved in succession.

UNIT-IV : POPULATION ECOLOGY & ORIGIN OF CELLS

Characteristics ofa population, population growth curves, population regulation, life history statergies (r and k selection). Concept of metapopulation – demes and dispersal, interdemic extinctions, age structured populations. Origin of basic biological molecules; abiotic synthesis of organic monomers and polymers; concept of oparin and Haldane, experiment of miller. Evolution of prokaryotes and eukaryotes.

UNIT V : PALEONTOLOGY , EVOLUTIONARY HISTORY AND MOLECULAR EVOLUTION

The evolutionary time scale, eras, periods and epoch; major events in the evolutionary time scale. Concepts of neutral evolution, molecular divergence and molecular clocks; molecular tools in phylogeny, classification and identification; Convergent evolution, sexual evolution and co-evolution.

References

1. The World of the cell - Becker, Kleinsmith and Harden Academic Internet Publishers; 5th edition 2006.
2. The Cell: A Molecular Approach, Fourth Edition- Geoffrey M. Cooper and Robert E. Hausman.
3. Cell and Molecular Biology by concepts and experiments - Gerald Karp John Wiley sons & Inc, - 2005.
4. Molecular cell Biology - Harvey Lodish. W. H. Freeman; Sol edition, 2007.
5. The Cell - Biochemistry, physiology and morphology - J. Brachet and A. E. Mirsky, Academic Press, 1963.

PAPER-2

CHEMISTRY OF MACROMOLECULES

UNIT-I: HOMO AND HETEROGLYCANS

Polysaccharides - occurrence, structure, properties and functions of homoglycans - starch, glycogen, cellulose, dextrin, inulin, chitins. Occurrence, structure, properties, and functions of heteroglycans - bacterial cell wall polysaccharides, glycoaminoglycans, agar, alginic acid, pectins, amino sugars and deoxy sugars, blood group substances and sialic acids. Glycoprotein and their biological applications. Lectins structure and functions.

UNIT-II: AMINOACIDS AND PROTEINS

Classification, properties and function of aminoacids and proteins.Primary structure - determination of amino acid sequence of proteins. The peptide bond: Ramachandran plot. Secondary structure - weak interactions involved - alpha helix and beta sheet and beta turns structure. Collagen triple helix. Super secondary structures - helix-loop-helix. Tertiary structure - alpha and beta domains. Quaternary structure - structure of hemoglobin.

UNIT-III : NUCLEIC ACIDS

Watson - Crick model of DNA structure. A, B and Z - DNA Cruciform structure in DNA, formation and stability of cruciforms, miscellaneous alternative conformation of DNA, slipped mispaired DNA, parallel stranded, anisomorphic DNA, palindrome.Types of RNA, hnRNA, methods for nucleic acid sequence determination, denaturation and renaturation, Cot value curve, hypochromic effect, DNA-protein interactions.

UNIT-IV : LIPIDS

Lipids - classification, phospholipids - classification, structure and functions. Ceramides and sphingomyelins. Eicosanoids, structure and functions of prostaglandins, thromboxanes, leukotrienes Types and functions of plasma lipoproteins. Amphipathic lipids - membranes, micelles, emulsions and liposomes. Steroids - cholesterol structure and biological role - bile acids, bile salts.

UNIT-V : VITAMINS

Vitamins - water soluble - thiamine, riboflavin, niacin, pyridoxine, folic acid, ascorbic acid-sources, structure, biochemical functions, deficiency diseases, daily requirements; fat soluble - vitamin A, vitamin D, vitamin E and vitamin K - sources, structure, biochemical functions, deficiency diseases, daily requirements.

4. Text Book of Biochemistry with clinical correlation - Thomas .M. Devlin, John Wiley-Liss, Hobokhen NJ publishers, 2006.
5. Biochemistry - Zubey, GL WCB Publishers.

PAPER-3

HUMAN PHYSIOLOGY AND NUTRITION

UNIT-I : DIGESTION, ABSORPTION AND EXCRETION

Digestive secretions - composition, functions and regulation of saliva, gastric, pancreatic, intestinal and bile secretions. Digestion and absorption of carbohydrates, lipids and proteins.

Excretory system - structure of nephron. Formation of urine - glomerular filtration, tubular reabsorption of glucose, water and electrolytes, tubular secretion.

UNIT-II : BLOOD AND CIRCULATION

Composition and functions of blood and plasma. Blood groups. Blood coagulation - mechanism, fibrinolysis. Hemoglobin - structure, abnormal types, anemia. Structure of heart, cardiac cycle, heart sounds, E.C.G (elementary knowledge), blood pressure, spleen, lymph, normal composition and function of lymph - role of different lymph cells.

UNIT-III : RESPIRATION AND REPRODUCTION

Structure of lungs, mechanism and regulation of respiration. Transport of blood gases - O_2 and CO_2. Acid-base balance - role of buffers, erythrocytes, respiratory system and kidneys. Acidosis and alkalosis - metabolic and respiratory. Fluid electrolyte balance - regulation of water balance and sodium balance - role of renin-angiotensin and ADH.

Structure and function of reproductive organs, composition of semen, physiology of pregnancy, parturition and lactation.

UNIT-IV : NEUROMUSCULAR FUNCTION

Structure and function of nerves, neurons, resting and action potential, transmission of nerve impulses, synaptic transmission, compounds affecting synaptic transmission, neuromuscular junction. Structure of muscle cells and muscle contraction, molecular organization of muscle, proteins of contractile element - their organization and role in contraction, energy for contraction.

UNIT-V : NUTRITION

Basal metabolism, basal metabolic rate, factors affecting BMR, determination of BMR - direct and indirect method, respiratory quotient. Role of fiber in diet, role of essential amino acids - relation with Marasmus, Kwashiorkar disease, role of essential fatty acids, disorders of fatty acid metabolism, Refsum's disease. Trace elements - macro and micro, daily requirements, functions, deficiency manifestations. Nutrition at different stages of life - during infancy, adolescence, pregnancy and old age.

6. Modern Nutrition and Health Diseases - M.E. Skilis and V.R. Young

ELECTIVE

PAPER-1
(To choose 1 out 3)

A. BIOPHYISCAL AND BIOORGANIC CHEMISTRY

UNIT-I : BIOENERGETICS

Thermodynamics - basic concepts. First, second and third laws of thermodynamics - enthalpy and entropy, exothermic and endothermic reactions. Free energy - standard free energy. Temperature and pressure dependence of free energy. Equilibrium for biochemical reactions. High energy phosphates and free energy. Redox reactions and free energy changes in biological reactions.

UNIT-II : SPECTROSCOPY AND STRUCTURAL ELUCIDATION

The electromagnetic spectrum - quantization of energy. Regions of the spectrum. Basic principles of UV, NMR and mass spectrometry and their biological applications. FT-NMR Nuclear overhauzer effect. Use of X-ray crystallography and CD in the study of proteins and nucleic acids.

UNIT-III : ATOMIC STRUCTURE AND CHEMICAL BONDS

Atomic orbitals. quantum numbers. Shapes of s, p and d orbitals. Aufbau principle, Pauli exclusion principle and Hund's rule. Electronic configuration of atoms, formation of chemical bonds, octet rule, ionic bond, covalent bond and co-ordinate bonds with examples.

UNIT-IV : FUNCTIONAL GROUPS AND REACTIONS

Classification of organic compounds based on functional groups and their nomenclature. Biologically important organic compounds (names and structures). Hemolytic and heterolytic cleavage of covalent bonds. Reactive species: electrophiles, nucleophiles and radicals. Types of organic reactions with examples. Inductive effect and resonance.

UNIT-V : ISOMERISM

Isomerism in organic compounds. Types of isomerisms, tautomerism with special reference to lactic acid.

Stereoisomerism. Geometric isomerism with special reference to maleic acid and unsaturated fatty acids. Partial double bond character of C-N bonds in amides. Geometrical isomerism in such compounds.

Optical isomerism, optical activity, enantiomers, diastereomers. Meso and dl forms. R-S and D-L notations in amino acids and sugars. Conformational analysis, conformations of ethane and cyclohexane.

B. PHARMACEUTICAL BIOCHEMISTRY

UNIT-I

Drug - Structural feature and pharmacology activity, prodrug concept. Absorption -first – pass effect. Distribution, metabolism- Phase I, II reactions, action of cytochrome p450 & elimination of drug receptor- localization, type and subtypes, models and their drug – receptor interaction, agonist & antagonist.

UNIT-II

Adverse response to drugs, Drug tolerance, Drug intolerance, Idio syneracy (pharmacogenesis), drug allergy. Tachyphylaxis, Drug abuse, vaccination against infection, factor that modifies the effect of drug. Assay of drug potency- bioassay and immunoassay.

UNIT-III

Biotechnology and pharmacy: Genetically engineered protein and peptide agents. Novel drug delivery systems – non conventional routes of administration. Anti-AIDS drug development, oncogenes ras target for drugs, multi-drug resistance.

UNIT-IV

Mechanism of action of drugs used in therapy of: Respiratory system – cough, bronchial – asthma, pulmonary tuberculosis. GIT – Digestants, appetite suppressants. Hypolipidemia agents, vomiting, constipation and peptic ulcer. Antimicrobial drugs – sulfonamides, trimethoprim, cotrimoxazole, penicillin, and macrolides. Aminoglycosides, Cephalosporin and bacterial resistance. Insulin and oral diabetic drugs, antifertility and ovulation inducingdrugs.

UNIT-V

Drugs of plant origin: Drug dependence and abuse – Management of self poisoning cancer. Chemotherapy – Cytotoxic drug. Immuno suppressive drug therapy. New Biological Targets for Drug Development. Novel Drug Screening Strategies.

5. Oxford textbook of clinicasl pharmacology and drug therapy. D.G. Burger’s medicinal Chemistry & Drug Discovery.
6. Principles and practice- Manfred.E. Wolf John Wiley and sons

ELECTIVE

PAPER-4

(to choose 1 out 3)

C. PLANT BIOCHEMISTRY AND PLANT MOLECULAR BIOLOGY

UNIT-I : ENERGY GENERATING MECHANISM

Photosynthetic Pigments, Light and Dark reactions of photosynthesis. Proton gradient and ATP synthesis of chloroplast and Bacterium. Mode of action of DCMU, Regulation of photosynthesis, Bacterio rhodopsin, CAM metabolism, RUBISCO, photorespiration and crop productivity.

UNIT-II: NITROGEN METABOLISM AND PLANT HORMONES

Nitrogen cycle, biochemistry of Symbiotic and Nonsymbiotic nitrogen fixation. Assimilation of ammonium , carbon-nitrogen ratio, Uride metabolism, nitrate metabolism, genetics of nitrogen fixation, genetic manipulation of Nif genes, Biosynthesis, Mode of action, transport, distribution and physiological effect of Auxin, Giberrilin, Cytokinin, Aba and ethylene.

UNIT-III : PLANT DISEASE AND SECONDARY METABOLITES

Biochemistry of plant disease, defence mechanism of plants, biosynthesis, distribution and biological functions of industrially important secondary metabolite, (Any 10) Principles of plant disease control.

UNIT-IV : PLANT PHYSIOLOGY

Water relations of plant, Mechanism of water absorption. Aquaporin Symplast - Apoplast concept. Ascent of sap, Transpiration and Stomatal mechanism. Source and sink relationship, Translocation of Inorganic and Organic substances, Bud and Seed dormancy. Senescence, Stress response in plant, Phytochromes- Properties, Photochemicals, transformation, Mode of action and physiological effect.

UNIT-V : PLANT MOLECULAR BIOLOGY AND BIOTECHNOLOGY

DNA polymorphism – Importance of RFLP and RAPD in plant breeding management. Aspects of plant genetic engineering. Tacking, Mapping and Cloning of plant genes, Selectable markers. Reporter genes and promoters used in plant vectors. Ti plasmids and Crown gall tumor, Genetic engineering of plant for disease resistance, Cytoplasmic Male Sterility, Edible oil, Biodegradable plastics, Delay of fruit ripening. Methods and Application of plant tissue culture.

Text Books:

1. Modern Plant Physiology - R.K. Sinha, Narosa Publishing House, 2004.
2. Microbiology – M.J. Pelczar, E.C.S. Chan and N.R. Kreig, Tata McGraw Hill Publishing Co., 5th Edition, 1986.
3. Microbiology – L.M. Prescott, J.P. Harley and D.A. Klein, McGraw Hill, 6th Edition, 2004.

References:

2. Plant Biochemistry and Molecular Biology – P.J. Lea, L.L. Castle and Lea, 2nd Edition, John Wiley & Sons, 1999.
3. Microbiology – B.D. Davis, R. Dulbecco, H.N. Eisen and H.S. Ginsberg. 3rd Edition, Harper & Row, 1980.

SEMESTER II
PAPER-4
ANALYTICAL BIOCHEMISTRY

UNIT I - ELECTROCHEMICAL TECHNIQUES AND ELECTROPHORESIS

Electrochemical techniques – principles, electrochemical cells – pH, Henderson – Hasselbalch equation, buffer capacity, pH measurement, glass electrode. Oxygen electrode – principle and application. Biosensors.

Separation of DNA fragments – Pulsed field gel electrophoresis. Autoanalyser – principal, instrumentation and applications. Isoelectric point-2D gel electrophoresis

UNIT II - ENZYME ASSAY, CENTRIFUGATION AND RADIOCHEMICAL TECHNIQUES

Enzyme monitoring technique – Assay methods, Immobilized enzymes.

Centrifugation: Preparative and Analytical ultracentrifuges.

Radiochemical methods – Basis concepts, counting methods and application. Autoradiography.

UNIT III – CHROMATOGRAPHY AND SPECTROSCOPY TECHNIQUES

GC, HPLC – principle, components, limitations and applications.

HPTLC – technique and applications

Optical rotatory dispersion, Circular dichroism, X-ray diffraction, Nuclear magnetic resonance, Electron spin resonance and Mass spectrometry – basic principle and application principle and applications of trubidimetry and nephelometry. Flow cytometry and cell separation.

UNIT IV – MOLECULAR TECHNIQUES

Restriction endonucleases, Restriction mapping, Nucleic acid probes – cloned probes, oligonucleotide probes and labelling of nucleic acid probs. Membrane blotting and hybridization of nucleic acids – Southern, Northern, Western, dot-plot and Fluorescent insitu hybridization. RFLR – Technique & applications.

PCR basic principle, technique, diagnostic and laboratory applications of PCR, RAPD

Construction of DNA and Oligonucleotide microarray.

UNIT V–MOLECULAR MARKERS ANALYSIS

Diagnostic applications of nucleic acid probes – sickle cell anaemia, thalassemia, haemophilia and lymphoid malignancy. Mutagenicity testing – Ames test. Comet assay and DNA fragmentation assay. Identifying protein – DNA interactions – DNA foot printing, DNA finger printing – Technique and applications. HLA typing – applications.

PAPER-5
ADVANCED ENZYMOLOGY

UNIT-I : CLASSIFICATION, PURIFICATION AND ACTIVE SITE

Nomenclature and classification of enzymes, isolation and purification of enzymes – enzymeprotein determination by different methods, criteria of purity - specific activity.Enzyme units - Katal, IU. Measurement of enzyme activity - two point assay, kinetic assay, using radiolabelled substrates. Active site - determination of active site amino acids - chemical probe, affinity label, and site-directed mutagenesis, intrinsic and extrinsic regulations.Investigation of 3-D structure of active site.A brief account of nonprotein enzymes - ribozymes and DNA enzymes.

UNIT-II : ENZYME KINETICS

Kinetics of single substrate enzyme - catalysed reactions - Michaelis - Menten equation, importance of Vmax, Km, MM equation, and turnover number; Lineweaver - Burk plot, Eadie - Hofstee plot, and Hanes - Woolf plot .

Presteady - state kinetics and relaxation kinetics.Kinetics of Allosteric enzymes - MWC and KNF models Hill' equation coefficient. Kinetics of multi - substrate enzyme - catalysed reactions - Ping-pong bi-bi, random order and compulsory order mechanism.

UNIT-III : ENZYME CATALYSIS AND INHIBITION

Mechanism of enzymicaction , mechanism of serine proteases - chymotrypsin, lvsozyme, carboxy peptidase A and ribonuclease.

Reversible inhibition - competitive, uncompetitive, noncompetitive, mixed, substrate and allosteric inhibition.Irreversible inhibition.

UNIT-IV : COENZYMES AND ISOENZYMES

Coenzymes - prosthetic group, classification - vitamin and nonvitamin coenzymes, thiamine pyrophosphate - mechanism of oxidative and nonoxidative decarboxylation, transketolase reaction, PALP and PAMP - role of PALP in transamination and decarboxylation reaction, folate coenzymes and vitamin C, metabolite and nonvitamin coenzymes, lipoic acid, coenzyme Q, nucleoside triphosphate and S-adenosyl methionine. Isoenzymes.

UNIT-V : INDUSTRIAL AND CLINICAL USES OF ENZYMES

Industrial uses of enzymes - sources of industrial enzymes, thermophilic enzymes, amylases, glucose isomerases, cellulose degrading enzymes, lipases, proteolytic enzymes in meat and leather industry, detergents and cheesed production.

Clinical enzymology - Enzymes as thromblytic agents, anti-inflammatory agents.Immobilization of enzymes and their applications.

5. Biochemistry - Stryer. W. H. Freeman; 6 edition, 2006.

PAPER-6

INTERMEDIARY METABOLISM

UNIT-I : BIOENERGETICS AND BIOLOGICAL OXIDATION

Free energy and entropy.Phosphoryl group transfers and ATP. Enzymes involved in redox reactions. The electron transport chain - organization and role in electron capture.

Oxidative phosphorylation - Electron transfer reactions in mitochondria. F_1F_0 ATPase - Structure and mechanism of action. The chemiosmotic theory.Inhibitors of respiratory chain and oxidative phosphorylation - Uncouplers and ionophores.Regulation of oxidative phosphorylation.

Mitochondrial transport systems - ATP/ADP exchange, malate / glycerophosphae shuttle, creatine - phosphate shuttle.

UNIT-II : CARBOHYDRATE METABOLISM

Glycolysis ,citric acid cycle andgluconeogenesis-pathway, key enzymes and coordinate regulation.The pentose phosphate pathway. Metabolism of glycogen and regulation.Metabolism of galactose and fructose.The glyoxylate cycle.Cori cycle. Futile cycles, anaplerotic reactions.

UNIT-III : LIPID METABOLISM

Oxidation of fatty acids - α,β and ω. Metabolism of ketone bodies - Formation, utilization, excretion and clinical significance. Biosynthesis of fatty acids.Metabolism of triglycerides, phospholipids and sphingolipids. Cholesterol - Biosynthesis, regulation, transport and excretion. Eicosanoid metabolism.

UNIT-IV : AMINO ACID, PURINE AND PYRIMIDINE METABOLISM

Biosynthesis of aromatic aminoacids.Catabolism of amino acid nitrogen - Transamination, deamination, ammonia formation and the urea cycle.Disorders of the urea cycle.Catabolism of carbon skeletons of amino acids.Conversion of amino acids to specialized products.

Metabolism of purines - *De novo* and salvage pathways for biosynthesis.Purine catabolism.Biosynthesis and catabolism of pyrimidines.

UNIT-V PORPHYRINS,PHOTOSYNTHESIS AND METABOLIC INTEGRATION

Biosynthesis and degradation of heme.

Photosynthesis - Photosynthetic apparatus, light reaction, cyclic and noncyclic photophosphorylation. Dark reaction - Calvin cycle, Hatch-Slack pathway.Photorespiration.Starch biosynthesis and degradation.Bioluminescence.
Integration of metabolism - Interconversion of major foodstuffs.Metabolic profile of the liver, adipose tissue and brain.Altered metabolism in starvation.

Text Books

1. Biochemistry 4th ed. Brooks/Cole Pub Co - Campbell and Farrell, 2002.
2. Biochemistry NMS. 4th ed. Lippincott. Willams and Wilkins - Davidson and Sittman, 1999.
3. Biochemistry - Donald Voet, J.G. Voet and John Wiley, 1995.
4. Biochemistry, 2nd ed. Schaum's Outlines McGraw Hill - Kuchel and Ralston, 1998.
5. Harper's Biochemistry. 26th ed. McGraw Hill - Murray, et al. 2003.
6. Lehninger's Principles of Biochemistry, 4th ed. McMillan Worth - Nelson Cox, 2004.
7. Biochemistry - Stryer. W. H. Freeman; 6 editions, 2006.

MAIN PRACTICAL

PAPER-1

A. ISOLATION AND CHARACTERIZATION STUDIES

1. Isolation and estimation of glycogen from liver.

2. Isolation and estimation of DNA from liver and spleen.

3. Isolation and estimation of RNA from plant tissues or yeast.

4. Isolation of lecithin from egg yolk.

5. Denaturation of DNA and UV absorption studies. (demonstration).

B. QUANTITATIVE ANALYSIS

1. Estimation Of Ascorbic Acid

2. Estimation of inorganic phosphorus by Fiske and SubbaRao method.

3. Determination of pyruvate or lactate

4. Determination of tryptophan.

5. Determination of protein by Lowry's method.

6. Estimation of sodium by flame photometry.

7. Estimation of glutathione from tissue/blood

8. Estimation of Iron

C. TECHNIQUES

1. Preparation of buffers and measurement of pH using indicators and pH meter.

2. Separation of amino acids sugars and lipids by thin layer chromatography.

3. Separation of plant pigments by column chromatography.

4. Separation of serum proteins by PAGE.

5. PCR Technique - Demonstration

References

1. Practical Biochemistry - K. Wilson and I. Walker. 5th edition, Cambridge University press, 2000.

2. Practical Biochemistry – Shawney.

3. Biochemical Methods - S.Sadasivam & A.Manickam, New Age International.

MAIN PRACTICAL

PAPER-2

A. ENZYMOLOGY - PURIFICATION AND KINETIC STUDIES

1. Subcellular fractionation of organelles from liver cells and identification by marker enzyme - LDH

2. Isolation of acid phosphatase from potato.

a. Determination of optimum pH.
b. Determination of optimum temperature.
c. Effect of substrate concentration on acid phosphatase activity.
d. Inhibition of acid phosphatase activity.

3. Assay of clinically important enzymes.

a. Assay of serum/tissue alkaline phosphatase activity.
b. Assay of serum acid phosphatase activity.
c. Assay of serum creatinine phosphokinase activity
d. Assay serum alanine aminotransferase activity.
e. Assay of serum aspartate aminotransferase activity

B. MICROBIAL TECHNIQUES

1. Handling and maintenance of microscopy.
2. Sterilization techniques - principles, methods, moist heat, dry heat, filter types CDC, safety levels.
3. Preparation of media - liquid, solid, agar deep. Slant and plate.
4. Staining techniques - simple, differential and special staining.
5. Pure culture techniques - streak plate, pour plate.
6. Growth curve - non-visual method turbidity method.
7. Identification and enumeration of microorganisms from soil - streak plate, pour plate.
8. Identification and enumeration of microorganisms from water - standard plate count, MPN test and membrane filtration technique.
9. PCR Technique - Demonstration

References

1. Practical Biochemistry - K. Wilson and I. Walker. 5th edition, Cambridge University press, 2000.

2. Practical Biochemistry – Shawney.

3. Biochemical Methods - S.Sadasivam & A.Manickam, New Age International.

4. Medical laboratory Technology Volume I, II & III - KL Mukherjee

ELECTIVE

PAPER-2

(to choose 1 out of 3)

A. MICROBIOLOGY

UNIT-I : MORPHOLOGY AND ULTRASTRUCTURE

Ultrastructure of bacteria, fungi, algae and protozoa.Classification of microbes, molecular taxonomy, cell walls of eubacteria - peptidoglycan and related molecules.Structure and synthesis of cell wall and cell membrane of gram - positive and negative bacteria.Flagella and motlility.Cell inclusion bodies.

Blue and green bacteria.Budding and appendaged bacteria, spirilla, spirochaetes, gliding and sheathed bacteria, pseudomonads, lactic and propionoc acid bacteria.Endospore forming rods and cocci, myobacteria, rickettsia and mycoplasma.Archaebacteria.

UNIT-II : MICROBIAL GROWTH AND METABOLISM

Microbial growth - definition.Mathematical expression of growth, growth curve, measurement of growth and factors affecting growth.

Microbial metabolism - overview, photosynthesis in microbes.Role of chlorophylls, carotenoids and phycobilins, Calvin cycle.Chemolithotrophy: hydrogen - iron - nitrite oxidizing bacteria: nitrate and sulfate reduction: methanogenesis and acetogenesis, fermentations - diversity, syntrophy - role of anoxic decompositions. Nitrogen metabolism, nitrogen fixation, hydrocarbon transformation.

UNIT-III : MICROBIOLOGICAL TECHNIQUES

Methods in microbial identification.Pure culture techniques.Theory and practice of sterilization.Principles of microbial nutrition, construction of culture media.Enrichment culture techniques for isolation of chemoautotrophs, chemoheterotrophs and photosynthetic microbes.

UNIT-IV : VIRUSES

Bacteria, plant, animal and tumor viruses.Classification and structure of viruses.Lytic cycle and lysogeny. DNA viruses: positive and negative strand. Double stranded RNA viruses. Replication: example of herpes, pox, adenoviruses, retroviruses, viroids and prions.

UNIT-V : MEDICAL MICROBIOLOGY

Disease reservoirs; Epidemiological terminologies.Infectious disease transmissions. Respiratory infections caused by bacteria and viruses; Tuberculosis, sexually transmitted diseases including AIDS; Vector bone diseases, water borne diseases, Public health and water quality. Pathogenic fungi, Antimicrobial agents, Antibiotics.Penicillins and cephalosporins, Broad spectrum antibiotics.Antibiotics from prokaryocytes, antifungal antibiotics - mode of action, Resistance to antibiotics.

Text Books

2. Microbiology. 4th ED - Davis, et al. Lippincott Williams and Wilkins, 1989.
3. Microbiology -Joklik, et al. Zinsser's McGraw Hill Professional, 1995.
4. Brack Biology of Microorganisms, 10th ed- Madigan, et al. Prentice Hall, 2002.
5. Microbiology, 5th Ed. - Pelczar et al. McGraw Hill, 2000.
6. Microbiology -Prescott et al. Mcgraw Hill, 1999.
7. General Microbiology. 5thed,Stainer RY, et al. Prentice Hall, 1986.

ELECTIVE

PAPER-2 (to choose 1 out of 3)

B. BIOCHEMICAL AND ENVIRONMENTAL TOXICOLOGY

UNIT-I

Definition and scope of toxicology: Eco-toxicology and its environment significance toxic effects. Basis for general classification & nature, dose - response relationship. Synergism and Antagonism, Determination of ED 50 & LD 50.

Acute and chronic exposures. Factors influencing toxicity. Pharmaco dynamics & Chemo dynamics.

UNIT-II

Principles & procedures of testing for acute toxic effects. Regulators guidelines, mammalian systems affected & the clinical signs of systemic toxicity. Factors affecting acute toxicity studies. Biochemical basis of toxicity. Mechanism of toxicity: disturbance of excitable membrane function altered calcium homeostasis. Covalent binding to cellular macromolecules. Genotoxicity. Tissue specific toxicity.

UNIT-III

Toxicity testing : Test Protocol, Genetic Toxicity Testing & Mutagenesis Assays: *Invivo* test systems- Bacterial Mutation Tests: Reversion Tests, Ames test, Fluctuation Tests & Eukaryote Mutation Tests In Vivo Mammalian Mutation Tests – host mediated assay & dominant lethal test. Use of drosophila in toxicity testing. DNA repair assays. Chromosome damage test. Toxicological Evaluation of Recombinant DNA –Derived Proteins.

UNIT-IV

Food toxicology: Toxicology of food additives. Metal toxicity: Toxicology of Arsenic, Mercury, Lead and Cadmium. Environmental Factors Affecting Metal Toxicity- Effect of Light, Temperature & PH. Diagnosis of toxic changes in liver and kidneys: Metabolism of Haloalkanes. Haloalkenes & Paracetomol with their toxic effects on tissues.

UNIT-V

Air pollution: common air pollutants and their sources. Air pollution & ozone. Air pollution due to chloroflurocarbons (CFCS) and asbestos. Occupational toxicology and assessment of occupational hazards: industrial effluent toxicology & environmental health. An overview of regulatory agencies: responsibilities of regulatory agencies. Management of toxicological risks. Regulatory approaches. Regulatory systems and organizations.

SEMESTER III

PAPER-7

ADVANCED ENDOCRINOLOGY

UNIT-I : CLASSIFICATION AND MECHANISM

Hormones - definition, classification based on receptors, hormone cascade system involving CNS, hypothalamus, anterior pituitary, target gland, feedback mechanisms, classification of hormones (polypeptides, glycoproteins and POMC peptides), genes and formation of polypeptide hormones - POMC peptides and vasopressin, insulin, Parathyroid.

UNIT-II : AMINO ACID DERIVED HORMONES

Synthesis of amino acid derived hormones-epinephrine and thyroxine, inactivation and degradation of hormones, signal transduction and second messengers - adenylate cyclase system, cAMP, adrenalin and glycogen degradation. G-protein as cellular transducer, inositol triphosphate and calcium release, glycogen phosphorylase kinase, DAG and protein kinase C-pathway.

UNIT-III : CYCLIC HORMONAL CASCADE SYSTEM AND PROTEIN KINASES

Cyclic hormonal cascade system - chronotropic control, melatonin and serotonin - light and dark cycle, ovarian cycle and role of hormones, hormone - receptor interactions, multiple hormone subunits Sactchard analysis, structure beta -adrenergic receptor and insulin receptor, internalization of receptors, intracellular action - protein kinases, insulin receptor - transduction through tyrosine kinase, vasopressin - protein kinase A, GnRH-protein kinase C, atrial natriuretic factor - protein kinase G.

UNIT-IV : HORMONE RECEPTORS AND REGULATION

Steroid hormone receptors, intracellular protein receptors, structural organization of receptor protein, hormone binding domain, antigenic domain and DNA binding domain, organizations of functional elements - hormone response elements, positive and negative transcriptional effects of S.R, receptor activation - upregulation and down regulation, apoptosis - steroid hormone action at cell level, multiple endocrine neoplasia - different types.

UNIT-V : STEROID HORMONES

Structure, biosynthesis, transport of steroid hormones in blood and metabolic inactivation of steroid hormones, control of synthesis and release of steroid hormones, Hormones that directly stimulate synthesis and release of steroid hormone with reference to the second messengers and the signal pathway (cortisol, aldosterone, testosterone, 17B - estradiol, progesterone and calcitriol).

PAPER-8

RESEARCH METHODOLOGY

UNIT- I : SCIENTIFIC RESEARCH & WRITING

Importance and need for research. Ethics and scientific research. Formulation of hypothesis. Types and characteristic designing a research work. Scientific writing - Characteristics - Logical format for writing thesis and papers. Essential features of abstract, introduction, review of literature, materials and methods, and discussion. Effective illustration - tables and figures. Reference styles - Harvard and Vancouver systems.

UNIT-II : BIOSTATISTICS

Collection and classification of data - diagrammatic and graphic representation of data- measurement of central tendency - standard deviation - normal distribution - test of significance based on large samples - small samples - Student t test -correlation and regression - Chi square test for independence of attributes - ANOVA.

UNIT- III : BIOINFORMATICS

Introduction to bioinformatics, scope of bioinformatics, role of computers in biology The internet. The World Wide Web. Useful search engines - Boolean searching, search engine algorithms. Finding scientific articles – PubMed,Science direct.

UNIT-IV : DATABASES

Data base concepts - database, database system, database management systems - hierarchical , rational and network, database security. Biological databases - types, sequence and structure. Data submission and data retrieval. Searching sequence databases - sequence similarity searches, amino acid substitution matrices. Database search - FASTA and BLAST, CLUSTAL.

UNIT-V : BIOETHICS AND PATENTING

Declaration of Bologina. Ethics in animal experimentation. CPCSEA guidelines - Animal care and technical personnel environment, animal husbandry, feed, bedding, water, sanitation and cleanliness, waste disposal, anesthesia and euthanasia.

Composition of (Human) institutional Ethical Committee (IEC) - General ethical issues. Specific principles for chemical evaluation of drugs, herbal remedies and human genetics research, Ethics in food and drug safety. Environmental release of microorganisms and genetically engineered organisms Ethical issues in human gene therapy and human cloning.

Patenting - definition of patent. Product and process patents. Patenting multicellular organisms. Patenting and fundamental research.

Books Recommended

1. How to write a scientific paper- R.A. Day.. Cambridge University Press.
2. Guide to scientific and technical writing - Cooray P.G.
3. Methods of Research - Carter V. Good and Douglas E seats.
4. The craft of scientific writing - Alley, Michael. Englewood Cliffs. N.N. Prentice 1987.
5. Desk Top Publishing on PC - M.C. Sharma, BPB Publications, 1997.
6. Introduction to Bioinformatics - Lesk, A.M. Oxford 2002.
7. Bioinformatics Computing 1st Edition - Bergeron BP 2002 Printice Hall
8. Fundamental concepts of bioinformatics - Krane et al Benjamin Cummings.
9. An Introduction to Biostatistics - Sundar Rao, Jesudian Richard.
10. Fundamentals of statistics - S.P. Gupta , Sultan Chand.
11. Ethics and the use of alternatives to animals in research and education, ShiraneePereira, CPCSEA.
12. CPCSEA guidelines for laboratory animal facility (CPCSEA) - No.13 Seaward road, Valmiki Nagar, Chennai-41.
13. Ethical guidelines for biomedical research on human subjects. ICMR, New Delhi,2000.
14. Dickson. Molecular and cell biology of human gene therapeutics. Series Chapman and Hall 1995.

PAPER-9

BIOTECHNOLOGY

UNIT-I : TOOLS OF GENETIC ENGINEERING

Basic principles - mechanism of natural gene transfer by Agrobacterium, generation of foreign DNA molecules, restriction enzymes, their types and target sites, cutting and joining DNA molecules, linkers, adapters, homopolymers, enzymes used in genetic engineering, cloning vehicles and their properties, natural plasmids, i*nvitro* vectors, cosmids and T-DNA based hybrid vectors.

UNIT-II : DNA CLONING AND SEQUENCING

Cloning strategies - cloning with single strand DNA vectors, cDNA cloning and gene libraries, recombinant selection and screening methods, expression of cloned genes-problems and solutions, shuttle vectors, DNA sequencing strategies - Sanger's and Maxam Gilbert's methods, PCR-types and applicationsand DNA hybridization, Southern, Northern andWestern blotting.

UNIT-III : GENE TRANSFER AND APPLICATIONS

Techniques of tissue culture-culturing explants and haploids, protoplasts fusion, methods of gene transfer to plants, animals and bacteria-Ca transfection, electroporation, shotgun and others, transgenic plants, GM foods, and biopesticides, gene knockouts and transgenic animals, xenogarfting, biodegradation, stimulation and its applications, bioleaching.

UNIT-IV : INDUSTRIAL BIOTECHNOLOGY

Applications of biotechnology-industrial biotechnology-fermentors, principle, types product recovery and purification of ethanol, citric acid, vitamin B 12, streptomycin, enzyme biotechnology-production and uses of industrially important enzymes such as protease.

UNIT-V : BIOSAFETY AND BIOETHICS

Biotechnology - potential hazards, biological weapons, biosafety of GM foods and GMOs - substantial equivalence and safety testing, gene drain, the tangled genes, human genome research - the objectives and approaches, the controversies, issues of biotechnology-social and scientific, technology protecting systems and the terminator, IPR, its concepts and conditions -patenting of genes, cells and life forms, evaluation of life patenting.

3. Gene cloning - an introduction by TA Brown, Chapman and Hall.
4. Molecular Biotechnology, 2nd ed - Glick & Pasternak, Panima Publications.

ELECTIVE
PAPER – 3
(To choose 1 out of 3)

A. IMMUNOLOGY

UNIT-I : LYMPHOID SYSTEM, ANTIGENS AND ANTIBODY

Lymphoid system - central and peripheral lymphoid organs and cells involved in immune system. Antigen, haptens, adjuvants, antigenicity, antigenic determinants and epitopes. Immunoglobulins basic structure, classification, functions, allotypes and idiotypes. Theories of antibody formation- side chain and clonal selection theory. Antibody diversity - mechanisms contributing to diversity - somatic recombination, rearrangement and generation of antibody diversity.

UNIT-II : IMMUNITY AND COMPLEMENT SYSTEM

Types of immunity - innate and acquired immunity, antitoxin, antibacterial and antiviral immunity. Immune response - primary and secondary - humoral and cell mediated immunity. Antigen recognition - T cell and B cell receptor complexes, antigen processing and presentation. Interaction of T and B cells, cytokines. Immunological memory, cytotoxicity - immunotolerance, immunosuppression.

Complement system - components, nomenclature, activation of complement, complement receptors and alternate pathway.

Immunity toextracellular and intra cellular microbes-Bacteria,Virus,Fungi and Parastites

UNIT-III : VACCINES AND IMMUNOLOGICAL TECHNIQUES.

Vaccines - killed attenuated organisms, toxoid, recombinant vaccines, subunit vaccines, DNA vaccines, synthetic peptide vaccines, antiidiotypic vaccines. Immunization practices- immunoprophylaxis and immunotherapy.

Immunological techniques - Production of polyclonal and monoclonal antibodies. Immunoprecipitation, RIA, ELISA, fluorescent immunoassay, avidin-biotin mediated assay, immunohistochemistry, immunoelectrophoresis, immunoblotting. Complement fixation test.

UNIT-IV : GENETIC BASIS OF IMMUNOLOGY, TRANSPLANTATION AND TUMOR IMMUNOLOGY

MHC complex - gene organization - HLA genes class I and II antigens. Structure and function. Histocompatibility testing - lymphocytotoxicty test - cross matching. MHC and disease association.

Transplantation - types, genetics of transplantation - graft versus host reactions. Tissue matching and immuno suppressive agents.

Tumor immunology - immune surveillance, tumor antigens, immune response to tumors, immunotherapy of tumors.

UNIT-V : HYPERSENSITIVITY, AUTOIMMUNE AND IMMUNODEFICIENCY DISORDERS

Hypersensitivity - definition and classification - type I, II, III, IV and V hypersensitivity, mechanism involved, diagnosis and treatment.

Autoimmunity and autoimmune diseases - mechanism of development, diagnosis and treatment.

Immunodeficiency disorders-B cell deficiencies, T cell deficiencies, secondary immunodeficiency diseases-pathogenesis, diagnosis and treatment of AIDS.

4. Immunological Techniques - D. M. Weir.
5. Basic and Clinical Immunology -Daniel P. Stites, John D. Stobo,J. Vivian Wells,Appleton & Lange; 6th edition,1987.

B. BIOINFORMATICS

UNIT-I

Computer peripherals and hardware description: computer system design. Recognition and Structure of Different Components of A Computer System And Their Respective Usage. I/O and Storage Devices with Data Communication with Introduction of Internet. Connections to the internet, internet service requirements and applications – e-mail - World Wide Web, URL, HTML, TCP/IP

UNIT-II

Operating systems: system and applications software, evolution of operating systems, layered structure of operating system, CUI and GUI's DOS internet and external commands, batch files: WIN 95/98: Anatomy of windows and features, multitasking.
Office applications : MS-Office 95/97/2000/2003 including MS-Word, MS-Excel, MS Powerpoint.

Logic developments: generation of programming languages, emulation of common DOS commands using C and C++, data structures in C objects and classes, pointers arravasione and two dimensional) normal string and file handling in C.

UNIT-III

Introduction to bioinformatics – biological data bases- sequence analysis-need and importance-pajirwise alignments – dot plot, dynamic programming – global(needle man-wunsch) and local (smith-waterman) alignment algorithms- scoring and substitution matrix – data base searching. Basics of Entrez, BLAST, and FASTA search procedures- multiple alignment. CLUSTAL – Njplot-Phylogenetis trees.

UNIT-IV

Secondary structure prediction of RNA and protein – detecting ORFs- restriction maps, algorithm for Tm calculations, primer design and probe synthesis – structural classification of proteins (SCOP and CATH) – structural genomics-functional genomics and proteomics – DNA microarrays – present status and future prospects.

UNIT-V

3-D Structural analysis of biomolecules – Molecular Visualization Tools – rasmol, Chime, weblab Viewer, Deep View, ISIS Draw, chemdraw, molmol, etc – computer modeling of proteins. Simulation studies and virtual reality – Simulation Of ES Complex Interaction and stereodynamic concept- structural studies of substrate – Ligand Binding – Drug Designing-introduction to PERL and BIOPERL to facilitate Biological Analysis.

C. NANO BIOTECHNOLOGY

UNIT I: NANOBIOMATERIALS

Introduction – Biocompatibility - Antibacterial activity- Principles involved - Applications. Biomaterial Nanocircuitry: Protein based nanocircuity: Neurons for network formation. DNA nanostructures for mechanics and computing and DNA based computation: DNA based nanomechanical devices.

UNIT II: NANOBIOTECHNOLOGY

Interaction between Biomolecules and Nanoparticle surface, Different types of inorganic materials used for the synthesis of Hybrid Nano-bio assemblies, Application of Nano in biology, Nanoprobes for analytical applications- A new methodology in medical diagnostics and biotechnology, Current status of Nanobiotechnology, Future perspectives of Nanobiology, Nanosensors.

UNIT III: NANOMEDICINES

Developing of Nanomedicines, Nanosystems in use, Protocols for Nanodrug administration, Nanotechnology in Diagnostics applications, Materials used in diagnostics and therapeutic applications - Molecular Nanomechanics, Molecular devices, Nanotribology, Studying Tribology at Nanoscale, Nanotribology applications.

UNIT IV: MOLECULAR AND CELLULAR BIOLOGY

Molecular and cellular biology applications, 2-D electrophoresis and mass spectrometry of proteins, Protein Microarrays (Fabrication – Fluorescencedetection) - Binding Assays and Immunosensors- Integrated Nanobiotechnology Systems.

UNIT V: BIOLOGICAL METHODS OF SYNTHESIS

Use of Bacteria, Fungi, Actinomycetes for Nanoparticle Synthesis, Magnetotactic Bacteria for Natural Synthesis of Magnetic Nanoparticles: Mechanism of Formation: Viruses As Components for the Formation of Nanostructured materials: Synthesis Process and application, Role Of Plants in Nanoparticle Synthesis.

12. Nanobiotechnology: ed - C.M. Niemeyer, C.A.Mirkin.

SEMESTER IV

PAPER-10

MOLECULAR BIOLOGY

UNIT-I : DNA REPLICATION

Types of replication, evidence for semiconservative replication - Meselson and Stahl experiment, Replication in prokaryotes and inhibitors of replication, replication bubble, bidirectional replication, replicon, action of SSB, primase, DNA gyrase, topoisomerases, DNA polymerase I, II, and III, lagging and leading strand synthesis, Okazaki fragments, replication in RNA virus, plasmid replication (x174) reverse transcriptase, retroviruses, temporal control of replication. Eukaryotic replication and inhibitors of replication,

UNIT-II : TRANSCRIPTION

Transcription - definition, coding strand, template strand, sense strand and antisense strand, promotor, foot-printing experiment, DNA - dependent RNA polymerase role of Prinbnow box, template binding, prokaryotic transcription, Rho - dependent and independent transcription, posttranscriptional processing in prokaryotes, split genes, overiapping genes, housekeeping genes, biosynthesis of rRNA and tRNA, eukaryotic transcription, RNA editing - post-transcriptional modifications of eukaryotic RNAs, RNA splicing, introns and splicing reactions, self-splicing introns - group I and group II, exons, spacer sequences, enhancers.

UNIT-III : GENETIC CODE AND TRANSLATION

Genetic code - definition, deciphering of the genetic code, codon dictionary, salient features of genetic code. structure of tRNA, activating enzymes, binding of amino acids to tRNA, wobble mechanism and its significance, composition of prokaryotic and eukaryotic ribosomes, leader region, Shine-Dalgarno sequence, reading frameshift, prokaryotic and eukaryotic protein biosynthesis - initiation, elongation, translocation and termination, polysomes, post-translational modifications in prokaryotes and eukaryotes, inhibitors of protein synthesis.

UNIT-IV : PROTEIN TRANSPORT AND GENE EXPRESSION

Protein targeting, translocation, heat shock proteins, glycosylation, SNAPs and SNAREs, bacterial signal sequences, heat shock proteins, mitochondrial, chloroplast and nuclear protein transport, endocytosis-viral entry, ubiquitin TAG protein destruction, gene expression and regulations, molecular mechanism of regulation, prokaryotes - operon model, lac, trp, arabinose operons, repression and attenuation, eukaryotes - C value paradox, repetitive DNA, gene dosage and gene amplifications.

UNIT-V : MUTAGENESIS, DNA DAMAGE AND REPAIR

Mutagenesis and replication fidelity, misincorporation of nucleotides during DNA synthesis, transient and spontaneous chemical changes in DNA, frameshift mutagenesis, DNA damage - different types, DNA repair - direct reversal repair, direct repair of nicks, excision repair, nucleotide excision repair, mismatch repair, long and short patch mismatch repair, recombination error, SOS response and mutagenic repair.

PAPER-11

ADVANCED CLINICAL BIOCHEMISTRY

UNIT-I : SPECIMEN COLLECTION AND ANALYSIS

Concepts of accuracy, precision, reproducibility, reliability, and other factors in quality control. Normal values. Clinical significance of sugars, proteins, ketone bodies, bilirubin and porphyrins. CSF - collection, composition and analysis. Amniotic fluid - Origin, collection, composition.

UNIT-II : DISORDERS OF CARBOHYDRATE AND LIPID METABOLISM

Disorders of carbohydrate metabolism - blood sugar levels, hyper-and hypoglycemia, regulation of blood glucose, renal threshold, diabetes mellitus - etiologic classification and diagnostic criteria, glucose tolerance test, metabolic complications - acute and late complications. Hypoglycemic agents. Glycogen storage diseases, galactosemia, fructosuria.

Disorders of lipid metabolism - plasma lipids and lipoprotein abnormalities, lipidosis, Xanthomatoses, hypocholestremic agents, fatty liver. Atherosclerosis. Tay Sach's disease, Niemann Picks disease, Gaucher's disease, inherited disorders of familiar hyper and hypolipoproteinemias.

UNIT-III : DISORDERS OF PROTEIN METABOLISM AND CLINICAL ENZYMOLOGY

Disorders of protein metabolism - non-protein nitrogenous constituents in blood - urea, uric acid and creatinine. Plasma protein abnormalities - deficiency, agammaglobulinemia, multiple myeloma, proteinuria, glomerulonephritis, nephrotic syndrome. Haemoglobinopathies - sickle cell anaemia and thalassimia. Phenylketonuria, tyrosinosis, alkaptonuria, maple syrup urine disease, Hartnup disease, homocystinuria, albinism.

Serum enzyme activities in diseases - Principle and assay of aspartate aminotransferase, alanine aminotransferase, alkaline phosphatase, acid phosphatase, streptokinase, asparaginase, isocitrate dehydrogenase, ceruloplasmin, y -glutamyl transpeptidase, creatine kinase and lactate dehydrogenase.

UNIT-IV : HEPATIC AND RENAL FUNCTIONAL TESTS

Normal structure and functions of liver, diseases of the liver, hepatitis types, cirrhosis, alcoholic liver disease, hepatic tumor and bilary tract diseases, liver function tests, disorders of bilirubin metabolism. Gastric function tests.
Renal function tests and related disorders - acute and chronic renal failure, urinary tract obstruction and analysis of urinary calculi.

UNIT-V: FREE RADICALS, CANCER AND DISORDERS OF NUCLEIC ACID METABOLISM

Free radicals in health and disease - Endogenous and exogenous free radicals. Oxidative damages to lipids, proteins and DNA. Role of enzymatic and non-enzymatic antioxidants. Cancer: Morphological and metabolic changes in tumor cells. Tumor markers - AFP, CEA, hCG. Carcinogenic agents.

Inborn errors of nucleic acid metabolism - Lesch Nyhan syndrome, immunodeficiency diseases associated with defects in purine nucleotide metabolism, gout, oratic aciduria, xanthinuria. Serology: C-reactive protein.

MAIN PRACTICAL

PAPER -3

A. BIOCHEMICAL ANALYSIS OF BLOOD

1. Estimation of blood glucose by o-toluidine method.
2. Glucose tolerance test
3. Estimation of blood glucose by GOD-POD method using semiautoanalyser. (Demonstration)
4. Estimation of serum proteins by Bradford's Method.
5. Estimation of plasma fibrinogen.
6. Estimation of A.G. ratio in serum.
7. Estimation of blood urea by DAM method.
8. Estimation of serum uric acid by phosphotungstate method.
9. Estimation of serum creatinine by alkaline picrate method.
10. Estimation of serum triglycerides.
11. Estimation of serum cholesterol by Zlatkis, Zak and Boyle method.
12. Estimation of serum phospholipids.
13. Estimation of serum calcium.
14. Estimation of serum bilirubin by Evelyn Malloy method.
15. Estimation of glycosylated hemoglobin.

B. IMMUNOLOGICAL AND MOLECULAR BIOLOGY TECHNIQUES

1. Grouping of blood and Rh typing.
2. Latex agglutination test for rheumatoid factor and pregnancy.
3. ELISA - demonstration.
4. Extraction of genomic DNA and electrophoresis in agarose gel. (Demonstration)
5. Determination of molecular size of DNA. (Demonstration)
6. Restriction enzyme digestion and electrophoresis. (Demonstration)
7. Immunodiffusion
8. Production of antisera

6. Biochemical Methods - S.Sadasivam & A.Manickam, New Age International.

MAIN PRACTICAL

PAPER-4

A. HAEMATOLOGICAL METHODS

1. Collection, storage of blood and anticoagulants
2. Total RBC count
3. Total WBC count
4. Total platelet count
5. Differential WBC count
6. Absolute eosinophil count
7. Determination of hemoglobin content
8. Determination of clotting time.
9. Determination of prothrombin time
10. Determination of ESR.
11. Pathological examination of blood film.
12. Prothrombin time

B. URINE ANALYSIS

1. Collection and preservation of urine
2. Qualitative analysis of normal and pathological constituents in urine.
3. Microscopic analysis of urine
4. Estimation of titrable acidity of urine.
5. Estimate of true acidity.
6. Estimation of protein in urine by biuret method
7. Analysis of urinary calculi.
8. Estimation area in urine
9. Estimation uric acid in urine.
10. Estimation of calcium in urine.

C.Industrial study tour (Research institute/Industry one visit per year)

D. One week hands ontraining on any biochemical instrument.

References

5. Haematology for students Practitioners - Ramnik Sood
6. Biochemical Methods - S.Sadasivam & A.Manickam, New Age International.

Elective

A. STEM CELL TECHNOLOGY

UNIT-I

Stem cells -Introduction, Definition and basics of stem cells. Classification of stem cells-different types of stem cells- Human embryonic stem cells, Adult stem cells. Sources of stem cells - Fetus and various adult tissues – Advantages of stem cells.

Blastocyst culture- Various stages of embryonic development. In vitro fertilization. Xeno-free derivation of stem cells – Alternative feeder cells and feeder free culture. Cryopreservation of stem cells – Conventional slow- freezing method and Vitrification method. Properties of stem cells - self renewel, clonality and plasticity. Pluripotent nature of stem cells - Extrinsic and Intrinsic factors. Characterization of human embryonic stem cells – Expression of cell surface marker, Karyotyping.

UNIT-II

Stem Cells and their developmental potentials, Characteristics of stem cells-Transdifferntiation of stem cells. Controlled differentiation of human embryonic stem cells. In vivo and invitro differentiation of stem cells. Application of stem cells.

UNIT-III

Therapeutic cloning strategies, derivation and propagation of human embryonic stem cells. Reproductive cloning by SCNT. Use of SCNT. Limitations of cloning – Hurdles to improve the efficiency of therapeutic cloning. Stem cell research and ethics – translational medicine ethics.

UNIT-IV

Hematopoietic stem cells (HSC) - Basics, Development and Regulation of HSC. Clinical Application of HSC – Gene Therapy – using haematopoietic stem cells HSC for Leukemia.

Mesenchymal stem cells (MSC) - Differentiation and Identification. Characteristics of mesenchymal stem cells. Clinical applications of stem cells. Stem cells and regenerative medicine. Ips –induced pluripotent stem cells.

UNIT-V

Skeletal Muscle Stem Cells – Development and functions. Liver stem cells – Organization and functions. Tumor stem cells – Basics differences and Similarities of cancer stem cells and stem cells. Cancer stem cell signaling – NOTCH pathway. Canonical wnt signaling pathways in hematopoietic stem cells. Stem cell therapies in animal models. Use and benefits of stem cell for human beings.

References:

1. Handbook of stemcells- Robert Lanza.
2. Stem cell research and therapeutic.s. – Yanhong Shi
3. Stem cells reviews- Humana Press
4. Stem cells – C.S. Potten
5. Adult stem cells – Kursad Turksen.

B. HERBAL TECHNOLOGY

UNIT – I : PHARMACOGNOSY

Definition and history, Indian systems of medicine - Siddha, ayurvedha, and Unani systems. Taxonomy of locally available medicinal plants, their chemical constituents and medicinal uses - Classification of Crude drugs - Chemistry of Drugs - Future of pharmacognosy.

UNIT – II : CLASSIFICATION OF MEDICINAL PLANTS

Vernacular name and family - Geographical source, cultivation, collection, and processing for market and commerce in crude drugs. Morphological and histological studies, chemical constituents - Therapeutic and other pharmaceutical uses. Underground stem - ginger, Alpinia - Roots - Rauolfia - Belladona - Aerial parts - Bark - Cinchona.

UNIT – III : BIOMEDICAL IMPORTANCE OF MEDICINAL PLANTS

Leaves - Adathoda, Eucalyptus - Flower - Clove fruits seeds - Nux vomica Nutmegs, Gooseberry - unorganized drugs - Gum - Acacia - Resin - Turpentine, fixed oil - castor oil.

UNIT – IV : HERBAL MEDICINES FOR HUMAN AILMENTS

Drugs Acting on Cardiac Diseases, Cerebral Diseases, Nasal diseases - Blood pressure Drugs acting on Nervous system – Depressants, Stimulants. Respiration and Drugs - Urogenital system and drugs - Psychoactive plants.

UNIT – V : PROPAGATION OF MEDICINAL PLANTS

Micro and macro propagation, conservation of rare medicinal plants, Role of biotechnology in medicinal plant's banks,cultivation of medicinal and aromatic plants. Drug adulteration - methods of Drug evaluation. Herbal food - Food processing - packaging - Herbal sale and Export of medicinal plants - marketing - Intellectual property rights - Export laws.

8. Text book of pharmacognosy , 5th edition -Wallis, T.E, CBS publishers and distributors, New Delhi.

C. GENETIC ENGINEERING

UNIT-I

Introduction to gene cloning: Early development of Genetics - Gene cloning - Specialized tools and techniques - Importance of gene cloning

Intellectual property rights and types, Patenting, Isolation and Purification of DNA; Preparation of total cell DNA, Plasmid DNA, Bacteriophage DNA, Plant cell DNA.

UNIT-II

Cloning And Expression Vectors : Plasmids- Bacteriophages (M13 and λ) PUC vectors yeast vectors, agrobacterium, medicated gene transfer, YAC, BAC, Human artificial chromosomes, Ti plasmid, SV40, baculoviruses, adenoviruses, papilloma viruses and retroviruses.

UNIT-III

Multipulation of purified DNA: DNA manipulative enzymes – Nucleases, Ligases, polymerases, Topoisomerases, Restriction enzymes performing restriction digests, Ligation-joining DNA molecules together – Random labeling Nick translation and End filling.

UNIT-IV

Introduction to DNA into living cells: Biolistics, Electroporation, Microinjection, Liposome – mediated method and Calcium phosphate method.

UNIT-V

Construction of libraries – Studying gene and genome structure – Blotting techniques, PCR, Insitu hybridization, DNA Sequencing, Chromosome Walking and Jumping, DNA foot printing, Restriction analysis of DNA, RFLP, RAPD –Principles, Procedures and Applications.

THIRUVALLUVAR UNIVERSITY
M.Sc. CHEMISTRY
SYLLABUS
UNDER CBCS
(with effect from 2017-2018)

FIRST YEAR

SEMESTER I
PAPER - 1
ORGANIC CHEMISTRY I

OBJECTIVES:

To make the students learn and understand the concept of stereochemistry, conformational analysis and their application in the determination of reaction mechanism. To understand the mechanism of nucleophilic and electrophilic substitution reactions.

UNIT-I: STEREOCHEMISTRY

Optical activity and chirality, classification of chiral molecules as asymmetric and dissymmetric. A brief study of dissymmetry of allenes, biphenyls, spiro compounds, trans-cyclooctene, cyclononene and molecules with helical structures. Absolute configuration - R, S notation of biphenyls and allenes. Fischer projection. Inter conversion of Sawhorse, Newman and Fischer projections. Erythro and threo nomenclature, E and Z nomenclature - Asymmetric synthesis - Cram's rule.

UNIT-II: CONFORMATIONAL ANALYSIS

Conformational analysis of disubstituted cyclohexane and their stereochemical features (geometrical and optical isomerism (if shown) by these derivatives). Conformation and reactivity of substituted cyclohexanol (oxidation and acylation), cyclohexanone (reduction) and cyclohexane carboxylic acid derivatives (esterification and hydrolysis). Conformation and stereochemistry of cis and trans-decalin and 9 - methyldecalin.

UNIT-III: ALIPHATIC SUBSTITUTION REACTIONS

Nucleophilic substitution reactions: S_N1, S_N2 and S_Ni mechanisms - Neighboring group participation – Reactivity - structural and solvent effects - substitution in norbornyl and bridgehead systems - substitution at allylic and vinylic carbons - substitution by ambident nucleophiles - substitution at carbon doubly bonded to oxygen and nitrogen - alkylation and acylation of amines, halogen exchange, Von-Braun reaction, alkylation and acylation of active methylene carbon compounds, hydrolysis of esters, Claisen and Dieckmann condensation.

Electrophilic substitution reactions: S_E1, S_E2 and S_Ei mechanism, double bond shift - Reactivity. Migration of double bond, keto-enol interconversion, Stark- Enamine reaction, halogenation of aldehydes and ketones and decarboxylation of aliphatic acids.

UNIT-IV: ELIMINATION REACTIONS

E1, E2 and $E1_CB$ mechanism - E1, E2 and E1cB spectrum - Orientation of the double bond - Hoffman and Saytzeff rules - Competition between elimination and substitution. Typical elimination reactions- dehydration, dehydrohalogenation and dehalogenation. Stereochemistry of E2 eliminations in cyclohexane systems. Mechanism of pyrolytic eliminations. Chugaev and Cope eliminations.

UNIT-V: AROMATIC SUBSTITUTION REACTIONS

Electrophilic substitution reactions: The arenium ion mechanism. Orientation and reactivity (ortho, meta and para directing groups). Typical reactions including Reimer - Tieman reaction, Vilsmeier - Haack, Gattermann, Gattermann - Koch reaction and Kolbe reaction. Synthesis of di and tri substituted benzene (symmetrical tribromo benzene, 2-amino-5-methyl phenol, 3-nitro-4-bromobenzoic acid, 3, 4- dibromonitrobenzene and 1, 2, 3 - trimethylbenzene) starting from benzene or any monosubstituted benzene.

Nucleophilic substitution reactions: Mechanisms: S_N1, S_NAr and Benzyne mechanisms. Methods for the generation of benzyne intermediate and reactions of aryne intermediate. Nucleophilic substitution involving diazonium ions. Aromatic nucleophilic substitution of activated halides, Ziegler alkylation and Chichibabin reaction.

PAPER -2
INORGANIC CHEMISTRY I

OBJECTIVES:
To learn about the inorganic polymers. To study the concept of coordination chemistry, stability of the complexes and stereochemistry of complexes. To know about the structure and bonding of inorganic compounds.

UNIT-I: STRUCTURE AND BONDING - I

Polyacids: Isopolyacids and heteropolyacids of vanadium, chromium, molybdenum and tungsten.
Inorganic Polymers: Silicates, structure - properties - correlation and applications - molecular sieves, polysulphur - nitrogen compounds and poly – organophosphazenes
.

UNIT-II: STRUCTURE AND BONDING - II

Boron hydrides: Polyhedral boranes, hydroboration, carboranes and metallocarboranes.
Metal clusters : Chemistry of low molecularity metal clusters (upto) trinuclear metal clusters, multiple metal-metal bonds. Cubane clusters and Zintl clusters.

UNIT-III: COORDINATION CHEMISTRY - I

Stability of complexes; thermodynamic aspects of complex formation; factors affecting stability, HSAB approach. Determination of stability constants by spectrophotometric, polarographic and potentiomteric methods.

UNIT-IV: COORDINATION CHEMISTRY - II

Stereochemical aspects; stereoisomerism in inorganic complexes; isomerism arising out of ligand distribution and ligand conformation; chirality and nomenclature of chiral complexes; optical rotatory dispersion and circular dichroism. Macrocyclic ligands; types; porphyrins; corrins, Schiff bases; crown ethers and cryptates.

UNIT-V: COORDINATION CHEMISTRY - III

Evidences for metal-ligand orbital overlap, molecular orbital theory and energy level diagrams, concept of weak and strong field ligands, Jahn-Teller distortion, charge - transfer spectra. Term states for "d"- ions, energy diagrams, d-d transitions, Orgel and Tanabe - Sugano diagrams, spin orbit coupling, nephelauxetic effect, spectral and magnetic characteristics of transition metal complexes.

PAPER-3
PHYSICAL CHEMISTRY I

OBJECTIVE:

To study the partial molar property, fugacity and its significance. Theories and basic concepts of chemical kinetics - mechanism of acid, base and enzyme catalysis reaction. To acquire knowledge on phase equilibria of three component system. To study the basics of colloids.

UNIT-I: THERMODYNAMICS

Partial molar properties -Partial molar free energy (chemical potential), Partial molar volume and Partial molar heat content - Their significance and determination of these quantities. Variation of chemical potential with temperature and pressure.
Definition of fugacity - determination of fugacity by graphical method - variation of fugacity with temperature and pressure - the concept of activity and activity coefficients – determination of activity and activity coefficient by emf method - determination of activity and activity coefficients for non-electrolytes - determination of standard free energies - choice of standard states.

UNIT-II: PHASE EQUILIBRIA

Physical equilibria involving phase transition: Two component system - Congruent system (phenol-aniline) and Incongruent system (sodium chloride- water) - Peritectic reactions. Three component system: Solid - Liquid equilibria - hydrate formation (sodium chloride - sodium sulphate - water); Liquid - Liquid equilibria - one pair of partially miscible liquids (acetic acid - chloroform - water and alcohol - benzene - water); two pairs of partially miscible liquids (water - ethyl alcohol - succinic nitrile).

UNIT-III: COLLOIDS

Surface phenomena - surfactants, micellization, critical micelle concentration (CMC), factors affecting CMC of surfactants, micro emulsions, reverse micelles and surface films (electro kinetic phenomena).

Structure and stability of colloids - Zeta potential (derivation), electro osmosis, protective colloids, gold number, sedimentation potential, streaming potential and Donnan membrane equilibrium.

UNIT-IV: CHEMICAL KINETICS

Absolute Reaction Rate Theory (ARRT) - Potential energy surfaces - partition function and activated complex- Eyring equation - estimation of free energy, enthalpy and entropy of activation and their significance.

Reactions in solutions - effect of pressure, dielectric constant and ionic strength on reactions in solutions - kinetic isotope effects - linear free energy relationships. Hammett and Taft equation.

UNIT-V: CATALYSIS

Acid - Base catalysis - mechanism of acid - base catalyzed reactions - Bronsted catalysis law. Catalysis by enzymes - Kinetics of enzyme catalyzed reaction - Michaelis - Menten equation and its interpretation. Effect of substrate concentration, pH and temperature on enzyme catalyzed reactions - inhibition of enzyme catalyzed reactions - Competitive, Non-competitive and Uncompetitive inhibition.

==========

ELECTIVE
PAPER-I
(to choose 1 out of 3)

A. ADVANCED POLYMER CHEMISTRY

OBJECTIVE:

To gain the knowledge in the preparation, properties, characterization and applications of polymers.

UNIT- I: BASIC CONCEPTS

Classification - Nomenclature and isomerism - functionality - Molecular forces and chemical bonding in polymers - molecular weight – linear, branched and cross linked polymers. Thermoplastic and thermosetting polymers - Elastomers, fibers and resins. Techniques of polymerization - bulk solution, emulsion and suspension.

UNIT- II: KINETICS AND MECHANISM

Kinetics and mechanism of polymerization - free radical, cationic, anionic and co-ordination polymerization (Ziegler-Natta Catalyst). Copolymerization - kinetics (Detailed Study). General characterization-kinetic chain length-degree of polymerization, chain transfer - initiators - inhibitors - retarders.

UNIT-III: A. STRUCTURE AND PROPERTIES

Structure - property relationship - mechanical properties, thermal properties - glass transition temperature - factors affecting glass transition temperature - crystallinity and melting point - related to structure.

B. POLYMER CHARACTERIZATION AND ANALYSIS

Crystalline nature - X-Ray diffraction - Differential Scanning Calorimetry (DSC) - Thermo Gravimetric Analysis - molecular weight determination - Osmometry (membrane), viscosity, ultra centrifuge and gel permeation chromatography.

UNIT-IV: INDUSTRIAL AND NATURAL POLYMERS

Important industrial polymers - preparation and application of polyethylene, poly vinyl chloride, poly urethanes, polytetrafluro ethylene (TEFLON), nafion and ion - exchange resins. Importance of natural polymers - application and structures of starch, cellulose and chitosan derivatives.

UNIT-V: ADVANCES IN POLYMERS

Biopolymers - biodegradable polymers - biomedical polymers - poly electrolytes - conducting polymers - high temperature and fire retardant polymers - polymer blend - polymer composites - polymer nanocomposites - IPN inter penetrating network polymers - electroluminescent polymers.

PAPER-1

B. HETEROCYCLIC CHEMISTRY

OBJECTIVES:

To know the student about chemistry of heterocyclic compounds. To understands the strategies for designing the chemical synthesis. To make the students knowledgeable in higher heterocycles.

UNIT I: NOMENCLATURE OF HETEROCYCLES

Introduction, nomenclature systems- systematic nomenclature system (Hantzsch – Widman system) and replacement nomenclature system for monocyclic, fused, spiro and bridged heterocycles. Aromatic heterocycles: Introduction, chemical behavior of aromatic heterocycles, classification (structural types). Criteria of aromaticity in heterocycles (bond lengths, dipole moments, empirical resonance energy, delocalization energy, Dewar resonance energy, chemical shits and ^{1}HNMR spectra).

UNIT- II: NONAROMATIC HETEROCYCLES

Introduction, strain, bond angle strain, torsional strain and their consequences in small ring heterocycles, conformations of six membered heterocycles – molecular geometry, barriers to ring inversion, pyramidal inversion and 1,3 diaxial interactions. Stereoelectronic effect in saturated six membered heterocycles- anomeric effect, other related effects and attractive interactions through space.

UNIT III: SMALL RING HETEROCYCLES

Three membered and four membered heterocycles: Synthesis and reactions of aziridines, oxiranes, thiranes, azetidines, oxetanes and thietanes. Benzo- fused five membered heterocycles: Synthesis and reactions including medicinal applications of benzopyrroles, benzofurans and benzothiophenes.

UNIT- IV: MESO IONIC HETEROCYCLES

General classification, chemistry of some important meso-ionic heterocycles of type A and B and their applications. Six membered heterocycles with on heteroatom: Synthesis and reactions of pyrylium salts and pyrones and their comparisons with pyridinium and thiopyrylium salts and pyridones.

UNIT- V: HIGHER HETEROCYCLES

Six membered heterocycles with two or more heteroatom: Synthesis and reactions of diazines. triazines and tetrazines. Seven and large membered heterocycles: Synthesis and reactions of azepines, oxepines , thiepines and diazepines. Synthesis of five and six membered heterocycles with P, As, Sb and Bi.

Text book:

7. Comprehensive Heterocyclic Chemistry, A. R. Katrizky and C.W. Rees, eds. Pergamon press.

PAPER-1
C. MATERIALS CHEMISTRY

OBJECTIVES:

To learn about different types of materials. To understand the classifications of materials. To learn the advancements of material chemistry.

UNIT-I: MULTIPHASE MATERIALS

Ferrous alloys**:** Fe-C phase transformation in ferrous alloys, stainless steels, non- ferrous alloys, properties of ferrous and non-ferrous alloys and their applications.
Glasses**:** Glassy state, glass formers, glass modifiers and applications.
Ceramics**:** Ceramic structures, mechanical properties, clay products, refractories-characterizations, properties and applications.
Composites**:** Microscopic composites- dispersion-strengthened and particle reinforces-fibre-reinforced composites and macroscopic composite.
Nanomaterials**:** Nanocrystalling phase- preparation- special properties and applications.
Thin films and Langmuir - Blodgett films**:** Preparation techniques; evaporation/sputtering and sol-gel methods. Photolithography, properties and application of thin films.

UNIT-II: LIQUID CRYSTALS

Mesomorphic behaviour, thermotropic liquid crystals, positional order, bond orientational order, nematic and smectic mesophases; smectic-nematic transition and clearing temperature-horneotropic, planar and schlieren textures, twisted nematics, chiral nematics, molecular arrangement in smectic A and smectic C phases, optical properties of liquid crystals. Dielectric susceptibility and dielectric constants.

UNIT-III: IONIC CONDUCTORS

Types of ionic conductors, mechanism of ionic conduction, interstitial jumps (Frenkel). Vacancy mechanism, diffusion super ionic conductors; phase transitions and mechanism of conduction in super ionic conductors, examples and applications of ionic conductors.

High Tc Materials**:** Defect perovskites, high Tc superconductivity in cuprates, preparation and characterization of 1-2-3 and 2-1-4 materials, anisotropy, normal state properties: temperature dependence of electrical resistance, optical phonon modes, super conducting state; heat capacity;

Coherence length, elastic constants, position lifetimes and microwave absorption - Applications of high Tc materials.

UNIT-IV: MATERIALS FOR SOLID STATE DEVICES

Rectifiers, transistors, capacitors- IV-V compounds, low dimensional quantum structures, optical properties.
Organic solids: Conducting organic solids, organic superconductors and magnetism in organic materials.
Fullerenes: doped fullerenes as superconductors.
Molecular devices**:** Molecular rectifiers and transistors, artificial photosynthetic devices, optical storage memory and switches-sensors.
Nonlinear optical materials: nonlinear optical effects. Second and third order - molecular hyper polarisability and second order electric susceptibility - materials for second and third harmonic generation.

UNIT-V: ADVANCED MATERIALS

Brief study of the following: Fiber reinforced plastics (FRP), fiber reinforced metals (FRM), metal matrix composites (MMC), surface acoustic wave (SAW) materials, ceramics and cermets, electrets and SMART materials.

BOOKS SUGGESTED:

1. Solid State Chemistry and its applications, Anthony R.West, (1998), John Wiley & Sons, New York.
2. Material Science and Engineering. An Introduction. W.D. Callister. Wiley.
3. Principles of the Solid State, H.V. Keer. Wiley Eastern.
4. Materials Science for Engineers: J. C. Anderson, K.D. Leaver, P. Leevers and R.D. Rawlings, 5^{TH} Edition, Nelson Thornes Ltd.
5. Thermotropic Liquid Crystals. Ed. G.W. Gray. John Wiley.
6. Handbook of Liquid Crystals. Kelker and Hafz. Chemie Verlag.
7. Materials science, M. Arumugam ,Anuradha publications (2012) , Chennai.

SEMESTER II

PAPER - 4

ORGANIC CHEMISTRY II

OBJECTIVES:

To understand the nature of carbon-hetero atom multiple bond additions and the mechanism of a chemical reactions.To understand the techniques involved in the rearrangements and their synthetic utility. To know the methods of synthetic strategies and applications. To apply the knowledge of chemical reactions in organic synthesis.

UNIT-I: ADDITION TO CARBON - CARBON AND CARBON – HETERO MULTIPLE BONDS

Electrophilic, nucleophilic and neighbouring group participation mechanisms - addition of halogen and nitrosyl chloride to olefins. Hydration of olefins and acetylenes. Hydroboration, hydroxylation, Michael addition, 1, 3 - dipolar additions, Simon - Smith reaction. Mannich, Stobbe, Darzen, Wittig, Wittig - Horner and Benzoin reactions. Carbenes and nitrenes: Methods of generation, structure, addition reactions with alkenes and insertion reactions.

UNIT-II OXIDATIONS AND REDUCTIONS

Mechanism - study of the following oxidation reactions - oxidation of alcohols - use of DMSO in combination with DCC and acetic anhydride in oxidising alcohols - oxidation of methylene to carbonyl, oxidation of aryl methane - allylic oxidation of olefins - ozonolysis - oxidation of olefinic double bonds and unsaturated carbonyl compounds - oxidative cleavage of C-C bond. Reduction: Selectivity in reduction of 4-t-butylcyclohexanone using selecterides. Hydride reductions - reduction with $LiAlH_4$, $NaBH_4$, tritertiarybutyloxyaluminium hydride, sodium cyanoborohydride, trialkyltin hydride and hydrazines.

UNIT-III: MOLECULAR REARRANGEMENTS

A detailed study with suitable examples of the mechanism of the following rearrangements: Wagner - Meerwein, Pinacol - Pinacolone, Demjanov, Dienone - phenol, Favorski, Baeyer - Villiger, Wolf, Stevens and Von Richter rearrangements.

UNIT-IV: MODERN SYNTHETIC METHODS, REACTIONS AND REAGENTS

Synthesis of simple organic molecules using acetylation and alkylation of enamines, Grignard reactions, Diels - Alder reaction, phosphorus and sulphur ylides, Robinson annulations. Retrosynthetic Analysis: Basic principles and terminology of retrosynthesis, one group and two group C-X disconnections, one group C-C and two group C-C disconnections, amine and alkene synthesis. Protection and deprotection of functional groups (R-OH, R-CHO, RCO-R, R-NH_2 and R-COOH). Uses of the following reagents: DCC, Trimethylsilyliodide, 1, 3-Dithiane (umpolung), and diisobutylaluminiumhydride (DIBAL).

UNIT-V: HETEROCYCLES, VITAMINS AND STEROIDS

Synthesis of imidazole, oxazole, thiazole, flavones, isoflavones, anthocyanins, pyrimidines (cytocine, uaracil only) and purines (adenine, guanine only). Synthesis of vitamin-A_1 using Wittig method. Conversion of cholesterol to progesterone, estrone and testosterone.

PAPER – 5

INORGANIC CHEMISTRY II

OBJECTIVES:

To make the students knowledgeable in solid state chemistry. To equip the students for their future career in nuclear industry. To learn the chemistry of lanthanides, to learn about nanotechnology and use of inorganic compounds in biological chemistry.

UNIT-I: THE CHEMISTRY OF SOLID STATE

Structure of solids; Comparison of X-ray and Neutron Diffraction; structure of pyrovoskite, cadmium iodide and nickel arsenide; spinels and antispinels, defects in solids, non-stoichometeric compounds. Electrical, magnetic and optical properties of solids, band theory. Semiconductors, superconductors, solid state electrolytes. Types of magnetic behaviour, dia, para, ferro, antiferro and ferrimagnetism, hysterisis.
Solid state lasers, inorganic phosphors and ferrites.

UNIT- II: NUCLEAR CHEMISTRY-I

Nuclear properties: Nuclear spin and moments, origin of nuclear forces, Nuclear models: liquid drop model and nuclear shell model. Modes of radioactive decay: Orbital electron capture, nuclear isomerism, internal conversion. Detection and determination of activity by cloud chamber, nuclear emulsion, bubble chamber, Geiger-Muller, scintillation and Cherenkov counters.
Nuclear reactions: Types, cross section, compound nucleus theory, high energy nuclear, direct nuclear, photonuclear and thermonuclear reactions.

UNIT- III: NUCLEAR CHEMISTRY-II

Stellar energy: synthesis of elements, hydrogen burning, carbon burning. Nuclear reactors: fast breeder reactors, particle accelerators, linear accelerators, cyclotron and synchrotron. Radio analytical methods: Isotope dilution analysis, radiometric titrations, radio immuno assay. Neutron activation analysis.

UNIT-IV: THE CHEMISTRY OF LANTHANIDES, ACTINIDES AND NANOTECHNOLOGY

The chemistry of solid state, lanthanides and actinides, oxidation state, spectral, magnetic characteristics, coordination numbers, stereochemistry, nuclear and non-nuclear applications.

Nanotechnology: Introduction - preparatory methods, characterization, application as sensors, biomedical applications, application in optics and electronics.

UNIT-V: BIOINORGANIC CHEMISTRY

Transport proteins: Oxygen carriers, metalloenzymes, carboxy peptidase, carbonic anhydrase, redox process, iron-sulphur proteins, chlorophyll, salient features of the photo synthetic process, vitamin-B_{12}, role of sodium, potassium, calcium, zinc and copper; fixation of nitrogen, nitrogen cycle.

PAPER-6
PHYSICAL CHEMISTRY II

OBJECTIVES:

To understand the behavior of kinetic reactions and fast reaction. To understand the behavior of electrolytes in solution. To know the structure of the electrode surface. To differentiate electrode kinetics from other types of kinetic studies. To know the applications of electrode process. To study the concept and applications of group theory.

UNIT-I: KINETICS OF COMPLEX REACTIONS & FAST REACTIONS

Kinetics of complex reactions, reversible reactions, consecutive reactions, parallel reactions, chain reactions, general treatment of chain reactions - chain length - Rice Herzfeld mechanism - explosion limits.
Study of fast reactions - relaxation methods - temperature and pressure jump methods- stopped flow and flash photolysis methods.

UNIT-II: ELECTROCHEMISTRY – I

Mean ionic activity and mean ionic activity coefficient - activity coefficient of strong electrolytes - determination of activity coefficient by electrochemical method.
Debye Huckel limiting law - qualitative and quantitative verification - limitation - Debye Huckel limiting law at appreciable concentrations of electrolytes - Debye - Huckel - Bronsted equation.

UNIT-III: ELECTROCHEMISTRY – II

Electrode - electrolyte interface - adsorption at electrified interface - electrical double layer - electro capillary phenomenon - Lippmann equation - Structure of double layers - Helmholtz - Perrin, Guoy - Chapman and Stern model of electrical double layers.
Diffusion - Fick's law of diffusion - Effect of ionic association on conductance-electro kinetic phenomena -membrane potential.

UNIT-IV: GROUP THEORY – I

Definition of basic terms in group theory – Group – Abelian group, cyclic group, subgroup, group multiplication table - similarity transformation and class, symmetry elements and symmetry operations -Point groups (any examples limited to n = 4 of C_{nv}, C_{nh}, D_{nh}, D_{nd}, & T, T_d, O, O_h), Reducible and Irreducible representations - direct product representation. Character Table - explanation of various column and Mullliken Symbol.

UNIT-V: GROUP THEORY – II

Orthogonality theorem and its consequences - construction of character table for C_{2V}, C_{3V}, C_{2h}, and D_{2d} point groups - hybrid orbitals in nonlinear molecules (CH_4, BF_3, and NH_3). Determination of representations of vibrational modes in nonlinear molecules (H_2O, NH_3, BF_3 and $[PtCl_4]^{2-}$). Symmetry selection rules of Infra-red and Raman spectra.

ELECTIVE
PAPER-2
(to choose 1 out of 3)

A. GREEN CHEMISTRY

OBJECTIVES:

To know the principle and importance of green chemistry. To understand the student green chemistry strategies for designing the chemical synthesis. To know the solvent free synthesis. To make the students knowledgeable ultrasound and microwave assisted green synthesis.

UNIT- I: BASIC PRINCIPLES OF GREEN CHEMISTRY

Basic principles, prevention of waste/by-products, maximum incorporation of the reactants (starting materials and reagents) into the final product, prevention or minimization of hazardous products, designing safer chemicals, energy requirements for synthesis, selection of appropriate solvent, selection of starting materials, use of protecting groups, use of catalyst and products designed should be biodegradable.

UNIT- II: ULTRASOUND AND MICROWAVE ASSISTED GREEN SYNTHESIS

Ultrasound: Introduction, instrumentation, the phenomenon of cavitation. Sonochemical esterification, substitution, addition, alkylation, oxidation, reduction and coupling reactions.

Microwaves: Introduction, concept, reaction vessel/ medium, specific effects, atom efficiency (% atom utilization), advantages and limitations. N-alkylation and alkylation of active methylene compounds and Diels –Alder reactions. Reactions in water and reaction in organic solvents. Solvent free reactions and deprotection of esters.

UNIT- III: IONIC-LIQUIDS AS GREEN SOLVENTS

Introduction, structure, synthesis and applications of some important ionic liquids in organic synthesis.

Polymer supported reagents in green synthesis**:** Introduction - properties and advantages of polymer supported reagents and choice of polymers.

Substrate covalently bound to the support: Synthesis of oligosaccharides, intramolecular cyclisation. Selective chemical reactions on one aldehyde group of symmetrical aldehydes - Asymmetric synthesis.

Reagent linked to a polymeric material: Preparation of sulfonazide polymer and application in diazotransfer reaction. Synthesis of polymer bound per acid and its applications, synthesis of polystyrene tin dichloride resin and its applications.

Polymer supported catalytic reactions: Preparation of polymer supported $AlCl_3$ and applications - polymer supported photo sensitizers.

UNIT- IV: PHASE TRANSFER CATALYSIS IN GREEN SYNTHESIS

Introduction, mechanism of phase transfer catalyst reaction, types and advantages of phase transfer catalyst, types and applications of phase transfer reaction: Nitriles from alkyl or acyl halides, alkyl fluorides, alcohols, azides from alkyl halides, generation of dichlorocarbenes, addition to olefins, elimination reaction, alkylation reactions, Willamson synthesis, Benzoin condensation, Darzen reaction, Michael reaction, Wittig reaction, oxidation under PTC condition and reduction.

UNIT-V: INDUSTRIAL CASE STUDIES

Methyl Methacrylate (MMA)-Greening of Acetic acid manufacture, Vitamin-C- Leather manufacture-Types of Leather- Difference between Hide and Skin- Tanning –Reverse tanning-Vegetable tanning-Chrome tanning- Fat liquoring- Dyeing- Application-Polyethylene-Ziegler Natta Catalysis, Metallocene Catalysis- Eco friendly Pesticides-Insecticides.

PAPER-2

B. SUPRAMOLECULAR AND NANOCHEMISTRY

OBJECTIVES:

To know the student the basis of suprmolecular chemistry, metal-organic framework solids, nano materials and their applications.To understand the various techniques available to characterize the advanced nano materials. To identify the applications of nanotechnology.

UNIT-I: SUPRAMOLECULAR CHEMISTRY

Definition of supramolecular chemistry. Nature of binding interactions in supramolecular structures: ion-ion, ion-dipole, dipole-dipole, H-bonding, cation-p, anion-p, p-p, and vander Waals interactions. Supramolecular synthons.

Self-assembly molecules: Design, synthesis and properties of the molecules, self-assembling by H-bonding, metal-ligand interactions and other weak interactions, metallomacrocycles, catenanes, rotaxanes, helicates and knots.

UNIT-II: FRAMEWORK SOLIDS

Introduction-definition of porosity, pore size, pore volume, pore density-zeolites-synthesis and applications-metal organic frame work solids-definition-classifications-uses of different types of organic ligands- tuning of structure and properties - synthetic methods- advantage of MOF solids over zeolites- cracking of petroleum products

UNIT-III: SYNTHESIS OF SUPRAMOLECULES

Synthesis and structure of crown ethers, lariat ethers, podands, spherands, cyclophanes, cryptophanes, carcerands and hemicarcerands., Host-Guest interactions, lock and key analogy. Binding of cationic, anionic, ion pair and neutral guest molecules.
Molecular devices: molecular electronic devices, molecular wires, molecular rectifiers, molecular switches and molecular logic.

UNIT-IV: NANOCHEMISTRY

Introduction and definition of nanoparticles and nanomaterials, emergence of nanotechnology, challenges of nanotechnology. Synthesis of nanoparticles of ZnO_2, TiO_2, silver, gold, rhodium, palladium and platinum; carbon materials- fullerene- porous nano carbon (PNC).

Techniques of synthesis: Electroplating and electrophoretic deposition, conversion through chemicalreactions and lithography; Thin films: Chemical vapor deposition and atomic layer deposition techniques; Carbon fullerenes and nanotubes.

UNIT-V: ANALYTICAL CHARACTERIZATION AND APPLICATIONS

X-rays, Infrared, UV-Vis, Laser Raman, Electron microscopic techniques (SEM and TEM) - Thermal analysis (TG/DTA/DSC) methods.

Application of nanotechnology: modern technology in electronic, biological, consumer and domestic applications. Energy related application: photo-voltaic cells, energy storage nanomaterial. Drug delivery, drug targeting. Sensors and biosensors.

PAPER-2

C. MODERN SEPARATION TECHNIQUES

OBJECTIVES:

To learn the basic concept of chromatography. To understand the different chromatographic techniques. To study the applications of chromatography. To know the separation and purification methods.

UNIT-I: BASIC CONCEPTS OF CHROMATOGRAPHY

General description: Definitions, terms and parameters used in chromatography. Classification of chromatographic methods. Elution chromatography on columns. Migration rates of solutes, zone broadening, column efficiency and optimization of column performance.

UNIT-II GAS CHROMATOGRAPHY(GC)

Principles of gas-liquid chromatography, instrumentation, carrier gas, sample injection, column configuration and detection system (FID, TCD, ECD). Gas chromatographic columns (open tubular columns and packed columns) and stationary phases. Interfacing GC/MS.

UNIT-III: HIGH PERFORMANCE LIQUID CHROMATOGRAPHY (HPLC)

Column efficiency. Instrumentation: pumping system, sample injection system. Liquid chromatographic columns - types of column packing. Detectors: Absorbance detector and electrochemical detectors. Partition chromatography.

UNIT-IV: ION-EXCHANGE CHROMATOGRAPHY (IEC)

Definition, requirements for ion exchange resin. Synthesis and types of ion-exchange resins. Principle and basic features of ion - exchange reactions. Exclusion chromatography: Theory and principle of size exclusion chromatography. Experimental techniques of gel-filtration chromatography (GFC) and gel-permeation chromatography (GPC). Materials for packing-factors governing column efficiency. Methodology and applications.

==========

UNIT-V: PURIFICATION AND EXTRACTION TECHNIQUES

Principle and techniques: Desiccants, precipitation: types of precipitation, factors affecting the precipitation. Distillation: fractional, steam, azeotropic, vacuum distillations. Recrystalization and sublimation.

Solvent extraction: Principle and techniques. Factors affecting the extraction efficiency: Ion association complexes, chelation, synergistic extraction and pH. Role of chelating ligands in solvent extraction. Introduction to solid phase extraction (SPE) and microwave assisted extraction (MAE) and applications.

MAIN
PRACTICAL PAPER – 1
ORGANIC CHEMISTRY PRACTICAL- I

A) Identification of components in a two component mixture and preparation of their derivatives. Determination of b.p. / m.p. for components and m.p. for the derivatives.

B) Any Six preparations from the following:

1. Preparation of o-benzoyl benzoic acid (Fridel Crafts Reaction)
2. p-Nitrobenzoic acid from p-nitrotoluene (Oxidation)
3. Anthroquinone from anthracene (Oxidation)
4. Glucose pentaacetate from Glucose (Acetylation)
5. m-Nitroaniline from m-dinitrobenzene (Reduction)
6. Benzophenone oxime from benzophenone (Addition reaction)
7. p-Chlorotoluene from p-toluidine (Sandmeyers' Reaction)
8. 2,3 - Dimethylindole from phenyl hydrazine and 2 - butanone (Fisher Indole Synthesis)
9. 1,2,3,4 - Tetrahydrocarbazole from cyclohexanone (Fisher Indole Synthesis)
10. Methyl orange from sulphanilic acid (Diazo Reaction)

PRACTICAL PAPER-3
PHYSICAL CHEMISTRY PRACTICAL- I

Experiments in Thermodynamics, colligative properties, phase rule, chemical equilibrium and chemical kinetics.

Typical examples are given and a list of experiments is also provided from which suitable experiments can be selected as convenient.

1. Heat of solution from Solubility measurements
2. Determination of Molecular weight
3. Determination of activity and activity coefficient
4. Construction of Phase diagram involving two / three component systems
5. Determination of partial molar quantities
6. Verification of Freundlich Adsorption isotherm
7. Reaction rate and evaluation of other kinetic parameters using polarimetry
8. Determination of Reaction rate and Rate constant using Analytical techniques: Conductometry and Dilatometry
9. Verification of Beer Lambert law.

Detailed list of Experiments for Physical Chemistry Practical I

Typical list of possible experiments is given.
Experiments of similar nature and other experiments may also be given.
Any 15 experiments have to be performed in a year.

1. Determine the temperature coefficient and energy activation of hydrolysis of ethyl acetate.
2. Study the kinetics of the reaction between acetone and iodine in acidic medium by half-life method and determine the order with respect to iodine and acetone.
3. Study the effect of solvent (DSMO-water, acetone-water system) on the rate of acid catalysed hydrolysis of acetal by dilatometry.
4. Study the Saponification of ethyl acetate by sodium hydroxide conductometrically and determine the order of the reaction.
5. Determine the order with respect to Silver (I) in the oxidation and rate constant and for uncatalysed reaction.
6. Study the inversion of cane sugar in the presence of acid using Polarimeter.
7. Determine the rate constant and order of the reaction between potassium persulphate and potassium iodide and determine the temperature coefficient and energy of activation of the reaction.
8. Study the effect of ionic strength on the rate constant for the saponification of an ester.
9. Study the salt effect on the reaction between acetone and iodine.

10. Study the kinetics of the decomposition of sodium thiosulphate by mineral acid (0.5M HCI).
11. Study the primary salt effect on the kinetics of ionic reactions and test the Bronsted relationship (iodide ion is oxidized by persulphate ion).
12. Study the kinetics of enzyme catalysed reactions (Activity of tyrosinase upon tyrosine spectrophotometrically).
13. Study the salt effect, the solvent effect on the rate law of alkaline hydrolysis of crystal violet.
14. Study the reduction of aqueous solution of ferric chloride by stannous chloride.
15. Determine the molecular weight of benzoic acid in benzene and find the degree of association.
16. Determine the activity coefficient of an electrolyte by freeing point depression method.
17. Study the phase diagram form-toluidine and glycerine system.
18. Construct the phase diagram for a simple binary system naphthalene - phenantherene and benzophenone-diphenyl amine.
19. Construct the boiling point composition diagram for a mixture having maximum boiling point and minimum boiling point.
20. Study the complex formation between copper sulphate and ammonia solution by partition method.
21. Study the simultaneous equilibria in benzoic acid - benzene - water system.
22. Determine the degree of hydrolysis and hydrolysis constant of aniline hydrochloride by partition method.
23. Determine the molecular weight of a polymer by viscosity method.
24. Determine the viscosities of mixtures of different compositions of liquids and find the composition of a given mixture.
25. Determine the partial molal volume of glycine / methanol and formic acid / sulphuric acid by graphical method and by determining the densities of the solutions of different compositions.
26. Study the temperature dependence of the solubility of a compound in two solvents having similar inter molecular interactions (benzoic acid in water and in DMSO water mixture) and calculate the partial molar heat of solution
27. Construct the phase diagram of the three component of partially immiscible liquid system (DMSO-water benzene; acetone-chloroform -water; chloroform-acetic acid-water)
28. Construct the phase diagram of a ternary aqueous system of glucose -potassium chloride and water
29. Study the surface tension - concentration relationship for solutions (Gibb's equation)

30. Study the absorption of acetic acid by charcoal (Freundlich isotherm).
31. Study the complex formation and find the formula of silver-ammonia complex by distribution method.
32. Determine the dissociation constant of picric acid using distribution law

SECOND YEAR
SEMESTER III

PAPER - 7
ORGANIC CHEMISTRY III

OBJECTIVE:
To understand the concepts of spectral techniques and to apply these techniques for the quantitative and structural analysis of organic compounds. To learn the chemistry of terpenes, alkaloids and free radicals and their importance.

UNIT-I: UV AND IR SPECTROSCOPY AND THEIR APPLICATIONS

Ultraviolet-Visible spectroscopy: Types of electronic transitions - chromophores and auxochromes - factors influencing the positions and intensity of absorption bands - absorption spectra of dienes, polyenes and unsaturated carbonyl compounds - Woodward - Fieser rules and its applications.

Infra Red Spectroscopy: Vibrational frequencies and factors affecting them - identification of functional groups - intra and inter molecular hydrogen bonding – functional group region- finger print region - far IR region.

UNIT-II: NMR SPECTRA AND ITS APPLICATIONS

Nuclear spin - magnetic moment of a nucleus - nuclear energy levels in the presence of magnetic field - basic principles of NMR experiments - CW and FT NMR - ^{1}H NMR - Chemical shift and coupling constant - factors influencing proton chemical shift and vicinal proton - proton coupling constant- ^{1}H NMR spectra of simple organic molecules such as CH_3CH_2Cl and CH_3CHO.

AX and AB spin system - nuclear overhauser effect- chemical exchange.

^{13}C NMR - proton decoupling and Off resonance decoupling spectra - factors affecting ^{13}C NMR chemical shift - ^{13}C NMR spectra of simple organic molecules.

UNIT-III: PHYSICAL METHODS OF STRUCTURAL DETERMINATION

Mass spectroscopy - Principles - measurement techniques - (El, Cl, FD, FAB, SIMS) - presentation of spectral data - molecular ions - isotope ions - fragment ions of odd and even electron types - rearrangement ions - factors affecting cleavage patterns - simple and multicentre fragmentation – Mc Lafferty rearrangement - Mass spectra of hydrocarbons, alcohols, phenols, aldehydes and ketones. ORD and its applications - Octant rule - cotton effect - axial halo ketone rule - Problem solving (for molecules with a maximum number of C10).

UNIT-IV: TERPENES AND ALKALOIDS

Introduction - classification - isoprene rule - structural determination of terpenoids'- Citral, geraniol - linalool - farnesol - α-pinene and camphor.
Introduction - isolation of alkaloids - total synthesis of quinine - morphine and reserpine.

UNIT-V: FREE RADICALS

Long and short-lived free radicals - methods of generation of free radicals - detection of free radicals by ESR - Addition of free radicals to olefinic double bonds - aromatic radical substitutions reactions - decomposition of diazo compounds – phenol coupling - Sandmeyer reaction - Gomberg reaction - Pschorr reaction - Ulmann reaction and Hunsdiecker reaction.

PAPER- 8
INORGANIC CHEMISTRY III

OBJECTIVE:
To study about the Coordination complexes, Substitution in Coordination complexes and Inorganic Photochemistry.

UNIT-I: ORGANO METALLIC CHEMISTRY - I

Carbon donors: Alkyls and aryls metallation, bonding in carbonyls and nitrosyls, chain and cyclic donors, olefins, acetylene and allyl system. Synthesis, structure and bonding of metallocenes (ferrocene only).
Reactions: Association, substitution, addition and elimination reactions, ligand protonation, electrophilic and nucleophilic attack on ligands. Carbonylation, decorboxylation, oxidative addition and fluxionality.

UNIT-II: ORGANO METALLIC CHEMISTRY - II

Catalysis: Hydrogenation of olefins (Wilkinson's catalyst), hydroformylation of olefins using cobalt or rhodium catalysts (Oxo process), oxidation of olefins to aldehydes and ketones (Wacker process), polymerization (Zeigler - Natta Catalyst); cyclo oligomerisation of acetylene using nickel catalyst (Reppe's catalyst); polymer-bound catalysts.

UNIT-III: COORDINATION CHEMISTRY - IV

Electron transfer reactions, outer and inner sphere processes; atom transfer reaction, formation and rearrangement of precursor complexes, the bridging ligand, precursor and successor complexes. Marcus theory. Complementary, non-complementary and two electron transfer reactions.

UNIT-IV: COORDINATION CHEMISTRY - V

Substitution Reactions: Substitution in square planar complexes, reactivity of platinum complexes, influences of entering, leaving and other groups, the Trans effect.

UNIT-V: COORDINATION CHEMISTRY - VI

Substitution of octahedral complexes of cobalt and chromium, replacement of coordinated water, solvolytic (acids and bases) reaction applications in synthesis (platinum and cobalt complexes only).
Inorganic Photochemistry: Photo-substitution, Photoredox and isomerisation process, application of metal complexes in solar energy conversion.

PAPER-9
PHYSICAL CHEMISTRY III

OBJECTIVES:

To study the electrochemical kinetics, over potential, corrosions and fuel cells. To know the solid state and its properties. To Study the principles and applications of spectroscopy. To study statistical thermodynamics,

UNIT-1: ELECTROCHEMISTRY- III

Mechanism of electrode reactions - polarization and over potential - the Butler-Volmer equation for one step and multistep electron transfer reactions - significance of electron exchange current density and symmetry factors - transfer coefficient and its significance - mechanism of the hydrogen and oxygen evolution reactions.

Corrosion and passivation of metals - Pourbaix diagram - Evan's diagram - fuel cells - electrodeposition - principle and applications.

UNIT-II: SOLID STATE

Classification of solids - Imperfection in solids - point, line and plane defect - Electrons and holes - Non-stoichiometry - Imperfection and physical properties of solids (brief study). **Electrical properties** - electrical conductivity - Hall effect - dielectric properties - piezo electricity, Ferro electricity and conductivity; **Optical properties** - Photo conductivity -luminescence - color center - lasers - refraction - birefringence;

Magnetic properties - diamagnetism - paramagnetism - ferro - antiferro and ferrimagnetisms. Calculation of magnetic moments. Mechanical and thermal properties.

UNIT-III: SPECTROSCOPY - I

Microwave spectroscopy – Rotational spectroscopy of rigid rotator - non rigid rotator - diatomic and polyatomic molecules.

Vibrational spectroscopy - Harmonic oscillator - anharmonicity - vibrational spectra of polyatomic molecules - vibrational frequencies - group frequencies - vibrational coupling- overtones - Fermi resonance.

Raman Spectroscopy- Raman effect, Stoke’s and Anti-stoke’s lines, rotational and vibrational Raman spectra.

Electronic spectroscopy - Progressions and sequences, selection rules, Franck - Condon principle, types of electronic transitions - solvent effects.

UNIT-IV: SPECTROSCOPY- II

Resonance spectroscopy - Zeeman effect - equation of motion of spin in magnetic fields - chemical shift - spin-spin coupling - NMR of simple AX and AMX type molecules - calculation of coupling constants - ^{13}C, ^{19}F, ^{31}P NMR spectra - applications - a brief discussion of Fourier Transformation Resonance Spectroscopy.

UNIT-V: STATISTICAL THERMODYNAMICS- I

Objectives of statistical thermodynamics - concept of thermodynamic and mathematical probabilities - permutations and combinations, distribution of distinguishable and non-distinguishable particles. Stirling approximation, Maxwell - Boltzmann distribution law - Fermi - Dirac and Bose - Einstein statistics - comparison with Maxwell -Boltzmann distribution law and their applications - radiation law - electron gas in metals.

Partition function - evolution of translational, vibrational and rotational partition functions for mono and diatomic ideal gases.

ELECTIVE
PAPER-3
(to choose 1 out of 3)

A. Scientific Research Methodology

OBJECTIVES:

To study about the importance of research, literature survey, error analysis, statistical treatment. To study about the conventions of writing thesis.

UNIT-I: INTRODUCTION

Nature and importance of research - aims, objective, principles and problems - selection of research problem - survey of scientific literature - primary and secondary sources - citation index for scientific papers and journals - patents.

UNIT-II: CONDUCT OF RESEARCH WORK

Physical properties useful in analysis and methods of separation prior to analysis - Isolation techniques - extraction - Soxhlet extraction, crystallization, sublimation - methods for vacuum sublimation and distillation under reduced pressure.
Chemistry of working with hazardous materials - acid / base / water sensitive, corrosive, toxic, explosive and radioactive materials.

UNIT-III: EVALUATION OF ANALYTICAL DATA

Precision and accuracy - Reliability - determinate and random errors - distribution of random errors - normal distribution curve.

UNIT-IV: STATISTICAL TREATMENT OF ANALYTICAL DATA

Statistical treatment of finite samples - the students test and F test - criteria for rejection of an observation - the Q test, significant figures and computation rules - data plotting - least square analysis.

UNIT-V: THESIS AND ASSIGNMENT WRITING

Conventions of writing - the general format - page and chapter format - use of quotations and footnotes - preparation of tables and figures - referencing - appendices - revising editing and evaluating the final product - proof reading - meanings and examples of commonly used abbreviations.

PAPER-3
B. ADVANCED BIOINORGANIC CHEMISTRY

OBJECTIVES:

1. *To learn the importance of Bioinorganic Chemistry*
2. *To learn the role of metal ions in the biologically important complexes*
3. *To learn mechanism of photosynthesis*

UNIT - I: SCOPE OF BIOINORGANIC CHEMISTRY

Introduction: Trace elements, complex formation, hard and soft acids and bases (HSAB), inert and labile complexes. Amino acids and proteins - structure of proteins, peptide bond - enzymes - nucleic acid - carbohydrates - blood - plasma.

Concepts of essentiality - evolution of essential trace elements - future essential trace elements- role of minerals - working of essential trace elements - essential ultra trace elements - essential ultra trace nonmetals.

UNIT - II: METALLOPORPHYRINS

Respiratory proteins: Hemoglobin and Myoglobin - structure and functions - oxygenation reactions - structure and functions relationship - structural models for dioxygen binding - synthetic models for oxygen binding - models for Hemoproteins – Hemerythrin - Hemocyanin. Non-redox metalloenzymes: Peroxidase, Catalayse and Alcohol Dehydrogenase (Structure, mechanism of action and model compound)

UNIT - III: METALLOENZYMES

Copper enzymes: Superoxide dismutase, cytochrome oxidase and ceruplasmin - Molybdenum enzymes: Pyridoxyal oxidase and xanthine oxidase. Zinc enzymes: Carbonic anhydrase and carboxy peptidase. Cobalt enzyme: Vitamin B_{12}. Biomineralization – Siderophores - Ferritin and Transferrin,

UNIT - IV: METALS IN MEDICINE

Metal deficiency and disease - toxicity of mercury, cadmium, lead, beryllium, selenium and arsenic - biological defence mechanism - meaning and example of chelation therapy - Metals used for diagnosis (Tc, Fe and Co) - Metals in medicine: platinum complexes as anticancer drugs, Pt-DNA binding, complexes of gold, copper, zinc, mercury, arsenic and antimony as drugs.

UNIT - V: NITROGEN FIXATION AND PHOTOSYNTHESIS

Nittogenase enzyme: Reactivity, reduction involving nitride / diazene intermediate, dinitrogen complexes and their reactivity in vitro nitrogen fixation. Photosynthesis: Structure of chlorophyll in green plants (Z- Scheme) - ATP synthesis - Role of manganese complex in oxygen evolution - dark reaction (Calvin cycle).

PAPER-3
C. ADVANCED ANALYTICAL TECHNIQUES

OBJECTIVES:
On the completion the course the students will have the knowledge of various instrumental techniques. The students should have learnt data analysis and electroanalytical techniques.

UNIT-1: ELECTROANALYTICAL TECHNIQUES:

Voltametry - coulometry - amperometry – potentiometry – polarography - electrolytic conductivity - impedance spectroscopy.

UNIT-1I: CHEMICAL ANALYSIS:

Non-destructive techniques: Wavelength and energy dispersive X-ray fluorescence spectroscopy (WDS and EDS) - X-ray absorption spectroscopy (XANES and EXAFS) - secondary ion mass spectrometry (SIMS) - temperature programmed desorption (TPD) - thermal desorption spectroscopy (TDS).

Destructive techniques: Atomic absorption spectroscopy (AAS) - inductively coupled plasma-atomic emission spectroscopy (ICP-AES).

UNIT-1II: IMAGING AND DEPTH PROFILING:

Basic concepts in surface imaging - secondary electron microscopy (SEM) - secondary Auger microscopy (SAM) - scanning probe microscopy (SPM) - scanning tunneling microscopy (STM) - transmission electron microscopy (TEM) - surface imaging - depth profiling. Associated techniques of microscopy and spectroscopy.

UNIT- IV: THERMAL ANALYSIS:

Thermo gravimetric and differential thermal analysis - thermometric titrations - differential scanning colourimetry - basic instrumentation and applications.

UNIT–V: RADIOCHEMICAL METHODS

Hot atom chemistry – the Szilard – chalmers process, chemistry of recoil atoms, chemical effects on radioactive decay, solvated electron. Uses of radiations in the study of matter, neutron activation analysis, dilution analysis, dosimetry, synthesis of organic and inorganic compounds by irradiation. Radiometric analysis and radiography.

SEMESTER IV

PAPER - 10
ORGANIC CHEMISTRY IV

OBJECTIVE:

To understand the concepts of Aromaticity, Photochemical Reactions, Antibiotics and proteins. Applications and Techniques of Dyeing.

UNIT-I: AROMATICITY

Aromaticity of benzenoid - non-benzenoid and heterocyclic compounds - Huckel's rule - Aromatic systems with π electron numbers other than six - non-aromatic (cyclo octatetraene etc,) and anti aromatic system (cyclobutadiene etc.) - system with more than 10π electrons - Annulenes upto C18 (synthesis of all these compounds is not expected).

UNIT-II: PHOTOCHEMISTRY

Photochemical excitation - fate of the excited molecules - Jablonski diagram - study of photochemical reactions of ketone - photo reduction - photo cycloaddition - Paterno - Buchi reaction - di pi-methane rearrangement - Pericyclic analysis of electrocyclic - cyclo addition and sigmatropic reactions - correlation diagrams for butadiene - cyclobutene system - hexatriene to cyclohexadiene systems - structure of bulvalene - fluxional molecule - Cope and Claisen rearrangement.

UNIT-III PROTEINS AND NUCLEIC ACIDS

Proteins - peptides and their synthesis - synthesis of tripeptide - merrifield synthesis - determination of tertiary structure of protein - biosynthesis of proteins - nucleic acids - types - DNA & RNA polynucleotide chain - components - biological functions - structure and role of (genetic Code) DNA and RNA (nucleotides only) - Biosynthesis of cholesterol.

UNIT-IV: ANTIBIOTICS

Introduction - structural elucidation and synthesis of penicillin – streptomycin - chloromycetin and tetracyclines.

UNIT-V: DYES

Introduction - classification and various methods of dyeing - preparations and applications of dyes - Nitroso dyes - Azodyes - Fast green - Methyl Orange - Methyl Red - Fast Red - Tripheylmethane dyes - Malachite green - Rosaniline - Aniline blue - Crystal violet - Xanthene dyes - Fluorescein - Rhodamine-B - Anthroquinone dyes - Alizarin.

Recommended Books:

8. O.P. Agarwal, Chemistry of organic Natural Products, Goel Publishing House, Meerut.

PAPER-11
INORGANIC CHEMISTRY - IV

OBJECTIVE:
To study about the Inorganic Spectroscopy and Nuclear Chemistry.

UNIT-I: INORGANIC SPECTROSCOPY - I

Applications to inorganic systems of the following: ultra violet, visible, infra-red and Raman spectra of metal complexes, organometallic and simple inorganic compounds with special reference to coordination sites and isomerism.

UNIT-II: INORGANIC SPECTROSCOPY - II

Application to Inorganic systems of the followings
NMR, NQR and Mossebauer spectra - NMR of ^{31}P, ^{19}F, NMR shift reagents. NQR - Nitrosyl compounds. Mossebauer spectra of Fe and Sn systems.

UNIT-III: INORGANIC SPECTROSCOPY - III

ESR Introduction - Zeeman equation, g-value, nuclear hyperfine splitting, interpretation of the spectrum, simple carbon centered free radicals. Anisotropy - g-value and hyperfine splitting constant. McConnell's equation, Kramer's theorem.ESR of transition metal complexes of copper, manganese and vanadyl complexes.

Photoelectron spectroscopy (UV and X-ray) - photo electron spectra - Koopman's theorem, fine structure in PES, chemical shift and correlation with electronic charges.

UNIT-IV: INSTRUMENTAL ANALYSIS - I

AAS, AES and AFS – Principle, instrumentation and applications, advantages of AAS, interferences; GLC and HPLC – Principle, instrumentation and working, types of detectors; Inductively coupled plasma spectroscopy (ICP)- introduction, instrumentation, interferences and applications.

UNIT-V INSTRUMENTAL ANALYSIS - II

Laser Raman spectroscopy - principle, interfaces, advantages and applications.
Magnetic susceptibility and its determination - Guoy method, Faraday method and applications.
Polarography and Amperometry - Principle, instrumentation and applications.

PAPER-12
PHYSICAL CHEMISTRY-IV

OBJECTIVE

To study the principles of photochemical reactions. To study the Experimental methods and kinetics studies of photochemical reactions. Study of electrode - electrolytic interface. To study the fundamental principles of quantum chemistry and its application to chemical bonding. Schrödinger wave equation and its applications. To study statistical thermodynamics, quantum statistics and irreversible thermodynamics.

UNIT- I: PHOTOCHEMISTRY - I

Absorption and emission of radiation - Franck - Condon Principle - decay of electronically excited states - Jablonski diagram - radiative and non-radiative processes - fluorescence and phosphorescence - spin forbidden radiative transition - Internal conversion and intersystem crossing - energy transfer process - kinetics of unimolecular and bimolecular photophysical processes - excimers and exciplexes - static and dynamic quenching - Stern-Volmer analysis.

UNIT- II: PHOTOCHEMISTRY - II

Experimental methods - quantum yield and life time measurements - steady state principle - quantum yield and chemical actinometry.

Kinetics of photochemical reactions: hydrogen and halogen reactions,

Brief study about photoredox, photosubstitution, photoisomerization and photosensitized reactions - photovoltaic and photogalvanic cells, photo electrochemical cells, photo-assisted electrolysis of water, aspects of solar energy conversion.

UNIT- III: QUANTUM CHEMISTRY - I

Failure of classical mechanics - Compton effect - wave particle duality - uncertainty principle - waves - wave equation for electrons - quantum mechanical postulates - The concept of operators - Hermitian property. Schrodinger wave equation - application of Schrodinger's equation - the particle in a box (one, and three dimensional cases) - particle in a ring, solution to rigid rotor and harmonic oscillator. Schrodinger equation for hydrogen atom (no derivation is required) and the solutions.

UNIT- IV: QUANTUM CHEMISTRY - II

Approximation methods - Perturbation and Variation methods - application to hydrogen

molecule and helium atoms. Born - Oppenheimer approximation - valence bond theory for hydrogen molecule - LCAO - MO theory for diatomic molecules. Concept of hybridization - Huckel theory for conjugated molecules (Ethylene, butadiene and benzene).

UNIT- V: STATISTICAL THERMODYNAMICS - II

Thermodynamic functions in terms of partition functions - application of partition function to heat capacity of ideal gases - nuclear partition function - contribution to heat capacity of ortho and para hydrogen. Heat capacity of solids - Einstein and Debye models, Negative Kelvin temperature. Entropy of monoatomic gases - Sackur-Tetrode equation.

Irreversible thermodynamics - forces and fluxes - linear force - flux relation - phenomenological equations.

ELECTIVE
PAPER- 4
(to choose 1 out of 3)

A. ENVIRONMENTAL CHEMISTRY

OBJECTIVES:

To understand the concept of different types of pollution. To learn the various techniques involved in the analysis of pollutants. To know the methods for the control of pollution

UNIT-I AIR POLLUTION AND WATER POLLUTION

Classification of air pollution according to origin, chemical composition and state of matter - effects of air pollutants on living and nonliving things - ambient air quality standards - problems of air pollution in India - pollutions in industrial area (cement industry and thermal power plant) - Effect and consequences of air pollution: acid rain, green house effect, global warming and ozone depletion - major air pollution disasters - Bhopal Gas Leak - Chernobyl Nuclear Accident and Three Mile Island disaster.

Classification of water pollutants: DOD, BOD and COD - Effects of water pollutant on life and Environment.

UNIT-II SAMPLING AND ANALYSIS OF WATER AND AIR POLLUTANTS

Methods of sampling of gaseous, liquid and solid pollutant - analysis and effect of sulfur oxides, nitrogen oxides and carbon monoxide - biochemical effects and toxicology of Cd, Cr, As, Pb and Cu. Environmental implications of fertilizers, insecticides, pesticide - effect of pesticide residue on life - analytical techniques for pesticides residue analysis (Neutron Activation Analysis, Anodic Stripping Voltammetry and Atomic Absorption Spectroscopy) .

UNIT-III METHODS OF CONTROL OF AIR AND WATER POLLUTION

Methods of control of air pollution: Electrostatic precipitations - wet and dry scrubber, filters, gravity and cyclonic separation - adsorption, absorption and condensation of gaseous effluent.

Methods of control of water pollution: Water and waste water treatment - aerobic and anaerobic - aeration of water - principle of coagulation, flocculation, softening, disinfection, demineralization and fluoridation.

UNIT – IV NOISE POLLUTION

The decibel scale - effect: physiological, psychological, acute and chronic - Measurement of noise level (Sound level meter, Magnetic tap recorder, noise limit indicator) - noise control in industries: Administrative, engineering and path control - Protection of the personne (ear plugs, ear muffs. Helmets) - acoustic absorptive materials - noise control methods in industrial plants.

UNIT-IV RADIOACTIVE POLLUTION

Classification: Non-ionizing and ionizing radiation - radioactive pollution and their sources - natural and anthropogenic - biological effect of radiation on the human body - radiation doses -preventive measure from nuclear radiation - regulations from safety measure.

Radioactive wastes: Classification - low level and high level - radioactive waste disposal - geological disposal - ocean dumping - sub-sea bed dumping - subductive waste disposal method - transmutation of high - level radioactive waste - radioactive waste management in India.

PAPER- 4
B. INORGANIC PHOTOCHEMISTRY

UNIT-I: BASICS OF PHOTOCHEMISTRY

Absorption, excitation, photochemical laws, quantum yield, electronically excited states, life times-measurements of the times. Flash photolysis, energy dissipation by radiative and non-radiative processes, absorption spectra, Frank-Condon principle, photochemical stages-primary and secondary processes.

UNIT-II: EXCITED STATES OF METAL COMPLEXES

Excited states of metal complexes: Comparison with organic compounds, electronically excited states of metal complexes, charge transfer spectra and charge transfer excitations.

UNIT-III: LIGAND FIELD PHOTOCHEMISTRY

Photosubstitution, photooxidation and photoreduction, lability and selectivity, zero vibrational levels of ground state and excited state, energy content of excited state, zero-zero spectroscopic energy, development of the equations for redox potentials of the excited states.

UNIT-IV: REDOX REACTIONS BY EXCITED METAL COMPLEXES

Energy transfer under condition of a weak interaction and strong interaction-examples formation; condition of the excited states to be useful as redox reactants, excited electron transfer, metal complexes as attractive condidates, (2,2-bipyridine and 1,10-phenanthroline complexes), illustration of reducing and oxidising character of Ru (II) (bipyridal complex, comparison with Fe(bipy); role of spin-orbit coupling-life time of these complexes. Application of redox processes of electronically excited states for catalytic purposes, transformation of low energy reactants into high energy products and conversion of chemical energy into light.

UNIT-V: METAL COMPLEX SENSITIZERS

Metal complex sensitizers, electron relay, metal colloid systems, semiconductor supported metal or oxide systems, water photolysis, nitrogen fixation and carbon dioxide reduction.

Book Suggested:

1. Concepts of Inorganic Photochemistry, A.W. Adamson and P.D. Fleischauer, Wiley.
2. Inorganic Photochemistry, J.Chem. Educ. vol. 60 No. 10, 1983.
3. Progress in Inorganic Chemistry, Vol. 30ed. S.J. Lippard. Wiley.
4. Coordination Chem. Revs. 1981, vol. 39, 121, 1231, 1975, 14, 321,; 1990 97, 313.
5. Photochemistry of Coordination Compounds, V. Balzari and V. Carassiti, Academic Press.
6. Elements of Inorganic Photochemistry, G.J. Ferraudi, Wiley.
7. S.Arunachalam, "Inorganic Photochemistry - An Introduction to Photochemical andPhotophysical Aspects of Metal Complexes", Kala Publications, Tiruchirappalli, India, 2002.
8. D.M. Roundhill, “Photochemistry and photophysics of Metal complexes”, Springer;Edition, 1994

PAPER – 4
C. MEDICINAL CHEMISTRY AND DRUG DESIGN

Objectives:

Students should be able to understand concepts of drug design and mechanism of drug action of different drugs. Students will be aware of metabolism and delivery methods of different classes of drugs.

UNIT-I: DRUG DESIGN

Development of new drugs, concepts of pro-drugs and soft drugs, Principles of drug design, Quantitative structure activity relationships. History and development of QSAR (Quantitative Structure Activity Relationships) - Concepts of drug parameters. High throughput Screening.

UNIT-II: IMPORTANCE AND MECHANISM OF DRUG ACTION

Antibiotics: Drug action of penicillin, cephalosphorin, tetracycline and macrocyclic antibiotics (no synthesis). Antimalerials: Trimethoprim- NSAIDS: Paracetamol, Meperidine, Aminopyrine-Ibuprofen, Oxyphenylbutazone, Diclophenac sodium, Indomethacin-Antitubercular and antileprotic: Ethambutol, Isoniazide and Daspone - Anaesthetics: Lidocaine, - Antihistamines: Phenobarbital, Diphenylhydramine- Tranquilizers: Diazepham, Trimeprazine, Thiopental - Anti AIDS agents: Acylovir, Ganciclovir.

UNIT-III: PHYSICO-CHEMICAL FACTORS AND BIOLOGICAL ACTIVITIES

Physical properties - Features governing drug action - Structurally specific - nonspecific drugs -Thermodynamic activity - Theories - Cut-off point - Factors governing ability of drugs -Absorption - Distribution - Excretion - Biotransformation - Intramolecular distances -Dissociation constants - Isosterism and Bioisosterism.

UNIT-IV: CLASSIFICATION OF MEDICINAL COMPOUNDS

Central Nervous system acting drugs – (General and Local anaesthetics, Sedatives and Hypnotics, Anticonvulsants, Narcotic and Non-narcotic analgesics, Anti-Parkinsonian agents, Anti-depressants, Tranquilizers, Psychomimetics) - Pharmacodynamic agents (Anti-arrythmics, Anti-anginals, Vasodialators, Anti-hypertensives, Diuretics, Antihistamines) - Chemotherapeutic Agents (Antibiotics, Antivirals, Antifungals) - Drugs for metabolic and endocrine disorders (Anti-thyroid drugs, Anti-diabatic drugs, biosynthetic insulin) – Therapeutic Index (Definitions with examples).

UNIT-V: DRUG ANALYSIS

Principles of quantitative analysis of the following drugs in formulations: Aspirin - benzyl penicillin - ascorbic acid - isoniazid - codeine - chloramphenical - riboflavin and folic acid.

MAIN PRACTICAL
PRACTICAL PAPER-4
ORGANIC CHEMISTRY PRACTICAL- II

I. ANY SIX PREPARATIONS FROM THE FOLLOWING INVOLVING TWO STAGES

1. sym-Tribromo benzene from aniline (bromination, diazotization and hydrolysation)
2. Benzanilide from benzophenone (addition and Beckmann rearrangement)
3. m-Nitro benzoic acid from methyl benzoate (nitration and hydrolysation)
4. 2, 4.- Dinitrobenzoic acid from p-nitrotoluene (oxidation and nitration)
5. m-Nitro benzoic acid from benzaldehyde (oxidation and nitration)
6. Benzil from benzaldehyde (rearrangement)
7. Anthraquinone from phthalic anhydride (Fridel Crafts reaction)
8. Acetyl salicylic acid from methyl salicylate (hydrolysis and acetylation)
9. 2- Phenyl indole from phenyl hydrazine (Fisher indole reaction)
10. m-nitroaniline from nitrobenzene (nitration and reduction)

II. ANY TWO EXERCISES IN THE EXTRACTION OF NATURAL PRODUCTS

1. Caffeine from tea leaves
2. Lactose from milk
3. Citric acid from lemon
4. Piperine from black pepper

III. CHROMATOGRAPHIC SEPARATIONS

1. Column chromatography - Separation of anthracene and picric acid from anthracene picrate.
2. Thin layer chromatography - Separation of green leaf pigments.
3. Paper chromatography - Identification of amino acid.

IV. ANY FIVE ESTIMATIONS

1. Estimation of aniline
2. Estimation of phenol
3. Estimation of glucose
4. Estimation of ethyl methyl ketone
5. Estimation of amino group
6. Estimation of amide group
7. Saponification of fat or an oil
8. Iodine value of an oil
9. Estimation of sulphur in an organic compound

V.SPECIAL INTERPRETATION OF ORGANIC COMPOUNDS USING UV, IR, PMR AND MASS SPECTRA OF THE FOLLOWING 15 COMPOUNDS

[See ANNEXURE – I]

PRACTICAL PAPER - 5
INORGANIC CHEMISTRY PRACTICAL - II

1. ANALYSIS OF ORES

1. Determination of percentage of calcium and magnesium in dolomite.
2. Determination of percentage of MnO_2 in pyrolusite.
3. Determination of percentage of lead in galena.

II. ANALYSIS OF ALLOYS

1. Estimation of tin and lead in solder.
2. Estimation of copper and zinc in brass.
3. Estimation of chromium and nickel in stainless steel.

III. ANALYSIS OF INORGANIC COMPLEX COMPOUNDS

1. Preparation of cis and trans potassium bis (oxalato) diaquochromate(III) and analysis of each of these for chromium.
2. Preparation of potassium tris (oxalato) ferrate (III) and analysis for iron and oxalate.

IV. QUANTITATIVE ANALYSIS OF THE FOLLOWING MIXTURES
(one by volumetric and one by gravimetric method)

1. Copper and Nickel
2. Copper and Zinc
3. Iron and Nickel
4. Iron and Magnesium

V. COLORIMETRIC ANALYSIS USING PHOTOELECTRIC METHOD

1. Estimation of iron
2. Estimation of nickel
3. Estimation of manganese
4. Estimation of copper

VI. AMPEROMETRIC TITRATIONS (With dead stop endpoint)

1. Thiosulpate - iodine system
2. Iron (II) - cerium (IV) systems.

PRACTICAL PAPER-6
PHYSICAL CHEMISTRY PRACTICAL- II

EXPERIMENTS IN ELECTROCHEMISTRY:
CONDUCTOMETRY, POTENTIOMETRY, PH METRY AND SPECTROSCOPY.

I.CONDUCTIVITY MEASUREMENTS

1. Determination of equivalent conductance of a strong electrolyte and verification of Debye - Huckel - Onsager Equation
2. Verification of Debye-Huckel limiting law
3. Verification of Ostwald's Dilution law for a weak electrolyte.
4. Determination of pK_a values of weak acids and weak bases.
5. Conductometric titrations between acid (simple and mixture of strong and weak acids) - base,
6. Precipitation titrations including mixture of halides.

II. E.M.F MEASUREMENTS

1. Determination of standard potentials (Copper, Silver & Zinc)
2. Determination of thermodynamic quantities from EMF measurements –
3. Potentiometric titrations – Neutralization reactions
4. Determination of pH of buffer solution and calculation of pK_a.
5. Determination of stability constant of a complex.
6. Determination of solubility product of a sparingly soluble salt.
7. Potentiometric titrations – Redox titrations.
8. Potentiometric titrations – Precipitation titration of mixture of halides by EMF measurements.

III. SPECTROSCOPY: INTERPRETATION OF SPCTRA [See ANNEXURE – III].

1. Experiments given only to familiarize the interpretation of spectra provided.
2. Interpretation of UV-Visible spectra of simple molecules for the calculation of molecular data
3. Identification of functional groups (5 typical spectra will be provided).
4. IR and NMR spectral calculations of force constant and coupling constants respectively
5. Identification and interpretation of a spectra (5 each in IR and NMR will be provided)

LIST OF EXPERIMENTS SUGGESTED FOR PHYSICAL CHEMISTRY PRACTICAL II

Typical list of possible experiments are given.
Experiments of similar nature and other experiments may also be given.
The list given is only a guideline.
Any 15 experiments have to be performed in a year.

1. Determination of the equivalent conductance of a weak acid at different concentrations and verify Ostwald's dilution law and calculate the dissociation constant of the acid.
2. Determination of equivalent conductance of a strong electrolyte at different concentrations and examine the validity of the Onsager's theory as limiting law at high dilutions.
3. Determination of the activity co-efficient of Zinc ions in the solution of 0.002M Zinc sulphate using Debye-Huckel limiting law.
4. Determination of the solubility product of silver bromate and calculate its solubility in water and in 0.01 M $KBrO_3$ using Debye-Huckel limiting law.
5. Conductometric titrations of a mixture of HCl, CH_3COOH and $CuSO_4$ and NaOH.
6. Determination of the dissociation constant of an acid at different dilution.
7. Determination of the solubility of the lead iodide in water , 0.04 M KI and 0.04 M $Pb(NO_3)_2$ at 298 K
8. Determination of the solubility product of leadiodide at 298 K and 308 K and calculate the molar heat of solution of lead iodide.
9. Compare the relative strength of acetic acid and mono chloroacetic acid by conductance method.
10. Determine the basicity of organic acids (oxalic /benzoic).
11. Determine the electrode potentials of Zn and Ag electrodes in 0.1M and 0.001M solutions at 298 K and fine the standard potentials for these electrodes and test the 12.
12. Determine the activity co-efficient of an electrolyte at different molalities by EMF measurements.
13. Determine the dissociation constant of acetic acid titrating it with sodium hydroxide using quinhydrone as an indicator electrode and calomel as a reference electrode.

14. Study of the electrolytic separation of metals (Ag, Cu, Cd and Zn)
15. Determine the strength of a given solution of KCl using differential potentiometric titration technique.
16. Determine the dissociation constant of acetic acid in DMSO, DMF, acetone and dioxane by titrating it with KOH.
17. Determine the transport number of Ag ions and nitrate ions by Hittorf's method.
18. Determine the transport number of cadmium ions and sulphate ions by measuring emf of concentration cells with and without transference.
19. Determine the dissociation constant of monobasic or dibasic acid by all the Alber-Serjeant method.
20. Determine the pH of the given solution with the help of indicators using buffer solutions and by colorimetric method.
21. Perform acid-base titration in a non aqueous medium.
22. Determine the pH of a given solution by EMF method using glass and calomel electrodes and evaluate pKa value of an acid.
23. Determine the pH of a given solution by emf methods using hydrogen electrode and quinhydrone electrode.
24. Estimate the concentration of cadmium and lead ions by successive reduction in polarography. Verify Illkovic equation.
25. Determine lead ion by amperometric titrations with potassium dichromate.
26. Determine ferric ion by amperometric titration.
27. Determine pH value of an acid-base indicator (methyl red) by colorimetry.
28. Determine the composition and instability constant of a complex by mole ratio method.
29. By colorimetry determine simultaneously Mn and Cr.
30. Study the effect of solvent on the conductivity of $AgNO_3$/acetic acid and determine the degree of dissociation and equilibrium constant in different degree of dissociation and mixtures (DMSO, DMF, dioxane, acetone, water) and test the validity of Debye-Huckel Onsager's equation.
31. Determine the solubility of $Ca(TiO_3)_2$ in deionised water and in dilute solution of KCl at 298 K. Determine the solubility product graphically.
32. Determine the equivalent conductivity of a Ca electrolyte and dissociation constant of the electrolyte.
33. Determine the equivalent dissociation constant of a polybasic acid.
34. Calculate the thermodynamic parameters for the reaction $Zn + H_2SO_4$ gives $ZnSO_4 + H_2$ by emf method.

35. Determine the formation constant of silver-ammonia complex and stoichiometry of the complex potentiometrically.
36. Determine the stability constant of a complex by polarographic method.
37. Determine the g value from a given ESR spectrum.

SEMESTER –I **MAIN PAPER-1** **5H/5C**

FORMAL LANGUAGES AND AUTOMATA THEORY

UNIT–I

Fundamentals - String, Alphabets, Operations, Finite State Machine – Definitions, Divisibility by Three Tester - Set Theory – Relations – Functions- Counting Techniques – Logic-Methods of Proof

UNIT-II

Finite Automata –Deterministic and Nondeterministic Finite Automata – Equivalence of NFA and DFA – Finite Automata with Outputs –Finite Automata with Null Moves – Finite Automata and Sequential Circuits

UNIT-III

Chomsky classification of grammars -Regular Expression – Relation between Regular languages and Finite Automata- Closure Properties – Automata for Union, Intersection and Difference of Languages – Context free grammars – Normal forms for Context Free Grammar – Parse Trees – Ambiguity Grammars – Removing Ambiguity from Grammars

UNIT-IV

Basic Structure – Types of Acceptance by PDA – Correspondence between PDA and CFL – Parsing and PDA -Languages of PDA – Equivalence of PDA and CFG – Deterministic PDA

UNIT-V

Basic structure of TM – Instantaneous Description of Turing Machine – Language of TM – Turing Machine as Computer for Positive Integer- Universal Turing Machine – Turing Machine for 1's Complement, 2's Complement- TM for Well Formed Parenthesis – TM for Unary addition and Multiplication – TM for Palindrome Recognition – TM for GCD – TM for 0^n1^n

SEMESTER –I **MAIN PAPER -2** **4H/3C**

ADVANCED JAVA PROGRAMMING

UNIT-I

Design Patterns: Introduction to Design patterns - Catalogue for Design Pattern - Factory Method Pattern, Prototype Pattern, Singleton Pattern- Adapter Pattern- Proxy Pattern-Decorator Pattern-Command Pattern- Template Pattern- Mediator Pattern-Collection Framework – Array List class – Linked List class – Array List vs. Linked List - List Iterator interface - Hash Set class- Linked Hash Set class-Tree Set class Priority Queue class - Map interface-Hash Map class- Linked Hash Map class –Tree Map class - Comparable interface -Comparator interface-Comparable vs. Comparator

UNIT-II

Applet Fundamentals- Applet Class - Applet lifecycle- Steps for Developing Applet Programs- Passing Values through Parameters- Graphics in Applets- GUI Application - Dialog Boxes - Creating Windows - Layout Managers – AWT Component classes – Swing component classes- Borders – Event handling with AWT components - AWT Graphics classes - File Choosers - Color Choosers – Tree – Table – Tabbed panels–Progressive bar - Sliders.

UNIT-III

JDBC -Introduction - JDBC Architecture - JDBC Classes and Interfaces – Database Access with MySQL -Steps in Developing JDBC application - Creating a New Database and Table with JDBC - Working with Database Metadata; Java Networking Basics of Networking - Networking in Java- Socket Program using TCP/IP - Socket Program using UDP- URL and In et address classes.

UNIT–IV

Servlet: Advantages over Applets - Servlet Alternatives - Servlet Strengths - Servlet Architecture - Servlet Life Cycle – Generic Servlet, Http Servlet - First Servlet - Invoking Servlet - Passing Parameters to Servlets - Retrieving Parameters - Server-Side Include – Cookies- JSP Engines - Working with JSP - JSP and Servlet - Anatomy of a JSP Page.

UNIT-V

Client-Side Programming: Client-side programming technologies - Form design using HTML, XHTML and DHTML and CSS - Client side validation Using Java Script - Content Structuring using XML - Adding Interactivity with AJAX - Query Framework- Server-side Programming- Web Servers - Handling request and response - Handling Form data - Session management - Database Access.

2. Bruce W.Perry, “Java Servlet and JSP Cook Book”, O'Reilly, 2004.

SEMESTER –I **MAIN PAPER -3** **4H/3C**

WEB APPLICATION USING C#

UNIT – I

Introduction to ASP.NET: Evolution of .NET – Benefits of .NET – Overview of .NET - ASP.NET overview: Exploring new features of ASP.NET - ASP.NET Technologies- Exploring an ASP.NET 4.0 Web Application – Creating an ASP.NET website.

UNIT – II

Developing a Web Application: Specifying a location for a web application – File types in ASP.NET - Exploring ASP.NET Web pages - ASP.NET Coding Models – Application Structure and State: Structure of an application- The Global. Sax Application file – States.

UNIT – III

ASP.NET Controls: Standard Controls: The Control Class – The Web Control class- The Label Control- the Button Control – The Text Box Control - The Image Control - The List Box Control – Navigation Controls: The Tree View Control - Creating Static Menus - Validation Controls: Using the Required Field Validator Control- Using the Range Validator Control – HTML Controls: HTML Server Controls – HTML Form Class.

UNIT - IV

Accessing Data in ASP.NET : Working with Database Controls: The Grid View Control The Data list control-The Details view control- LINQ Queries: Introducing LINQ Queries-Data Structures in LINQ – Deffered Query Execution and Immediate Execution LINQ and Generic Types – ADO.NET Entity Framework: Exploring ADO.NET Entity Framework – Exploring the features of Entity Framework – Working with Files and Streams: Introducing the System.IO Namespace – Working with Drives and Directories- Exploring the Directory class.

UNIT – V

ASP.NET Web Services: Introduction – Infrastructures of ASP.NET web services – Web Service Properties – Security in ASP.NET: Working with Login Controls – Working with User Profiles – Crystal Reports: Understanding Crystal Reports.

TEXT BOOK

1. KOGENT Learning Solutions, "ASP.NET 4.0 (Covers C# 2010 and VB 2010 codes) Black Book", Dream-Tech Press

REFERENCES

4. Shivprasad Koriala and Rajesh Pillai, "C# and ASP.NET Projects", Paperback, 2007.

SEMESTER –I **MAIN PAPER- 4** **4H/3C**

DATABASE MANAGEMENT SYSTEMS

UNIT-I

File System vs. DBMS- Database System Applications- View of Data- Data base language-Database design-ER Mode l_ Relational Model-Network Data Model-Hierarchical Data Model-Data Storage & Querying- Data Architecture.

UNIT-II

Relational Model-Structure of Relational Databases - Relational Algebra and Calculus- SQL - Basic Structure- Set Operations- Aggregate Functions- Null Values- Nested Queries-Complex Queries-Views - Modification of the Database - Advanced SQL- Triggers.

UNIT-III

Functional Dependencies – Features of Relational designs-Decomposition and Normalisation using Functional Dependencies and Multi valued Dependencies-Join dependencies-Domain key Normal form.

UNIT-IV

Overview of Physical Storage Media- Magnetic disks-RAID- Tertiary Storage-File Organization – Organization of records in Files- Indexing and Hashing-Ordered Indices- B+ -Tree Index Files - B-Tree Index Files – multiple Key Access - Static and Dynamic Hashing-QueryProcessing-TransactionManagement-Transactions-Concurrency.

UNIT-V

Distributed Databases - Homogeneous and Heterogeneous Databases-Distributed Data Storage - Distributed Transactions-Commit Protocols - Concurrency Control - Object BasedDatabases-ComplexDatatypes-StructuredTypesandInheritanceinSQL–Object identity and Reference-Types in SQL-XML-structure of XML data- XML Document - Schema - Querying and Transformation - Data Mining and Data Ware housing.

TEXTBOOK

1. Abraham Silberschatz, Henry F.Korth and S.Sudarshan-“Database System Concepts”, Fifth Edition, McGraw-Hill, 2006.

REFERENCES

3. Hector Garcia–Molina, Jeffrey D.Ullmanand Jennifer Widom- “Database System Implementation”-PearsonEducation-2000.
4. Narang,”DatabaseManagementSystems”, 2nd ed., PHI.

SEMESTER –I **MAIN PRATICAL PAPER- 1** **3H/2C**

ADVANCED JAVA PROGRAMMING LAB

1. Collections using Set, List and Map interfaces
2. Applet programs
3. AWT Controls
4. CRUD operation Using JDBC
5. Displaying Query Results in a Table
6. TCP Socket
7. UDP Socket
8. Web application using Servlet and JDBC
9. Cookies and Session tracking
10. Web application using JSP and JDBC

SEMESTER –I **MAIN PRATICAL PAPER- 2** **3H/2C**

WEB APPLICATIONUSING C# LAB

1. Web Configuration File
2. HTML Control Classes, Control Events, Container and Input Control Classes,
3. HTTP Request Classes & Response Classes
4. Web Control Classes & Control Tags
5. Validation Controls
6. Rich Controls
7. Data Access
8. Components
9. Custom Controls
10. User Controls

SEMESTER –I **MAIN PRATICAL PAPER- 3** **3H/2C**

DATABASE MANAGEMENT SYSTEMS LAB

1. Creating data base tables and using data types. - Create table- Modify table - Drop table

2. Practical Based on Data Manipulation- Adding data with Insert - Modify data with Update -Deleting records with Delete

3. Practical Based on Implementing the Constraints - NULL and NOT NULL - Primary Key and Foreign Key Constraint - Unique, Check and Default Constraint

4. Practical for Retrieving Data Using following clauses - Simple select clause - Accessing specific data with Where - Ordered By - Distinct and Group By

5. Practical Based on Aggregate Functions - AVG –COUNT – MAX –MIN –SUM -CUBE

6. Practical Based on implementing all String functions and Date and Time Functions, union, intersection, set difference.

7. Implement Nested Queries & JOIN operation.

8. Practical Based on performing different operations on a view.

9. Practical Based on implementing use of triggers, cursors & procedures.

10. Make Database connectivity with front end tools MS-Visual Studio with C# programming.

SEMESTER –I **ELECTIVE PAPER- 1** **4H/3C**

(To choose either A or B or C)

A. OBJECT ORIENTED ANALYSIS AND DESIGN

UNIT - I

System Development - Object Basis-Development life cycle - Methodologies-Patterns - Frame works-Unified Approach-UML.

UNIT - II

Use - Case Models-Object Analysis-Object relations-Attributes-Methods-Class and object responsibilities-Case Studies.

UNIT - III

DesignProcess-DesignAxioms-ClassDesign-Objectstorage-ObjectInterpretability-Case Studies.

UNIT - IV

User interface design-View layer classed-Micro-level processes-View Layer Interface-Case Studies.

UNIT - V

Quality Assurance Tests - Testing strategies - Object O riented on Testing - Test Cases - Test Plans - Continuous Testing – Debugging Principles – System usability – Measuring user satisfaction-Case Studies.

TEXTBOOK

4. David West and Brett McLaughlin, "Head First Object-Oriented Analysis and Design", Kindle Edition, 2011.

SEMESTER –I **ELECTIVE PAPER- 1** **4H/3C**

(To choose either A or B or C)

B. CLOUD COMPUTING

UNIT - I

Fundamentals – Cloud computing – History of Cloud Computing – Cloud Architecture – Cloud Storage – Why cloud computing Matters – Advantages of Cloud computing – Disadvantages of Cloud Computing – Companies in the Cloud Today – Cloud Services

UNIT- II

Web-Based Application – Pros and Cons of Cloud Service Development – Types of Cloud Service Development – Software as a Service – Platform as a Service – Web Services –On-Demand computing –Discovering Cloud Services Development Services and Tools – Amazon Ec2- Google App Engine – IBM Clouds.

UNIT -III

Centralizing Email communications –collaborating on Schedules – Collaborating on To-Do Lists – Collaborating Contact Lists – Cloud computing for the Community – Collaborating on Group Projects and Events – Cloud Computing for the Corporation.

UNIT -IV

Collaborating on Calendars, Schedules and Task Management – Exploring Online Scheduling Applications–Exploring Online Planning and Task Management – Collaborating on Event Management – Collaborating on Contact Management – Collaborating on Project Management – Collaborating on Word Processing – Collaborating on Databases – Storing and Sharing Files – Evaluating Web Mail Services – Evaluating Web Conference Tools – Collaborating via Social Networks and Groupware – Collaborating via Blogs and Wikis.

UNIT -V

OGSA – Sample Use Cases – OGSA Platform Components – OGSI – OGSA Basic Services. Globus Toolkit – Architecture – Programming Model – High Level Services – OGSI.Net. Middleware Solutions.

TEXT BOOK

1. Michael Miller, "Cloud Computing: Web-Based Applications That Change the Way You Work and Collaborate Online", Que Publishing, 2008.

4. Rajkumar Buyya and James Broberg, " Cloud Computing: Principles and Paradigms", Paperback, 2013

SEMESTER –I **ELECTIVE PAPER- 1** **4H/3C**

(To choose either A or B or C)

C. PRINCIPLES OF PROGRAMMING LANAGUES

UNIT - I

Language design Issues: Reasons for studying concepts of programming language language evaluation criteria-influences on language design-structure and operation of computer virtual computers and binding times-language paradigms.

UNIT - II

Data types: Properties of types and objects-elementary data types- structured data types. Abstraction: Abstract data types-encapsulation by sub programs-type definition-storage management.

UNIT - III

Sequence Control: Implicit and explicit sequence control-sequencing with arithmetic and non-arithmetic expressions-sequence control between statements**.** Subprograms control: subprogram sequence control-attributes of data control shared data in subprograms.

UNIT - IV

Inheritance: Inheritance-polymorphism; Language Translation Issues: Programming language syntax-stages in translation-formal translation models.

UNIT - V

Advances in language design: variations on subprogram control-language constructors for parallel processing language semantics-software architecture.

TEXTBOOK

1. Terrance W.Pratt, Marvin V Zelkowitz, "Programming Languages, Design and Implementation", PHI, 2002, (4^{th} edition).

4. 4. D.Appleby, J.J.Vande Kopple, "Programming languages Paradigm and practice", McGraw Hill, International Editions, (2ndedition), 1997.

SEMESTER –II **MAIN PAPER- 5** **4H/4C**

COMPILER DESIGN

UNIT-I

Lexic an analysis: Regular expression- Non deterministic automata-deterministic automata EquivalenttoNFAs-minimizingthestatesofDFA-implementationoflexicalanalyzer.

UNIT-II

Syntax analysis: Top down parsing concepts-recursive descent parsing - predictive parsers-non recursive predicate parsing- bottom-up parsing- handle pruning- shift reduce parsing-operator parsing-LR parsers-parser generators -YACC.

UNIT-III

Intermediate code generation: Syntax directed definitions - construction of syntax trees-top down translation-bottom up evaluation of inherited attributed -recursive evaluators-assigning space at compiler construction time-type checking-overloading of functions and operators -polymorphic function.

UNIT-IV

Storage organization: Storage organization -storage allocation strategies - parameter passing - symbol tables-dynamic storage allocation - intermediate languages - representation of declarations - assignment statement - Boolean expression - back patching-procedure calls.

UNIT-V

Code generation and Code optimization: Design of code generators - runtime storage management - basic blocks-flow graphs-register allocation and assignment-DAG representation of basic blocks - peephole optimization - code optimization - the principle sources of optimization - optimization of basic blocks - global data flow analysis-loop optimizations.

3. C. N. Fisher and R. J. LeBlanc, “Crafting a Compiler with C”, Pearson Education, 2000

SEMESTER –II **MAIN PAPER- 6** **4H/3C**

ENTERPRISE JAVA PROGRAMMING

UNIT-I

Introduction -Enterprise Architecture Styles - J2EE Architecture - Containers - J2EE Technologies - Developing J2EE Applications - Naming and directory services - Using JNDI - JNDI Service providers Application Servers - Implementing the J2EE Specifications - J2EE packaging and Deployment - J2EE packaging overview - Configuring J2EE packages

UNIT-II

JSP Benefits - Framework roles - Simple JSF application - User Interface Component Model - Navigational Model - Life Cycle of JSF page - Using JSF in JSP Pages – Setting up a page, using core tags - using HTML tags - using localized messages - Using converters.

UNIT-III

Introduction to Enterprise Beans - Session Bean - Entity Bean - Message driven Bean - defining clients access with interfaces - contents of an enterprise Bean - life cycle of enterprise Bean - creation of Enterprise Bean - application client - web client - other Enterprise Bean features-handling exceptions.

UNIT–IV

Struts Architecture - Struts classes - Action Forward, Action Form, Action Servlet, Action classes - Understanding struts - config.xml, Understanding Action Mappings, Struts flow with an example application.

UNIT-V

Hibernate - Architecture of Hibernate - Life cycle of Hibernate Entities- Exploring HQL - Understanding Hibernate O/R Mapping - Collection Mapping - Association Mapping - Relationships in Java and Databases.

TEXT BOOKS

SEMESTER –II **MAIN PAPER- 7** **4H/3C**

ENTERPRISE APPLICATION USING C#

UNIT – I

Introduction – Creating a Simple Component – Properties and State – Database Components – Consuming the Database Component –Enhancing the Component with Error Handling – Aggregate Information–Data Objects.

UNIT - II

User Controls–Creating a Simple User Control–Visual Studio .NET Custom Control Support – Independent User Controls –Integrated User Controls –User Control Events – Limitations – Deriving Custom Controls.

UNIT - III

Designing for Scalability–Profiling –Caching-Output Caching–Client Side–Query Structuring– Events–CustomCachingControl–CachingwithHTTPCachePolicyClass–Fragment Caching – Data Caching –A Simple Cache Test–Caching to Provide Multiple Views.

UNIT – IV

Determining Security Requirements –Restricted File Types – Security Concepts –ASP .NET Security Model–Security Strategies – Certificates – SSL –Forms Authentication –Web. Config Settings– Login Page – User Lists – Protecting User Passwords with Encryption – Custom Roles – Windows Authentication–IIS Settings –Web. Config Setting –A windows Authentication Test.

UNIT – V

EnterpriseLibrary–DevelopingApplicationswithEnterpriseLibrary–DesignBlocks–Caching– Cryptography–Data Access – Exception Handling –Logging – Policy Injection – Security – Unity – Validation – Deployment Tools –Development of Deployment Tools –Choosing a Deployment Strategy–Click once Update Strategy – Deployment and Security.

TEXTBOOK

4. Shivprasad Koriala and Rajesh Pillai, "C# and ASP .NET Projects", Paperback, 2007.

SEMESTER –II **MAIN PAPER- 8** **4H/3C**

UNIX NETWORKING PROGRAMMING

UNIT-I

Overview of UNIXOS - File I/O-File Descriptors -File sharing-Files and directories-File types-File access permissions-Files systems-Symbolic links-Standard I/Library- Streams and file objects-Buffering-System data files and information-Password file- Group file-Login accounting-system identification.

UNIT-II

Environment of a UNIX process - Process termination - command line arguments - Process control-Process identifiers-Process relationships terminal logins-Signals- threads.

UNIT-III

Introduction -Message passing (SVR4)-pipes-FIFO-message queues-Synchronization (SVR4)-Mutexes-condition variables-read-write locks–file locking-record locking-semaphores-Shared memory (SVR4).

UNIT-IV

Introduction -transport layer-socket introduction-TCP sockets-UDP sockets-raw sockets-Socket options-I/O multiplexing-Name and address conversions.

UNIT-V

Application-Debugging techniques-TCPecho client server-UDPecho client server- Ping-Trace route-Client server applications like file transfer and chat.

TEXTBOOKS

1. W.Richard Stevens, Advanced programming in the UNIX environment, Addison Wesley, 999. (Unit1, 2 &3)
2. W. Stevens, Bill Fenner, Andrew Rudoff, "Unix Network Programming", Volume 1, The Sockets Networking API, 3rd Edition, Pearson education, Nov2003. (unit4&5)

REFERENCES

3. Bill Fenner, "Unix Network Programming: The Sockets Networking", Vol 1, 3rd ed., Paperback, 2012.

4. Mark G.Sobell, "A Practical Guide to Linux Commands, Editors and Shell Programming", Paperback, 2012.

SEMESTER –II **MAIN PRACTICAL PAPER- 4** **3H/2C**

ENTERPRISE JAVA PROGRAMMING LAB

1. Simple JSF application using JSP in JSF
2. HTML render kit in JSF
3. Core render kit in JSF
4. Creating Enterprise Bean
5. Creating Web Client
6. Using Session Bean
7. Struts Action
8. Struts Forward Action
9. Object Relational Mapping
10. Collection Mapping

SEMESTER –II **MAIN PRATICAL PAPER- 5** **3H/2C**

ENTERPRISE APPLICATION USING C# LAB

1. Creation and consumption of a simple component and database component and components using aggregate functions.

2. Creation of a Custom control which includes the following operation
A textboxes that parses the separator and identifies the first name and last name.

2. Create a popup calendar control that consists of a textbox and calendar control. The calendar control pops uponly by clicking the calendar control

3. Cache the output of the page for a specified time using Output Caching

5. Cache the data content of the web page using the Data Caching

6. Cache portion of a web page using Fragment caching

7. Create a simple profile and provide customized settings for the user.

8. Using the Forms Authentication, authenticate the user and encrypt the password using either SHA or RSA algorithm.

9. Implementation of deployment tools (XCOPY or Web Setup wizard)

10. Working with enterprise library tool with various features (Data access, exception, Cryptography, logging).

SEMESTER –II **MAIN PRATICAL PAPER- 6** **2H/2C**

UNIX PROGRAMMING LAB

1. Write a shell script to copy, rename and print multiple files using choice menus.

2. Write a shell script to display logged in users who are using high CPU percentage.

3. Write a shell script to list processes based on CPU percentage and memory un usage.

4. Write a shell script to display total used and free memory space.

5. Write a shell script that takes as command – line input a number and a word. The program should then print the word times, one word per line.

6. Write a shell scripts using the following statements.

a) While-loop

b) For-loop

c) If-then-else

d) Switch

7. Write a shell script using grep statement.

8. Write a shell script that can search all immediate sub-directories of the current- directory for a given file and then quit if it finds one.

9. Write a shell script program to include verbose Debug option for debugging.

10. Write a shell script program to include trace Debug option for debugging.

SEMESTER –II **COMPULSORY PAPER** **2H/2C**

HUMAN RIGHTS

UNIT-I

Definition of Human Rights - Nature, Content, Legitimacy and Priority - Theories on Human Rights - Historical Development of Human Rights.

UNIT-II

International Human Rights - Prescription and Enforcement up to World War II - Human Rights and the U .N .O. - Universal Declaration of Human Rights - International Covenant on Civil and Political Rights - International Convenant on Economic, Social and Cultural Rights and Optional Protocol.

UNIT-III

Human Rights Declarations - U.N. Human Rights Declarations - U.N. Human Commissioner.

UNIT-IV

Amnesty International - Human Rights and Helsinki Process - Regional Developments - European Human Rights System - African Human Rights System - International Human Rights in Domestic courts.

UNIT-V

Contemporary Issues on Human Rights: Children's Rights - Women's Rights - Dalit's Rights - Bonded Labour and Wages - Refugees - Capital Punishment.
Fundamental Rights in the Indian Constitution - Directive Principles of State Policy - Fundamental Duties - National Human Rights Commission.

TEXT BOOKS

1. International Bill of Human Rights, Amnesty International Publication, 1988.
2. Human Rights, Questions and Answers, UNESCO, 1982
3. Mausice Cranston - What is Human Rights
4. Desai, A.R. - Violation of Democratic Rights in India
5. Pandey - Constitutional Law.
6. Timm. R.W. - Working for Justice and Human Rights.

SEMESTER –II **ELECTIVE PAPAER- 2** **4H/3C**

(to choose either A or B or C)

A. SOFTWARE TESTING

UNIT - I

Introduction - Purpose of testing, Dichotomies, model for testing, consequences of bugs, taxonomy of bugs. Flow graphs and Path testing: - Basics concepts of path testing, predicates, path predicates and achievable paths, path sensitizing, path instrumentation, application of path testing.

UNIT - II

Transaction Flow Testing:-transaction flows, transaction flow testing techniques. Dataflow testing: - Basics of dataflow testing, strategies in dataflow testing, application of dataflow testing.

UNIT – III

Domain Testing:-domains and paths, Nice & ugly domains, domain testing, domains and interfaces testing, domain and interface testing, domains and testability. Paths, Path products and Regular expressions: - path products & path expression, reduction procedure, applications, regular expressions & flow anomaly detection.

UNIT - IV

Logic Based Testing- overview, decision tables, path expressions, kv charts, specifications. State, State Graphs and Transition testing- state graphs- good & bad state graphs- state testing, Testability tips.

UNIT - V

Graph Matrices and Application:-Motivational overview, matrix of graph, relations, power of a matrix, node reduction algorithm, building tools. (Student should be given an exposure to a tool like J Meter or Win runner).

TEXT BOOKS

1. Baris Beizer, Dream tech, "Software Testing techniques", second edition, Paperback, 2002.

2. Dr.K.V.K.K. Prasad, Dream tech, "Software Testing Tools", Paperback, 2004.

REFERENCES

1. Brian Marick, "The craft of software testing", Pearson Education.

4. Perry and John Wiley, "Effective methods of Software Testing", 2nd Edition, 1999.

SEMESTER –II **ELECTIVE PAPAER- 2** **4H/3C**

(to choose either A or B or C)

B. WEB SERVICES

UNIT – I

Overview of Distributed Computing. Introduction to web services– Industry standards-Technologiesandconceptsunderlyingwebservices–theirsupporttowebservices.Applications that consume web services.

UNIT – II

XML–itschoiceforwebservices–networkprotocolstobackenddatabases-technologies–SOAP, WSDL–exchangeofinformationbetweenapplicationsindistributedenvironment–locatingremote web services–its access and usage. UDDI specification– an introduction.

UNIT - III

A brief outline of web services – conversation –static and interactive aspects of system interface and its implementation, workflow –orchestration and refinement, transactions, security issues– the common attacks – security attacks facilitated within web services quality of services – Architecting of systems to meet users requirement with respect tolatency, performance, reliability, QOS metrics, Mobile and wireless services– energy consumption, network band width utilization, portals and services management.

UNIT - IV

Buildingrealworldenterpriseapplicationsusingwebservices–samplesourcecodestodevelopweb services–
stepsnecessarytobuildanddeploywebservicesandclientapplicationstomeetcustomersrequirement– Easier development, customization, maintenance, transactional requirements, seamless porting to multiple devices and platforms.

UNIT - V

Deployment of Web services and applications onto Tomcat application server and axis SOAP server–Web services platform as a set of enabling technologies for XML based distributed computing.

TEXT BOOK

1. Sandeep Chatterjee, James Webber, "Developing Enterprise Web Services: Architects Guide, Prentice Hall, Nov2003.

REFERENCES

4. Andreas Witting, Michael Wittig, "Amazon Web services in Action", Paperback, 2015

SEMESTER –II **ELECTIVE PAPAER- 2** **4H/3C**

(To choose either A or B or C)

C. CRYPTOGRAPHY AND NETWORK SECURITY

UNIT - I

Security Problems: Security problem in computing- Security Attacks – Security Services – Security Mechanisms – OSI security attack-Standards and standard setting organizations

UNIT - II

Data Security: Basic encryption and decryption-Substitution-Transposition-Block ciphers Data encryption standard encryption and decryption-Differential and linear crypto analysis Advanced encryption–Standard encryption and decryption - Block cipher models-Triple DES with two keys-Stream cipher-RC4- RSA algorithm – Diffie -Hellman key exchange algorithm.

UNIT - III

Message Authentication: Hash Functions – MD5-Hash algorithm - SHA 512 logic - Authentication Protocols-Digital signature standards

UNIT - IV

Network Security: IP security overview, IP security architecture, Authentication header, Encapsulating security pay load, combining security association, Key management-Web security considerations, secure socket layer, secure electronic transaction.

UNIT - V

System Security: Intruders and intrusion detection-Malicious software, Viruses and related threats, virus counter measures, distributed denial of services attack-Firewalls design principles-Trusted systems.

TEXT BOOK

SEMESTER –III **MAIN PAPER -9** **5H/5C**

DISTRIBUTED OPERATING SYSTEMS

UNIT-I

Evolution –Models – Popularity - Distributed Operating System – Issues – Distributed Computed Environment - Features of a Good Message Passing – Issues- Synchronization – Buffering - – Multi data gram Messages – Encoding and Decoding of Message Data – Process Addressing – Failure Handling – Group Communication.

UNIT-II

The RPC Model –Transparency – Implementation – Stub – Messages – Marshaling - Server Management –Parameter Passing Semantics – Call Semantics – Communication protocols – Complicated – Client server Binding – Exception Handling – Security – Special types – Heterogeneous – Light Weight – Optimization

UNIT-III

Clock Synchronization – Event Ordering – Mutual Exclusion – Deadlock – Election Algorithms - Process Migration – Threads.

UNIT–IV

Meet Hadoop: Data - Data Storage and Analysis - Comparison with Other Systems - A Brief History of Hadoop - The Apache Hadoop Project – Map Reduce: A Weather Dataset - Analyzing the Data with UNIX Tools - Analyzing the Data with Hadoop - Scaling Out - Hadoop Streaming - Hadoop Pipes

UNIT-V

The Configuration API - Configuring the Development Environment - Running Locally on Test Data - Running on a Cluster - The Map Reduce Web UI - Using a Remote Debugger - Tuning a Job - Map Reduce Workflows

TEXT BOOKS

1. Pradeep K. Sinha, “Distributed Operating System Concepts and Design”, PHI, New Delhi, 2007.
2. Tom White, “Hadoop: The Definitive Guide”, Published by O’Reilly Media, Third Edition, 2009

REFERENCES

4. Nutt, 2005, Operating Systems, 3 rd Edition, Pearson Education, Delhi.

SEMESTER –III **MAIN PAPER -10** **4H/3C**

SOFTWARE PROJECT MANAGEMENT

UNIT-I

Project Management-Introduction to Project and Project management- problems with software projects - Project Management Knowledge Area and Framework- Stages of project - Feasibility study -cost-benefit analysis - Planning - project execution - project and product lifecycle - Project Stakeholders - All Parties of project - role of project manager - Exploration of Open Source Software tools for project management. Checkpoints And Processes of Project -Major Milestones- Minor Milestones- Periodic status assessments. Project Processes- Initiating Processes- Planning Processes- Control Processes- Executing Processes- Closing Processes- Process Groups- Process Interactions.

UNIT-II

Project Planning -Integration Management - Introduction - Project plan development – Plan Execution - Scope Management - Introduction - methods for selecting projects - project charter - scope statement - work breakdown structure - Stepwise Project Planning -Overview - Main steps in project planning. Project Scheduling-Time Management- Importance of project schedules- Schedules and activities - Sequencing and scheduling activity - Project Network Diagrams - Network planning models- Duration Estimating and schedule development- Critical path analysis- Program evaluation and review Techniques.

UNIT-III

Technical Metrics For Software-Software Process and Project Metrics- Size Oriented Metrics- Function-Oriented Metrics- Extended Function Point Metrics- A Framework for Technical Software Metrics- Metrics for Requirement Specification Quality- Metrics for Analysis- Metrics for Design- Metrics for Source Code- Metrics for Testing- Metrics for Maintenance. Technical Metrics For Object-Oriented Systems-Intent of Object-Oriented Metrics- Characteristics of Object-Oriented Metrics - Metrics for OO Design Model- Class-Oriented Metrics- Operation-Oriented Metrics- Metrics for Object-Oriented Testing- Metrics for Object-Oriented Projects.

UNIT–IV

Overview- Benefits- Technologies related to ERP- E R P packages- Business Process Re-engineering- Implementation Life Cycle of ERP- Training - Team Training- End User Training- Post Implementation (Maintenance Mode) - Implementation in large-scale organization- Applications of ERP in functional areas- Marketing- Personnel- Financial & Production.

UNIT-V

Decision structure- Decision Support Trends- DSS Components- Using DSS- What-if analysis- sensitivity analysis- Goal Seeking Analysis- Optimization Analysis- Executive Information Systems- Enterprise portals and decision support- knowledge management systems.

TEXT BOOKS

SEMESTER –III **MAIN PAPER -11** **4H/3C**

MOBILE COMPUTING

UNIT-I

Mobile Computing – Mobile Computing Vs wireless Networking – Mobile Computing Applications – Characteristics of Mobile computing – Structure of Mobile Computing Application. MAC Protocols – Wireless MAC Issues – Fixed Assignment Schemes – Random Assignment Schemes – Reservation Based Schemes.

UNIT-II

Overview of Mobile IP – Features of Mobile IP – Key Mechanism in Mobile IP – route Optimization. Overview of TCP/IP – Architecture of TCP/IP- Adaptation of TCP Window – Improvement in TCP Performance.

UNIT-III

Global System for Mobile Communication (GSM) – General Packet Radio Service (GPRS) – Universal Mobile Telecommunication System (UMTS).

UNIT–IV

Ad-Hoc Basic Concepts – Characteristics – Applications – Design Issues – Routing – Essential of Traditional Routing Protocols –Popular Routing Protocols – Vehicular Ad Hoc networks (VANET) – MANET Vs VANET – Security.

UNIT-V

MOBILE PLATFORMS AND APPLICATIONS Mobile Device Operating Systems – Special Constrains & Requirements – Commercial Mobile Operating Systems – Software Development Kit: i OS, Android, BlackBerry, Windows Phone – M Commerce – Structure – Pros & Cons – Mobile Payment System – Security Issues.

SEMESTER –III **MAIN PAPER -12** **4H/3C**

DESIGN AND ANALYSIS ALGORITHMS

UNIT-I

Algorithm Analysis – Time Space Tradeoff – Asymptotic Notations – Conditional asymptotic notation – Removing condition from the conditional asymptotic notation - Properties of big-Oh notation – Recurrence equations – Solving recurrence equations – Analysis of linear search.

UNIT-II

Divide and Conquer: General Method – Binary Search – Finding Maximum and Minimum – Merge Sort – Greedy Algorithms: General Method – Container Loading – Knapsack Problem.

UNIT-III

Dynamic Programming: General Method – Multistage Graphs – All-Pair shortest paths – Optimal binary search trees – 0/1 Knapsack – Travelling salesperson problem .

UNIT–IV

Backtracking: General Method – 8 Queens problem – sum of subsets – graph coloring – Hamiltonian problem – knapsack problem.

UNIT-V

Graph Traversals – Connected Components – Spanning Trees – Biconnected components – Branch and Bound: General Methods (FIFO & LC) – 0/1 Knapsack problems – Introduction to NP-Hard and NP-Completeness.

TEXT BOOKS

1. Ellis Horowitz, SartajSahni and Sanguthevar Rajasekaran, Computer Algorithms/ C++, Second Edition, Universities Press, 2007. (For Units II to V)

2. K.S. Easwarakumar, Object Oriented Data Structures using C++, Vikas Publishing House pvt. Ltd., 2000 (For Unit I)

SEMESTER –III **MAIN PRACTICAL PAPER -73H/2C**

MOBILE COMPUTING LAB

1. Creation of simple application using Button, Text View and Edit Text
2. Creating an application which uses Radio buttons & Option Group
3. Creating an application with Alert Dialog box
4. Creating an application with Date Picker Widget
5. Creating an application which creates Progress Bar
6. Creating an application with Spinner
7. Creating an application with Menus and Intents
8. Creating an application with File I/O
9. Creating an application which connects RDBMS (SQ Lite / My SQL)
10. Creating an application with Phone services (SMS, Call etc.)

SEMESTER –III **MAIN PRACTICAL PAPER -83H/2C**

DESIGN AND ANALYSIS OF ALGORITHMS LAB

1. Liner &Binary search using Divide and Conquer
2. Quick sort using Divide and Conquer
3. Merge Sort using Divide and Conquer
4. Selection Sort using Divide and Conquer
5. Maximum and Minimum using Divide and Conquer
6. 0/1 knapsack using Dynamic Programming
7. All pairs of Shortest path algorithm
8. Minimum Cost Spanning Tree using Prims Algorithm & Kruskal Algorithm
9. N-Queens Problem using Backtracking
10. Sum of Subset of numbers

SEMESTER –III **MAIN PRACTICAL PAPER -93H/2C**

MINI PROJECT

REGULATIONS

a) Students should do their Mini Project work in the College during 3rd semester.
b) The Candidate should submit the filled in format as given in **Annexure-I** to the department for the approval during the 2nd week of July.
c) Each internal guide shall have maximum of eight Students.
d) Periodically the project should be reviewed minimum three times by the advisory committee.
e) The Students should prepare two copies of the project work and submit the same on the date fixed by the Department for the evaluation. After evaluation one copy is to be retained in the College Library and the student can hold one copy.
f) A Sample Cover page format of the Mini project work is enclosed in **Annexure-II**.
g) Format of the **Title page** and **certificate** are enclosed in **Annexure-III.**
h) The Students should use Presentation during their Mini Project Viva voce Examinations.
i) To pass the Mini Project and viva-voce a candidate should secure 50% marks. The candidate should compulsorily attend viva-voce examination to secure pass in that paper.

The evaluation of Mini Project is as follows:

The maximum mark for each Mini Project is 100 with 25 for Continuous Internal Assessment (CIA) and 75 for Semester Examination.

CIA Project Work		
I	First Review	10 Marks
II	Second Review	10 Marks
III	Report Preparation	5 Marks
	Total	**25 Marks**
Semester Project Work		
1.	Evaluation of Project Work Document	55 Marks
2.	Viva – Voce	20 Marks
	Total	**75 Marks**

SEMESTER –III **ELECTIVE PAPAER- 3** **4H/3C**

(to choose either A or B or C)

A. SOFTWARE QUALITY ASSURANCE

UNIT-I

The Role of SQA – SQA Plan – SQA considerations – SQA people – Quality Management – Software Configuration Management

UNIT-II

Managing Software Organizations – Managing Software Quality – Defect Prevention – Software Quality Assurance Management

UNIT-III

Software Quality – Total Quality Management (TQM) – Quality Metrics – Software Quality Metrics Analysis

UNIT–IV

Software Quality Program Concepts – Establishment of a Software Quality Program – Software Quality Assurance Planning – An Overview – Purpose & Scope.

UNIT-V

Software Standards–ISO 9000 Quality System Standards - Capability Maturity Model and the Role of SQA in Software Development Maturity – SEI CMM Level 5 – Comparison of ISO 9000 Model with SEI's CMM

TEXT BOOKS

1. Watts S Humphrey, "Managing the Software Process", Pearson Education Inc
2. Mordechai Ben-Menachem / Garry S Marliss, "Software Quality", Vikas Publishing House, Pvt, Ltd., New Delhi

REFERENCES

1. Gordon G Schulmeyer, "Handbook of Software Quality Assurance", Third Edition, Artech House Publishers 2007
2. Nina S Godbole, "Software Quality Assurance: Principles and Practice", Alphab Science International, Ltd, 2004

SEMESTER –III **ELECTIVE PAPAER- 3** **4H/3C**

(to choose either A or B or C)

B. BIGDATA

UNIT-I

Big Data in the Enterprise: Search at Scale – Multimedia Content - Sentiment Analysis – Enriching and Contextualizing Data – Data Discovery and Exploratory Analytics – Operational Analytics or Exploratory Analytics – Realizing opportunities from Bid Data – Taming the "Big Data" – New Information Management Paradigm: New Approach to enterprise Information management for Big Data – Implications of Big Data to Enterprise IT – Big Data Implications for Industry: Big Data uses cases by Industry Vertical.

UNIT-II

Scale-Out architecture – Database Workloads – Database Technologies for managing the workloads – Columnar Database - Polyglot persistence: The next generation architecture - Big Data warehouse and analytics – How Hadoop Works – Additional consideration for BDW – Data Quality implications for Big Data.

UNIT-III

Understanding Data Integration Patterns – Big Data Workload Design Approaches – Map reduce patterns, algorithms and use cases, No SQL Modeling Techniques.

UNIT–IV

Challenges in Big Data Analysis – Big Data Analytics Methodology – Analyze and Evaluate Business Use case – Develop Business Hypotheses – Setting up Big Data Analytics System – Gathering Data with Apache Flume.

UNIT-V

In-Memory Computing Technology: Guidelines – Real Time Analytics and CAP Theorem – Hadoop and No SQL Conundrum – Using an In-Memory Data Grid for Real time Data Analysis – Map Reduce and real Time Processing – Big Data Workflow – Design Principles for Contextualizing Big Data.

TEXT BOOK

1. Soumendra Mohanty, Madhu Jagadeesh, and Harsha Srivatsa, "Big Data Imperatives: Enterprise Big Data Warehouse, BI Implementations and Analytics", Apress Publication.

2. Paul Zikopoulos, Thomas Deutsch, Dirk Deroos, David Corrigan, Krishnan Parasuraman and James Giles, "Harness the power of Big Data", McGraw Hill, 2013

SEMESTER –III **ELECTIVE PAPAER- 3** **4H/3C**

(to choose either A or B or C)

C. SOFT COMPUTING

UNIT-I

Introduction to Neuro – Fuzzy and Soft Computing – Fuzzy Sets – Basic Definition and Terminology – Set – Theoretic Operations – Member Function Formulation and Parameterization – Fuzzy Rules and Fuzzy Reasoning – Extension Principle and Fuzzy Relations – Fuzzy If Then Rules – Fuzzy Reasoning – Fuzzy Inference Systems – Mamdani Fuzzy Models – Sugeno Fuzzy Models – Tsukamoto Fuzzy Models – Input Space Partitioning and Fuzzy Modeling.

UNIT-II

Derivative based Optimization – Descent Methods – The Method of Steepest Descent – classical Newton's Method – Step Size Determination – Derivative Free Optimization – Genetic Algorithms – Simulated Annealing – Random Search – Downhill Simplex Search.

UNIT-III

Supervised Learning Neural Networks – Perceptrons – Adaline Back propagation Multilayer perceptrons – Radial Basis Function Networks – Unsupervised Learning and Other Neural Networks – Competitive Learning Networks – Kohonen Self – Organizing Networks – Learning Vector Quantization – Hebbian Learning.

UNIT–IV

Adaptive Neuro – Fuzzy Inference Systems – Architecture – Hybrid Learning Algorithm – Learning Methods that Cross fertilize ANFIS and RBFN – Coactive Neuro Fuzzy Modeling – Framework – Neuron Functions for Adaptive Networks – Neuro Fuzzy Spectrum.

UNIT-V

Printed Character Recognition – Inverse Kinematics Problems – Automobile Fuel Efficiency Prediction – Soft Computing for Color Recipe Prediction.

TEXT BOOK

SEMESTER –IV **MAIN PAPER- 11**

PROJECT WORK

REGULATIONS

a. Students should do their four months Project work in Company / Institutions during fourth semester.
b. The Candidate should submit the filled in format as given in **Annexure-IV** to the department for approval during the Ist Week of January.
c. Each internal guide shall have maximum of eight Students.
d. Periodically the project should be reviewed minimum three times by the advisory committee.
e. The Students should prepare three copies of the project work and submit the same on the date fixed by the department for the evaluation. After evaluation, one copy is to be retained in the College Library and one copy is to be submitted to the University (Registrar) and the student can hold one copy.
f. A Sample Cover page format of the Project Work is enclosed in **Annexure-V**.
g. Format of the **Title page** and **certificate** are enclosed in **Annexure-VI.**
h. The Students should use Presentation during their Project Viva voce Examinations.
i. For the project work and viva-voce a candidate should secure 50% of the marks for pass. The candidate should compulsorily attend viva-voce examination to secure pass in that paper.

The evaluation of project is as follows:

The maximum mark for each Project is 200 with 80 for Continuous Internal Assessment (CIA) and 120 for Semester Examination.

CIA Project Work		
I	First Review	25 Marks
II	Second Review	25 Marks
III	Report Preparation	30 Marks
	Total	**80 Marks**
Semester Project Work		
1.	Evaluation of Project Work Document	80 Marks
2.	Viva – Voce	40 Marks
	Total	**120 Marks**

For the conduct of University Examinations in practical subjects and Project work the University will appoint two external examiners.

THIRUVALLUVAR UNIVERSITY
M.Sc. MATHEMATICS
SYLLABUS
UNDER CBCS
(with effect from 2017 - 2018)
SEMESTER - I
PAPER - 1
ALGEBRA - I

Objectives : To introduce the concepts and to develop working knowledge on class equation, finite abelian groups, linear transformations, real quadratic forms.

UNIT-I

Another counting principle - class equation for finite groups and its applications - Sylow's theorems (For theorem 2.12.1, Only First proof).

Chapter 2: Sections 2.11 and 2.12

UNIT-II

Direct products - Finite abelian groups- Modules

Chapter 2: Sections 2.13 and 2.14 (Only Theorem 2.14.1)
Chapter 4: Section 4.5

UNIT-III

Linear Transformations: Canonical forms - Triangular form - Nilpotent transformations.

Chapter 6: Sections 6.4 , 6.5

UNIT-IV

Jordan form - rational canonical form.

Chapter 6 : Sections 6.6 and 6.7

UNIT-V

Trace and transpose - Hermitian, unitary, normal transformations, real quadratic form.

Chapter 6 : Sections 6.8, 6.10 and 6.11

PAPER - 2
REAL ANALYSIS - I

Objectives : To work comfortably with functions of bounded variation, Riemann - Stieltjes Integration, convergence of infinite series, infinite product and uniform convergence and its interplay between various limiting operations.

UNIT-I : FUNCTIONS OF BOUNDED VARIATION

Introduction - Properties of monotonic functions - Functions of bounded variation - Total variation - Additive property of total variation - Total variation on [a, x] as a function of x - Functions of bounded variation expressed as the difference of two increasing functions - Continuous functions of bounded variation.

Chapter - 6 : Sections 6.1 to 6.8

UNIT-II : THE RIEMANN - STIELTJES INTEGRAL

Introduction - Notation - The definition of the Riemann - Stieltjes integral - Linear Properties - Integration by parts- Change of variable in a Riemann - Stieltjes integral - Reduction to a Riemann Integral - Euler’s summation formula - Monotonically increasing integrators, Upper and lower integrals - Additive and linearity properties of upper and lower integrals - Riemann's condition.

Chapter - 7 : Sections 7.1 to 7.13

UNIT-III : THE RIEMANN-STIELTJES INTEGRAL

Integrators of bounded variation-Sufficient conditions for the existence of Riemann-Stieltjes integrals-Necessary conditions for the existence of Riemann-Stieltjes integrals-Mean value theorems for Riemann - Stieltjes integrals - The integrals as a function of the interval - Second fundamental theorem of integral calculus-Change of variable in a Riemann integral-Second Mean Value Theorem for Riemann integral-Riemann-Stieltjes integrals depending on a parameter-Differentiation under the integral sign.

Chapter - 7 : 7.15 to 7.25

UNIT-IV : INFINITE SERIES AND INFINITE PRODUCTS

Absolute and conditional convergence - Dirichlet's test and Abel's test - Rearrangement of series - Riemann's theorem on conditionally convergent series. Double sequences - Double series - Rearrangement theorem for double series - A sufficient condition for equality of iterated series - Multiplication of series - Cesaro summability - Infinite products.

Chapter 8 : Sections 8.8, 8.15, 8.17, 8.18, 8.20, 8.21 to 8.26

UNIT-V: SEQUENCES OF FUNCTIONS

Pointwise convergence of sequences of functions - Examples of sequences of real - valued functions - Definition of uniform convergence - Uniform convergence and continuity - The Cauchy condition for uniform convergence - Uniform convergence of infinite series of functions - Uniform convergence and Riemann - Stieltjes integration - Uniform convergence and differentiation - Sufficient condition for uniform convergence of a series - Mean convergence.

Chapter - 9 Sec 9.1 to 9.6, 9.8, 9.10,9.11, 9.13

Recommended Text

PAPER - 3
ORDINARY DIFFERENTIAL EQUATIONS

Objectives : To develop strong background on finding solutions to linear differential equations with constant and variable coefficients and also with singular points, to study existence and uniqueness of the solutions of first order differential equations.

UNIT-I : LINEAR EQUATIONS WITH CONSTANT COEFFICIENTS

Second order homogeneous equations-Initial value problems-Linear dependence and independence - Wronskian and a formula for Wronskian -Non-homogeneous equation of order two.

Chapter - 2 : Sections 1 to 6

UNIT-II : LINEAR EQUATIONS WITH CONSTANT COEFFICIENTS

Homogeneous and non-homogeneous equation of order n - Initial value problems-Annihilator method to solve non-homogeneous equation - Algebra of constant coefficient operators.

Chapter - 2 : Sections 7 to 12.

UNIT-III : LINEAR EQUATION WITH VARIABLE COEFFICIENTS

Initial value problems - Existence and uniqueness theorems - Solutions to solve a non-homogeneous equation - Wronskian and linear dependence - reduction of the order of a homogeneous equation - homogeneous equation with analytic coefficients -The Legendre equation.

Chapter - 3 Sections 1 to 8

UNIT-IV : LINEAR EQUATION WITH REGULAR SINGULAR POINTS

Euler equation - Second order equations with regular singular points -Exceptional cases - Bessel Function.

Chapter 4 : Sections 1 to 4 and 6 to 8

UNIT-V: **EXISTENCE AND UNIQUENESS OF SOLUTIONS TO FIRST ORDER EQUATIONS**

Equation with variable separated - Exact equation - method of successive approximations - the Lipschitz condition - convergence of the successive approximations and the existence theorem.

Chapter 5 : Sections 1 to 6

Recommended Text

PAPER - 4
DIFFERENTIAL GEOMETRY

Objectives : This course introduces space curves and their intrinsic properties of a surface and geodesics. Further the non-intrinsic properties of surfaces are explored.

UNIT-I : SPACE CURVES

Definition of a space curve - Arc length - tangent - normal and binormal - curvature and torsion - contact between curves and surfaces - tangent surface - involutes and evolutes - Intrinsic equations - Fundamental Existence Theorem for space curves - Helics.

Chapter I : Sections 1 to 9

UNIT-II : INTRINSIC PROPERTIES OF A SURFACE

Definition of a surface - curves on a surface - Surface of revolution - Helicoids - Metric - Direction coefficients - families of curves - Isometric correspondence - Intrinsic properties.

Chapter II: Sections 1 to 9

UNIT-III : GEODESICS

Geodesics - Canonical geodesic equations - Normal property of geodesics - Existence Theorems - Geodesic parallels

Chapter II: Sections 10 to 14

UNIT-IV : GEODESICS (Contd . . .)

Geodesics curvature - Gauss - Bonnet Theorem - Gaussian curvature - surface of constant curvature.

Chapter II: Sections 15 to 18

UNIT-V : NON INTRINSIC PROPERTIES OF A SURFACE

The second fundamental form - Principal curvature - Lines of curvature - Developable - Developable associated with space curves and with curves on surface - Minimal surfaces - Ruled surfaces.

Chapter III: Sections 1 to 8

ELECTIVE: PAPER - 1
(to choose any 1 out of the given 4)
A. FINITE ELEMENT METHOD

Objective: To give a basic expertise in the use of Finite Element Method Techniques.

Unit–I: SECOND ORDER DIFFERENTIAL EQUATIONS IN ONE DIMENSION

Finite element models Background – Basic steps of finite element analysis– Model boundary value problem–Discretization of the domain–Derivation of element equations– Connectivity of elements–Imposition of- boundary conditions–Solution of equations– Post computation of the solution–Some Remarks. (Numerical Example 3.2.1only).
Chapter 3: Sections: 3.1 to 3.3

Unit – II: SECOND ORDER DIFFERENTIAL EQUATIONS IN ONE DIMENSION: APPLICATIONS

Axi-symmetric problems–Model equation–weak form–finite element model– preliminary comments–Discrete systems–Linear elastic spring– Torsion of circular shafts–Electrical resistor circuits –Fluid flow through pipes– Heat transfer – Governing equations –Finite element models – Fluid mechanics – Governing equations – Finite element model. (Numerical Examples 3.4.1, 4.2.1, 4.2.2, 4.3.1, 4.4.1 only)
Chapter 3: Section: 3.4 , Chapter 4: Sections: 4.1– 4.4.

Unit – III: SECOND ORDER DIFFERENTIAL EQUATIONS IN ONE DIMENSION: APPLICATIONS

Solid and Structural Mechanics–Preliminary Comments–Finite Element Model of Bars and cables – Plane trusses: Introduction – Basic truss element–General truss element – Constraint equations – Penalty approach – Direct approach. (Numerical Examples4.6.1,4.6.2,4.6.5only)

Chapter4: Sections: 4.5 to 4.6

Unit–IV: BEAMS AND FRAMES

Introduction–Euler-Bernoulli beam element–Governing equation–Discretization of the domain – Derivation of element equations – Assembly of Element Equations – Imposition of boundary conditions– Post processing of solution – Timoshenko beam elements–Governing equations – Weak form–General finite element model.

Chapter5: Sections:5.1,5.2 (5.2.1to5.2.6),5.3 (5.3.1to 5.3. 3)

Unit–V: EIGEN VALUE AND TIME DEPENDENT PROBLEMS

Eigen value problems: Introduction – Formulation of Eigen value problems – Finite element formulation.Time dependent problems: Introduction–Semi discrete finite element models– Parabolic equations–Time Approximation (Numerical Example 6.1.1 only).

(Chapter 6: Sections: 6.1 (6.1.1to 6.1.3), 6.2 (6.2.1 to 6.2.3)

Book for Study:

4. C.S.Krishnamoorthy, Finite element Analysis Theory and Programming (Eighteenth Reprint), Tata McGraw Publishing company Limited, New Delhi, 2007.

ELECTIVE: PAPER - 1
B. DISCRETE MATHEMATICS

Objectives: This course aims to explore the topics like lattices and their applications in switching circuits, finite fields, polynomials and coding theory.

UNIT - I: LATTICES

Properties and examples of Lattices - Distributive lattices - Boolean algebras - Boolean polynomials - Minimal Forms of Boolean Polynomials.
Chapters: 1 to 4 and 6.

UNIT - II: APPLICATIONS OF LATTICES

Switching Circuits - Applications of Switching Circuits
Chapters: 7 and 8.

UNIT - III: FINITE FIELDS AND POLYNOMIALS

Finite fields
Chapter: 13.

UNIT - IV: FINITE FIELDS AND POLYNOMIALS

Irreducible Polynomials over Finite fields - Factorization of Polynomials over Finite fields.
Chapters: 14 and 15.

UNIT - V: CODING THEORY

Introduction to Coding - Linear Codes.
Chapters: 16 and 17.

ELECTIVE: PAPER - 1
C. GRAPH THEORY

Objectives : To study and develop the concepts of graphs, subgraphs, trees, connectivity, Euler tours, Hamilton cycles, matching, coloring of graphs, independent sets, cliques, vertex coloring, and planar graphs

UNIT-I : GRAPHS, SUBGRAPHS AND TREES

Graphs and simple graphs - Graph Isomorphism - The Incidence and Adjacency Matrices - Subgraphs - Vertex Degrees - Paths and Connection - Cycles - Trees - Cut Edges and Bonds - Cut Vertices.

Chapter 1 (Section 1.1 - 1.7) ; Chapter 2 (Section 2.1 - 2.3)

UNIT-II : CONNECTIVITY, EULER TOURS AND HAMILTON CYCLES

Connectivity - Blocks - Euler tours - Hamilton Cycles.

Chapter 3 (Section 3.1 - 3.2) ; Chapter 4 (Section 4.1 - 4.2)

UNIT-III : MATCHINGS, EDGE COLOURINGS

Matchings - Matchings and Coverings in Bipartite Graphs - Edge Chromatic Number - Vizing's Theorem.

Chapter 5 (Section 5.1 - 5.2) ; Chapter 6 (Section 6.1 - 6.2)

UNIT-IV : INDEPENDENT SETS AND CLIQUES, VERTEX COLOURINGS

Independent sets - Ramsey's Theorem - Chromatic Number - Brooks' Theorem - Chromatic Polynomials.

Chapter 7 (Section 7.1 – 7.2); Chapter 8 (Section 8.1 – 8.2, 8.4)

UNIT-V: PLANAR GRAPHS

Plane and planar Graphs - Dual graphs - Euler's Formula - The Five-Colour Theorem and the Four-Colour Conjecture.

Chapter 9 (Section 9.1 - 9.3, 9.6)

Recommended Text

ELECTIVE: PAPER - 1
D. RELIABILITY AND QUEUEING THEORY

Objectives : To study applications of Mathematics.

UNIT - I : RELIABILITY DEFINITION AND FAILURE DATA ANALYSIS

Introduction – Definition of Probability – Failure Data – Mean Failure Rate – Mean Time To Failure (MTTF) – Mean Time Between Failure (MTBF) – Graphical Plots.

Chapter-2: 2.1 - 2.2
Chapter-3: 3.2 - 3.6

UNIT - II : FAILURE DATA ANALYSIS

Four important points – MTTF in terms of Failure density – Generalization – Reliability in terms of Hazard rate and failure density – MTTF in integral form. Introduction – Definition of Probability – Failure Data – Mean Failure Rate – Mean Time To Failure – Mean Time Between Failure – Graphical Plots.

Chapter-3: 3.7 - 3.11

UNIT - III : SYTEM RELIABILITY

Introduction – Series Configuration – Parallel Configuration – Mixed Configuration – Application to specific hazard Models – An r out of n structure – Systems not reducible to mixed configuration.

Chapter-6: 6.1 - 6.6 and 6.8

UNIT - IV : INTRODUCTION TO QUEUEING PROCESS

Measuring system performance – Some general results Simple data book keeping for queues - Poisson process and the exponential distribution – Markovian Property of the exponential distribution.

Chapter-1: 1.4 - 1.8

UNIT - V : SIMPLE MARKOVIAN BIRTH-DEATH QUEUEING MODELS

Steady state solution for the M / M / 1 model – Methods of solving steady state difference equations – Queues with parallel channels and truncation (M / M / c / K).

Recommended Text

1. Srinath. L. S., Reliability Engineering, East West Press, New Delhi. (for Units I , II and III)

SEMESTER - II
PAPER - 5
ALGEBRA - II

Objectives : To study field extension, roots of polynomials, Galois Theory, finite fields, division rings, solvability by radicals and to develop computational skill in abstract algebra.

UNIT-I

Extension fields - Transcendence of e.

Chapter 5: Section 5.1 and 5.2

UNIT-II

Roots or Polynomials.- More about roots

Chapter 5: Sections 5.3 and 5.5

UNIT-III

Elements of Galois theory.

Chapter 5 : Section 5.6

UNIT-IV

Solvability by Radicals - Finite fields - Wedderburn's theorem on finite division rings.

Chapter 5: Section 5.7.
Chapter 7: Sections 7.1 and 7.2 (Only Theorem 7.2.1)

UNIT-V

Solvability by radicals - A theorem of Frobenius - Integral Quaternions and the Four - Square theorem.

Chapter 7 : Sections 7.3 and 7.4

PAPER - 6
REAL ANALYSIS II

Objectives : To introduce measure on the real line, Lebesgue measurability and integrability, Fourier Series and Integrals, in-depth study in multivariable calculus.

UNIT - I : FOURIER SERIES AND FOURIER INTEGRALS

Introduction - Orthogonal system of functions - The theorem on best approximation - The Fourier series of a function relative to an orthonormal system - Properties of Fourier Coefficients - The Riesz-Fischer Thorem - The convergence and representation problems in trigonometric series - The Riemann - Lebesgue Lemma - The Dirichlet Integrals - An integral representation for the partial sums of Fourier series - Riemann's localization theorem - Sufficient conditions for convergence of a Fourier series at a particular point - Cesaro summability of Fourier series- Consequences of Fejes's theorem - The Weierstrass approximation theorem

Chapter 11 : Sections 11.1 to 11.15 (Apostol)

UNIT - II : MULTIVARIABLE DIFFERENTIAL CALCULUS

Introduction - The Directional derivative - Directional derivative and continuity - The total derivative - The total derivative expressed in terms of partial derivatives - The matrix of linear function - The Jacobian matrix - The chain rule - Matrix form of chain rule - The mean - value theorem for differentiable functions - A sufficient condition for differentiability - A sufficient condition for equality of mixed partial derivatives - Taylor's theorem for functions of R^n to R^1

Chapter 12 : Section 12.1 to 12.14 (Apostol)

UNIT - III : IMPLICIT FUNCTIONS AND EXTREMUM PROBLEMS

Functions with non-zero Jacobian determinants - The inverse function theorem -The Implicit function theorem - Extrema of real valued functions of severable variables - Extremum problems with side conditions.

Chapter 13 : Sections 13.1 to 13.7 (Apostol)

UNIT - IV THE LEBESGUE INTEGRAL

Length of open sets and closed sets - Inner and outer measure : Measurable sets - Properties of measurable sets - Measurable functions - Definition and existence of the Lebesgue integral for bounded function.

Chapter 11 : Section 11.1 to 11.5 [R. R. Goldberg]

UNIT - V THE LEBESGUE INTEGRAL (Contd . . .)

Properties of the Lebesgue integral for bounded measurable functions - The Lebesque integral for unbounded functions - Some fundamental theorems - The metric space L^2 [a, b] - The integral on $(-\infty, \infty)$ and int plane.

Chapter 11 : Section 11.6 to 11.10 [R. R. Goldberg]

Recommended Texts

PAPER - 7
PARTIAL DIFFERENTIAL EQUATIONS

Objectives : The aim of the course is to introduce to the students the various types of partial differential equations and how to solve these equations.

UNIT - I : PARTIAL DIFFERENTIAL EQUATIONS OF FIRST ORDER

Formation and solution of PDE- Integral surfaces - Cauchy Problem order equation - Orthogonal surfaces - First order non-linear - Characteristics - Compatible system - Charpits method.

Chapter 0: 0.4 to 0.11 (omit 0.1, 0.2, 0.3 and 0.11.1)

UNIT - II : FUNDAMENTALS

Introduction – Classification of Second Order PDE - Canonical forms – Adjoint Operators - Riemann's method.

Chapter 1 : 1.1 to 1.5

UNIT - III : ELLIPTIC DIFFERENTIAL EQUATIONS

Derivation of Laplace and Poisson equation - BVP - Separation of Variables - Dirichlet's Problem and Newmann Problem for a rectangle - Solution of Laplace equation in Cylindrical and spherical coordinates - Examples.

Chapter 2 : 2.1, 2 2 , 2.5 to 2.7, 2.11, 2.12(omit 2.3, 2.4, 2.8, 2.9, 2.10 and 2.13)

UNIT - IV : PARABOLIC DIFFERENTIAL EQUATIONS

Formation and solution of Diffusion equation - Dirac-Delta function - Separation of variables method - Solution of Diffusion Equation in Cylindrical and spherical coordinates - Examples.

Chapter 3 : 3.1 to 3.7.

UNIT - V : HYPERBOLIC DIFFERENTIAL EQUATIONS

Formation and solution of one-dimensional wave equation - canocical reduction – IVP - D'Alembert's solution - IVP and BVP for two-dimensional wave equation - Periodic solution of one-dimensional wave equation in cylindrical and spherical coordinate systems - Uniqueness of the solution for the wave equation - Duhamel's Principle - Examples.

Chapter 4: 4.1 to 4.12 (omit 4.5, 4.6 & 4.10)

Recommended Text

PAPER - 8
MECHANICS

Objectives : To study mechanical systems under generalized coordinate systems, virtual work, energy and momentum, to study mechanics developed by Newton, Langrange, Hamilton Jacobi and Theory of Relativity due to Einstein.

UNIT-I : MECHANICAL SYSTEMS

The Mechanical system - Generalised coordinates - Constraints - Virtual work - Energy and Momentum.

Chapter 1 : Sections 1.1 to 1.5

UNIT-II : LAGRANGE'S EQUATIONS

Derivation of Lagrange's equations- Examples - Integrals of motion.

Chapter 2 : Sections 2.1 to 2.3 (Omit Section 2.4)

UNIT-III : HAMILTON'S EQUATIONS

Hamilton's Principle - Hamilton's Equation - Other variational principle.

Chapter 4 : Sections 4.1 to 4.3 (Omit section 4.4)

UNIT-IV : HAMILTON-JACOBI THEORY

Hamilton Principle function - Hamilton-Jacobi Equation - Separability

Chapter 5 : Sections 5.1 to 5.3

UNIT-V : CANONICAL TRANSFORMATION

Differential forms and generating functions - Special Transformations - Lagrange and Poisson brackets.

Chapter 6 : Sections 6.1, 6.2 and 6.3 (omit sections 6.4, 6.5 and 6.6)

Recommended Text

HUMAN RIGHTS
COMPULSORY PAPER

UNIT – I

Definition of Human Rights – Nature, Content, Legitimacy and Priority – Theories of Human Rights – Historical Development of Human Rights.

UNIT – II

International Human Rights – Prescription and Enforcement upto World War II – Human Rights and the U. N. O. – Universal Declaration of Human Rights – International Covenant on Civil and Political Rights – International Covenant or Economic, Social and Cultural Rights and Optional Protocol.

UNIT – III

Human Rights Declarations – U.N. Human Rights Declarations – U.N. Human Rights Commissioner.

UNIT – IV

Amnesty International – Human Rights and Helsinki Process – Regional Developments – European Human Rights System – African Human Rights System – International Human Rights in Domestic courts.

UNIT – V

Contemporary Issues on Human Rights: Children's Rights – Women's Rights – Dalit's Rights – Bonded Labour and Wages – Refugees – Capital Punishment.
Fundamental Rights in the Indian Constitution – Directive Principles of State Policy – Fundamental Duties – National Human Rights Commission.

Reference Magazines:

1. The Lawyer, Bombay.
2. Human Rights Today, Columbia University.
3. International Instruments of Human Rights, UN Publication.

ELECTIVE: PAPER-2
(to choose any 1 out of the given 4)
A. PROGRAMMING IN C++ PRACTICALS

Objectives: This courses introduces a higher level language C++ and numerical methods for hands-on experience on computers. Stress is also given on the error analysis.

- Functions in C++ - Classes and Objects.
- Constructors and destructors - Operator Overloading
- Inheritance : Pointers and Polymorphism.

Recommended Text

Balagurusamy, *Object Oriented Programming with* C++, Tata McGraw Hill, New Delhi, 1999.

Reference Books

D. Ravichandran, *Programming with* C++, Tata McGraw Hill, New Delhi, 1996.

COMPUTER LABORATORY PRACTICE EXERCISES

COMPUTER LANGUAGE EXERCISES FOR PROGRAMMING IN C++

1. Write a class to represent a vector (a series of float values). Include member functions to perform the following tasks: To create the vector, To modify the value of a given element, To multiply by a scalar value, To display the vector in the form (10, 20, 30,…). Write a program to test your class.
2. Create a class FLOAT that contains one float data member. Overload all the four arithmetic operators so that they operate on the objects of FLOAT.
3. Write a program which shows the days from the start of year to date specified. Hold the number of days for each month in an array. Allow the user to enter the month and the day of the year. Then the program should display the total days till the day.
4. Write a program to include all possible binary operator overloading using friend function.
5. Write a program to read an array of integer numbers and sort it in descending order. Use readdata, putdata, and arraymax as member functions in a class.
6. Write a program to read two character strings and use the overloaded '+' operator to append the second string to the first.
7. Develop a program Railway Reservation System using Hybrid Inheritance and Virtual Function.
8. Using overloaded constructor in a class write a program to add two complex numbers.
9. Create a class MAT of size(m,n). Define all possible matrix operations for MAT type objects.
10. Write a program that determines whether a given number is a prime number or not and then prints the result using polymorphism.
11. Write a program to illustrate the dynamic initialization of constructors.
12. Write a program to illustrate the use of pointers to objects.
13. Write a program to illustrate how to construct a matrix of size m x n .
14. Write a program to arrange the given data in ascending / descending order using various sorting algorithms
15. Write a program to find the biggest /smallest number in the given data using various search algorithms

ELECTIVE: PAPER-2
B. FUZZY MATHEMATCS

Objectives : To introduce the basic notions and study the techniques of Fuzzy Mathematics.

UNIT - I : FUZZY SETS

Fuzzy sets – Basic Types – Basic concepts – Characteristics – Significance of the paradigm shift – Additional properties of α – cuts.

Chapter 1 : Sections 1.3 to 1.5 and Chapter 2 : Section 2.1

UNIT - II : FUZZY SETS VERSUS CRISP SETS

Representation of Fuzzy sets – Extension principle of Fuzzy sets – Operation on Fuzzy sets – Types of operation – Fuzzy complements.

Chapter 2 : Sections 2.2 and 2.3 and Chapter 3 : Sections 3.1 and 3.2

UNIT - III : OPERATIONS ON FUZZY SETS

Fuzzy intersection – t-norms – Fuzzy unions – t-conorms.

Chapter 3 : Sections 3.3 and 3.4.

UNIT - IV : FUZZY ARITHMETIC

Fuzzy number – Linguistic variables – Arithmetic operation on intervals – Lattice of Fuzzy numbers.

Chapter 4 : Sections 4.1 to 4.4

UNIT - V : FUZZY RELATIONS

Crisp Versus fuzzy relations – Projection and Cylindric extension – binary fuzzy relations – binary relations on a single set.

Chapter 5 : Sections 5.1 to 5.4

Recommended Text

G. J. Klir and Bo Yuan, *Fuzzy Sets and Fuzzy Logic : Theory and Applications*, PHI, New Delhi, 2005.

Reference Books

1. H. J. Zimmerman, *Fuzzy Set Theory and its Applications*, Allied Publishers, 1996.

ELECTIVE: PAPER-2
C. CALCULUS OF VARIATIONS AND INTEGRAL EQUATIONS

Objectives : The aim of the course is to introduce to the students the concept of calculus of variation and its applications and second to introduce various types of integral equations and how to solve these equations.

UNIT-I : VARIATIONAL PROBLEMS WITH MOVING BUNDARIES

The concept of Variation and its properties – Euler's equation – Variational problems for functional – Functionals dependent on higher order derivatives – Functions of several independent variables – Some applications to problems of mechanics.

Chapter 1 : 1.1 to 1.7

UNIT - II : VARIATIONAL PROBLEMS WITH MOVING BOUNDARIES

Movable boundary for a functional dependent on two functions – One sided variations – Reflection and Refraction of extremals – Diffraction of light rays.

Chapter 2 : 2.1 to 2.5

UNIT - III INTEGRAL EQUATIONS

Introduction – Definition – Regularity conditions – Special kinds of Kernals – Eigen values and eigen functions – Convolution integral – Reduction to a system of algebraic equations – Examples – Fredholm alternative – Examples – An approximation method.

Chapter 1 : 1.1 to 1.5
Chapter 2 : 2.1 to 2.5

UNIT - IV METHOD OF SUCCESSIVE APPROXIMATIONS AND FREDHOLM THEORY

Method of successive approximations – Iterative scheme – Examples – Volterra integral equations – Examples – Some results about the resolvent kernel – The method of solution of Fredholm equation – Fredholm first theorem – Examples.

Chapter 3 : 3.1 to 3.5
Chapter 4 : 4.1 to 4.3

UNIT - V APPLICATIONS TO ORDINARY DIFFERENTIAL EQUATIONS

Initial value problems – Boundary value problems – Examples – Singular integral equations – The Abel integral equations - Examples.

Chapter 5 : 5.1 to 5.3
Chapter 8 : 8.1 to 8.2

Recommended Text

1. A. S. Gupta, *Calculus of Variations with Applications*, PHI, New Delhi, 2005. (for Units I and II)
2. Ram P. Kanwal, *Linear Integral Equations,* Theory and Techniques, Academic Press, New York, 1971. (for Units III, IV and V)

ELECTIVE: PAPER-2
D. MATHEMATICAL MODELLING

Objective of the course:

This course aims at introducing mathematical modeling through differential equations, systems of ordinary differential equations, difference equations, graphs, calculus of variations and dynamical programming.

Unit – I: MATHEMATICAL MODELLING THROUGH SYSTEMS OF ORDINARY DIFFERENTIAL EQUATIONS OF THE FIRST ORDER

Mathematical modelling in Population Dynamics – Mathematical Modelling of Epidemics Through Systems of Ordinary Differential Equations of First Order– Mathematical Models in Medicine, Arms Race, Battles and International Trade in Terms of Systems of Ordinary Differential Equations – Mathematical Modelling in Dynamics Through Systems of Ordinary Differential Equations of First Order.
(Chapter 3:3.1, 3.2, 3.5, 3.6)

Unit – II: MATHEMATICAL MODELLING THROUGH DIFFERENCE EQUATIONS

The Need for Mathematical Modelling Through Difference Equations: Some Simple Models – Basic Theory of Linear Difference Equations with Constant Coefficients – Mathematical Modelling Through Difference Equations in Economics and Finance.
(Chapter 5: 5.1 – 5.3)

Unit – III: MATHEMATICAL MODELLING THROUGH DIFFERENCE EQUATIONS

Mathematical Modelling Through Difference Equations in Population Dynamics and Genetics – Mathematical Modelling Through Difference Equations in Probability Theory –Miscellaneous Examples of Mathematical Modelling Through Difference Equations.
(Chapter 5: 5.4 – 5.6)

Unit – IV: MATHEMATICAL MODELLING THROUGH GRAPHS

Situations that can be Modelled Through Graphs – Mathematical Models in Terms of Directed Graphs – Mathematical Models in Terms of Signed Graphs – Mathematical Modelling in Terms of Weighted Digraphs.

(Chapter 7: 7.1 – 7.4)

Unit – V: MATHEMATICAL MODELLING THROUGH CALCULUS OF VARIATIONS AND DYNAMIC PROGRAMMING

Optimization Principles and Techniques – Mathematical Modelling Through Calculus of Variations – Mathematical Modelling Through Dynamic Programming. (Chapter 9: 9.1 – 9.3)

Recommended Text:

SEMESTER - III
PAPER - 9
COMPLEX ANALYSIS - I

Objectives : To Study Cauchy integral formula, local properties of analytic functions, general form of Cauchy's theorem and evaluation of definite integral and harmonic functions

UNIT-I : ANALYTIC FUNCTIONS AS MAPPINGS

Analytic functions in regions- conformal mapping-Fundamental Theorems: Line integrals-Rectifiable arcs-line integrals as functions of arcs-Cauchy's theorem for a rectangle- Cauchy's theorem in a disk.

Chapter3: Section 2 : 2.2 and 2.3;
Chapter 4 : Section 1 : 1.1 to 1.5;

UNIT-II : CAUCHY'S INTEGRAL FORMULA

The Index of a point with respect to a closed curve - The Integral formula - Higher derivatives. Local Properties of Analytic Functions: Removable Singularities - Taylors's Theorem - Zeros and poles - The local Mapping - The Maximum Principle.

Chapter 4 : Section 2 : 2.1 to 2.3;
Chapter 4 : Section 3 : 3.1 to 3.4

UNIT-III : THE GENERAL FORM OF CAUCHY'S THEOREM

Chains and cycles- Simple Continuity - Homology - The General statement of Cauchy's Theorem - Proof of Cauchy's theorem - Locally exact differentials- Multilply connected regions - Residue theorem - The argument principle.

Chapter 4 : Section 4 : 4.1 to 4.7;
Chapter 4 : Section 5: 5.1 and 5.2

UNIT-IV : EVALUATION OF DEFINITE INTEGRALS AND HARMONIC FUNCTIONS

Evaluation of definite integrals - Definition of Harmonic function and basic properties - Mean value property - Poisson formula.

Chapter 4 : Section 5 : 5.3 ;
Chapter 4 : Sections 6 : 6.1 to 6.3

UNIT-V : HARMONIC FUNCTIONS AND POWER SERIES EXPANSIONS

Schwarz theorem - The reflection principle - Weierstrass theorem - Taylor's Series - Laurent series .

Chapter 4 : Sections 6.4 and 6.5 ; Chapter 5 : Sections 1.1 to 1.3

Recommended Text

PAPER - 10
TOPOLOGY

Objectives : To study topological spaces, continuous functions, connectedness, compactness, countability and separation axioms.

UNIT-I : TOPOLOGICAL SPACES

Topological spaces - Basis for a topology - The order topology - The product topology on X x Y - The subspace topology - Closed sets and limit points.

Chapter 2 : Sections 12 to 17

UNIT-II : CONTINUOUS FUNCTIONS

Continuous functions - the product topology - The metric topology.

Chapter 2 : Sections 18 to 21 (Omit Section 22)

UNIT-III : CONNECTEDNESS

Connected spaces - connected subspaces of the Real line - Components and local connectedness.

Chapter 3 : Sections 23 to 25

UNIT-IV : COMPACTNESS

Compact spaces - compact subspaces of the Real line - Limit Point Compactness - Local Compactness.

Chapter 3 : Sections 26 to 29

UNIT-V: COUNTABILITY AND SEPARATION AXIOM

The Countability Axioms - The separation Axioms - Normal spaces - The Urysohn Lemma - The Urysohn metrization Theorem - The Tietz extension theorem.

Chapter 4 : Sections 30 to 35

Recommended Text

James R. Munkres, *Topology* (2nd Edition) Pearson Education Pve. Ltd., Delhi-2002 (Third Indian Reprint)

PAPER - 11
OPERATIONS RESEARCH

Objectives: This course aims to introduce decision theory, PERT, CPM, deterministic and probabilistic inventory systems, queues, replacement and maintenance problems.

UNIT – I: INTEGER LINEAR PROGRAMMING

Types of Integer Linear Programming Problems - Concept of Cutting Plane - Gomory's All Integer Cutting Plane Method - Gomory's mixed Integer Cutting Plane method - Branch and Bound Method.

Chapter-7: 7.1 - 7.6

UNIT – II: DYNAMIC PROGRAMMING

Characteristics of Dynamic Programming Problem - Developing Optimal Decision Policy - Dynamic Programming Under Certainty - DP approach to solve LPP.

Chapter-20: 20.1 - 20.5

UNIT - III:

CLASSICAL OPTIMIZATION METHODS : Unconstrained Optimization - Constrained Multi-variable Optimization with Equality Constraints - Constrained Multi-variable Optimization with inequality Constraints.
NON-LINEAR PROGRAMMING METHODS: Examples of NLPP - General NLPP - Graphical solution - Quadratic Programming - Wolfe's modified Simplex Methods.

Chapter-23: 23.1 - 23.4 and Chapter-24: 24.1 - 24.4

UNIT-IV

REVISED SIMPLEX METHOD : Standard forms for Revised simplex Method - Computational procedure for Standard form I - comparison of simplex method and Revised simplex Method.
BOUNDED VARIABLES LP PROBLEM: The simplex algorithm

Chapter-26: 26.1 - 26.4
Chapter-28: 28.1, 28.2

UNIT-V : DECISION THEORY

Steps in Decision theory Approach - Types of Decision-Making Environments - Decision Making Under Uncertainty - Decision Making under Risk - Posterior Probabilities and Bayesian Analysis - Decision Tree Analysis - Decision Making with Utilities.

Chapter-11 : 11.1 - 11.8

Recommended Text

PAPER - 12
PROBABILITY THEORY

Objectives : To introduce axiomatic approach to probability theory, to study some statistical characteristics, discrete and continuous distribution functions and their properties, characteristic function and basic limit theorems of probability.

UNIT-I : RANDOM EVENTS AND RANDOM VARIABLES

Random events - Probability axioms - Combinatorial formulae - conditional probability - Bayes Theorem - Independent events - Random Variables - Distribution Function - Joint Distribution - Marginal Distribution - Conditional Distribution - Independent random variables - Functions of random variables.

Chapter 1: Sections 1.1 to 1.7
Chapter 2 : Sections 2.1 to 2.9

UNIT-II : PARAMETERS OF THE DISTRIBUTION

Expectation- Moments - The Chebyshev Inequality - Absolute moments - Order parameters - Moments of random vectors - Regression of the first and second types.

Chapter 3 : Sections 3.1 to 3.8

UNIT-III: CHARACTERISTIC FUNCTIONS

Properties of characteristic functions - Characteristic functions and moments - semi-invariants - characteristic function of the sum of the independent random variables - Determination of distribution function by the Characteristic function - Characteristic function of multidimensional random vectors - Probability generating functions.

Chapter 4 : Sections 4.1 to 4.7

UNIT-IV : SOME PROBABILITY DISTRIBUTIONS

One point , two point , Binomial - Polya - Hypergeometric - Poisson (discrete) distributions - Uniform - normal gamma - Beta - Cauchy and Laplace (continuous) distributions.

Chapter 5 : Section 5.1 to 5.10

UNIT - V: LIMIT THEOREMS

Stochastic convergence - Bernoulli law of large numbers - Convergence of sequence of distribution functions - Levy-Cramer Theorems - de Moivre-Laplace Theorem - Lindberg Theorem - Lyapunov Theroem.

Chapter 6 : Sections 6.1 to 6.4, 6.6 to 6.9.

Recommended Text

ELECTIVE: PAPER - 3
(to choose any 1 out of the given 4)
A. TENSOR ANALYSIS AND RELATIVITY THEORY

Objectives : The course aims to introduce vector algebra and vector calculus and special relativity and relativistic kinematics, dynamics and accelerated systems.

UNIT-I : TENSOR ALGEBRA

Systems of Different orders - Summation Convention - Kronecker Symbols - Transformation of coordinates in S_n - Invariants - Covariant and Contravariant vectors - Tensors of Second Order - Mixed Tensors - Zero Tensor - Tensor Field - Algebra of Tensors - Equality of Tensors - Symmetric and Skew –symmetric tensors - Outer multiplication, Contraction and Inner Multiplication - Quotient Law of Tensors - Reciprocal Tensor of Tensor - Relative Tensor - Cross Product of Vectors.

Chapter I : I.1 - I.3, I.7 and I.8 and Chapter II : II.1 - II.19

UNIT-II : TENSOR CALCULUS

Riemannian Space - Christoffel Symbols and their properties

Chapter III: III.1 and III.2

UNIT-III : TENSOR CALCULUS (Contd . . .)

Covariant Differentiation of Tensors - Riemann - Christoffel Curvature Tensor - Intrinsic Differentiation.

Chapter III: III.3 - III.5

UNIT-IV : SPECIAL THEORY OF RELATIVITY

Galilean Transformation - Maxwell's equations - The ether Theory - The Principle of Relativity.

Relativistic Kinematics : Lorentz Transformation equations - Events and simultaneity - Example - Einstein Train - Time dilation - Longitudinal Contraction - Invariant Interval - Proper time and Proper distance - World line - Example - twin paradox - addition of velocities - Relativistic Doppler effect.

Chapter 7 : Sections 7.1 and 7.2

UNIT-V : RELATIVISTIC DYNAMICS

Momentum - Energy - Momentum - energy four vector - Force - Conservation of Energy - Mass and energy - Example - inelastic collision - Principle of equivalence - Lagrangian and Hamiltonian formulations.

Accelerated Systems : Rocket with constant acceleration - example - Rocket with constant thrust

Chapter 7 : Sections 7.3 and 7.4

Recommended Texts

ELECTIVE: PAPER - 3
B. ANALYTIC NUMBER THEORY

Objectives : This course introduces arithmetic function and Dirichlet multiplication, averages of arithmetic function, congruence and quadratic residues

UNIT-I

Arithmetical function and Dirichlet multiplication.

Chapter 2

UNIT-II

Averages of Arithmetical function.

Chapter 3

UNIT-III

Congruence - Finite Abelian Groups and their characters

Chapter 5 (Omit 5.10 and 5.11) ; Chapter 6: 6.1 to 6.4

UNIT-IV

Finite Abelian Groups and their characters (contd. . .) - Dirichlet's theorem on Primes in Arithmetic Progressions

Chapter 6: 6.5 to 6.10; Chapter 7: All sections except 7.9

UNIT-V

Quadratic residues and quadratic reciprocity law.

Chapter 9 (Omit 9.10 and 9.11)

Recommended Text

Tom Apostol, *Introduction to Analytic Number theory*, Narosa Publications, New Delhi,

Reference Books

3. W.W. Adams and L. J. Goldstein, *Introduction to Number Theory*, Prentice Hall Inc.
4. S.G. Telang, *Number Theory*.

ELECTIVE: PAPER - 3
C. FLUID DYNAMICS

Objectives : This course aims to discuss kinematics of fluids in motion, Equations of motion of a fluid, three dimensional flows, two dimensional flows and viscous flows.

UNIT-I

Kinematics of Fluids in motion. Real fluids and Ideal fluids - Velocity of a fluid at a point, Stream lines , path lines , steady and unsteady flows- Velocity potential - The vorticity vector- Local and particle rates of changes - Equations of continuity - Worked examples - Acceleration of a fluid - Conditions at a rigid boundary.

Chapter 2. Sections 2.1 to 2.10.

UNIT-II: EQUATIONS OF MOTION OF A FLUID

Pressure at a point in a fluid at rest. - Pressure at a point in a moving fluid - Conditions at a boundary of two inviscid immiscible fluids- Euler's equation of motion - Discussion of the case of steady motion under conservative body forces.

Chapter 3. Sections 3.1 to 3.7

UNIT-III

Some three dimensional flows. Introduction- Sources, sinks and doublets - Images in a rigid infinite plane - Axis symmetric flows - stokes stream function

Chapter 4 Sections 4.1, 4.2, 4.3, 4.5.

UNIT-IV : SOME TWO DIMENSIONAL FLOWS

Meaning of two dimensional flow - Use of Cylindrical polar coordinate - The stream function - The complex potential for two dimensional, irrotational incompressible flow - Complex velocity potentials for standard two dimensional flows - Some worked examples - Two dimensional Image systems - The Milne Thompson circle Theorem.

Chapter 5. Sections 5.1 to 5.8

UNIT-V : VISCOUS FLOWS

Stress components in a real fluid. - Relations between Cartesian components of stress- Translational motion of fluid elements - The rate of strain quadric and principal stresses - Some further properties of the rate of strain quadric - Stress analysis in fluid motion - Relation between stress and rate of strain - The coefficient of viscosity and Laminar flow - The Navier - Stokes equations of motion of a Viscous fluid.

Chapter 8. Sections 8.1 to 8.9

Recommended Text

5. T.Petrila, *Basics of Fluid Mechanics and Introduction to Computational Fluid Dynamics,* Springer, berlin, 2004.

ELECTIVE: PAPER-3
D. ALGEBRAIC TOPOLOGY

Objectives: To introduce the ideas of algebraic topology to other branches of Mathematics.

UNIT – I : CALCULUS IN THE PLANE: PATH INTEGRALS

Angles and Deformations – Differntial forms and path Integrals – Independence of Path – Criterion for exactness. Angles and Deformations: Angle functions and Winding numbers – Reparametrizing and Deforming the Paths. Winding Numbers: Definition – Homotopy and Reparametrization – Varying the point – Degrees and Local Degrees.

Chapter – 1: (a) to (c); Chapter – 2: (a) to (b); Chapter – 3: (a) to (d).

UNIT – II: COHOMOLOGY AND HOMOLOGY

De Rham Cohomology and the Jordan Curve Theorem. Definition of the De Rham Graphs – The Coboundary map – the Jordon Curve Theorem – Applications and Variations.

Homology: Chains, Cycles, and H_0U – Boundaries, H_1U, and Winding Numbers – Chains on Grids – Maps and Homology – The First Homology Group for General Spaces.

Chapter 5: (a) to (d); Chapter 6: (a) to (e)

UNIT – III: HOLES AND INTEGRALS

Multiply connected regions – Integrations over continuous Paths and Chains – Periods of Integrals – Complex Integration.

Mayer – Victoris: The Boundary map – Mayer – Victoris for Homology – Variations and applications – Mayer – Victoris for Cohomology.

Chapter 9: (a) to (d); Chapter 10: (a) to (d)

UNIT – IV: COVERING SPACES AND FUNDAMENTAL GROUPS

Covering spaces: Definition – Lifting paths and Homotopies – G-coverings – Covering Transformations. The Fundamental Groups: Definitions and Basic Properties – Homotopy – Fundamental group and Homology. Fundamental Groups and Covering Spaces: Fundamental Group and Coverings – Automorphisms of Coverings – The Universal Covering – Coverings and Subgroups of the Fundamental Group.

Chapter 11: (a) to (d); Chapter 12: (a) to (c); Chapter 13: (a) to (d)

UNIT – V: THE VAN KAMPEN THEOREM

G-Coverings from the Universal Covering – Patching Coverings together – The Van Kampen Theorem.

Cohomology: Patching Coverings and Cech cohomology – Cech Cohomology and Homology – De Rham Cohomology and Homology – Proof of Mayer – Victoris fro De Rham Cohomology.

Chapter 14: (a) to (d); Chapter 15: (a) to (d)

Recommended Text:

5. J. R. Munkres, Topology, Prentica Hall of India, New Delhi, 2002, [3rd Indian Print].

SEMESTER - IV
PAPER - 13
COMPLEX ANALYSIS - II

Objectives : To study Riemann Theta Function and normal families, Riemann mapping theorem, Conformal mapping of polygons, harmonic functions, elliptic functions and Weierstrass Theory of analytic continuation.

UNIT - I: PARTIAL FRACTIONS AND ENTIRE FUNCTIONS

Partial fractions - Infinite products - Canonical products - Gamma Function - Jensen's formula - Hadamard's Theorem

Chapter 5 : Sections 2.1 to 2.4 ; Chapter 5 : Sections 3.1 and 3.2

UNIT - II: RIEMANN THETA FUNCTION AND NORMAL FAMILIES

Product development - Extension of $\zeta(s)$ to the whole plane - The zeros of zeta function - Equicontinuity - Normality and compactness - Arzela's theorem - Families of analytic functions - The Classical Definition

Chapter 5 : Sections 4.1 to 4.4 ; Chapter 5 : Sections 5.1 to 5.5

UNIT - III: RIEMANN MAPPING THEOREM

Statement and Proof - Boundary Behavior - Use of the Reflection Principle.
Conformal mappings of polygons : Behavior at an angle - Schwarz-Christoffel formula - Mapping on a rectangle.
Harmonic Functions : Functions with mean value property - Harnack's principle.

Chapter 6 : Sections 1.1 to 1.3 (Omit Section1.4) ;
Sections 2.1 to 2.3 (Omit section 2.4)
Section 3.1 and 3.2

UNIT-IV : ELLIPTIC FUNCTIONS

Simply periodic functions: Representation by exponentials-The Fourier development-Functions of finite order- Doubly periodic functions:The Period Module-Unimodular transformations-The Canonical basis-General properties of Elliptic functions.

Chapter 7 : Sections 1.1 to 1.3 ; Sections 2.1 to 2.4

UNIT-V : WEIRSTRASS THEORY

The Weierstrass ρ-function - The functions $\zeta(z)$ and $\sigma(z)$- The differential equation -The modular function $\lambda(\tau)$ - The Conformal mapping by $\lambda(\tau)$.

Chapter 7 : Sections 3.1 to 3.5

Recommended Text:

Lars V. Ahlfors, Complex Analysis, (3rd Edition) McGraw Hill Book Company, New York, 1979.

Reference Books

4. M.Heins, Complex function Theory, Academic Press, New York,1968.

PAPER - 14
FUNCTIONAL ANALYSIS

Objectives : To study the details of Banach and Hilbert Spaces and to introduce Banach algebras.

UNIT-I : BANACH SPACES

Definition - Some examples - Continuous Linear Transformations - The Hahn -Banach Theorem - The natural embedding of N in N**

Chapter 9 : Sections 46 to 49

UNIT-II : BANACH SPACES AND HILBERT SPACES

Open mapping theorem - conjugate of an operator - Definition and some simple properties - Orthogonal complements - Orthonormal sets

Chapter 9 : Sections 50 and 51 ; Chapter 10 : Sections 52, 53 and 54

UNIT-III : HILBERT SPACE

Conjugate space H* - Adjoint of an operator - Self-adjoint operator - Normal and Unitary Operators - Projections

Chapter 10 : Sections 55, 56,57,58 and 59

UNIT-IV : PRELIMINARIES ON BANACH ALGEBRAS

Definition and some examples - Regular and single elements - Topological divisors of zero - spectrum - the formula for the spectral radius - the radical and semi-simplicity.

Chapter 12 : Sections 64 to 69

UNIT-V: STRUCTURE OF COMMUTATIVE BANACH ALGEBRAS

Gelfand mapping - Applications of the formula $r(x) = \lim \| x^n \|^{1/n}$ - Involutions in Banach Algebras - Gelfand-Neumark Theorem.

Chapter 13 : Sections 70 to 73

Recommended Text:

G.F.Simmons , *Introduction to topology and Modern Analysis*, McGraw Hill International Book Company, New York, 1963.

Reference Books

PAPER - 15
MATHEMATICAL STATISTICS

Objectives : This course introduces sampling theory, significance tests ,estimation, testing of hypotheses, ANOVA and sequential analysis with rigorous mathematical treatment.

UNIT-I : SAMPLE MOMENTS AND THEIR FUNCTIONS

Notion of a sample and a statistic - Distribution of the arithmetic mean of independent normally distributed random variables – The χ^2 - distribution – The distribution of the statistics ($\bar{X}$, S) – Student's t - distribution - Fisher's Z - distribution - Snedecor's F - distribution - Distribution of sample mean from non-normal populations.

Chapter 9 : Sections 9.1 to 9.8

UNIT-II : SIGNIFICANCE TEST

Kolmogorov Theorem 10.11.1 - Smirnov Theorem 10.11.2 - Concept of a statistical test - Parametric tests for small samples and large samples - χ^2 test - Tests of Kolmogorov and Smirnov type - The Wald-Wolfovitz and Wilcoxon -Mann-Whitney tests - Independence Tests by contingency tables.

Chapter 10 : Section 10.11; Chapter 12 :Sections 12.1 to 12.7

UNIT-III : ESTIMATION

Preliminary notion - Consistent estimation - Unbiased estimates - Sufficiency of an estimate - Efficiency of an estimate - Asymptotically most efficient estimates - methods of finding estimates - confidence Interval.

Chapter 13 : Sections 13.1 to 13.8

UNIT-IV : Analysis of Variance

One way classification and two-way classification. **Hypotheses Testing:** The Power functions and OC function - Most Powerful test - Uniformly most powerful test - unbiased test.

Chapter 15 : Sections 15.1 and 15.2
Chapter 16 : Sections 16.1 to 16.5

UNIT-V : SEQUENTIAL ANALYSIS

SPRT - Auxiliary Theorem - Wald's fundamental identity - OC function and SPRT – The expected value of $E(n)$ - Determination of A and B - Testing a hypothesis concerning p of zero – one distribution - Testing a hypothesis concerning the expected value m of a Normal population.

Chapter 17 : Sections 17.1 to 17.9

Recommended Text:

PAPER - 16
DIFFERENCE EQUATIONS

Objectives : To introduce the process of discretization, Discrete version of Differential Equations, Discrete oscillation and the asymptotic behaviour of solutions of certain class of difference equations for linear cases only. Solution of difference equations using z-transforms is stressed.

UNIT-I : LINEAR DIFFERENCE EQUATIONS OF HIGHER ORDER

Difference Calculus - General Theory of Linear Difference Equations - Linear Homogeneous Equations with Constant coefficients - Linear non-homogeneous equations - Method of Undetermined coefficients, the method of variation of constants - Limiting behavior of solutions.

Chapter 2: Sections 2.1 to 2.5

UNIT-II : SYSTEM OF DIFFERENCE EQUATIONS

Autonomous System - The Basic Theory - The Jordan form - Linear periodic system.

Chapter 3: Section 3.1 to 3.4

UNIT-III : THE Z-TRANSFORM METHOD

Definition, Example and properties of Z-transform - The Inverse Z-transform and solution of Difference Equations: Power series method, partial fraction method, the inverse integral method - Volterra Difference Equation of convolution types - Volterra systems.

Chapter 5: Sections 5.1 to 5.3, 5.5 (omit 5.4)

UNIT-IV : ASYMPTOTIC BEHAVIOUR OF DIFFERENCE EQUATION

Tools and Approximations - Poincare's Theorem - Second order difference equations - Asymptotic diagonal systems - Higher order Difference Equations.

Chapter 8 : Sections 8.1 to 8.5

UNIT-V : OSCILLATION THEORY

Three-term difference Equation - Non-linear Difference Equations - Self-Adjoint second order equations.

Chapter 7 : Sections 7.1 to 7.3

Recommended Text:

Saber N. Elaydi, *An Introduction to Difference Equations*, Springer Verlag, New York, 1996.

Reference Books:

ELECTIVE: PAPER - 4
(to choose any 1 out of the given 4)
A. NUMBER THEORY AND CRYPTOGRAPHY

Objectives : This course aims to give elementary ideas from number theory which will have applications in cryptology.

UNIT-I : Elementary Number Theory

Time Estimates for doing arithmetic - Divisibility and Euclidean algorithm - Congruences - Applications to factoring.

Chapter – I Sec – 1.1 to 1.4

UNIT-II : Cryptography

Some simple crypto systems - Enciphering matrices

Chapter – III Sec – 3.1 and 3.2

UNIT-III : Finite Fields and quadratic Residues

Finite fields - Quadratic residues and Reciprocity

Chapter – II Sec – 2.1 and 2.2

UNIT-IV : Public Key Cryptography

The idea of public key cryptography - RSA - Discrete log - Knapsack

Chapter-IV Sec – 4.1 to 4.4

UNIT-V : Primality and Factoring

Pseudo primes - The rho method - Fermat factorization and factor bases - The Continued fraction method.

Chapter – V Sec – 5.1 to 5.4

Recommended Text:

Neal Koblitz, *A Course in Number Theory and Cryptography*, Springer-Verlag, New York, 2002, Second Edition.

Reference Books:

1. Niven and Zuckermann, *An Introduction to Theory of Numbers* (Edn. 3), Wiley Eastern Ltd., New Delhi, 1976.

3. K.Ireland and M.Rosen, *A Classical Introduction to Modern Number Theory*, Springer Verlag, 1972.

ELECTIVE: PAPER – 4
B. ALGEBRAIC NUMBER THEORY

Objectives : The course aims to provide a study on modules over rings, finite fields, algebraic extensions, number fields and cyclotomic fields, Noetherian rings and modules and Dedekind rings.

UNIT-I : ALGEBRAIC BACKGROUND

Rings and Fields- Factorization of Polynomials - Field Extensions - Symmetric Polynomials - Modules - Free Abelian Groups.

Chapter 1: Sec. 1.1 to 1.6

UNIT-II : ALGEBRAIC NUMBERS

Algebraic numbers - Conjugates and Discriminants - Algebraic Integers - Integral Bases - Norms and Traces - Rings of Integers.

Chapters 2: Sec. 2.1 to 2.6

UNIT-III : QUADRATIC AND CYCLOTOMIC FIELDS

Quadratic fields and cyclotomatic fields : Factorization into Irreducibles : Trivial factorization - Factroization into irreducibles - Examples of non-unique factorization into irreducibles.

Chapter 3: Sec. 3.1 and 3.2 ; Chapter 4: Sec. 4.2 to 4.4

UNIT-IV

Prime Factroization - Euclidean Domains - Euclidean Quadratic fields - Consequences of unique factorization - The Ramanujan -Nagell Theorem.

Chapter 4: Sec. 4.5 to 4.9

UNIT-V : IDEALS

Prime Factorization of Ideals - The norms of an Ideal - Non-unique Factorization in Cyclotomic Fields..

Chapter 5 : Sec. 5.2 to 5.4

Recommended Text

ELECTIVE: PAPER – 4
C. STOCHASTIC PROCESSES

Objectives : This course aims to introduce advanced topics in Markov process, Markov chains and Renewal theory.

UNIT - I : STOCHASTIC PROCESSES

Specification of stochastic processes – stationary processes – Markv Chains : Definitions and Examples – Higher transition probabilities – Generalization of independent Bernoulli trials.

Chapter 2 : 2.1 to 2.4; Chapter 3 : 3.1 to 3.3

UNIT - II : MARKOV CHAINS

Stability of Markov system – Graph theoretic approach – Markov chain with denumerable number of state – Reducible chains – Statistical inference for Markov chains.

Chapter 3 : 3.6 to 3.10

UNIT - III : MARKOV PROCESS WITH DISCRETE STATE SPACE

Poisson process: Poisson process and related distributions – Generalizations of Poisson process – Birth and death process – Markov process with discrete state space (Continuous time Markov chain).

Chapter 4 : 4.1 to 4.5

UNIT - IV : MARKOV PROCESS WITH CONTINUOUS STATE SPACE

Brownian motion – Weiner process – Differential equations for Weiner Process – Kolmogorov equations – First passage time distribution for Weiner process.

Chapter 5 : 5.1 to 5.5

UNIT - V : RENEWAL PROCESS AND THEORY

Renewal process and renewal equation – Stopping time – Wald's equation – Renewal theorem – Delayed and equilibrium renewal process.

Chapter 6 : 6.1 to 6.6

Recommended Text

4. S.K. Srinivasan and A. Vijayakumar, Stochastic Processes, Narosa, 2003.

ELECTIVE: PAPER – 4
D. MATHEMATICAL SOFTWARES PRACTICAL

Objectives : This course aims to practice the students in Mathematics document preparation and utilizing the software facility available for tedious computations.

- **CREATING A DOCUMENT USING LATEX**
  - Simple Typesetting
  - Page Layout (page size, margins, page style)
  - Formatting (Font size, Text Alignment)
  - Tables and Figures
  - Typesetting Mathematics
  - Bibliography Management.

- **MATLAB BASICS**
  - Algebra and Arithmetic
  - Calculus, Graphics and Linear Algebra
  - Curve Fitting and Interpolation
  - Ordinary Differential Equations

Reference Books

1. Latex Tutorials – A PRIMER Indian TEX Users Group, 2002, 2003 Indian TEX Users Group Floor III SJP Buildings, Cotton Hills Trivandrum 695014, India.
2. Brain R. Hunt, Ronald R. Lipsman and Jonathan M. Rosenberg, A Guide to MATLAB for Beginners and experienced users, Cambridge University Press, 2003.
3. Getting Started with MATLAB 7, Rudra Pratap, Oxford University Press, India, 2006.
4. Rose L. Spencer, Introduction to MATLAB.

COMPUTER LABORATORY PRACTICE EXERCISES

LATEX

1. Create a document file to prepare a Chapter in a Book.
2. Create a document file to prepare a research article.

MATLAB

1. Multiplication of matrices of order 4×4
2. Solution to linear non-homogeneous equations (4 unknowns)
3. Rank of a matrix of order atleast 4
4. Solving ordinary differential equations
5. Plotting of two and three dimensional graphs SPSS
6. Drawing Histograms, frequency curves and frequency polygons
7. Finding central measures and measures of dispersion
8. Finding correlation and rank correlation
9. Finding partial and multiple correlation
10. Calculation of ANOVA

Project

There will be a Project work at the end of the Semester IV. The guidelines for the Project work with Viva-voce as follows.

a) The Project work carries 100 marks for which the Project report shall be evaluated for 75 marks and the Viva-voce carries 25 marks. The marks for Project report and Viva-voce are to be awarded jointly by the external examiners in consultation with project supervisor.
b) The Project report may consist of 40 to 50 pages.
c) The candidate has to submit the Project report 15 days before the commencement of the IV Semester examinations.
d) A candidate who fails in the Project/Dissertation may resubmit the report (on the same topic) with necessary modification/correction/ improvements in the subsequent even Semester examination for evaluation.
e) Each candidate shall be required to appear for Viva-voce examination (in defense of the Project only)

M.Sc. PHYSICS

SYLLABUS

UNDER CBCS

(With effect from 2017-2018)

SEMESTER I
PAPER-1

MATHEMATICAL PHYSICS I

UNIT-I: Linear Vector Spaces and Matrices

Linear Vector Spaces: Linear independence, basis and dimension - inner products. Orthonormality and completeness - Schwartz Inequality - Orthonormal basis - Gram-Schmidt orthogonalization process - Linear operators - Vectors in n dimensions - Matrix algebra, similarity transforms, matrix diagonalization - Orthogonal, Hermitian and Unitary matrices- Properties.

UNIT –II: Tensors

Coordinate transformation– summation convention - Contravariant, Covariant and mixed tensors – Rank of a tensor – symmetric and anti-symmetric tensors - Invariant tensors - Kronecker delta, Levi-civita tensor in three dimensions – contraction of tensors - product rule - Quotient rule - tensors of higher rank- Tensor forms of Operators.

UNIT-III: Ordinary Differential Equations

Second order linear differential equations: Wronskian, Ordinary and singular points- series solutions - Generating functions – Rodrigue's formula - Orthogonality relations - Important recurrence relations for Bessel, Legendre, Hermite and Laguerre functions - Spherical harmonics.

UNIT – IV: Green's functions

Dirac-delta function - Green's function - One dimensional Green function - boundary conditions – Eigen function - expansion of the Green's function- Reciprocity theorem – Sturm-Liouville type equations in one dimension and their Green's functions.

UNIT V: Probability theory and Random variables

Probability distributions and probability densities - Binomial, Poisson's and Normal - standard discrete and continuous probability distributions - moments and generating functions - Central limit theorem (statement and applications).

Books for Study:

1. P.K. Chattopadhyay, Mathematical Physics, Wiley Eastern, Madras, 1990.
2. G. Arfken and H.J. Weber, Mathematical Methods for Physicists, 5th Edition, Harcourt (India), New Delhi, 2001.
3. M.D. Greenberg, Advanced Engineering Mathematics, 2nd Edition, International Ed., Prentice - Hall International, New Jersey, 1998.
4. E. Kreyszig, Advanced Engineering Mathematics, 8th Edition Wiley, New York, 1999.
5. B.D. Gupta, Mathematical Physics, Vikas publishing house 3rd Edition, New Delhi, 2006.
6. Satyaprakash, Mathematical Physics, Sultan Chand & sons, New Delhi, 2004.

Books for Reference:

1. Schaum's outline series, McGraw Hill, (i) Vector and tensor analysis, (ii) Linear Algebra, (iii) Matrices, (iv) Differential Equations (v) Probability (vi) Statistics, 1964.
2. P.R Halmos, Finite dimensional Vector Spaces, 2nd Edition. Affiliated East - West, New Delhi, 1965.
3. C.R. Wylie and LC. Barrett, Advanced Engineering Mathematics, 6th Edition., International Edition. McGraw Hill, New York, 1995.
4. P.K. Chakrabarti and S.N. Kundu, A Text Book of Mathematical Physics, New Central Book Agency, Kolkata, 1996.
5. A.K. Ghatak, I.C. Goyal and S.H. Chua, Mathematical Physics Macmillan India, New Delhi, 2002.

PAPER-2

CLASSICAL AND STATISTICAL MECHANICS

PART A: CLASSICAL MECHANICS

UNIT-I: Lagrangian and Hamiltonian formulation

Hamilton's Variational Principle and Lagrange's equation - Lagrange Problems - Double Pendulum, Spherical pendulum, Cylinder rolling down an inclined plane - Hamilton's equations - cyclic variables – Principle of least action – Hamiltonian Problems - motion of a particle in a central force field, charged particle moving in an electromagnetic field – Equations of motion and first integrals –Scattering by central potential – Kepler's laws – Transformation from centre of mass to laboratory frame.

UNIT-II: Rigid body dynamics and Canonical transformations

Rigid body motion – Kinematics - Euler's angles - Angular momentum and kinetic Energy – Moment of inertia tensor - Euler's equations of motion – Torque-free motion of a rigid body - Motion of a symmetrical top under the action of gravity - Canonical transformation and their generators – simple examples – Poisson brackets – Equations of motion in Poisson bracket form - Noether's theorem.

UNIT-III: Hamilton - Jacobi Theory and Theory of Small Oscillations

Hamilton-Jacobi equations – Application to Linear harmonic oscillator problem - Action Angle variables - Application to Kepler's problem - Oscillatory motion - Theory of small oscillation –Two coupled pendulums - Linear triatomic molecule - Stability of Oscillatory motion - Forced Harmonic Oscillator - non- linear Oscillation in a symmetric potential.

PART B: STATISTICAL MACHANICS

UNIT-IV: Thermodynamics and Classical statistics

Thermodynamic parameters – thermodynamic potentials – Gibbs phase rule – First and second order phase transitions – Ehrenfest's equations - Random walk - Brownian motion - Langevin theory - Einstein theory.
Classical Statistics: Microstates and Macrostates - Phase space - Liouville theorem and it's significance - ensembles - Micro Canonical, Canonical and Grand Canonical ensembles - Partition function - Translational partition functions - Gibb's Paradox - Sackur- Tetrode equation.

UNIT-V: Quantum Statistics

Quantum Statistics of ideal gas - Ideas of Bose-Einstein and Fermi-Dirac Particles - Degeneracy of gases - Bose-Einstein condensation of gases - Photon gas - Planck's law of radiation and its limitation - Thermionic emission - Pauli's theory of Paramagnetism - Ising model.

Books for Study:

1. H. Goldstein, Classical Mechanics. 3rd Edition. Pearson Education, Asia, New Delhi, 2002.
2. S.N. Biswas, Classical Mechanics, Books and Allied Ltd., Kolkata, 1998.
3. Upadhyaya, Classical Mechanics, Himalaya Publishing Co., New Delhi, 1999.
4. Gupta Kumar Sharma, Classical Mechanics, Pragati Prakashan, Meerut, 2004.
5. K. Huang, Statistical Mechanics, Wiley Eastern Ltd., New Delhi, 1975.
6. B.K. Agarwal and M. Eisner, Statistical Mechanics, 2nd Edition, New Age International, New Delhi, 1998.
7. Sathya Prakash and J.P Agarwal, Statistical Mechanics, 7th Edition, Kedar Nath and Ram Nath & Co, Meerut, 1994.
8. J.K.Bhattacharjee, Statistical Mechanics: An Introductory Text, Allied Publication, New Delhi, 1996.

Books for Reference:

1. L.D. Landau and E.M. Lifshitz, Mechanics, Pergomon Press, Oxford, 1969.
2. K.R. Symon, Mechanics, Addison Wesley, London, 1971.
3. J.L. Synge and B.A Griffith, Principles of Classical Mechanics, Mc.Graw-Hill, NewYork, 1949.
4. C.R.Mondal, Classical Mechanics, Prentice - Hall of India, New Delhi.
5. L.P. Kadanoff, Statistical Physics - Statics, Dynamics and Renormalization, World Scientific, Singapore, 2001.
6. M. Glazer and J. Wark, Statistical Mechanics, Oxford University Press, Oxford, 2001.

PAPER-3

QUANTUM MECHANICS I

UNIT-I: Basic formalism

Wave functions for a free particle - Interpretation and conditions on the wave function - Postulates of quantum Mechanics and the Schrödinger equations – time dependent, independent - Expectation Value - Stationary States - Ehrenfest's theorem - Hermitian Operators for dynamical variables - Eigen values and Eigen functions - Uncertainty Principle.

UNIT-II: One Dimensional and Three Dimensional Problems

One Dimensional: Particle in a box – simple harmonic oscillator - Square well potential – Barrier penetration – Three Dimensional: Orbital angular momentum and spherical harmonics - Central forces and reduction of two body problem - Particle in a Spherical well - Hydrogen atom.

UNIT-III: General formalism

Hilbert's space - Dirac notation - Representation theory - Co-ordinate and momentum representations - Time evolution - Schrödinger, Heisenberg and Interaction pictures - Symmetries and conservation laws.

UNIT-IV: Approximation methods

Time-independent perturbation theory for non- degenerate and degenerate levels - Application to ground state of an harmonic oscillator and Stark effect in Hydrogen - Variation method -Application to ground state of Helium atom - WKB approximation - WKB quantization rule - Application to simple Harmonic Oscillator.

UNIT-V: Angular momentum and identical particles

Ladder Operators - Commutation rules for angular momentum operators - Eigen value spectrum from angular momentum algebra - Matrix representation - Spin angular momentum – Non-relativistic Hamiltonian including spin - Addition of two angular momenta - Clebsch- Gordan coefficients - Symmetry and anti symmetry of wave functions - Pauli's spin matrices.

Books for Study:

1. P.M. Mathews and K. Venkatesan, A Text book of Quantum Mechanics, Tata McGraw-Hill, New Delhi, 1976.
2. L.I. Schiff, Quantum Mechanics, 3rd Edition, International Student Edition,McGraw-Hill Kogakusha, Tokyo, 1968.
3. V. Devanathan, Quantum Mechanics, Narosa Publishing House, New Delhi, 2005.
4. V.K. Thankappan, Quantum Mechanics, 2nd Edition, Wiley Eastern Ltd, NewDelhi, 1985.
5. G. Aruldhas, Quantum Mechanics, Prentice-Hall of India, New Delhi, 2002.
6. Sathya Prakash Swati Saluja, Quantum Mechanics, Kedar Nath Ram Nath & Co Meerut, 2016.

Books for Reference:

1. E. Merzbacher, Quantum Mechanics 2nd Edition, John Wiley and Sons, NewYork, 1970.
2. P.A.M. Dirac, The Principles of Quantum Mechanics, Oxford University Press, London, 1973.
3. L.D. Landau and E.M. Lifshitz, Quantum Mechanics, Pergomon Press, Oxford, 1976.
4. Ajoy Ghatak, Loganathan, Quantum Mechanics theory and applications, Fourth edition, Macmillan, 1999.
5. Franz Schwabl, Quantum Mechanics, Narosa Publishing House, 1998.
6. B.S. Rajput, Advanced Quantum Mechanics, Seventh Edition, A Pragati Prakashan, 2007.
7. J.J.Sakurai, Modern Quantum Mechanics, Benjamin Cummings, 1985.
8. R.P. Feynman, R.B.Leighton and M.Sands, The Feynman Lectures on Physics, Vol.3, Narosa Publishing House, 1992.

ELECTIVE

PAPER - 1

(to choose 1 out of 3)

A. ELECTRONIC DEVICES AND APPLICATIONS

UNIT-I: Fabrication of IC and logic families

Fabrication of IC - Monolithic integrated circuit fabrication - pressure transducers - Monolithic RMS Voltage measuring device - Monolithic voltage regulators - Integrated circuit multipliers - Integrated circuit logic - Schottky TTL - P and N-MOS Logic - CMOS Logic - Tristate logic circuits.

UNIT-II: Opto electronic devices

Light sources and Displays - Light emitting diodes - Surface emitting LED - Edge Emitting LED - Seven segment display - LDR - Diode lasers - Photo detectors - Basic parameters - Photo diodes - p-i-n Photo diode - Solar cells - Photo transistors - IR and UV detectors.

UNIT-III: 555 Timer and applications

555 Timer - Description - Monostable operation - Frequency divider - Astable operation - Schmitt trigger - Phase Locked Loops - Basic principles - Analog phase detector - Voltage Controlled Oscillator - Voltage to Frequency conversion – temperature coefficient of resistance using IC 555 - PLL IC 565 - Description - Lock-in range - Capture range - Application - Frequency multiplication.

UNIT-IV: Op-amp applications

Instrumentation amplifier - V to I and I to V converter - Op-amp circuits using diodes - Sample and Hold circuits - Log and Antilog amplifiers - Multiplier and Divider - Electronic analog Computation solving simultaneous and differential equation- Schmitt Trigger - Astable, Monostable Multivibrator – Triangular wave generator - Sine wave generator - Active filters – Low, High and Band pass first and second order Butterworth filters – wide and narrow band reject filters.

UNIT-V: Pulse and digital Communication

Pulse communications - Introduction - Types - Pulse-Amplitude Modulation (PAM) - Pulse Time Modulation (PTM) : Pulse Width Modulation (PWM) - Pulse Position Modulation (PPM) - Pulse Code Modulation (PCM) - Principles of PCM - Quantizing noise - Generation and Demodulation of PCM - Effects of Noise - Advantages and applications of PCM - Pulse systems - Frequency-Shift keying - Digital communication - Modem classification - Modes of modem operation - Modem interconnection - Modem interfacing.

Books for Study:

1. S.M. Sze, Semiconductor Devices - Physics and Technology, Wiley, New York, 1985.
2. Millman and Halkias, Integrated Electronics, McGraw-Hill, New Delhi.
3. R.A. Gaekwad, Op-Amps and integrated circuits EEE, 1994.
4. Taub and Shilling, Digital Integrated Electronics, McGraw-Hill, New Delhi, 1983.
5. J. Millman, Digital and Analog Circuits and Systems, McGraw-Hill, London, 1979.
6. George Kennedy, Electronic communication systems 3rd Edition, McGraw-Hill, London, 1987.
7. G.S.N. Raju, Electronic Devices and Circuit , I.K. International Publishing House Pvt. Ltd., New Delhi, 2010.

Books for Reference:

1. R.F. Coughlin and F.F, Driscol, Op-Amp and linear integrated circuits, Prentice Hall of India, New Delhi, 1996.
2. M.S.Tyagi, Introduction to Semiconductor Devices, Wiley, New York.
3. P. Bhattacharya, Semiconductor Optoelectronic Devices, 2nd Edition, Prentice-Hall of India, New Delhi, 2002.
4. Deboo/ Burrous, Integrated circuits and semiconductor Devices – Theory and application, McGraw-Hill, New Delhi, 1985.
5. D. Roy Choudhury, Linear integrated circuits, Wiley Eastern, New Delhi, 1991.
6. Ramakant Gaekwad, Operational amplifiers, Wiley Eastern, New Delhi, 1981.
7. Louis E. Fresnel, Communication Electronics : principles and Applications, TMH Pub. Co., Ltd, 2002.

PAPER – 1

B. ELECTRONIC INSTRUMENTATION

UNIT-I : Transducers

Classification of Transducers - Principle, construction and working of Thermistor - LVDT, Electrical strain gauges and capacitive transducers, Photoelectric transducer, Piezoelectric transducer - Measurement of non-electrical quantities - Strain, Displacement, temperature, Pressure, Magnetic fields, vibration, optical and particle detectors.

UNIT-II: Digital Instrumentation

Principle, block diagram and working of Digital frequency counter, digital multimeter, digital pH meter, digital conductivity meter and digital storage oscilloscope.

UNIT-III: Analytical Instrumentation

Principle, block diagram, description, working and applications of UV-VIS spectrometer, IR spectrometer, Flame emission spectrometer and ICP - AES spectrometer - Basic concepts of Gas and Liquid Chromatography.

UNIT-IV: Bio-Medical Instrumentation

Physiological transducers to measure blood pressure, body temperature - Sources of Bio-electric potentials - resting potential, action potential, bio-potential electrodes - Principle, block diagram and operation of ECG and EEG - recorders.

UNIT-V: Computer Peripherals

Printers - Printer mechanism – Classification - Dot matrix, Ink jet and laser printers - Basic concepts of key board and mouse. Mass data storage - Hard Disk - Optical disk (CD) – DVD –Blueray disc – Universal Serial Bus (USB).

Books for Study:

1. Dr.Rajendra Prasad, Electronic Measurements and Instrumentation, Khanna Publications.
2. S.Ramabhadran, Electronic Measurements and Instrumentation Khanna Publications.
3. Leslie Cromwell fred J. Weibell, Erich A. Pfeiffer, Biomedical Instrumentation and Measurements 2nd Edition, Prentice –Hall of India Private Ltd, New Delhi, 2010.

Books for Reference:

1. S.M. Dhir, Electronics and Instrumentation, Khanna Publishers, Khandpur.
2. Albert D.Heltrick, William D. Cooper, Modern Electronics Instrumentation and measurement Techniques, PHI, New Delhi.

PAPER – 1

ELECTRONICS COMMUNICATION SYSTEMS

UNIT I- Signal Encoding Techniques

Antennas: types-Propagation modes – line of sight transmission- fading in the mobile environment – signal encoding techniques: criteria- ASK – FSK – BFSK – MFSK – PSK – BPSK – QPSK –multilevel PSK – AM modulation – Angle modulation – PCM – delta and adaptive delta modulation.

UNIT II – Coding and Error Control

Error detection – Parity check – cycle redundancy check – block error correction codes – hamming code – cyclic codes – BCH code – reed – Solomon codes – block interleaving – convolution codes – decoding – turbo coding – automatic repeat request – flow control – error control.

UNIT III – Satellite Communication

Satellite parameters and configurations – Satellite orbits – GEO – MEO – LEO – frequency bands – transmission impairments – Satellite foot print – atmospheric attenuation – satellite network – configuration – capacity allocation – multiplexing : FDM and TDM.

UNIT IV – Cellular wireless networks

Principles of cellular networks : Organization – frequency reuse – operation – mobile radio propagation effects – hand-off – power control – traffic engineering – first generation analog – AMPS – second generation – TDMA – mobile wireless TDMA design consideration – CDMA – mobile wireless CDMA design considerations – Soft handoff –IS 95 – Third generation systems – wireless local loop.

UNIT V – Wireless LANS

Overview: Wireless LAN applications, requirements and technology – Infrared LANS – spread spectrum LANS – narrow band microwave LANS – IEEE 802 architecture – IEEE 802.11 architecture.

Book for study:

1. William Schweber, Electronic Communication Systems, Complete Course Pearson Pub, 2011.
2. George Kennedy, Electronic Communication Systems, 3rd Edition, Tata McGraw-Hill Edition, New Delhi, 2008.

Book for References:

1. William Stallings, Wireless communications and Networks, Pearson education, Asia, 2002.
2. Robert J. Schoen beck, Electronic communications, modulation and transmission PHI, 1999.
3. P. Gnanasivam, Telecommunication switching and networks, PHI, 2004.

SEMESTER II

PAPER-4

MATHEMATICAL PHYSICS II

UNIT-I: Complex Variables

Functions of a complex variable – Single and multi valued functions - Analytic functions - Cauchy Riemann conditions – Singular points - Cauchy's integral theorem and formula - Taylor and Laurent expansions – Zeros and poles - Residue theorem - applications to evaluation of definite integrals.

UNIT –II: Partial differential equations

Laplace's equations – solutions of Laplace's Equations using cylindrical and spherical harmonics – Diffusion equation (Fourier equation of heat flow) – solutions of two and three dimensional heat flow - Wave equations – D' Alembert's solution - Interpretation - Vibrations of a rectangular membrane – Normal modes in three dimensions.

UNIT – III Laplace and Fourier Transforms

Laplace transforms: solution of linear differential equations with constant Coefficients – Fourier integral. Fourier transforms: Fourier sine and cosine transforms – Convolution theorems – Applications.

UNIT-IV: Group Theory

Definition of groups, subgroups and conjugate classes - Symmetry elements, Transformation, Matrix representation - Point groups - representation of a group - Reducible and irreducible representations - Orthogonality theorem - character of a representation - character Table C_{2v} and C_{3v} – Application to IR and Raman active vibrations of XY_3 molecules - Symmetry rotations SO(2) and SO(3) groups - Symmetry Unitary SU(2) and SU(3) groups.

UNIT –V Relativity

Relativistic mass-energy and momentum-energy relation – Relativistic Doppler effect – Velocity addition formula and its criticism - Relativistic Lagrangian and Hamiltonian for a particle – Minkowski's Space – four vectors – space-time and energy-momentum four vectors – centre of mass system for two relativistic particles – Invariance of Maxwell's field equations.

Books for Study:

6. A.K. Ghatak, I.C. Goyal and S.H. Chua, Mathematical Physics Macmillan India, New Delhi, 2002.

PAPER-5

ELECTROMAGNETIC THEORY AND PLASMA PHYSICS

UNIT I: Electrostatics

Laplace and Poisson equations – Boundary value problems - boundary conditions and uniqueness theorem – Laplace equation in three dimensions– Solution in Cartesian and spherical polar co ordinates – Examples of solutions for boundary value problems - Polarization and displacement vectors - Boundary conditions - Dielectric sphere in a uniform field – Molecular polarisability and electrical susceptibility –Langevin Theory of Polar molecules - Electrostatic energy in the presence of dielectric – Multipole expansion.

UNIT II: Magnetostatics

Biot-Savart Law - Ampere's circuital law - Magnetic vector potential and magnetic field of a localised current distribution - Magnetic moment, force and torque on a current distribution in an external field - Magnetostatic energy - Magnetic induction and magnetic field in macroscopic media - Boundary conditions - Uniformly magnetised sphere.

UNIT III: Maxwell Equations

Faraday's laws of Induction - Maxwell's displacement current - Maxwell's equations – free space and linear isotropic media - Vector and scalar potentials - Gauge invariance - Wave equation and plane wave solution- Coulomb and Lorentz gauges - Energy and momentum of the field - Poynting's theorem - Lorentz force - Conservation laws for a system of charges and electromagnetic fields.

UNIT IV: Electromagnetic Waves

Plane waves in non-conducting media - Linear and circular polarization, reflection and refraction at a plane interface- Fresnel’s law, interference, coherence and diffraction - Waves in a conducting medium - Propagation of waves in a rectangular wave guide - Inhomogeneous wave equation and retarded potentials - Radiation from a localized source - Oscillating electric dipole.

UNIT V: Elementary Plasma Physics

The Boltzmann Equation - Simplified magneto-hydrodynamic equations - Electron plasma oscillations - The Debye shielding problem - Plasma confinement in a magnetic field - Magneto-hydrodynamic waves - Alfven waves and magnetosonic waves.

Books for Study:

1. D.J. Griffiths, Introduction to Electrodynamics, 3rd Edition, Prentice-Hall of India, New Delhi, 2002.
2. J.R. Reitz, F. J. Milford and R. W. Christy, Foundations of Electromagnetic Theory, 3rd edition, Narosa Publication, New Delhi, 1986.
3. J. D. Jackson, Classical Electrodynamics, Wiley Eastern Ltd. New Delhi, 1975.
4. J. A. Bittencourt, Fundamentals of Plasma Physics, Pergamon Press, Oxford, 1988.
5. P.Lorrain, D.Corson, Electromagnetic fields and waves, CBS Publishers and distributors, 1986.

Books for Reference:

1. W. Panofsky and M. Phillips, Classical Electricity and Magnetism, Addison Wesley, Lodon, 1962.
2. J. D. Kraus and D. A. Fleisch, Electromagnetics with Applications, 5th Edition, WCB McGraw-Hill, New York, 1999.
3. B. Chakraborty, Principles of Electrodynamics, Books and Allied, Kolkata, 2002.
4. R. P. Feynman, R. B. Leighton and M. Sands, The Feynman Lectures on Physics, Vols. 2, Narosa, New Delhi, 1998.

PAPER-6

QUANTUM MECHANICS II

UNIT-I: Scattering Theory

The scattering problem - formulation –cross sections - Scattering amplitude – Greens function approach - Born approximation and its validity - Partial wave analysis - optical theorem - Phase shifts - Scattering length and effective range - Low energy scattering - Transformation from centre of mass to laboratory frame.

UNIT-II: Perturbation Theory

Time dependent perturbation theory - Constant and harmonic perturbations - Transition probabilities – Fermi-Golden rule - Selection rules for dipole radiation - Adiabatic approximation - Sudden approximation - The density matrix - spin density matrix and magnetic resonance - Semi classical treatment of an atom with electromagnetic radiation.

UNIT-III: Relativistic Quantum Mechanics

Klein-Gordon equation - Failures - Dirac equation - Plane - wave solutions - Interpretation of negative energy states - Antiparticles - Spin of electron - Magnetic moment of an electron due to spin - Energy values in a coulomb potential.

UNIT-IV: Dirac equation

Covariant form of Dirac equation - properties of gamma matrices - Traces -Separation of the equation and the Hydrogen atom problem - Invariance of Dirac equation under Lorentz transformation - T-Transformation for the Dirac equation in presence of electromagnetic field.

UNIT-V: Quantisation of Fields

Relativistic Lagrangian and Hamiltonian of a charged particle in an electromagnetic field - The Lagrangian and Hamiltonian formulations of field – Quantum equation for the field - Second quantization of Klein-Gordon field - creation and annihilation operators - Commutation relations - Quantization of electromagnetic field - Quantization of Schroedinger's field - Quantization of Dirac field.

Books for Study:

1. P.M. Mathews and K. Venkatesan, A Text book of Quantum Mechanics, Tata Mc Graw-Hill, New Delhi, 1976.
2. L.I. Schiff, Quantum Mechanics, 3rd Edition, International Student Edition, McGraw-Hill, Kogakusha, Tokyo, 1968.
3. E. Merzbacher, Quantum Mechanics, 2nd Edition, John Wiley and Sons, NewYork, 1970.
4. J.D. Bjorken and S.D. Drell, Relativistic Quantum Mechanics, McGraw-Hill, New York, 1964.
5. V. Devanathan, Quantum Mechanics, Narosa Publishing House, New Delhi, 2005.
6. P.A. M. Dirac, The Principles of Quantum Mechanics, Oxford University Press, London, 1973.
7. B.K. Agarwal, Quantum Mechanics and Field Theory, Lokbharti Publications, India, 1976.
8. Amitabha Lahiri and B.G. Pal, A First Book of Quantum Field Theory, Narosa Publications, New Delhi, 2005.

Books for Reference:

1. V.K. Thankappan Quantum Mechanics, 2nd Edition, Wiley Eastern Ltd, New Delhi, 1985,.
2. V. Devanathan, Angular Momentum Techniques in Quantum Mechanics, Kluwer Academic Publishers, Dordrecht, 1999.
3. L.D. Landau and E.M. Lifshitz, Quantum Mechanics, Pergomon Press, London, 1958.
4. J.S. Bell, Gottfried, M. Veltman, The Foundations of Quantum Mechanics, World Scientific, 2001.
5. G. Aruldhas, Quantum Mechanics, Prentice-Hall of India, New Delhi, 2002.
6. Claude Itzykson, Isau Bernard Zuber, Quantum Field Theory, McGraw-Hill International Edition, 1987.
7. Leslie E. Vallentine, Quantum Mechanics - A Modern Development, World Scientific Publications Pvt. Ltd, Singapore, 1998.

MAIN PRACTICAL
PAPER-1

GENERAL EXPERIMENTS

(Any 15 out of the given 25)

1. Cornu's method - Young's modulus by elliptical fringes.
2. Cornu's method - Young's modulus by hyperbolic fringes.
3. Determination of Stefan's constant.
4. Band gap energy - Thermistor.
5. Hydrogen spectrum - Rydberg's constant.
6. Co-efficient of linear expansion - Air wedge method.
7. Permittivity of a liquid using RFO.
8. Viscosity of liquid - Meyer's disc.
9. Solar spectrum - Hartmann's Interpolation formula
10. F.P. Etalon – spectrometer – determination of spacing between two plates
11. Iron / Copper arc spectrum.
12. Brass / Alloy arc spectrum.
13. B-H loop using Anchor ring.
14. Specific charge of an electron -Thomson's method / Magnetron method.
15. Electrical resistance of a metal / alloy as a function of temperature by four probe method
16. Edser and Butler fringes - Thickness of air film.
17. Spectrometer - Polarisability of liquids.
18. Spectrometer - Charge of an electron.
19. Determination of strain hardening co-efficient.
20. Thickness of the enamel coating on a wire - by diffraction.
21. Lasers: Study of laser beam parameters.
22. Measurement of Numerical aperture (NA) of a telecommunication graded index optic fiber.
23. Fiber attenuation of a given optical fiber.
24. Determination of solar constant.
25. Biprism - Wavelength of monochromatic source - Refractive Index of a liquid.

MAIN PRACTICAL

PAPER-2

ELECTRONICS EXPERIMENTS

(Any 20 out of the given 25)

1. FET as amplifier – frequency response, input impedance and output impedance.
2. Switching and power control using SCR and Triac.
3. Op-amp - Inverting, Non-inverting amplifier - Voltage follower - summing, difference, average amplifier - differentiator and integrator.
4. Op-amp - Study of the attenuation characteristics and design of the phase-shift Oscillator.
5. Op-amp - Study of the attenuation characteristics and design of the Wien Bridge Oscillator.
6. Op-amp - Solving simultaneous equations
7. Op-amp - Design of square wave, saw tooth wave, and Triangular wave generators.
8. Op-amp - Design of Schmitt Trigger and construction of Monostable multivibrator.
9. Op-amp - Design of active filters - second order - low pass, high pass, band pass and band reject.
10. Op-amp – 4 bit D/A converter - Binary weighted method and R-2R ladder method.
11. Arithmetic operations (Adder/ Subtractor) Using IC 7483.
12. Study of (i) Multiplexer using IC 74150 for the generation of Boolean functions and
    (ii) Demultiplexer using IC 74154
13. IC 7490 -as modulus counters and display using IC-7447
14. Up-down counters - Design of modulus counters.
15. IC 7476 - 4 bit Shift Register - Ring counter and Johnson counters.
16. IC 555 - Astable multivibrator and Voltage Controlled Oscillator.
17. IC 555 - Monostable multivibrator, Frequency Divider.
18. IC 555 - Schmitt Trigger and Hysteresis.
19. Temperature co-efficient of resistance using 555 timer.
20. Instrumentation Amplifier - using IC 741.
21. Pulse width modulator using IC 741.
22. A/D converter using comparator LM 339.
23. Phase Locked Loop.
24. Study of arithmetic and logical operations using IC74181
25. Study of A/D converters – 4 bit simultaneous A/D converter and successive approximation A/D converter using ADC IC 0801/IC 0804.

ELECTIVE
PAPER-2
(to choose 1 out of 3)

A. NANO SCIENCE

UNIT -I: NANOSCALE SYSTEMS

Introduction to Nanoscale – Size-Dependent properties - Size effect - surface tension, wettability - specific surface area and surface area to volume ratio – Reason for change in optical properties, electrical properties and mechanical properties – nanoscale catalysis - Principles of Top-Down and Bottom-Up approaches.

UNIT –II: SYNTHESIS OF NANOSTRUCTURE MATERIALS

Gas phase condensation – Vacuum deposition -Physical vapor deposition (PVD) - chemical vapor deposition (CVD) - Sol-Gel- Ball milling –spray pyrolysis – plasma based synthesis process (PSP) - hydrothermal synthesis - Etching technologies: wet and dry etching - photolithography – Drawbacks of optical lithography for nanofabrication - electron beam lithography – ion beam lithography - dip-pen nanolithography.

UNIT –III: QUANTUM DOTS

Quantum confinement - Excitons and excitonic Bohr radius – difference between nanoparticles and quantum dots - Preparation through colloidal methods - Epitaxial methods- MOCVD and MBE growth of quantum dots - current-voltage characteristics - magneto tunneling measurements - Absorption and emission spectra of quantum dots - photo luminescence spectrum.

UNIT IV: CHARACTERIZATION:

Nano SEM - Scanning Conducting microscopy (SCM) - High-resolution Transmission Electron Microscopy (HRTEM) - single nanoparticle characterization –Scanning capacitance microscopy. Principle and working of Atomic Force Microscopy (AFM) and Scanning tunneling microscopy (STM) – Principle of Transmission Electron Microscopy (TEM) – applications to nanostructures – nanomechanical characterization – nanoindentation.

UNIT V: APPLICATIONS OF NANOTECHNOLOGY:

Nanodiodes, Nanoswitches, molecular switches, Nano-logic elements - Single electron transistors - small metallic tunnel junctions - nanoparticles based solar cells and quantum dots based white LEDs – CNT based transistors –Surface acoustic wave (SAW) devices, microwave MEMS, field emission display devices, - Super hard nanocomposite coatings and applications in tooling - Biochemistry and medical applications: lab-on-a-chip systems. Nanoboat –nanosubmarines - DNA engineering.

Books for study:

1. S. Shanmugam,Nanotechnology TBH Edition.
2. T. Praddetp, Nano- the essential, Mc graw hill education, Chennai.
3. De Jongh J, Physics and Chemistry of Metal cluster components, Kulwer academic publishers, Dordrecht, 1994.
4. enneth J. Klabunde, Nanoscale Materials in Chemistry, KWiley & Sons, Publcn, 2001.
5. Dexler E, Nanosystems, John Wiley, CNY, 1992.
6. Sulabha K.Kulkarni, Nanotechnology: Principles and Practices, Capital Publishing company.
7. M.A.Shah, Principles of Nanoscience and Nanotechnology, Tokeer Ahmad.

Books for references:

1. Nanotechnology, AIP Press, Springer-Verlag, Gregory Timp editor, New York, , 1999.
2. N. JohnDinardo, Nanoscale characterization of surfaces & interfaces, 2nd Edition, Weinheim Cambridge: Wiley-VCH, 2000
3. Jan Korvink & Andreas Greiner, Semiconductors for micro and nanotechnology-An introduction for engineers, Weinheim Cambridge: Wiley-VCH, 2001.
4. W. Kamliu et. al Nanomaterials and mechanics, John Wiley.
5. Hand Book of Nanosciene, Engineering and Technology – The Electrical Engineering handbook series.

PAPER-2

B. FIBRE OPTICS

Unit I: Linear, nonlinear waves and Maxwell's equations

Simple pendulum – small and large oscillations – Duffing oscillator – Linear and nonlinear medium - Maxwell's equations – Electromagnetic waves phase and group velocity, modes in a planar and cylindrical wave guides – polarization - dielectric susceptibility – first and higher order susceptibilities.

Unit II: Optical fiber waveguides and sources

Ray theory transmission: Total internal reflection, acceptance angle, numerical aperture and skew rays –- evanescent field and Goos-Haechen shift – step index and graded index fibers – single and multi-mode fibers.

Sources: LED - Lasers – mode locked Lasers - modulation capability- transient response -semiconductor losses - diode structure and threshold conditions – modulation – temperature effects – source linearity and reliability – Photo detectors – PIN Photo detector – avalanche photodiode.

Unit III: Transmission characteristics of optical fibers

Attenuation – material absorption losses in silica fibers – linear and nonlinear scattering losses – fiber bend loss – mid-infrared and far-infrared transmission – intramodal and intermodal dispersion – overall fiber dispersion in multimode and single-mode fibers – modal birefringence.

Unit IV: Fabrication and connection of optical fibers

Glass fibers - Preparation of optical fibers – Liquid-phase (melting) and Vapour-phase deposition techniques – characteristics of single-mode, multimode, plastic-clad and all-plastic fibers - Stability of the Fiber Transmission Characteristics: Micro bending and hydrogen absorption – fiber alignment and joint loss – fiber splices – Fiber connectors: cylindrical ferrule expanded beam connectors - Fiber couplers: Three and four port couplers - star couplers.

Unit V: Nonlinear effects in fiber and solitons in optical fiber communication

Refractive index – frequency and intensity dependent refractive index – group velocity dispersion – self-phase modulation - Kerr effect – chirping - stimulated Raman scattering – stimulated Brillouin scattering – self-steepening – self-focusing – self-defocusing –

concept of solitons – formation of solitons – kdV equation - Nonlinear Schrödinger equation for solitons – soliton switching – soliton laser- advantages of soliton based communication.

Books for study:

1. Ajoy Ghatak and K. Thyagarajan, Introduction to fiber optics, 6th Edition, Cambridge University press, 2006.
2. John M. Senior, Optical fiber communications: Principles and practice, 2nd edition , PHI.
3. Govind P. Agrawal, Fiber-Optic communication systems, John Wiley, 2003.
4. Waves called solitons: concepts and experiments, Springer Verlag, 1992.
5. Gerd Keiser, Optical fiber communications,5th edition, McGra-Hill Education Pvt. Ltd., New Delhi, 2013.

Books for reference:

1. B.B. Laud,Lasers and Non-Linear optics, New Age International, New Delhi.
2. Akira Hasegawa and Yujiodama, Solitons in optical communications, oxford Press, 1995.
3. Robert W Boyd, Nonlinear fiber optics, 2nd Edition, Elsevier, 2006.

PAPER-2

C. NON LINEAR OPTICS

Unit I: Lasers

Gas lasers – He-Ne, Az + ion lasers – Solid state lasers – Ruby – Nd: YAG, Ti Sapphire – Organic dye laser – Rhodamine – Semiconductor lasers – Diode laser, p-n-junction laser, GaAs Laser.

Unit II: Introduction to Nonlinear Optics

Refractive index – frequency dependent and intensity dependent refractive index - Wave propagation in an anisotropic crystal – Polarization response of materials to light – Second harmonic generation – Sum and difference frequency generation – Phase matching –four wave mixing - Third harmonic generation – self focusing – Parametric amplification – bistability.

Unit III: Multiphoton Processes

Two photon process – Theory and experiment – Three photon process parametric generation of light – Oscillator – Amplifier – Stimulated Raman scattering – Intensity dependent refractive index optical Kerr effect – photorefractive, electron optic effects.

Unit IV: Nonlinear Optical Materials

Basic requirements – Inorganics – Borates – Organics – Urea, Nitro aniline – Semi organics –Thiourea complex – X-ray diffraction, FTIR and FT-NMR qualitative study – Kurtz test – Laser induced surface damage threshold.

Unit V: Fiber Optics

Step – Graded index fibers – wave propagation – Fiber modes – Single and multimode fibres – Numerical aperture – Dispersion – Fiber bandwidth – Fiber loss – Attenuation coefficient – Material absorption-Bending Losses, inverse square law losses-core and cladding losses.

Books for study:

1. Subir kumar Sarkar, Optical fibers and fiber Optic communication system, S. Chand & company Ltd, New Delhi.
2. D.L. Mills, Nonlinear Optics – Basic Concepts Springer, Berlin, 1998.

Books for Reference

1. B.B. Laud, Lasers and Nonlinear Optics, 2nd Edition, New Age International (P) Ltd., New Delhi, 1991.
2. Robert W. Boyd, Nonlinear Optics, 2nd Edition, Academic Press, New York, 2003
3. Govind P. Agarwal, Fiber-Optics Communication Systems, 3rd Edition, John Wiley & Sons, Singapore, 2003.
4. William T. Silvast, Laser Fundamentals, Cambridge University Press, Cambridge 2003.

SEMESTER III

PAPER-7

SPECTROSCOPY

UNIT-I: Microwave spectroscopy

Pure rotational spectra of diatomic molecules - Polyatomic molecules - Study of linear molecules and symmetric top molecules - Hyperfine structure and quadruple moment of linear molecules - Experimental techniques - Molecular structure determination - Stark effect - inversion spectrum of ammonia - Applications to chemical analysis.

UNIT-II: Infrared spectroscopy

Vibrational spectroscopy of diatomic and simple polyatomic molecules - Harmonic Oscillator - Anharmonic Oscillator - Rotational vibrators - Normal modes of vibration of Polyatomic molecules - Experimental techniques - Applications of infrared spectroscopy - H_2O and N_2O molecules - Reflectance spectroscopy.

UNIT-III: Raman Spectroscopy

Classical theory of Raman Scattering - Raman effect and molecular structure - Raman effect and crystal structure - Raman effect in relation to inorganic, organic and physical chemistry - Experimental techniques - Coherent anti-Stokes Raman Spectroscopy - Applications of infrared and Raman spectroscopy in molecular structural confirmation of water and CO_2 molecules - Laser Raman Spectroscopy.

UNIT-IV: NMR and NQR Spectroscopy

Theory of NMR - Bloch equations - Steady state solution of Bloch equations - Theory of chemical shifts - Experimental methods - Single Coil and double coil methods - Pulse Method - High resolution method - Applications of NMR to quantitative measurements. Quadruple Hamiltonian of NQR - Nuclear quadruple energy levels for axial and non-axial symmetry - Experimental techniques and applications.

UNIT-V: ESR and Mossbauer Spectroscopy

Quantum mechanical treatment of ESR - Nuclear interaction and hyperfine structure - Relaxation effects - Basic principles of spectrographs - Applications of ESR method - Mossbauer Effect - Recoillness emission and absorption - Mossbauer spectrum – Experimental methods - Mossbauer spectrometer - Hyperfine interactions - Isomer shift - Magnetic hyperfine interactions - Electric quadruple interactions - Simple biological applications.

Books for Study:

1. C.N. Banwell, E.M. Mc Cash, Fundamentals of Molecular Spectroscopy, 4th Edition, Tata McGraw-Hill Publications, New Delhi, 1994.
2. G. Aruldas, Molecular Structure and Spectroscopy, Prentice - Hall of India Pvt.Ltd., New Delhi, 2001.
3. D.N. Satyanarayana, Vibrational Spectroscopy and Applications, New Age International Publications, New Delhi, 2004.
4. Raymond Chang, Basic Principles of Spectroscopy, Mc Graw-Hill Kogakusha, 1980.

Books for Reference:

1. Straughn and Walker, Spectroscopy, Vol I &II Chapman and Hall, 1967.
2. Atta Ur Rahman, Nuclear Magnetic Resonance, Spinger Verlag, New York, 1986.
3. Towne and Schawlow, Microwave Spectroscopy, McGraw-Hill, New York, 1995.
4. Raymond Chang, Basic Principles of Spectroscopy, Mc Graw-Hill, Kogakusha, Tokyo, 1980.
5. D.A. Lang, Raman Spectroscopy, Mc Graw-Hill International, New York.
6. John Ferraro, Introductory Raman Spectroscopy, Academic Press, New York, 2008.
7. Raj kumar, Atomic and Molecular Spectra: Laser, Kedar Nath Ram Nath, Meerut, New Delhi, 2015.

PAPER-8

NUCLEAR AND PARTICLE PHYSICS

UNIT I: Nuclear Interactions

Nuclear forces – Exchange forces - Two body problem – Ground state of deutron - Magnetic moment – Quardrupole moment - Tensor forces – Nucleon – Nucleon interaction –Meson theory of nuclear forces – Nucleon-Nucleon scattering – Effective range theory – Spin dependence of nuclear forces – Charge independence and charge symmetry of nuclear forces – Isospin formalism.

UNIT II: Nuclear Reactions

Types of reactions and conservation laws – Energetics of nuclear reactions –Dynamics of nuclear reactions – Q-value equation – Scattering and reaction cross sections – Compound nucleus reactions – Direct reactions – Resonance scattering – Breit-Wigner one level formula.

UNIT III: Nuclear Models

Liquid drop model – Bohr-Wheeler theory of fission – Experimental evidence for shell effects – Shell model – Spin-orbit coupling - Magic numbers – Angular momenta and parities of nuclear ground states – Qualitative discussion and estimate of transition rates – Magnetic moments and Schmidt lines – Collective model of Bohr and Mottelson.

UNIT IV: Nuclear Decay

Beta decay – Fermi theory of beta decay – Shape of the beta spectrum – Total decay rate - Mass of the neutrino – Angular momentum and parity selection rules – Allowed and forbidden decays – Comparative half-lives – Neutrino physics – Non-conservation of parity – Gamma decay – Multipole transitions in nuclei – Angular momentum and parity selection rules – Internal conversion – Nuclear isomerism.

UNIT V: Elementary Particle Physics

Types of interaction between elementary particles – Hadrons and leptons – Symmetries and conservation laws – Elementary ideas of CP and CPT invariance – Classification of hadrons – SU(2) and SU(3) multiplets –- Gell-Mann-Okubo mass formula for octet and decuplet hadrons – Quark model- Types of quarks.

Books for study:

1. K. S. Krane, Introductory Nuclear Physics, Wiley, New York, 1987.
2. D. Griffiths, Introduction to Elementary Particle Physics, Harper & Row, New York, 1987.
3. R. R. Roy and B.P. Nigam, Nuclear Physics, New age Intl. New Delhi, 1983.
4. M.L. Pandya and R.P.S. Yadav, Elements of Nuclear Physics 7th Edition, Kedar Nath Ram Nath, Delhi, 1995.
5. D.C. Tayal, Nuclear Physics, 5th Edition, Himalaya Publishing House, Bombay, 1997.
6. R. C. Sharma, Nuclear physics, Kedar Nath & Co, Meerut.

Books for reference:

1. H. A. Enge, Introduction to Nuclear Physics, Addison-Wesley, Tokyo, 1983.
2. Y. R. Waghmare, Introductory Nuclear, Physics, Oxford-IBH, New Delhi, 1981.
3. Ghoshal, Atomic and Nuclear Physics, Vol. 2
4. J. M. Longo, Elementary particles, McGraw-Hill, New York, 1971.
5. R. D. Evans, Atomic Nucleus, McGraw-Hill, New York, 1955.
6. I. Kaplan, Nuclear Physics, Narosa, New Delhi, 1989.
7. B. L. Cohen, Concepts of Nuclear Physics, TMH, New Delhi, 1971.
8. M. K. Pal, Theory of Nuclear Structure, Affl. East-West, Chennai, 1982.
9. W. E. Burcham, M. Jobes, Nuclear and Particle Physics, Addison-Wesley, Tokyo, 1995.

PAPER-9

MICROPROCESSOR AND MICROCONTROLLER

UNIT-I: 8085 Architecture and Programming

8085 Architecture - Programmer's model - ALU - Registers and Flags - Stacks - Complete instruction set of Intel 8085 - State transition and timing diagrams - T States - Machine cycles - Instruction cycles - Timing diagram for memory read and memory write cycles - Addressing modes - Maskable and Non-maskable Interrupts - Assembly language programs – time delay subroutines and delay calculations.

UNIT-II: Interfacing Memory and I/O devices

Interfacing memory and devices – I/O and Memory mapped I/O – Simple polled I/O and Handshaking operations - Programmable keyboard / display interface 8279 - Programmable peripheral device 8255A - 8253 Timer Interface – DAC and ADC interface - Wave form generation (Sine, square, triangular and ramp wave) - Programmable communication interface 8251 (USART).

UNIT-III: Microcontroller 8051

Introduction – 8 and 16 bit Microcontroller families –Flash series – Embedded RISC Processor – 8051 Microcontroller Hardware – Internal registers – Addressing modes – Assembly Language Programming – Arithmetic, Logic, Sorting operations and BCD to binary and binary to BCD conversion.

UNIT IV: Interfacing I/O and Memory With 8051

Interfacing I/O Ports, External memory, counters and Timers - Serial data input/output, Interrupts – Interfacing 8051 with ADC, DAC, LED display, Keyboard, Sensors and Stepper motor.

UNIT V: Embedded Microcontroller

Embedded microcontroller system – types of embedded operating system – Micro chip PIC 16C6X /7X family – features – Architecture – Memory Organization – Register file map – I/O ports – Data and flash program memory – asynchronous serial port – Applications in communication and industrial controls.

Books for Study

1. R.S. Gaonkar, Microprocessor Architecture, programming and Application with the 8085, 3rd Edition, Penram International Publishing, Mumbai, 1997.
2. V.Vijayendran, Fundamentals of Microprocessor 8085 - Architecture, programming and interfacing, Viswanathan Publication, Chennai, 2002.
3. Kenneth J. Ayala – The 8051 Micro Controller Architecture, Programming and Applications. 3rd Edition , Penram International
4. John B. Peatman, Design with PIC Microcontrollers, 7th Indian reprint, Pearson Education, 2004.
5. K. V. Shibu, Introduction to Embedded System, Tata Mc Graw-Hill Education Private Limited , New Delhi.
6. Raj Kumar, Embedded System, Tata Mc Graw-Hill Education Private Limited, New Delhi.

Books for Reference

1. B. Ram, Fundamentals of Microprocessors and Microcomputers, Dhanpat Rai publications, New Delhi.
2. R. Thiagarajan, S. Dhanasekaran, S.Dhanapal, Microprocessor and its applications, New Age International, New Delhi.
3. Muhammed Ali Mazidi, Janice Gillespie Mazidi, The 8051 Microcontroller and Embedded Systems, Fourth Indian Reprint, Pearson Education , 2004.
4. Raj Kamal, Introduction to Embedded Systems, TMS, 2002.

ELECTIVE

PAPER-3

(to choose 1 out of 3)

A. CRYSTAL GROWTH AND THIN FILMS

UNIT I: Nucleation and Growth

Nucleation – Different kinds of nucleation - Concept of formation of critical nucleus – Classical theory of nucleation - Spherical and cylindrical nucleus - Growth Kinetics of Thin Films – Thin Film Structure.

UNIT II: Growth Techniques

Solution Growth Technique: Low temperature solution growth: Solution - Solubility and super solubility – Expression of super saturation – Miers T-C diagram - Slow cooling and solvent evaporation methods - Constant temperature bath and crystallizer – Seed preparation and mounting.
Gel Growth Technique: Principle – Various types – Structure of gel – Liesegang rings - Importance of gel – Experimental procedure –Chemical reaction method – Single and double diffusion method — Advantages and disadvantages of gel method.

UNIT III: Melt Growth Techniques

Melt technique: Bridgman technique - Basic process – Various crucibles design - Thermal consideration –Vertical Bridgman technique –Crystal Pulling technique - Czochralski technique – Experimental arrangement – Growth process –Zone melting technique –Skull melting process –Verneuil Process.

UNIT IV: Thin Film Deposition Techniques

Thin Films – Introduction to Vacuum Technology - Deposition Techniques - Physical Vapour Deposition: Resistive Heating, Electron gun, Laser gun Evaporation and Flash Evaporations, Sputtering – D.C. Reactive Sputtering, RF Sputtering - Chemical vapour deposition (CVD): Spray Pyrolysis -– Preparation of Transparent Conducting Oxides.

UNIT V: Characterization Technique

X – Ray Diffraction (XRD) – Powder and single crystal - Fourier transform Infrared analysis (FT-IR) – Elemental analysis:Energy dispersive X-ray analysis (EDAX) – Scanning Electron Microscopy (SEM) – UV-Vis-NIR Spectroscopy – Etching (Chemical) – Vicker's Micro hardness –Dielectric studies – Second harmonic generation test.

Books for Study and Reference:

1. J.C. Brice, Crystal Growth Processes, John Wiley and Sons, New York, 1986.
2. P. SanthanaRagavan and P. Ramasamy, Crystal Growth Processes and Methods, KRU Publications, Kumbakonam, 2001.
3. A. Goswami, Thin Film Fundamentals, New Age International (P) Limited, New Delhi, 1996.

7. Heniz K.Henisch, Crysals in Gels and Liesegang Rings, Cambridge University Press, Cambridge, 1988.
8. Anthony R.West, Solid State Chemistry and its Applications, John Wiley & Sons, NewYork, 2003.

PAPER 3

B. ADVANCED SPECTROSCOPY

UNIT I: UV Spectroscopy

Energy levels, Molecular orbitals – Theory of UV spectra – Franck Condon Principle – transition Probability, measurement of spectrum – Types of transition in Organic molecules – Types of absorption bands – transition in metal complexes – Selection rules – Electronic spectra in poly atomic molecules – Chromophore concept – Application of UV Spectroscopy.

UNIT II: Atomic absorption and Emission Spectroscopy

Atomic Absorption Spectroscopy (AAS): Principle of AAS– single beam Spectrophotometer –Applications of AAS - Atomic emission Spectroscopy – Principle of AES, Advantages - Instrumentation– Applications of AES –Difference between AAS and AES.

UNIT III: Surface Enhanced Raman Scattering (SERS) and FT Raman Spectroscopy

Surfaces for SERS study – Enhancement mechanism – Instrumentation and sampling techniques - Surface selection rules – SERS microprobe – SERS study of bio molecules – SERS in medicine –Use of Laser FT Raman Spectroscopy: Principle, Instrument, sample handling methods and applications.

UNIT IV: Surface Spectroscopy

Electron energy loss spectroscopy (EELS) – Reflectance Absorbance – IR spectroscopy (RAIRS) – Inelastic helium scattering – Photo electron spectroscopy (PES) – X ray photo electron spectroscopy (XPES).

UNIT V: Nonlinear Spectroscopic Phenomena

Nonlinear Raman phenomena – Hyper Raman effect – Experimental Technique – Stimulated Raman scattering – Inverse Raman effect – Photo acoustic Raman scattering – Multiphoton spectroscopy.

Books for study

PAPER-3

B. ADVANCED NUCLEAR PHYSICS

UNIT-I: Methods of investigating nuclear size

Classification of nuclei, nuclear size - methods to investigate nuclear size - Mesonic X-rays, Electron scattering, Coulomb energies of mirror nuclei, neutron scattering methods

UNIT-II: Discovery and Properties of neutron

Discovery of neutron, fundamental properties of neutron, neutron sources, - radioactive sources, Photo-neutron sources, accelerated particle sources – Detection of neutrons – General principles, slow neutron detectors by foil activation method, detection of fast neutrons by scintillation counter.

UNIT-III: Classification and interaction of neutron

Classification of neutrons according to energy, Neutron –electron interactions, slowing down of fast neutrons, slowing down time, slowing down density, resonance escape probability, neutron diffusion-solution to diffusion equation, diffusion of fast neutrons-Fermi-age equation

UNIT-IV: Reactor Physics

Condition of criticality of nuclear reactor, the critical equation and buckling, critical reactor dimensions, criticality of large thermal reactors- migration length, the reflector reactor, continuum theory of nuclear reactions, optical model theory of nuclear reactions, photo-nuclear reactions.

UNIT-V: Nuclear fusion: Thermonuclear energy

Nuclear fusion, the fusion reaction, thermonuclear reactions, sources of stellar energy, controlled thermonuclear reactions, the possibility of fusion reactor, cold fusion and transuranic elements.

Books for Study and Reference:

1. Robley D. Evans, The atomic nucleus, TMH, New Delhi, 1982.
2. M.L.Pandya, R.P.S Yadhav, Kedharnath, Ramnath, Elements of nuclear Physics, Meerut, 1995.
3. Irving Kaplan, Nuclear Physics, Narosha Publshers,New Delhi, 1989.
4. V. Devanathan, Nuclear Physics, Narosa Publishing House , New Delhi.
5. A.B Gupta, Modern Atomic and Nuclear Physics, Books and Allied Limited, Kolkata.

SEMESTER IV

PAPER-10

MATERIALS SCIENCE AND LASER PHYSICS

UNIT-I: Defects and dislocations

Point defects - Schottky and Frenkel defects - number of defects as a function of temperature - Diffusion in metals - Diffusion and ionic conductivity in ionic crystals - Dislocations - Edge and screw dislocations - Burgers vector - Plastic deformation - Slip - Motion of dislocations under uniform shear stress - Stress fields around dislocations - Density - Work hardening function- Effect of grain size on dislocation motion - Effect of solute atoms on dislocation motion.

UNIT-II: Optical Properties, Dielectric Properties and Ferro Electrics

Color centers - Photo conductivity - electronic transitions in photo conductors - Trap, Capture, recombination centers - General mechanism - Luminescence - Excitation and emission - Internal electric field in a dielectric - Clausius-Mossotti and Lorentz - Lorenz equations - Dielectric dispersion and loss - Ferroelectrics - Ferro electricity - General properties - Dipole theory - Ionic displacements and the behaviors of $BaTiO_3$.

UNIT-III: Elastic Behaviour, Polymer and Ceramics

Anelastic and visco elastic behaviour - Atomic model of elastic behaviour - rubber like elasticity - Anelastic deformation - Relaxation process - Model for visco elastic behaviour - Polymers - Polymerization mechanism - Polymer structures - Deformation of polymers - Behaviour of polymers. Ceramics:Ceramic phases - Structure - classes - Effect of structure on the behaviour of ceramic phases - composites.

UNIT-IV: Nano Material and Its Applications

Classification of Nanomaterials – Synthesis – Ball milling, Solgel and CVD methods – metal and semiconductor nanoparticles by colloidal route – microorganism method – Analytical methods: STM- TEM – Electrical, Magnetic and optical properties of nanoparticles – Applications Optoelectronic device– LED – Colourants and pigments – Nano biotechnology – DNA chips – DNA array devices – Drug delivery systems.

UNIT-V: Laser Physics

Introduction - Interaction of radiation - with matter - Spontaneous and stimulated emission - Conditions for oscillation - Frequency of oscillation of the system - Einstein co-efficient - Possibility of amplification - Population inversion - Laser pumping Rate equations - Three level and four level system - Optical resonator - Types and modes of resonator - Oscillation - Threshold condition. The confocal resonant cavity - theory - Spot size and beam divergence - quality factor (Q) of an optical cavity.

Books for Study:

1. G.K. Narula, K.S. Narula, and V.K. Gupta, Material Science, TMH, New Delhi, 1995.
2. A.J. Dekker, Solid State Physics, McMillan Co., 1981.
3. V.Ragavan, Material Science and Engineering, 4th Edition, Prentice Hall of India,New Delhi, 2003.
4. M. Arumugam, Materials Science, 3rd Edition, Anuradha Agencies, 2002.
5. Allen, Jones, Principles of Gas lasers, Butterworths, London, 1967.
6. K.R. Nambiar, Laser Principles, types and Application, New Age International, 2004.
7. K. Thyagarajan, A.K. Ghatak, Laser Theory and Applications, Macmillan India Ltd., 1997.

Books for Reference:

1. Lawrence H. Vlack, Elements of Materials Science and Engineering, 6th Edition, Second ISE reprint, Addison-Wesley, 1998.
2. H. Iabch, H. Luth, Solid State Physics, An introduction to principles of Material Science, 2nd Edition, Springer, 2001.
3. B.B. Laud, Lasers and Non linear optics, Wiley Eastern Ltd., 1991.
4. J.J. Verdayan, Laser Electronics, Prentice-Hall India, New Delhi, 1993.

PAPER-11

CONDENSED MATTER PHYSICS

UNIT-1 Crystal Physics

Types of lattices - Miller indices – symmetry elements and allowed rotations - simple crystal structures – Atomic packing factor - Crystal diffraction - Bragg's law –Scattered wave amplitude - Reciprocal lattice (sc, bcc, fcc) – Diffraction conditions - Laue equations – Brillouin Zone - Structure factor - Atomic form factor - Inert gas crystals - Cohesive energy of ionic crystals - Madelung constant - Types of crystal binding(general ideas).

UNIT-II: Lattice dynamics

Monoatomic lattices - Lattice with two atoms per primitive cell - First Brillouin zone - Group and phase velocities - Quantization of lattice vibrations - Phonon momentum - Inelastic scattering by phonons - Einstein's model and Debye's model of specific heat - thermal expansion - Thermal conductivity - Umklapp processes.

UNIT-III: Theory of metals and semiconductors

Free electron gas in three dimensions - Electronic heat capacity - Wiedmann-Franz law - Band theory of metals and semiconductors - Bloch theorem - Kronig-Penny model - Semiconductors - Intrinsic carrier concentration – Temperature dependence - Mobility - Impurity conductivity – Impurity states - Hall effect -Fermi surfaces and construction - Experimental methods in Fermi surface studies - de Haas Van Alphen effect.

UNIT-IV: Magnetism

Diamagnetism - quantum theory of Paramagnetism - Rare earth ion - Hund's rule - Quenching of orbital angular momentum - Adiabatic demagnetization - Quantum theory of ferromagnetism - Curie point - Exchange integral - Heisenberg's interpretation of Weiss field - ferromagnetic domains - Bloch Wall - Spin waves - Quantization - Magnons - thermal excitation of magnons - Curie temperature and susceptibility of ferrimagnets - Theory of anti ferromagnetism - Neel temperature.

UNIT-V: Super conductivity

Experimental facts: Occurrence - Effect of magnetic fields - Meissner effect – Critical field – Critical current - Entropy and heat capacity - Isotope effect - Energy gap - Type I and Type II superconductors. Theoretical explanation: Thermodynamics of super conducting transition - London equation - BCS Theory - Coherence length –- Cooper pairs - Single particle Tunneling - Josephson tunneling - DC and AC Josephson effects - High temperature super conductors - SQUIDS.

Books for Study:

1. C. Kittel, Introduction to Solid State Physics, 7th Edition, Wiley, New York, 1996.
2. M. Ali Omar, Elementary Solid State Physics-Principles and Applications, Addison-Wesley, London, 1974.
3. H.P. Myers, Introductory Solid State Physics, 2nd Edition, Viva Book, New Delhi, 1998.
4. S.O. Pillai, Solid State Physics, New Age International, New Delhi, 1997.

Books for Reference:

1. N.W. Aschroft, N.D. Mermin, Solid State Physics, Rhinehart and Winton, New York.
2. J.S. Blakemore, Solid State Physics, 2nd Edition, W.B. Saunder, Philadelphia, 1974.
3. A.J. Dekker, Solid State Physics, Macmillan India, New Delhi.
4. H.M. Rosenburg, The Solid State, 3rd Edition, Oxford University Press, Oxford, 1993.
5. S.O. Pillai, Problems and Solutions in Solid State Physics, New Age International, New Delhi, 1994.
6. S.L. Altmann, Band Theory of Metals, Pergamon, Oxford.
7. M.A. Wahab, Solid State Physics, Structure and Properties of Materials, Narosa, New Delhi, 1999.
8. J.M. Ziman, Principles of the Theory of Solids, Cambridge University Press, London, 1971.

PAPER-12

PROJECT WITH VIVA VOCE

Preamble

The concept of introducing the project will help the student community to learn and apply the principles of Physics and explore the new research avenues.

In the course of the project the student will refer books, Journals or collect literature / data by the way of visiting research institutes/ industries. He/she may even do experimental /theoretical work in his/her college and submit a dissertation report with a minimum of 40 pages not exceeding 50 pages.

Format for Preparation of Dissertation

The sequence in which the dissertation should be arranged and bound should be as follows

1. Cover Page and title Page
2. Declaration
3. Certificate
4. Abstract (not exceeding one page)
5. Acknowledgement (not exceeding one page)
6. Contents (12 Font size, Times new Roman with double line spacing)
7. List of Figures/ Exhibits/Charts
8. List of tables
9. Symbols and notations
10. Chapters
11. References

Distribution of marks for Dissertation (100 Marks)

(a) For Organization and presentation of Thesis - 60 marks
(b) For the novelty /Social relevance -10 marks
(c) Presentation of work /Participation in state/
(d) national level Seminar/publication - 5 marks
(e) Viva voce (Preparation, Presentation of work and Response to questions) - 25 marks

MAIN PRACTICAL

PAPER-3

ADVANCED GENERAL EXPERIMENTS

(Any 15 out of the given 20)

1. G.M. Counter - characteristics, Inverse square law.
2. G.M. Counter - Absorption co-efficient.
3. Michelson Interferometer -Wavelength and separation of wavelengths.
4. Michelson Interferometer - Thickness of mica sheet.
5. F.P. Etalon - using Michelson set up.
6. Hall Effect.
7. Molecular Spectra - AlO Band.
8. Molecular Spectra - CN Band.
9. Susceptibility of a liquid by Quincke's method.
10. Susceptibility of a liquid by Guoy's method.
11. Ultrasonic Diffraction - Velocity and Compressibility of a liquid.
12. Ultrasonic Interferometer - Velocity and Compressibility of a liquid.
13. B-H curve using CRO.
14. Spectral analysis of a salt.
15. Absorption Spectra.
16. Laser beam - Interference Experiments
    (a) Using an optically plane glass plate.
    (b) Using Lloyd's single mirror method.
17. Laser beam – Diffraction Experiments.
    (a) Diffraction at straight edge.
    (b) Diffraction at a straight wire.
    (c) Diffraction at a circular aperture.
18. Microwave experiment.
19. Determination of Planck's constant.
20. Spectrophotometer - Beer's law verification and absorption co-efficient.

MAIN PRACTICAL

PAPER-4

Microprocessor, Microcontroller and C Programming

(Any 20 out of the given 30)

Microprocessor 8085 programs

1. Number conversion - 8 bit and 16 bit: BCD to Binary, Binary to BCD, Hex to ASCII.
2. Square and square root of BCD and HEX numbers (both 8 and 16 bit).
3. Time delay subroutine and a clock programme.
4. Sum of simple series and arithmetic progression.
5. Interfacing (i) Op-amp 8 bit DAC R-2R network (ii) Switching an array of LEDs.
6. ADC and interfacing IC 0809 with MPU
7. Interfacing and programming IC 0800 with MPU – Unipolar and Bipolar.
8. Wave form generation – sine wave, square wave, triangular and ramp wave.
9. Analog to digital conversion using a DAC Comparator and MPU system.
10. Interfacing a DC stepper motor to the MPU system - clockwise and anticlockwise – full Stepping and half stepping
11. Parallel and Serial communication between two microprocessor systems.
12. Interfacing a HEX keyboard to the MPU system through I/O ports.

Microprocessor 8086 programs using MASM

13. Addition, subtraction
14. Multiplication and division.
15. Multibyte addition/ Subtraction
16. Computation of LCM
17. Sorting in ascending/ descending order.
18. Factorial of a number

Microcontroller 8051 experiments

19. Addition, Subtraction
20. Multiplication and Division.
21. Block transfer
22. BCD to Binary conversion and binary to BCD
23. Sorting in ascending and descending order.
24. LED interface and Stepper motor interface.

Computation methods – C programming

25. Lagrange interpolation with algorithm, flow chart, program and its output
26. Numerical integration by Simpson's rule with algorithm and flowchart, program and its output.
27. Numerical solution of ordinary first order differential equation -Euler's method with algorithm, flowchart, program and its output.
28. Numerical solution of ordinary first order differential equations by the Runge-Kutta IV method, with algorithm, flow chart, program and its output.
29. Curve fitting - Least square fitting with algorithm, flowchart, program and its output.
30. Matrix manipulation - Multiplication Transpose and Inverse with algorithm, Flow chart, program and its output.

ELECTIVE

PAPER-4

A. ADVANCED MICROPROCESSOR

UNIT-I 8086 Architecture and programming

Internal architecture of 8086 - Software model - Internal registers - Minimum mode and Maximum mode system - Instruction set - Addressing modes – Data transfer, Arithmetic, Logical, Shift and rotate instruction – Compare, Jump, Loop, String, Processor control, CALL - RET and stack instructions - Procedures - Assembler Macros - Assembler directives.

UNIT-II Software Programs of 8086

Assembly language Programming – Addition, subtraction and multiplication and division of two 16 bit numbers - Multibyte addition/subtraction – Ascending order – Sum of a series - Computation of LCM - Block transfer – Factorial of a number.

UNIT-III: Memory and Interrupt interface of 8086 Microprocessor

Memory interface - block diagram - Hardware organization of the memory address space - Memory control signals - The stack - Stack segment register and stack pointer - RAM interface - Dynamic RAM interfacing and refreshing - Types of interrupts - Interrupt and address pointer table - Interrupt instructions - Masking of interrupts - External hardware interrupt interface - Interrupt sequence - 8259 Programmable interrupt controller (PIC).

UNIT-IV: 80286, 386 and 486 Microprocessor

Introduction to Intel Processor and its architecture 80286/ 80386 and 80486 microprocessors – block diagram of 386 and 486 - comparison - Pentium Processor –block diagram (Pentium II, III and IV) and its salient features – Multitasking concepts - Operating system concepts and terms - DISK operating system (DOS) - Multitasking and multiprogramming operating system (UNIX).

UNIT-V: Data communication and applications

Centronix parallel interface of printers - Printer concepts - Interfacing ASCII keyboard - Concepts of secondary storage device like floppy disk and Hard disk – PCI bus architecture – AGP - USB - Data Communication methods and standard GPIB – IEEE-488, RS-232C, RS-422 and RS-423A - Temperature controller.

Books for Study:

1. Douglas V. Hall : - Microprocessors and Interfacing programming and Hardware (Tata Mc Graw Hill)
2. W.A. Triebel and Avatar Singh, The 8086 /8088 Microprocessors- Programming, Software, Hardware and application, Prentice Hall of India, New Delhi.
3. Badri Ram, Advanced Microprocessors and interfacing, Tata McGraw Hill, 2006.

Books for Reference:

1. B. Brey, Intel Microprocessors 8086/8088, 80186,80286,80486,80486, Architecture, Programming and Interfacing, 1995.
2. V. Vijayendran, Fundamentals of Microprocessor –8086- Architecture, Programming (MASM) and interfacing, Viswanathan, Chennai, 2002.
3. Yu – Cheng and Glenn A. Gibson, The 8086 / 8088 family Architecture, Programming and Design, Prentice-Hall of India.

PAPER-4

B. PROGRAMMING IN C AND MATLAB

UNIT-I: Data types, managing input and output operations

Basic structure of C programs – Character set – C tokens- Constants– keywords and identifiers – variables – data types - declaration of variables – Assigning values to variables – defining symbolic constants – Reading and writing a character – formatted inputs and outputs.

UNIT-II: Operators, Expressions and Arrays

Arithmetic, relational, logical, assignment, increment, decrement, conditional, bitwise special operators –Arithmetic expressions- evaluation of expressions, precedence of arithmetic operators-one dimensional arrays, two dimensional arrays, multi dimensional arrays- declaration and initialization of arrays.

UNIT-III Decision making, Branching and Looping

Simple if, If-else, If-else ladder, switch, go-to statements, While, DO, FOR statements, simple programs using these statements.

UNIT-IV: Functions and Application programs

Programs for finding square root of second degree algebraic equations-matrix addition, multiplication, diagonalisation and inversion-Solution of simultaneous equations- Gauss elimination method, Solution of first order differential equations- Euler's method, runge Kutta IV order method, numerical integration-Simpson's 1/3 rule.

UNIT-V: MATLAB

Basic Computations, Array operations, Solving Algebraic equations in MATLAB-Differentiation, Integration, Limits, sums and products, Taylor's series – Simple x-y plots – Matrices – Determinant, multiplication, transpose – Loops – Branching – Script M-file – Function M-files.

Books for study:

1. E. Balagurusamy, Programming in ANSI C, 4th Edition TMH, New Delhi, 2009.
2. S.S. Sastry, Introductory methods of Numerical analysis, 3rd Edition Prentice, Hall of India, New Delhi, 2003.
3. E. Balagurusamy, Numerical methods, Tata Mc-Graw Hill, New Delhi.
4. Gilat, MATLAB: An introduction with Applications, John Wiley & Sons, Inc 2004.

Books for Reference:

1. MATLAB 7.0 Basics, P. Howard, spring, 2005.
2. http://www.maths.tamu.edu/~phoward/308/matbasics.pdf
3. S.S. Kuo, Numerical Methods, and Computer, Addison-Wesley, 1996.
4. W.H. Press, Numerical Recipes in C, 2nd Edition, Cambridge University Press, 1992.

PAPER-4

C. NUMERICAL METHODS AND PROGRAMMING in C

UNIT-I: Errors and the measurements

General formula for errors – Errors of observation and measurement – Empirical formula –Graphical method – Method of averages – Least square fitting – curve fitting –parabola, exponential.

UNIT-II: Numerical solution of algebraic and transcendental equations

The iteration method – The method of false position – Newton-Raphson method – Convergence and rate of convergence – C program for finding roots using Newton – Raphson method - Simultaneous linear algebraic equations - Gauss elimination method – Jordon's modification – Gauss–Seidel method of iteration – C program for solution of linear equations.

UNIT-III: Interpolation

Linear interpolation – Lagrange interpolation Gregory – Newton forward and backward Interpolation formula – Central difference interpolation formula – Gauss forward and backward interpolation formula – Divided differences – Properties – Newton's interpolation formula for unequal intervals – C programming for Lagrange's interpolation.

UNIT-IV: Numerical differentiation and integration

Newton's forward and backward difference formula to compute derivatives – Numerical Integration: the trapezoidal rule, Simpson's rule – Extended Simpson's rule – C program to evaluate integrals using Simpson's and trapezoidal rules.

UNIT-V: Numerical Solutions of ordinary differential equations

Nth order ordinary differential equations – Power series approximation – Pointwise method – Solutions of Taylor series – Euler's method – Improved Euler's method – Runge-Kutta method – second and fourth order – Runge-Kutta IV method for solving first order differential equations – C program for solving ordinary differential equations using Runge-Kutta IV method.

Books for study and Reference:

1. S.S. Sastry, Introductory Methods of Numerical analysis, Prentice, 3rd Edition, Hall of India, New Delhi, 2003.
2. M.K. Venkataraman, Numerical Methods in Science and Engineering, The National Publishing Co. Madras, 2001.
3. E. Balagurusamy, Numerical methods ,Tata Mc Graw Hill, New Delhi, 2008.
4. A. Singaravelu, Numerical Methods, Meenakshi Agency, Chennai.
5. B.P.Flannery, S.A.Teukolsky, W.T. Vetterling, Numerical Recipes in C, W.H. Press, Cambridge University, 1996.
6. K.P.N. Murthy, Monte Carlo : Basics, ISRP, Kalpakkam, 2000.
7. Veerarajan,Numerical Methods in C and C++, S.Chand, New Delhi, 2006.

THIRUVALLUVAR UNIVERSITY

PART-IV

SOFT SKILL

SYLLABUS
(For all UG Degree Courses)

(with effect from 2017-2018)

UNIT I

1.1. Skills in Listening and Writing

1.2. Skills in Reading and Understanding

UNIT II

2.1. Skills to Read and Respond to Instructions

2.2. Skills of Interpretation and Transcoding Information

UNIT III

3.1. Skills in Seeking and Responding to Information

3.2. Skills of Day-to-Day communication

UNIT IV

4.1. Grammatical skills and Spelling rules

4.2. Career skills

UNIT V

5.1. Skills of formal and in-formal expressions

5.2. Skills of non-verbal communication

Note: The contents of the previous book for 'Soft Skills' by Trinity Publication for I year UG students have not been changed. However, the titles of the contents have been modified.

THIRUVALLUVAR UNIVERSITY

PART-IV

VALUE EDUCATION

SYLLABUS
(For all UG Degree Courses)

(with effect from 2017-2018)

SEMESTER II

UNIT-I

Value Education - Definition - relevance to present day - Concept of Human Values - self introspection - Self esteem.

UNIT-II

Family values - Components, structure and responsibilities of family - Neutralization of anger - Adjustability - Threats of family life - Status of women in family and society - Caring for needy and elderly - Time allotment for sharing ideas and concerns.

UNIT-III

Ethical values - Professional ethics - Mass media ethics - Advertising ethics - Influence of ethics on family life - psychology of children and youth - Leadership qualities - Personality development.

UNIT-IV

Social values - Faith, service and secularism - Social sense and commitment - Students and Politics - Social awareness, Consumer awareness, Consumer rights and responsibilities - Redressal mechanisms.

UNIT-V

Effect of international affairs on values of life/ Issue of Globalization - Modern warfare - Terrorism. Environmental issues - mutual respect of different cultures, religions and their beliefs.

Chinua Achebe	: Things Fall Apart

Books for Study and Reference

Texts and their worlds II.ed., K Naryan chandran. Foundation Books.,Chennai,2005

Ed. Nasta, Susheila. *Writing Across Worlds*. London: Routledge.2004

Punter, David. *Postcolonial Imaginings*: *Fictions of a New World Order*. Atlantic: New Delhi. 2005.

SEMESTER VI

ELECTIVE PAPER 2 -

TECHNOLOGY MEDIATED ENGLISH

Unit 1:

1. World Wide Web & Email: WWW FAQ'S : Email, Internet
2. Searching the Internet & Search FAQ's
3. The Internet as Resource Bank and classroom tool
4. E.Mail Projects and Discussion Lists

Unit 2:

1. Introduction to NET (I)
2. Introduction to NET (II)

Unit 3:

1. Strange news
2. Making news
3. Eco-tourism

Unit 4:

1. Writing Projects
2. Online groups
3. Blogs and Wikis
4. Email projects and discussion lists

Unit 5:

1. A good book
2. Puzzle maker
3. web quest
4. Professional development online

Prescribed Text

The Internet and the Language Classroom – A Practical Guide for Teachers – II Edition – Gavin Dudency , Cambridge University Press, 2007.

SEMESTER VI

ELECTIVE - PAPER 2

BUSINESS ENGLISH

UNIT I

1. Introduction to Business Communication
2. Communication in Organizations

UNIT II

1. Non- Verbal Communication
2. Effective Listening

UNIT III

1. Making presentations
2. Audio - Visual Aids
3. E-Mail Communication

UNIT IV

1. Resumes and cover letters
2. Preparing an Effective cv
3. Group Discussions
4. Interview Techniques

UNIT V

1. Memos, Reports, Proposals
2. Note taking, Note making
3. Inter cultural communication

Books for Study and Reference

N. Krishnaswamy, Manju Dariwal, Lalitha Krishnaswamy.

Mastering communication and soft skills: A Learner's Guide to Life Skills. Bloomsbury. 2015

Om P. Juneja and Aarti Mujumdar Business Communication: Techniques and Methods (Hyderabad: Orient Blackswan Private Limited, 2010.

Sanghita Sen , Alankrita Mahendra , Priyadarshi Patnaik.
Communication & language skills. Cambridge University Press India.2015

SEMESTER VI

ELECTIVE PAPER - 3 COPY EDITING AND PROOF READING

UNIT I: INTRODUCTION TO COPY EDITING

1. What is copy editing?
2. Type Scripts: Hard copy, Electronic and Camera ready
3. Type Scripts corrected by the author
4. Copy editing on Screen

UNIT II: PREPARING THE TEXT FOR THE TYPE SETTER

1. Various legal aspects
2. A well organized and consistent book
3. Copy right permissions and acknowledgements

UNIT III: ILLUSTRATIONS AND PROOFS

1. How to read proofs
2. How to make corrections
3. Colour coding corrections
4. The author's corrected proof
5. After passing proofs for Press

UNIT IV: HOUSE STYLE

1. House Style and Preliminary Pages
2. Cross – references
2. Date and Time
3. Spelling and Punctuation
4. Title page
5. Contents List
6. List of Illustrations

UNIT V: OTHER PARTS OF A BOOK AND LITERARY MATERIAL

1. Running Heads
2. Page numbers
3. Headings
4. Footnotes and Endnotes
5. Tables
6. Appendixes
7. Glossaries

Prescribed Text:

"Butcher's copy Editing" – Fourth Edition – Judith Butcher, Caroline Drake and Marseen Leach – CUP.

SEMESTER VI

ELECTIVE PAPER -3

EFFECTIVE COMMUNICATION

UNIT I- JUST A MINUTE

Planning a speech- Beginning a speech-Transitions-Closing statements- Body language- Voice modulation- Practising a speech- Effective Communication

UNIT II- WRITING SKILLS

Features of good writing – Gathering ideas – Purposes of writing – Writing for a specific audience – Organising ideas – Writing an introduction

UNIT III- CRITICAL THINKING SKILLS

Developing support ideas- Writing a conclusion – Using linkers – Choosing the right words – Common errors in writing – Editing and proofreading

UNIT IV- GROUP DISCUSSION

Group discussion as a tool for selection- Skills for group discussion- Leadership and problem solving skills- Types of group discussions- Group dynamics- Roles and functions: beginning, presenting, elaborating- Roles and functions: agreeing/disagreeing and summarising- Etiquette, body language and time management- group discussion activities

UNIT V- CRITICAL THINKING SKILLS

Reasoning- Analysis- Making an argument- Evaluating an argument- Evaluating alternative points of view- Synthesising and making connection- Interpreting information- Thinking about experiences- Problem solving- Thinking out of the box.

Prescribed Book

Mukhopadhyay, Lina *et* al. Polyskills*: A course in communication skills and life skills.* New Delhi: Cambridge University Press India Pvt. Ltd., 2012.

SEMESTER VI

SKILL BASED SUBJECT - PAPER 4
ENGLISH LANGUAGE TEACHING

UNIT I

Problems & prospects for the teacher of English.

What is involved in teaching English?

UNIT II

The content of the teaching of English

Strategies of techniques for the teacher

Planning the lesson

Methods & Techniques for Teaching

English in large classes- prose

UNIT III

Teaching reading skills: poetry

UNIT IV

Teaching of grammar & Composition

Examinations in English

4. Murugadoss, Jaya, Charulatha and Baskar, Financial Accounting, Vijay Nicholes Imprint Pvt. Ltd., Chennai.

CORE PAPER- 4

ELEMENTS OF INSURANCE

Objective:

To gain a knowledge of insurance and its importance.

UNIT-I

Definition of insurance - classification of Contracts of insurance - marine and non-marine - general principles of law as applied to non-marine insurance.

UNIT-II

Life Assurance - objects of life Assurance - principles of life Assurance - different plans of life Assurance and annuities - policy condition and privilege - assignment and nomination - lapses and revivals - surrender values and loans - claims - double insurance.

UNIT-III

Marine insurance - principles of marine insurance - functions of marine insurance - proximate clause - subrogation and contribution

UNIT-IV

Types of marine policy - clauses in general use - warranties - kinds of marine losses - reinsurance and double insurance.

UNIT-V

Fire insurance - principles of law as applied to fire insurance - the subject matter of fire insurance - fire waste - hazard types of fire policy - cover notes - surveys and inspection average - re-insurance - renewals.

Text and Reference Books:

1. Dr. B. Vardharajan - Insurance Vol 1 and 2. - Tamil Text Book.
2. R.S. Sharma - Insurance Principle & Practice - Vara Bombay, 2006.
3. A. Murthy - Elements of Insurance Risk management & Insurance - Harrington, 2006 - Tata McGraw Hill pub.

ALLIED - 1

(To choose any 1 out of 3)

PAPER – 2

A. INDIAN ECONOMY - II

UNIT-I

Role of Technology - Information Technology BPO in India - their impact on Economic Development – Cyber Crime.

UNIT-II

Role of industries - Cottage & Small Scale industries - Some Large Scale industries (Cotton, Sugar, Iron & Steel, Tea & Petro Chemical) Industrial Policy - 1991 and after - Public sector Enterprises - Dis-investment and Privatisation.

UNIT-III

Transport - Importance of Transport (Roadways, Railways, Shipping and Civil Aviations) to Economic growth - Evaluation of Government in Policy in relation to privatisation policy - Transport Coordination.

UNIT-IV

Planning in India - Strategy of Indian Planning - Resources for Financing Plan - Agriculture and Industrial Development - Planning techniques - Investment Priorities – General Objectives – Targets, Achievements and Failures – 11^{th} and 12^{th} five year plans- NITIAYOG

UNIT-V

Poverty in India - Poverty Eradication Programmes - Recent Employment scheme-Swaraj Bharat Mission - Role of Micro finance - (SHG, Cottage and Household Sector etc.,) - Regional Development Disparities -India's Foreign Trade and Balance of Payments.

ALLIED - 1

PAPER - 2

B. LOGISTIC MANAGEMENT

Objective:

To understand the comprehensive nature of Logistics Management.

UNIT-I

Logistics - definition - scope - functions - objectives of Logistics Management - customer service and logistics.

UNIT-II

Supply Chain - components - role of logistics in supply chain - Warehousing - functions - types - warehouse layout - material handling and logistics - Inventory Management.

UNIT-III

Transportation - infrastructure - freight management - transportation network - route planning - containerization.

UNIT-IV

Logistical packaging - logistics information needs - logistics design for distribution channels - logistics outsourcing.

UNIT-V

Government policies and regulations - Motor Vehicles Act, carriage by air, sea, multi-modal transportation etc., Documentation - Airway Bill, Railway Receipt, Lorry Receipt, Bill of Lading etc.

SKILL BASED SUBJECT

PAPER - 3

PRINCIPLES OF MARKETING

Objective:

To enable the students to understand the concept and importance of marketing and the developments that have taken place in the field of marketing in the global scenario.

Unit - I Introduction

Meaning of market – classification of markets- meaning and definition of marketing- features of marketing – importance of marketing – difference between marketing and selling – Evolution of marketing concepts - functions of marketing.

Unit - II Market Segmentation and Consumer Behaviour

Meaning and definition of market segmentation – different patterns of market segmentation – Bases for segmenting consumer markets – benefits and limitations of market segmentation

Definition of consumer behaviour - consumer behaviour theories - factors determining consumer behaviour.

Unit - III Marketing Mix and Product policy

Definition and components of marketing mix - four P's of marketing mix - definition of product - features of a product - classification of products - stages in new product development - product life cycle – Branding – advantages of branding a product - packaging – functions of package – labelling – functions of labelling – kinds of labels.

Unit - IV Pricing policy, Channel of distribution and Promotion Mix

Meaning of price – factors affecting price decision – Types of pricing strategies - definition of channel of distribution – features of marketing channels – types of Channel of distribution - factors determining Channel of distribution - functions of wholesalers – types of retailers – promotion mix – Advertising – types of advertising – personal selling – qualities of a good salesman – sales promotion – kinds of sales promotion.

Unit - V Recent trends in Marketing

Social marketing – De-marketing – Re – marketing – Over marketing – Meta marketing – E- Marketing – online retailing – shopping malls.

Text Books:

1. Rajan Nair, Marketing, Sultan Chand & Sons , New Delhi
2. Varshney, Marketing Management, Sultan Chand & Sons , New Delhi.

Reference Books:

1. Jaisankar, Marketing, Margham Publications, Chennai
2. L. Natarajan, Marketing, Margham Publications, Chennai
3. Dr. K. Sundar, Essentials of Marketing, Vijay Nicole Imprints Private Ltd., Chennai.

SEMESTER – VI

CORE PAPER - 17

COST ACCOUNTING II

Objective:

To understand the basic concepts and methods of Cost Accounting.

UNIT-I

Job, Batch, Contract Costing: Job Costing – definition – Features – Procedure – WIP – Cost Accumulation, Batch Costing – EBQ, Contract Costing – Definition, Features, Work Certified and Uncertified – Incomplete Contact – Escalation Clause – Cost Plus Contract – Contract Account

UNIT-II

Process Costing : Definition – Features – Job Vs Process Costing – Process Account – Losses – By Products and Joint Products – WIP – Equivalent Units and its Calculation - Closing WIP with or without Process Loss.

UNIT-III

Operating Costing (Transport Costing): Cost Unit – Cost Classification – Operating Cost sheet.

UNIT-IV

Marginal Costing: Definition – Advantages and Limitation – Break Even Point – Margin of Safety – P/V Ratio – Key factor – Make or Buy Decision – Selection of Product Mix – Changes in Selling Price – Foreign Market Offer – Desired Level of Profit.

UNIT-V

Reconciliation of Cost and Financial Accounts.

(Weightage of Marks = Problems - 80%, Theory - 20%)

TEXT BOOKS:

1. T.S. Reddy &Hari Prasad Reddy – Cost Accounting – Margham Publications, Chennai
2. A.Murthy and S. Gurusamy, Cost Accounting 2nd Edition, Vijay Nicole Imprints Private Ltd., Chennai.
3. A.Murthyand S. Gurusamy, Cost Accounting, Tata McGraw-Hill Publishing Company Ltd. New Delhi.
4. Tulsian P.C. – Cost Accounting – Tata McGraw Hills.

REFERENCE BOOKS:

1. S.P.Jain and Narang – Cost Accounting – Kalyani Publishers, New Delhi
2. S.N.Maheswari – Principles of Cost Accounting – Sultan Chand & sons, New Delhi
3. S.P.Iyangar – Cost Accounting – Sultan Chand & Sons, New Delhi.

CORE PAPER - 18

MANAGEMENT ACCOUNTING

Objective:

To enable the students to gain knowledge in the application of accounting to Management.

UNIT-I

Management Accounting: Definition – objectives - Functions – Advantages and limitations – Financial Statement Analysis – Comparative and Common size statements – Trend Analysis.

UNIT-II

Ratio Analysis : Definition – Significance and Limitations – Classification – Liquidity, Solvency, Turnover and Profitability ratios – Computation of Ratios from Financial Statements – Preparation of Financial Statement from Ratios.

UNIT-III

Fund Flow and Cash Flow Analysis: Concept of Funds, Sources and Uses of Funds – Fund Flow Statement – Concept of Cash Flow – Cash Flow Statement as Per AS3.

UNIT-IV

Standard Costing – Variance Analysis – Material – Labour – Overheads – Fixed - Variable Sales Variance.

UNIT-V

Budget and Budgetary Control: Definition – Objectives – Essentials – Uses and Limitations – Preparation of Material Purchase, Production, Sales, Cash and Flexible Budget – Zero Base Budgeting.

(Weightage of Marks - Problems - 80%, theory - 20%)

Reference Books:

1. S.N.Maheswari, Management Accounting – Sultan Chand & Sons, New Delhi.
2. A.Murthy and S.Gurusamy, Management Accounting, Tata Mc-Graw Hill Publishing Company, New Delhi.

Reference Books:

2. S.P.Gupta, Management Accounting – Sultan Chand & Sons, New Delhi.
3. R.S.N.Pillai&Bhagavathi, Management Accounting – S.Chand& Co. Ltd., New Delhi.
4. T.S.Reddy&Hari Prasad Reddy, Management Accounting – Margham Publications, Chennai.

CORE PAPER - 19

INCOME TAX LAW AND PRACTICE – II

Objective:

To enable the students to have a knowledge of law of practice of Income tax.

Unit I: Capital gains

What are capital assets? – what are not capital assets? – kinds of capital assets – transfer u/s 2 (47) – cost of acquisition – cost of improvement – computation of short term capital gain - computation of long term capital gain – exemptions from capital gains.

Unit II: Income from other sources

Specific incomes chargeable to tax – general incomes chargeable to tax – Interest on securities – Interest exempt from tax u/s 10 (15) - deductions allowed from Income from other sources – computation of income from other sources.

Unit III: Clubbing of Incomes and Set off and carry forward of losses

Income transfer without asset transfer – cross transfer –transfer for the benefit of son's wife – capital gain on an asset gifted before marriage – gifted money used for construction of house by spouse – income including losses – clubbing of business income – clubbing of minor's income – computation of total income.

Provisions relating to set off of losses- Provisions relating to set off and carry forward of losses – unabsorbed depreciation – order of set off – computation of total income.

Unit IV: Agricultural Income and Deductions from gross total income

Meaning of agricultural income – types of agricultural income – income from growing and manufacturing rubber - income from growing and manufacturing coffee - income from growing and manufacturing tea – income of a sugar mill growing its own sugarcane – computation of tax of an assessee having agricultural income.

Permissible deductions from gross total income – section 80C, 80CCC, 80CCD, 80D, 80DD, 80DDB, 80E, 80G, 80GG, 80GGA, 80QQB, 80RRB, 80U.

Unit V: Assessment of Individuals and Assessment procedures

Sources of income of an individual – computation of total income and tax liability of an individual.

Filing of returns – permanent account number (PAN) –Usage of PAN – TDS - types of assessment – self assessment – Best judgement assessment – Income escaping assessment (reassessment) – Advance payment of tax

Note: Questions in Sec .A, B & C shall be in the proportion of 20:80 between Theory and Problems.

Text books

2. Murthy.A, Income Tax Law & Practice,Vijay Nicole Imprints Pvt. Ltd. Chennai
3. Reddy,T.S.& Hariprasad Reddy, Y, Income Tax Theory, Law & Practice, Margham Publications, Chennai.

Reference books

1. Mehrotra-Income Tax Law & Accounts, Sahithiya Bhavan Publications.
2. Vinod,K.Singhania, Students Guide to Income Tax, Taxman Publications Pvt.Ltd.

ELECTIVE

PAPER - 2

A. FINANCIAL MANAGEMENT

UNIT-I

Nature and Importance of Finance Functions – Organizing Finance Functions – Functions of Finance Manager – Objectives of Finance Function – Methods and Sources of Raising Finance – Critical Appraisal of the Various Sources of Finance.

UNIT-II

Goals of Finance Function – Financing Decisions – Financial Planning – Financial Forecasting – Capital Structure Decisions – Capitalization – Cost of Capital – Dividend Policy

UNIT-III

Investment Decisions – Estimation of Cash Flows – Evaluation of Alternative Investment Proposals like NPV, ARR, IRR Methods – Decision Making Under Risk and Uncertainty – Inflation and Investment Decisions

UNIT-IV

Working Capital – Gross and Net Working Capital – Determinants of Working Capital – Sources of WC – Credit and Collection Policies.

UNIT-V

Security Analysis and Portfolio Management - Leverages – Financial Ratio Analysis.

(Weightage of Marks = Problems - 60%, Theory - 40%)

Reference Books:

1. Dr. S.N.Maheswari, Financial Management, Sultan Chand & Sons, New Delhi.
2. Dr. A.Murthy, Financial Management, Margham Publications, Chennai.
3. Dr. J. Srinivasan, Sridhar and Ramalingam, Financial Management, Vijay Nicole Imprints Pvt .Ltd. Chennai

Reference Books:

1. I.M.Pandey, Financial Management.
2. Prasanna Chandra, Financial Management.
3. Subirkumar Banerjee, Financial Management.
4. Vyuptakesh Sharan, Fundamentals of Financial Management.
5. Dr .N. Premavathy, Financial Management, Sri Vishnu Publications, Chennai.

ELECTIVE

PAPER - 2

B. BUSINESS ENVIRONMENT

UNIT-I

The concept of Business Environment - Its nature and significance - Brief overview of political - Cultural - Legal - Economic and social environments and their impact on business and strategic decisions.

UNIT-II

Political Environment - Government and Business relationship in India - Provisions of Indian constitution pertaining to business

UNIT-III

Social Environment - Cultural heritage - Social attitudes - impact of foreign culture - castes and communities - Joint family systems - Linguistic and Religious groups - Types of Social Organization

UNIT-IV

Economic Environment - Economic Systems and their impact of Business - Macro Economic Parameters like GDP - Growth Rate - Population - Urbanization - Fiscal deficit - Plan investment - Per capita Income and their impact on business decisions

UNIT-V

Financial Environment - Financial System - Commercial banks - RBI - IDBI - Non-Banking Financial Companies NBFC's

Text Books:

1. Dr. S. Sankaran - Business Environment. Margham Publications, Chennai
2. Aswathappa - Business Environment, Himalaya Pub. House, 2009.

Reference Books:

1. Dasgupta and Sengupta - Government and Business in India.
2. Srinivasan K - Productivity and Social Environment.
3. International Business Environment - Prentice - Hall of India.
4. Dhana bakiyam & M. Kavitha, Business Environment, Vijay Nicole Imprints Pvt .Ltd. Chennai.

ELECTIVE

PAPER - 2

C. OFFICE MANAGEMENT

UNIT-I

Meaning and scope -Function and qualifications of Office Manager -Poor and good organization Departments -Flow of Work -Organization Charts and manual

UNIT-II

Administrative arrangements and physical conditions - Centralization and Decentralization of Office services - Office Accommodation and Layout -Office Furniture - Meaning of Various terms - Basic pattern of work -Sub-division - Standardization and Standards - Work Measurement and control

UNIT-III

Office equipments - Reproduction equipments - Typewriter - Duplicators - Photo Copier - Franking Machine - Communication Equipments - Dictaphone - Intercom - Telephone - Telex - Teleprinters - PABX - PBX - STD - Storage equipments - Filling Cabinets - Time Clocks - Use of Computers in Office Management

Office System - Procedure - Routine - And methods - Paper work in office Filling functions - essentials of good filling systems - Central vs. Departmental Filling classification - Methods of filling Old and Modern - Micro filing - Indexing Types.

UNIT-IV

Mail service and communication - Office Correspondence - Central vs. Departmental Correspondence - Handling Mail - Postal Services - Postbag and Post Box Numbers - Registered and Insured Posts - VPP Communications - Oral written - Internal and external communication - Records Management Types - Forms Controls - Principles - Foremost - Continuous stationery

UNIT-V

Office Supervisor - Meaning and characteristics of Supervisor - Status - Place and Role of Supervisor - Effective Supervisor - Qualification - Knowledge and skill of Supervisor.

Text Books:

1. Pillai R.S.N, Bhagwathi. V - Office Management, S.Chand, New Delhi.
2. Arora SP - Office Management, Vikas Publications Pvt. Ltd., Chennai.

Reference Books:

1. Dr.T.S. Devanarayan, N.S.Raghunathan - Office Management.
2. Balachandiran. V and Chandrasekaran, Office Management, Vijay Nicole imprints Private Limited, Chennai.

ELECTIVE

(To choose any 1 out of 3)

PAPER - 3

A. HUMAN RESOURCE MANAGEMENT

Objective:

To enable the students to recognize that the Human beings are the important assets in the organisation and to replace the term personnel by Human Resource Management.

To make the students to acquire knowledge about the development of Human Resource Managementwhich is crucial for quality productivity and growth.

UNIT-I

Nature and scope of HRM – personnel Management and HRM – Functions of HRM – Functions of HR Manager – HRM as a profession – Indian perspective

UNIT-II

Human Resource Planning – Recruitment – Selection – Methods of Selection – Use of Various tests – Interview techniques in selection – Induction - Placement

UNIT-III

Training methods – Techniques – Identification of training needs.

UNIT-IV

Job satisfaction – Motivation (Maslow's and Two Factor Theory only) – Performance Appraisal – Methods – Compensation – Incentives – Monetary and Non-Monetary

UNIT-V

Transfer – Promotion and Termination of Services – Career Development - Monitoring

TEXT BOOKS:

1. Dr.K.Sundar&Dr.J.Srinivasan, Human Resource Management, Vijay Nicole Publications, Chennai.
2. C B Gupta, Human Resource Management, S.Chnd, New Delhi.
3. Aswathappa, Human Resource and Personnel Management, Vikas Publications Pvt. Ltd., Chennai.

REFERENCE BOOKS:

1. Dr.K.Sundar & Dr.J.Srinivasan, Human Resource Development, Margham Publications, Chennai.
2. J. Jayasankar, Human Resource Management, Margham Publications, Chennai.
3. Dr. N. Premavathy, Human Resource Management & Development, Sri Vishnu Publications, Chennai.

ELECTIVE

PAPER - 3

B. FINANCIAL SERVICES

Objective:

To enable the students to gain knowledge of business financial services.

UNIT-I

Financial services – meaning – Financial services and economic environment – legal and regulatory framework – financial institutions and other participants in the financial services sector – capital and money markets – Instruments – Government – Securities market – SWAP Analysis

UNIT-II

Introduction to leasing – legal and tax aspects – lease evaluation – Merits and Demerits – Accounting and Reporting for Lease – lease funding – Types of lease – Lease agreement – Hire purchase Vs lease – Legal aspects of Hire purchase – rights and duties of hire vendor and hire purchaser.

UNIT-III

Factoring – Types and feature of factoring agreement – Factoring Vs Bills discounting – Services of factor – Consumer Finance and credit card services – forfeiting.

UNIT-IV

Venture capital – meaning and characteristics – criteria for assistance – schemes and guidelines – infrastructure financing – assessment of risk – legal aspects.

UNIT-V

Mutual funds – SEBI Guidelines – Features and types – Management structure and performance evaluation – Growth and recent trends – Investor services – Credit rating agencies – CRISIL, CARE, ICRA – Services – Criteria for rating – Symbols.

Text Books:

1. Dr.S.Gurusamy, Financial Services, Vijay Nicholes Imprint Pvt. Ltd., 2004 – Chennai

Reference Books:

1. Dr.V.Balu, Merchant Banking & Finance Services, Sri Venkateswara Publication, Chennai.
2. Dr.S.Gurusamy, Financial Services and Systems, Vijay Nicholes Imprint Pvt. Ltd., 2004 – Chennai
3. Dr.S.Gurusamy, Essentials of Financial Services, 2nd Edition, Vijay Nicholes Imprint Pvt. Ltd.,– Chennai
4. Dr. N. Premavathy, Financial Services and Stock Exchange, Sri Vishnu Publications, Chennai.

ELECTIVE

PAPER – 3

C. PORTFOLIO MANAGEMENT

UNIT-I

Portfolio Regulation and Management – Need – Traditional Approach – Efficient Market Hypothesis – Approaches to Portfolio Theory and Practices – Need for costing – Share Costing – Risk and Return.

UNIT-II

Portfolio Analysis – Theory and Practices – Risk Analysis – Types of Risks – Risk Management –Diversification of risk – Analysis of risk – Building a balanced portfolio.

UNIT-III

Characteristics of portfolio – Principles and Practices – Characteristics of Portfolio Analysis – Liquidity Vs. Safety – Income Vs. growth – Short Term and Long Term –Risk Vs. Return – Need for insuring risk to attract stable investors.

UNIT-IV

Revision of Investment Portfolio – Diversification of Investment Portfolio – International Scenario influencing portfolio – Need for reviewing portfolio constantly.

UNIT-V

Regulation of Investment Portfolio – Evaluation of investments in terms of market trends – Shape of Optimal Portfolio – Need for Investment Consultancy – Importance of Computer data Analysis for Security Analysis and Portfolio Analysis.

Text Books:

1. Dr. S. Guruswamy, Security Analysis and Portfolio Management, Vijay Nicholes Imprint Pvt. Ltd., – Chennai.
2. V. K. Bhalla, Portfolio Analysis and Management, Sultan Chand & Sons
3. PunithavathyPandian, Security Analysis and Portfolio Management, Vikas Publishing House Pvt. Ltd.

Reference Books:

1. **I. M. Pandey**, Financial Management, Vikas Publishing House Pvt. Ltd. Chennai.
2. Fischer & Jordan, Security Analysis and Portfolio Management, Prentice Hall India.
3. V. A. Avadhani, Investment and Securities Market in India, Himalaya Publishing House.

SKILL BASED SUBJECT

PAPER - 4

COMPUTER APPLICATION IN BUSINESS

Objective:

To provide basic knowledge of computer applications in business.

UNIT-I

Introduction to Computer–Characteristicsof a Computer –History of Computer– Computer generation - Hardware–Software – System Software and application software.

UNIT-II

MS - Word Processing: Starting MS word - MS word environment - working with word documents, text, tables - checking spelling and grammar - printing a documents.

UNIT-III

MS Excel - MS Excel Sheet - MS Excel environment - Working with Excel workbook - worksheet - Formulas and functions - Inserting charts - printing in Excel.

UNIT-IV

MS Power Point - Starting MSPower Point - MS power point environment - working with power point - working with different views – designing, presentation &printing in Power Point.

UNIT-V

Electronic Commerce - Types - Advantages and Disadvantages - Electronic data interchange (EDI) working of EDI - EDI benefits &Limitations - SMART card - SMART card applications.

TEXT BOOK

1. AnanthiSheshasaayee: Computer Application in Business and Management, Margam Publication.
2. Leon & Leon, Computer Applications in Business, Vijay Nicholes Imprint Pvt. Ltd.,– Chennai

REFERENCE BOOK

3. A. Zakiudeen Ahmed: Computer Application in Business, Margam Publication.

THIRUVALLUVAR UNIVERSITY

B.Sc. MATHEMATICS

SYLLABUS
CBCS PATTERN
(For the candidates admitted from 2017 - 2018)

SEMESTER I

PAPER - 1

ALGEBRA

Objectives

In this Course students are exposed to topics like Theory of Equations, Summation of Series, Matrices, Continued Fractions and Elementary Number Theory. The stress is on the development of problem solving skills.

UNIT-I: THEORY OF EQUATIONS

Polynomial Equations - Symmetric Functions of roots in terms of Coefficients - Reciprocal Equations - Transformation of Equations.

UNIT-II: THEORY OF EQUATIONS (Contd...)

Descartes Rule of Signs - Approximate Solutions of Polynomials by Horner's method - Newton - Raphson method of Solution of a Cubic Polynomial.

UNIT-III: SUMMATION OF SERIES

Summation of series using Binomial - Exponential and Logarithmic series (Theorems without proofs) - Approximation using Binomial & Exponential series and logarithmic series simple problems.

UNIT-IV: MATRICES

Symmetric - Skew symmetric, - Hermitian - Skew Hermitian - Orthogonal and Unitary Matrices - Cayley-Hamilton Theorem (without proof) - Eigen Values - Eigen Vectors–Similar Matrices - Diagonalisation of a Matrix.

UNIT-V: ELEMENTARY NUMBER THEORY

Prime Number - Composite Number - Decomposition of a Composite Number as a Product of Primes uniquely (without proof) - Divisors of a Positive Integer - Congruence Modulo *n* - Euler Function (without Proof) - Highest Power of a Prime Number p contained in *n!*- Fermat's and Wilson's Theorems (statements only) - simple problems.

Recommended Texts

3. A.Singaravelu (2003) *Algebra and Trigonometry*, Vol.-I & II Meenakshi Agency, Chennai.
4. S.Sudha(1998) *Algebra and Trigonometry*. Emerald Publishes, Chennai.

PAPER - 2

TRIGONOMETRY

Objectives

This course is a fundamental one for many courses of this Degree Programme. This covers topics on the expansions of trigonometric functions, hyperbolic functions, inverse circular, inverse hyperbolic functions and it aims to develop computational skills.

UNIT-I

Expansions of cosnθ , sin nθ - Expansion of tan nθ in terms of tan θ - Expansion of tan(A+B+C+…) - Formation of Equations. Chapter III section 1 to 3

UNIT-II

Powers of sines and cosines of θ in terms of functions of multiples of θ - expansions of sin θ and cos θ in a series of ascending powers of θ - Expansion of Inverse Circular Functions. Chapter III section 4 and 5

UNIT-III: Hyperbolic Functions

Definition – Relation between Hyperbolic Functions - Inverse Hyperbolic Functions. Chapter IV sections 1 to 2.3

UNIT-IV

Resolution into Factors - simple problems only - DeMoivre's Property on the Circle and Cote's Property on the Circle.Logarithm of complex quantities.
Chapter V sections 2 and 3(Problems only)
Chapter V sections 4, 4.1, 4.2, 5, 5.1, 5.2...

UNIT-V

Summation of Trigonometric Series: When the angles are in A.P, C+iS method of summation - Method of Differences - Gregory Series - Euler Series.
Chapter VI section 1, 2 ,3 ,3.1, 3.2.

SEMESTER II

PAPER - 3

CALCULUS

Objectives

The course introduces students to the fundamental principles, concepts and knowledge in the areas of Differential and Integral Calculus. This prepares the students to apply these fundamental concepts and working knowledge to other courses.

UNIT-I

Differential Calculus: n^{th} derivative - Leibnitz's theorem (Without proof) and its application - Jacobians - Total differential - maxima and minima functions of 2 & 3 independent variable, Lagrange's method (without proof), problems on this concepts.

UNIT-II: Differential Calculus (Contd…)

Polar coordinates – Angle between radius vector and tangent – Angle between two curves, Curvature, Radius of Curvature in Cartesian and Polar coordinates, p-r equation, Evolutes.

UNIT-III: Differential Calculus (Contd…)

Asymptotes: Methods (without proof) of finding asymptotes of rational algebraic curves with special cases.(First 5 sections only)

UNIT-IV: Integral Calculus

Reduction formulae, $\int \sin^n x\,dx$, $\int \cos^n x\,dx$, $\int \sin^m x\cos^n x\,dx$, Beta and Gamma Functions - Properties and Problems.

UNIT-V: Integral Calculus (Contd…)

Double Integrals - Change of order of Integration - Triple Integrals - Applications to Area, Surface Area and Volume.

PAPER - 4

ANALYTICAL GEOMETRY OF THREE DIMENSIONS

Objective:

To deepen the knowledge of the students in various concepts of Analytical Solid Geometry.

Unit I: Plane

General equation of a plane – Equation of a plane in the normal form – Angle between planes – Plane through three given points – Equation of a plane through the line of intersection of two planes.

UNIT II: Straight Line

Symmetrical form of a straight line – Image of a point with respect to a plane – Image of a line with respect to a plane – Length and equation of the shortest distance between two skew lines - Coplanar lines.

UNIT III: Sphere

Equation of the sphere – Length of the tangent – Tangent plane – Section of a sphere by a plane – Orthogonal spheres – Equation of a sphere through a given circle.

UNIT IV: Cone

Equation of a cone with a given vertex and a given guiding curve - Equation of a cone with its vertex at the origin - Condition for the general equation of the second degree to represent a cone - Right circular cone – Enveloping cone - Tangency of a plane to a cone.

UNIT V: Cylinder

Equation of a cylinder with a given generator and a given guiding curve - Right circular cylinder - Enveloping cylinder – Enveloping cylinder as a limiting form of an enveloping cone.

SEMESTER III

PAPER - 5

DIFFERENTIAL EQUATIONS

Objectives

This course aims to provide logical skills in the formation of differential equations, to expose to different techniques of finding solutions to these equations and in addition stress is laid on the application of these equations in geometrical and physical problems.

UNIT-I: Ordinary Linear Differential Equations

Bernoulli Equation – Exact Differential Equations – Equations Reducible to Exact Equations – Equations of First order and Higher degree: Equations solvable for p, Equation solvable for x and Equations Solvable for y – Clairaut's Equation.

UNIT-II: Ordinary Linear Differential Equations [Contd...]

Method of Variation of Parameters – 2^{nd} order Differential Equations with Constant Coefficients for finding the P.I's of the form e^{ax} V, where V is sin(mx) or cos(mx) and x^n – Equations reducible to Linear equations with constant coefficients – Cauchy's homogeneous Linear Equations – Legendre's Linear Equations.

UNIT-III: Differential Equations of Other Types

Simultaneous Equations with Constant coefficients – Total Differential Equations Simultaneous Total Differential Equations – Equations of the form dx/P = dy/Q = dz/R

UNIT-IV: Laplace Transform

Transform-Inverse Transform – Properties – Application of Laplace Transform to solution of first and second order Linear Differential equations [with constant coefficients].

UNIT-V: Partial Differential Equations

Formation of PDF – Complete Integral – Particular Integral – Singular Integral – equations Solvable by direct Integration – Linear Equations of the first order – Non-linear Equations of the first Order:

Types:

f[p,q]=0,

f[x,p,q]=0, f[y, p, q]=0, f(z, p, q]=0, f[x, q]= f[y, p],

z= px+qy + f[p, q]

SKILL BASED SUBJECT

PAPER - 1

LINEAR PROGRAMMING

Objectives

To improve the skills of solving very common problems which we come across in various fields like transportation, games and industries with machines.

UNIT-I

Linear programming problem - Mathematical formulation of the problem - Graphical solution method - simple method - Duality - primal and dual relation (simple Problems).

UNIT-II

Transportation problem - Degeneracy in transportation problem.

UNIT-III

The Assignment problem – Travelling salesman method.

UNIT-IV

Game theory - two persons zero sum game - the maximin minimax principle - saddle points - games without saddle points.

UNIT-V

Simulation - application - advantages and disadvantages - Monte Carlo method - simple problems.

6. Algebra, Manickavachakam Pillai & Narayanan

NON-MAJOR ELECTIVE

PAPER -1

BASIC MATHEMATICS

Objectives

To introduce a few basic and elementary concepts of mathematics for other major students.

UNIT-I: Sets

Definition - Subsets - Power sets - Equality of sets - Finite and Infinite sets - Set operations - De-Morgan's laws - Distributive tables - Cartesian products.

UNIT-II: Number system

Binary, octal, hexadecimal numbers - conversion from one system to another system - addition and subtraction - one's complement.

UNIT-III: Symbolic logics

Logical statements - connectives - truth tables - tautologies operations - groups – (problems and simple properties only).

UNIT-IV: Determinants

Definition - properties (without proof) - application of determinants - Cramer's rule for the solution of a system of equations

UNIT-V: Matrices

Definition - types of matrices - operations on matrices - adjoint and inverse - applications - solving non-homogeneous equations.

Recommended Texts

SEMESTER-IV

PAPER-6

VECTOR ANALYSIS AND FOURIER ANALYSIS

Objectives

This course covers the topics in vector and tensor calculus which are essential tools of modern applied mathematics. To develop deep understanding of key concepts followed by problems of applied nature. The portion on Fourier analysis will lead to post-graduate studies and research in pure as well as applied mathematics.

UNIT-I: Differential Vector Calculus

Differentiation of a Vector - Geometrical Interpretation of the Derivative - Differentiation Formulae - Differentiation of dot and Cross Products - Partial Derivatives of Vectors - Differentials of Vectors.

UNIT-II: Gradient, Divergence and Curl

Vector Differential Operator Del - Gradient of a Scalar Function - Directional Derivative - Geometric Interpretation - Gradient of the sum of Functions; of the product of functions and of a function of function - Operations involving Del - Divergence of a Vector and its Physical Interpretation - Curl of a Vector and its Physical Interpretation - Expansion Formulae for Operators involving Del - Solenoidal and Irrotational.

UNIT-III: Vector Integration

The Line Integral - Surface Integral and its Physical Meaning – Volume integral. Simple problems.

UNIT-IV: Vector Integration(Contd.)

Statements of Stoke's Theorem, Gauss Divergence Theorem and Green's Theorem and problems.

UNIT-V: Fourier Series

Euler's Formulae - Conditions for Fourier Expansion - Functions having Discontinuity - Change of Interval - Odd and Even Functions - Expansions of Odd or Even periodic Functions - Half-range Series-Typical Wave Forms - Parseval's Formula.

SKILL BASED SUBJECT

PAPER - 2

MATHEMATICS FOR COMPETETIVE EXAMINATIONS-I

Objectives

To introduce concepts of mathematics with emphasis on analytical ability and computational skill needed in competitive examinations.

Unit- I

Numbers, H.C.F. and L.C.M. of numbers, Decimal Fractions.

Unit -II

Simplification, Square roots and Cube Roots, Average.

Unit- III

Problems on numbers, problems on Ages.

Unit -IV

Surds and Indices, Percentage, Profit and Loss.

Unit -V

Ratio and Proportion, Partnership.

Text Books:-

ABSTRACT ALGEBRA

Objectives

This course aims to impart emphasis on concepts and technology of the groups and rings as these algebraic structures have applications in Mathematical Physics, Mathematical Chemistry and Computer Science.

UNIT-I: Groups

Definition of a Group - Examples - Subgroups;

UNIT-II: Groups (Contd)

Counting Principle - Normal Subgroups - Homomorphisms.

UNIT-III: Groups (Contd)

Automorphisms - Cayley's Theorem - Permutation Groups.

UNIT-IV: Rings

Definition and Examples - Integral Domain - Homomorphism of Rings - Ideals and Quotient Rings.

UNIT-V: Rings (Contd)

Prime Ideal and Maximal Ideal - The field of quotients of an Integral domain – Euclidean rings.

Recommended Text

PAPER - 8

REAL ANALYSIS I

Objectives

To understand various limiting behavior of sequences and series

To explore the various limiting processes viz.continuity, uniform continuity, differentiability and integrability and to enhance the mathematical maturity and to work comfortably with concepts.

UNIT-I: Functions & Sequences

Functions – real valued functions – equivalence – countability and real numbers – least upper bound – definition of sequence and subsequence – limit of a sequence – convergent sequence
Ch. 1.4 to 1.7, 2.1 to 2.3 of Goldberg.

UNIT-I: Sequences [Contd...]

Divergent sequences – Bounded sequences – Monotone sequence – Operations on convergent sequences – Operations on divergent sequences – Limit superior and Limit inferior – Cauchy sequences
Ch. 2.4 to 2.10 of Goldberg.

UNIT-III: Series of Real Numbers

Convergence and Divergence – Series with non negative terms – Alternating series – conditional convergence and Absolute convergence – Test for Absolute convergence.
Ch. 3.1 to 3.4 and 3.6 of Goldberg.

UNIT-IV: Series of Real Numbers [Contd...]

Test for Absolute convergence – The class ℓ^2 – Limit of a function on the real line – Metric spaces – Limits in Metric spaces.
Ch. 3.7, 3.10, 4.1 to 4.3 of Goldberg.

UNIT-V: Continuous Functions on Metric Spaces

Functions Continuous at a point on the real line – Reformulation – Functions Continuous on a Metric Spaces – Open Sets – Closed Sets.
Ch. 5.1 to 5.5 of Goldberg

Recommended Text

PAPER - 9

COMPLEX ANALYSIS - I

Objectives

This course provides

(i) a modern treatment of concepts and techniques of complex function theory

(ii) To gain knowledge about the complex number system, the complex function and complex integration.

UNIT-I: Complex numbers and Elementary functions

Complex Number system, complex numbers –Algebraic properties-Point at Infinity Stereographic Projection-Function of a complex variable-Mappings-Elementary Functions- The Logarithmic function- Branches of log Z.
Sections 1-10, 21-30.

UNIT-II: Analytic functions

Definitions of Limits -Continuity-Derivatives and Differentiation formula-Cauchy-Riemann equations-Cauchy-Riemann equations in polar form-properties of Analytic functions-Necessary and sufficient conditions for Analytic functions-problems. Sections 11-19.

UNIT-III: Conformal Mappings

Harmonic functions-Determination of Harmonic conjugate and Analytic functions-conformal mapping-Isogonal mapping-Further properties and examples-transformations of Harmonic functions**.**
Sections 20, 76-80.

UNIT-IV Mapping by Elementary transformations

The transformations $w=z+d$, $w=1/z$, $w=z^2$, $\overline{w}=\sqrt{z}$, $w = e^z$, $w=\sin z$ Bilinear Transformation andspecial Bilinear Transformation problems.
Sections 31-36, 38-39

UNIT-V: Integrals

Contours - Line Integrals _ Cauchy-Goursat's Theorem (without proof) Cauchy's Integral Formula - Derivatives of Analytic Functions - problems. Sections 43-46, 50-52.

PAPER - 10

STATICS

OBJECTIVES

This course introduces the students the basic concepts of forces, moments, couple, friction law virtual displacement and work, catenary and the centre of gravity and kinematics. This course stresses the development of skills in formation of suitable mathematical models and problems solving techniques.

UNIT- I

Forces, Type of forces- Resultant of three forces related to triangle acting at a point - Resultant of several forces acting on a particle - Equilibrium of a particle under three forces - Equilibrium of a particle under several forces - Limiting Equilibrium of a particle on an inclined plane.

UNIT- II

Moment of a forces- General motion of a Rigid body- Equivalent system of forces – Parallel forces- Forces along the sides of the triangle.

UNIT- III

Couples- Resultant of several coplanar forces – Equation of line of action of the resultant – Equilibrium of a rigid body under three coplanar forces.

UNIT - IV

Reduction of coplanar forces into a force and a couple – Friction – laws of friction – cone of friction and angle of friction – Applications involving frictional forces.

UNIT - V

Center of mass – Center of mass of a triangular lamina – Three particles of same mass - Three particles of certain masses – uniform rods forming a triangle – lamina in the form of a trapezium and solid tetrahedron – Center of mass using integration – circular arc – circular lamina – elliptic lamina – solid hemisphere – solid right circular cone – hemispherical shell – hollow right circular cone.

PAPER - 11

DYNAMICS

OBJECTIVES

This course aims to provide models for some real life problems. This covers topics like Simple Harmonic Motion, Projectiles, Central Orbits and Moment of Inertia. Stress is on the mathematical formulation of the physics aspects of the problems and it develops logical deduction and interpretation.

UNIT- I

Velocity, Relative Velocity, Angular Velocity, Acceleration, Rectilinear motion, Rectilinear motion with constant acceleration, Relative angular velocity, Work, Power, Energy.

UNIT- II

Motion of a projectile, Nature of a trajectory, Results pertaining to the motion of a projectile, Range on an inclined plane, Maximum range on the inclined plane. Simple problems.

UNIT -III

Impulsive force, Conservation of linear momentum, Impact of a sphere, Laws of impact, Impact of two smooth spheres, Direct impact of two smooth spheres, Direct impact of a smooth sphere on a plane, oblique impact of a smooth sphere on a plane. Simple problems.

UNIT- IV

Central force and Central Orbit, Equation of central orbit, finding law of force and speed for a given orbit, Determination of the orbit when law of force is given, Kepler's Laws on planetary motion. Simple Problems.

UNIT -V

Moment of Inertia of simple bodies, Theorems of parallel and perpendicular axes, Moment of inertia of triangular lamina, circular lamina, circular ring, right circular cone, sphere. Simple problems.

PAPER - 1

A. GRAPH THEORY

Objectives

To study and develop the concepts of graphs, subgraphs, trees connectivity, Eulerian and Hamiltonian graphs, matching colorings of graphs and planar graphs

UNIT-I

Graphs, subgraphs, Degree of a vertex, Isomorphism of graphs, independent sets and coverings.

UNIT-II

Intersection graphs; Adjacency and incidence of matrices; Operations on graphs;;

UNIT-III

Walks; trails; paths; Connectedness and components; cut point, bridge, block.

UNIT-IV

Connectivity theorems and simple problems. Eulerian graphs and Hamiltonian graphs; simple problems

UNIT-V

Trees, theorems, and simple problems.

Recommended Text

B. ASTRONOMY

Objectives

This course aims to provide working knowledge about the universe.

UNIT-I

Celestial Sphere - Diurnal motion - Simple Problems page 39 - 83 (Use the results 65,67,83,84) to solve problems.No derivation.)

UNIT-II

Zones of Earth - Terrestrial Latitudes and Longitudes - Rotation of Earth - Dip of the horizon - - Simple problems. Page 90-131 (Use the results of 96,99,102 to solve problems. No need for derivation.

UNIT-III

Twilight-simple problems-Astronomical refraction - Simple problems.page 131-157. (use the result of 124,125,126,127 to solve problems. No need to derive the result)

UNIT-IV

Kepler's Laws - simple problems page 172-189. (Use result s of 159,160 to solve the problems.No need to derive the results.

UNIT-V

Moon - phases of moon - Eclipses - Introduction - umbra and penumbra - lunar eclipse - solar eclipse - condition for the occurrence of lunar and solar eclipses. Page 334-377. (Use the results of 270,271,272 to solve problem, no need to derive the results)

LINEAR ALGEBRA

Objectives

To study the Algebraic structures of Vector Spaces and Linear Transformation

UNIT-I: Vector Spaces

Definition and examples-Linear dependence and independence

UNIT-II: Vector Spaces (Contd)

Dual space - Inner Product spaces.

UNIT-III: Linear Transformation

Algebra of linear transformations - Characteristic roots

UNIT-IV: Linear Transformation (Contd)

Matrices, Canonical forms; Triangular forms.

UNIT-V: Linear Transformation (Contd)

Trace and Transpose, Determinants

PAPER - 13

REAL ANALYSIS II

Objectives

To understand Integration process of Riemann
To develop the understanding of point wise and uniform convergence of sequence and series of functions.
To enhance the mathematical maturity and to work comfortably with concepts.

UNIT-I: Connectedness, Completeness

Open Sets – Connected Sets – Bounded Sets and Totally Bounded Sets – Complete Metric Spaces.
Ch. 6.1 to 6.4 of Goldberg

UNIT-II: Compactness

Compact Metric Space – Continuous Functions on Compact Metric Spaces - Continuity of Inverse Functions – Uniform Continuity.
Ch. 6.5 to 6.8 of Goldberg

UNIT-III: Riemann Integration

Sets of measure zero - Definition Riemann Integral – Properties of Riemann Integral – Derivatives.
Ch. 7.1, 7.2 7.4, 7.5 of Goldberg.

UNIT-IV: Riemann **Integration [Contd...]**

Rolle's Theorem – The law of mean – Fundamental theorems of calculus – Taylor's theorem.

Ch. 7.6 to 7.8 and 8.5 of Goldberg.

UNIT-V: Sequences and Series of Functions

Pointwise convergence of sequences of functions – Uniform convergence of sequences of functions – consequences of uniform convergence – Convergence and uniform convergence of series of functions.

Ch. 9.1 to 9.4 of Goldberg.

PAPER - 14

COMPLEX ANALYSIS II

Objectives:

(1) To gain knowledge about complex Integration and series.
(2) This course provides methods to solve problems in pure as well as in applied mathematics.

UNIT-I: Integrals:

Morera's theorem- Maximum Moduli of functions- The fundamental theorem of Algebra-Lioulle's theorem-convergence of sequences and series-uniform convergence. Sections 53-56, 61.

UNIT-II: Power series.

Taylor's and Laurent's theorem-Integration and differentiation o f power series-problems.
Sections 57-60.

UNIT-III: Singularities and Residues.

Singularities and classifications- Isolated singularties:Removable singularity Pole and essential singularity-Residues-Cauchy's Residue theorem-problems.
Sections 67-71.

UNIT-IV: Analytic continuation

Conditions under which f (z)=o-Uniqueness-Singular points:Poles and zeros-Essential singular points-Number of zeros and poles-The Argument principal.
Sections 106 -114.

UNIT V: Contour Integration

Evaluation of Improper Real Integrals-Improper integrals involving Trigonometric functions -Integration around a Branch point.
Sections 72-75.

PAPER - 15

PROGRAMMING IN C LANGUAGE

Objectives

To develop programming skill in the Computer Language C

UNIT-I

C Constants, variables, Data-type, Declaration of variables, assigning values to variables.

UNIT-II: Operators

Arithmetic, Relational, Logical, Assignment, Increment and decrement, Conditional, Arithmetic Expressions, Evaluation of Expressions, Precedence of Arithmetic operators, Formatted input and output.

UNIT-III: Operators

Decision making and branching If, simple if, If else, Nesting of if - else, Else - If ladder, Switch statement, the?: operator, Go to statement. Decision making with looping: While, Do, for statement, Jumps in loops.

UNIT-IV: Arrays

One - dimensional array, two - dimensional array, Initializing arrays, Multi - dimensional arrays.

UNIT-V: User-Defined Function

Need for User-defined function, Multi-function program, the form of C-Function, Return Value and their types.

Structures and Unions:

Structure definition, Structure initialization, Comparison of structure variables, union**.**

PRACTICAL

PRACTICAL IN C LANGUAGE

Objectives

This computer practice course aims to provide strong logical thinking and error-free syntax codes writing, to master the debugging techniques and to present the results in neat form in C Language for numerical methods. Students will be able to solve problems numerically whenever theoretical methods are not available.

The following exercises shall be performed as minimum mandatory requirements (for eligibility to take the practical examination) and a RECORD of the code-listing and outputs shall be maintained by each students.

1. Assigning the ASCII value.
2. Square of numbers: Using For loop, While loop
3. Square of numbers: Do-While loop, Goto statement.
4. Characters between two given characters.
5. Number of vowels and consonants.
6. Three – dimensional matrix.
7. Prime numbers between two give numbers.
8. Fibonacci series.
9. Factorial numbers
10. Power of a value.
11. Interchange sort.
12. Student record.

Note: Mathematics faculty should be appointed as an Examiner.

PAPER - 2

OPERATIONS RESEARCH

Objectives

To develop computational skill and logical thinking in formulating industry oriented problems as a mathematical problem and finding solutions to these problems.

UNIT-I

Network-construction of network diagram-Critical path method (CPM) – Three floats

UNIT-II

Three time estimates-Network scheduling by PERT Method-PERT Computation

UNIT-III

Inventory models - EOQ model (a) Uniform demand rate infinite production rate with no shortages (b) Uniform demand rate finite production rate with no shortages – Inventory control with Price Breaks.

UNIT-IV

Sequencing problem - n jobs through 2 machines, n jobs through 3 machines - two jobs through m machines – n jobs through m machines.

UNIT-V

Queuing Theory - Basic concepts - Steady state analysis of M/M/1 and M/M/N systems with finite and infinite capacities.

CALCULUS OF FINITE DIFFERENCES AND NUMERICAL METHODS

(To be chosen only by those students who have not taken Numerical Methods as Allied subject)

Objectives

This course covers the basic methods for finding the finite difference, solution of simultaneous equations and the techniques of Numerical Differentiation and Numerical Integration. It also deals with solution of Algebraic and Transcendental equations.

(Note: All The Formulae Without Proof - Units I to V)

UNIT-I: Finite differences & Interpolation

Forward difference operator ▲ and Backward difference operator ▼ and shifting operator E, Relation between ▲, ▼and E - Interpolation - Newton - Gregory forward & backward formulae, Estimating the missing terms- Lagrange's and Newton's divided difference Formula for unequal intervals.

UNIT-II: Solutions of simultaneous linear equations

Gauss elimination method - matrix inversion method - Gauss-Jordan Method, Gauss – Seidal method.

UNIT-III: Numerical Differentiation

Newton's forward and backward differences formulae to compute derivatives - using Guass forward and backward formulae.

UNIT-IV: Numerical Integration

General Quadrature formula - Trapezoidal rule - Simpson's one third rule - Simpson's three-eight rule.

UNIT-V: Solution of Algebraic and Transcendental Equations:

Bisection method - Regula - falsi method (False Position method) – Newton - Raphson method. Numerical solution of ordinary Differential equation (First order only): Euler's method, modified Euler's method, Picard's method, Runge - Kutta method

ELECTIVE - III

PAPER – 3

A. SPECIAL FUNCTIONS

Objectives

To develop computational skill in certain special functions which are frequently occurring in higher mathematics and mathematical physics.

UNIT-I

Properties of Linear Operators - Simultaneous Linear Differential Equations -

UNIT-II

Special Solvable Types of Nonlinear Equations. Numerical Solutions Using Taylor Series -

UNIT-III

Adams and Modified Adams Method - Extrapolation with
Differences Properties of Power Series - Examples

UNIT-IV

Singular Points of Linear Second Order Differential Equations - Method of Frobenius.

UNIT-V

Bessel Functions - Properties – Legendre Functions.

PAPER – 3

B.FUZZY MATHEMATICS

Objectives

1. To know the fundamentals of fuzzy Algebra.
2. To know the basic definitions of fuzzy theory
3. To know the applications of fuzzy Technology.

UNIT-I

Introduction- Fuzzy subsets-Lattices and Boolean Algebras- L fuzzy sets-operations on fuzzy –α level sets – properties of fuzzy subsets of a set. section s 1.1-1.10

UNIT-II

Algebraic product and sum of two fuzzy subsets-properties satisfied by Addition and product-cartesian product of fuzzy subsets. Sections 1.11-1.13.

UNIT-III

Introduction- Algebra of fuzzy relations-logic-connectives. section s 2.1-2.4

UNIT-IV

Some more connectives-Introduction-fuzzy subgroup-homomorphic image and Pre-image of subgroupoid. Sections 2.5,3.1-3.3

UNIT-V

Fuzzy invariant subgroups-fuzzy subrings.
Section 3.4 and 3.5.
Recommended Text S.Nanda and N.R.Das "Fuzzy Mathematical concepts,Narosa Publishing House, New Delhi.

SKILL BASED SUBJECT

MATHEMATICS FOR COMPETETIVE EXAMINATIONS - III

Unit- I

Simple Interest.

Unit- II

Compound Interest

Unit- III

Logarithms – Races and Games of Skill.

Unit- IV

Area

Unit- V

Volume and surface areas.

Text Book:-

Quantitative Aptitude for competitive Examination , R.S.Aggarwal. S.Chand and company Ltd, 152, Anna salai, Chennai. 2001

ALLIED SUBJECTS FOR MATHEMATICS STUDENTS

To choose any two out of the following Four Allied subjects as Allied I and Allied II. Each Allied subject consists of two Examination papers as paper I and Paper II.

1. Mathematical Statistics (Paper I and II)
2. Numerical Methods (Paper I and II)
3. Physics (Paper I and II)
4. Chemistry (Paper I and II)

ALLIED

MATHEMATICAL STATISTICS - I

Objective

To apply Statistics Methods for Mathematical Problems

UNIT-I

Concept of Sample Space - Events - Definition of Probability (Classical, Statistical and Axiomatic) - Addition and Multiplication laws of Probability - Independence of Events - Conditional Probability - Baye's Theorem - Simple Problems.

UNIT -II

Random Variables (Discrete and Continuous) - Distribution Function - Expectation and Moments - Moment Generating Function - Probability Generating Function - Cumulant Generating Function - Simple Problems.

UNIT-III

Characteristic Function - Properties - Uniqueness and Inversion Theorem (Statement only) Chebychev's Inequality - Simple Problems

UNIT-IV

Concept of Bivariate Distribution - Correlation - Karl Pearson's Coefficient of Correlation - Rank Correlation - Linear Regression.

UNIT-V

Standard distributions: Discrete distributions - Binomial, Poisson, Hyper Geometric and Negative Binomial Distributions - Continuous Distributions Normal, Uniform, Exponential.

Recommanded text book:

S.C. Gupta & V.K. Kapoor : Fundamentals of Mathematical Statistics, Sultan & sons

Books for Reference

1. Hogg, R.V. &Craig.A.T.(1998) : Introduction to Mathematical Statistics, Macmillan
2. Mood. A.M. Graybill. F.A.&Boes.D.G.(1974) : Introduction to theory of Statistics, McGraw Hill.
3. Snedecor.G.W. &Cochran.W.G.(1967) : Statistical Methods, Oxford and IBH
4. Hoel, P.G (1971): Introduction to Mathematical Statistics, Wiley.
5. Wilks S.S. Elementary Statistical Analysis, Oxford and IBH

ALLIED

MATHEMATICAL STATISTICS II

Objective

To apply Statistics for Mathematical problems

UNIT-I

Statistical Population Census and Sampling Survey - Parameter and Statistics - Sampling and Sampling Distribution and Standard Error. Sampling distributions - students 't', chi - square and F distributions.

UNIT-II

Test of significance - Large sample test for proportion, mean and standard deviation - Exact test based on 't', Chi - square and F distribution with respect to population mean, variance and correlation coefficient - Tests of independence of attributes - goodness of fit tests.

UNIT-III

Point estimation - Concept of unbiasedness, consistency, efficiency and sufficiency - Cramer- Rao Inequality - Methods of Estimation - Maximum Likelihood Estimation - Method of Moments.

UNIT-IV

Test of Hypothesis: Null and Alternate Hypothesis - Type I and Type II error - Power of the test - Neymann Pearson lemma - Likelihood Ratio Test - Concept of Most Powerful test (Statement and Results only) - Simple Problems

UNIT-V

Analysis of Variance - One - way and Two-way Classification - Basic Principles of Design of Experiments - Randomization, Replication, Local Control, Completely Randomized Design, Randomized Block Design and Latin Square Design.

Recommended Text:

S.C. Gupta & V.K. Kapoor: Fundamentals of Mathematical Statistics, Sultan & sons

Books for Reference

5. Wilks . S. S.Elementary Statistical Analysis, Oxford and IBH
6. O. Kempthone - Design of Experiments
7. Das and Giri : Design of Experiments Wiley Eastern

ALLIED PRACTICAL

MATHEMATICAL STATISTICS

1. Measures of location and Dispersion (absolute and relative)
2. Computation of Correlation Coefficient for raw and Grouped data, Rank Correlation Coefficient
3. Computation of Regression Equations for Raw and Grouped Data
4. Curve Fitting by the Method of Least Squares
   a. $y=ax+b$
   b. $y=ax^2+bx+c$
   c. $y=ae^{bx}$
   d. $y=ax^b$
5. Fitting of Binomial, Poisson, Normal distributions and tests of goodness of fit.
6. Large sample tests with regard to population mean, proportion, standard deviation
7. Exact tests with Respect to Mean, Variance and Coefficient of Correlation
8. Test for Independence of Attributes Based on Chi-Square Distribution
9. Confidence Interval based on Normal, t and Chi-square and F Distributions
10. Problems based on ANOVA-one way and two way Classification
11. Completely Randomized Design
12. Randomized Block Design
13. Latin Square Design

Note
Use of scientific calculator shall be permitted for practical examination.
Statistical and Mathematical tables are to be provided to the students at the examination hall.

- Mathematics faculty alone should be appointed as examiners.

Books for Reference

ALLIED PAPERS

NUMERICAL METHODS - I

Objectives

This course will cover basic methods for finding the Finite differences, Central differences, Inverse interpolation, Summation of series, Interpolation for equal & unequal intervals, Solutions of simultaneous equations, Important principles, Method and Processes to get numerical results, Reliability of numerical result.

UNIT-I: Finite Differences

First and higher order differences-forward differences and Backward differences-Properties of operators-Differences of a Polynomial-Factorial Polynomials-Operator E, Relation between ▲,▼and E–Interpolation - Newton - Gregory forward & backward formulae for interpolation.

UNIT-II: Central Differences

Central difference Operators-Central differences formulae: Gauss Forward and Backward formulae-Sterling's formula-Bessel's formula.

UNIT-III: Interpolation for Unequal Intervals

Divided differences-Newton's divided differences formula and Lagrange's-Estimating the Missing terms (With one or more missing values).

UNIT-IV: Inverse Interpolation

Lagrange's method and Reversion of series method (Using Newton's forward formula only).

Summation of series: Sum to n term of the series whose general term is the first difference of a function-summation by parts.

UNIT-V: Solutions of Simultaneous Linear Equations

Gauss elimination method-matrix inversion method-Gauss-Jordan Method, Gauss-Seidal method (Three unknowns only).

NUMERICAL METHODS II

Objectives

This course covers the techniques of Numerical Differentiation and Numerical Integration. It also deals with solution of difference equations, Algebraic and Transcendental equations and Numerical solution of Ordinary differential equations of first order.

UNIT-I: Numerical Differentiation

Newton's forward and backward differences to compute derivatives-derivative using divided differences formula-maxima and minima using the above formulae.

UNIT-II: Numerical Integration

General Quadrature formula-Trapezoidal rule-Simpson's one third rule-Simpson's three-eight rule, Weddle's rule- Euler-Maclaurin Summation Formula

UNIT-III: Difference Equations

Linear differences equations-Linear homogeneous difference equation with constant co-efficient-Particular integrals for a^x, x^m, sinax, cosax and $a^x f(x)$.

UNIT-IV: Solution of Algebraic and Transcendental Equations

Bisection method-Iteration method-Regula-falsi method (False Position Method)-Newton-Rapson Method.

UNIT-V: Numerical Solution of Ordinary Differential Equations (First order only)

Euler's method- Euler's modified method-Picard's method - Taylor's methods-Runge-Kutta method (Fourth order only).

Recommended Text

ALLIED PRACTICAL

NUMERICAL METHODS

LIST OF PROBLEMS

1. Derivatives by Newton's method
2. Gauss elimination method.
3. Gauss-Jacobi method.
4. Gauss-Siedel method.
5. Power method (eigenvalue).
6. Newton's forward and backward interpolation.
7. Lagrange interpolation.
8. Trapezoidal and Simpson one-third rules.
9. Euler's method.
10. Picard's method
11. Runge-Kutta's method.
12. Predictor-corrector method.

ALLIED

PHYSICS - I

UNIT – I: PROPERTIES OF MATTER

Elasticity : Hooke's Law – Elastic Constants – bending of beam – Bending moment – Cantilever Depression at the loaded end of a cantilever – determination of Young's modulus by non-uniform bending.

Torsion : Torsion couple – Potential energy in a twisted wire – Torsional pendulum – Time period – Determination of rigidity modulus by Torsional oscillation (without masses).

Viscosity: Viscosity of a liquid – Viscous force – Co-efficient of viscosity of a liquid – Poiseuille's formula .

Surface Tension: Surface Tension – Surface Tension and interfacial surface tension by the method of drops.

UNIT – II: HEAT

Heat: Specific heat – Newton's law of cooling – determination of specific heat of a liquid using Newton's law of cooling – Emissivity and Emissive Power.
Low Temperature: J.K. Effect – Positive Effect – Negative Effect – Temperature of Inversion – Super conductors. Type I and II – Meisner Effect – Helium I and II.

UNIT – III: ELECTRICITY AND MAGNETISM

Electricity: Potentiometer – Principle – Calibration of low range voltmeter – Measurement of internal resistance of cell – measurement of an unknown resistance.

Magnetism – Moment and pole strength of a magnet – Deflection magnetometer – Tan C position – Vibration magnetometer – Theory – Period of Oscillation – Determination of M and B_H using the deflection magnetometer in Tan C position and the vibration magnetometer.

UNIT – IV: SOUND AND ACOUSTICS OF BUILDING

Sound: Transverse vibration of strings – Velocity and frequency of vibrations of a stretched string – laws – sonometer – A.C. Frequency – Steel Wire – Brass wire.

Ultrasonics – Production by Piezo – electric method – properties and uses.
Acoustics of buildings: Reverberation – Reverberation time – Sabine's formula (definition only) – Sound absorption co-efficient of surface – conditions for the perfect acoustics.

UNIT – V: OPTICS

Interference: Air Wedge – Description – Test for optical flatness of glass plate – Determination of diameter of a thin wire by air wedge.

Diffraction: Theory of transmission grating – Normal Incidence – Determination of Wavelength of monochromatic source and Wavelength of mercury line using a grating by normal Incidence.

Fibre optics: principle-classification of optical fibres-fibre optic communication system block diagram.

Books for Study & Reference

1. Allied Physics – R. Murugesan S. Chand & Co. First Edition (2005).
2. Allied Physics – Dr. K. Thangaraj, Dr. D. Jayaraman Popular Book Department, Chennai.

4. Elements of Properties of Matter – D.S. Mathur, S. Chand & Co. (1999).
5. Heat and Thermodynamics – N. Brijlal and Subramaniam S. Chand & Co.
6. A text book of Sound – by M. Narayanamoorthy and other National Publishing Companies (1986).
7. Modern Physics – R. Murugesan S. Chand & Co. (2004).
8. Introduction to Fibre optics- K.Thyagarajan and Ajay Ghatak,Cambridge,University Press(1999).

ALLIED

PHYSICS II

UNIT – I: WAVE MECHANICS

Wave Mechanics – De Broglie Waves – Dual Nature – Experimental Study of Matter Waves – Davission and Germer's Experiment – G.P. Thomson's Experiment _ Heisenberg's uncertainty Principle – The position and moment of a particle.

UNIT – II : NUCLEAR PHYSICS

Particle accelerators – cyclotron, particle detectors – GM Counter Artificial Transmutation – Rutherford's Experiment – The Q value equation for nuclear reaction – Threshold energy – Nuclear Reactions.

Conservation Laws: Conservation of Charge – Conservation of Nucleons – Conservation of Mass – Energy – Conservation of Parity – Quantities conserved and quantities not conserved in a nuclear reaction.

UNIT – III : ENERGY PHYSICS

Sources of conventional energy – Need for non-conventional energy resources – solar energy utilization – solar water heater – solar drier – conversion of light into electrical energy – solar cell – merits and demerits of solar energy – wind energy – its conversion systems – energy from Bio mass – Bio gas generation – Industrial and space application.

UNIT – IV: CRYSTALLOGRAPHY

Crystallography : The crystal structure – Unit Cell –Bravais lattice- structures of simple cubic-BCC and FCC- co ordination number, packing factor calculation for the above structures –Hexogonal closed packed(HCP) structure -Miller indices – concept of Reciprocal Vectors.

UNIT – V: ELECTRONICS

Electronics: Transistor characteristics in common base and common emitter mode- Transistor single stage amplifier- Expression for input impedence, output impedence and current gain.
Digital Electronics : NAND and NOR as universal building blocks- De Morgan's theorem –statement and proof- Fabrication of diodes and transistors using Monolithic technology–limitations.

9. Introduction to Solid State Physics – C. Kittel, 5^{th} Edition Wiley Eastern Ltd.
10. Renewable & Sustainable energy sources – Agarwal.

ALLIED PRACTICAL

PHYSICS

(Any 15 Experiments)

1. Young's modulus – non uniform bending – pin and microscope.
2. Rigidity modulus – Static Torsion Method Using Scale and Telescope.
3. Ridigity modulus – Torsional oscillation method (without symmetric masses).
4. Determination of Co-efficient of Viscosity – Graduated Burette.
5. Surface Tension and Interfacial Tension – By drop weight method.
6. Specific Heat Capacity of a liquid – by Newton's Law of Cooling.
7. Sonometer – Determining A.C. Frequency. (Screw Gauge is given).
8. Sonometer – frequency of tuning fork.
9. Newton's Rings – Radius of Curvature.
10. Air Wedge – Determination of thickness of thin wire.
11. Spectrometer Grating – Minimum Deviation – Mercury Lines.
12. Spectrometer – Refractive Index of a liquid – Hollow Prism.
13. Potentiometer – Calibration of High Range Ammeter.
14. Potentiometer – Calibration of Low Range Voltmeter.
15. Determination of M and B_H using Deflection Magnetometer in Tan C position and vibration magnetometer.
16. Figure of merit and voltage sensitiveness of table galvanometer.
17. Construction of AND, OR gates using diodes and NOT by transistors.
18. Zener diode – Voltage Regulation.
19. NAND / NOR as universal gate.
20. Demorgan's theorem verification.

ALLIED

PAPER – 1

CHEMISTRY – I

OBJECTIVE:

- Basic knowledge on Metallurgy, Cycloalkanes, Polarising Effects, Stereochemistry, Chemical Kinetics, Catalysis, Photochemistry, VSEPR Theory, Fuels, Osmosis, Nuclear Chemistry, Petroleum Chemistry, Chemistry of Naphthalene, Conductors and Applications wherever necessary are to be taught for I- Semester.

UNIT – I

1.1General Metallurgy - Extraction of Metals - Minerals and Ores- Difference between Minerals and Ores – Minerals of Iron, Aluminum and Copper - Ore Dressing or Concentration of Ores - Types of Ore Dressing- Froth Floatation process, Gravity separation and Magnetic separation.

1.2 Calcination, Smelting, Roasting, Fux, Slag - Definition - Reduction methods - Goldschmidt Aluminothermic process and Carbon Reduction method - Refining of Metals - Electrolytic, Van Arkel and Zone Refining.

1.3 Ores of Titanium and Cobalt - Extraction of Titanium and Cobalt.

UNIT – II

2. Cycloalkanes - Preparation – Wurtz reaction and Dieckmann's condensation - Properties of Cycloalkanes – Substitution and Ring opening reactions.

2.2 Polarisation - Inductive effect, Mesomeric effect and Steric effect (Acid and Base Strength).

2.3Stereoisomerism – Types - Cause of Optical Activity – Enantiomers - Diastereomers - Meso form - Optical Activity of Lactic acid and Tartaric acid - Racemisation and Resolution – Definition and Methods - Geometrical isomerism – Definition and example - Maleic and Fumaric acid – Differences.

UNIT – III

3.1 Chemical Kinetics – Rate of a reaction – Definition of Order and Molecularity – Distinction between Order and Molecularity - Derivation of First order rate equation - Half Life Period of first order reaction.

3.2 Catalysis - Catalyst - Autocatalyst - Enzyme catalyst - Promoters - Catalytic poisons –

Active Centre - Differences between Homogeneous and Heterogeneous Catalysis - Industrial Applications of Catalysts.

3.3 Photochemistry – Grothus-Draper's law – Stark-Einstein's law - Quantum yield – Photosynthesis - Phosphorescence – Fluorescence.

UNIT – IV

4.1 VSEPR Theory – Hybridisation and Shapes of simple molecules BF_3, PCl_5, SF_6 and XeF_6.

4.2 Fuels – Classification of Fuels - Calorific value of Fuels – Water gas, Carbureted Water gas and Producer gas – Composition and Uses - Non-Conventional fuels - Need of Solar Energy - Applications - Biofuels – Oil gas, Natural gas and LPG – Uses.

4.3 Osmosis - Osmotic pressure - Reverse osmosis – Definition - Desalination of Sea water.

UNIT – V

5.1Nuclear Chemistry – Atomic number, Mass number - Isotopes, Isobars and Isotones – Definition and Examples - Definition of Half life period - Nuclear Binding Energy, Mass Defect and N/P ratio - Nuclear Fission and Nuclear Fusion (Elementary idea) - Applications of Radioisotopes in Medicine, Agriculture and Industries – Carbon Dating.

5.2 Crude Oil - Petroleum - Petroleum Refining - Cracking - Applications of Cracking – Naphthalene – Preparation – Haworth's method – Properties – Oxidation, Reduction and Uses of Naphthalene - Structure of Naphthalene (Structural elucidation not necessary).

5.3 Conductors, Insulators, Semiconductors, N- and P- Type Semiconductors – Definitions and Examples.

ALLIED

CHEMISTRY – II

OBJECTIVE:

- Basic knowledge on Coordination Chemistry, Industrial Chemistry, Carbohydrates, Aminoacids, Proteins, Electrochemistry, Paints and Pigments, dyes, Vitamins, Medicinal Chemistry, Corrosion and Applications wherever necessary are to be taught for II- semester.

UNIT – I

1.1 Coordination Chemistry - Nomenclature of Coordination Compounds - Ligands, Central Metal Ion and Complex Ion – Definition and Examples – Coordination Number - Werner's Theory of Coordination Compounds - Chelates - Functions and Structure of Haemoglobin and Chlorophyll.

1.2 Industrial Chemistry - Fertilisers and Manures – Biofertilisers - Organic Manures and their importance - Role of NPK in plants - Preparation and Uses of Urea, Ammonium Nitrate, Potassium Nitrite and Super Phosphate of Lime.

1.3 Contents in Match Sticks and Match Box - Industrial making of Safety Matches – Preparation and Uses of Chloroform, DDT, Gammexane and Freons.

UNIT – II

2.1 Carbohydrates - Definition and Examples - Classification – Oxidation and Reduction Reactions of Glucose - Structure of Glucose (Structural elucidation not necessary) - Uses of Starch - Uses of Cellulose Nitrate and Cellulose Acetate.

2.2 Amino Acids – Definition and Examples - Classification of Amino Acids - Preparation - Gabriel Phthalimide Synthesis – Properties – zwitterion and Isoelectric point - Structure of Glycine.

2.3 Proteins – Definition - Classification of Proteins based on Physical properties and Biologcal functions - Primary and Secondary Structure of Proteins (Elementary Treatment only) – Composition of RNA and DNA and their Biological role - Tanning of Leather - Alum (Aluminum chloride tanning) - Vegetable tanning – Chrome Tanning.

UNIT – III

3.1 Electrochemistry - Electrolytes – Definition and Examples – Classification - Specific and Equivalent Conductance - their determination – Variation of Specific and Equivalent conductance with Dilution – Ostwald's Dilution Law and its Limitations.

3.2 Kohlrausch's Law - Determination of Dissociation Constant of weak Electrolytes using Conductance measurement - Conductometric titrations.

3.3 pH – Definition and pH determination by indicator method - Buffer solutions - Buffer action - Importance of buffers in the living systems.

UNIT – IV

4.1Paints - Components of Paint – Requisites of a Good Paint - Pigments – Classification of Pigments on the basis of Colour – Examples - Dyes – Definition – Chromophores and Auxochromes – Examples - Colour and Dyes - Classification based on Constitution and Application – Examples.

4.2 Vitamins – Definition – Classification – Water Soluble and Fat Soluble – Occurrence - Biological Activities and Deficiency Diseases caused by Vitamin A, B, C, D, E and K - Hormones – Definition and Examples – Biological Functions of Insulin and Adrenaline.

4.3 Chromatography - Principles and Applications of Column and Paper chromatography- R_f value.

UNIT – V

5.1 Drugs - Sulpha Drugs – Preparation and Uses of Sulphapyridine and Sulphadiazine - Mode of Action of Sulpha Drugs - Antibiotics - Uses of Penicillin, Chloramphenicol and Streptomycin - Drug Abuse and Their Implication - Alcohol – LSD.

5.2 Anaesthetics - General and Local Anaesthetics - Antiseptics - Examples and their Applications - Definition and One Example each for Analgesics, Antipyretics, Tranquilizers, Sedatives - Causes, Symptoms and Treatment of Diabetes, Cancer and AIDS.

5.3 Electrochemical Corrosion and its Prevention – Electroplating – Applications.

ALLIED PRACTICAL

CHEMISTRY

VOLUMETRIC ANALYSIS

1. Estimation of HCl – Standard sulphuric acid.
2. Estimation of Borax - Standard Sodium Carbonate.
3. Estimation of NaOH – Standard Oxalic Acid.
4. Estimation of $FeSO_4$ – Standard FAS.
5. Estimation of Oxalic acid – Standard $FeSO_4$.
6. Estimation of FAS – Standard Oxalic Acid.
7. Estimation of Oxalic acid – Standard Oxalic Acid.
8. Estimation of Fe^{2+} using Diphenylamine / N- Phenyl Anthranilic acid as indicator.

ORGANIC ANALYSIS

Systematic Analysis of Organic Compounds containing One Functional Group and Characterisation by Confirmatory Tests.

Reactions of Aromatic Aldehyde, Carbohydrates, Mono and Dicarboxylic acids, Phenol, Aromatic Primary Amine, Amide and Diamide.

REFERENCE BOOKS

- Inorganic Chemistry - P. L. Soni - Sultan Chand (2006).
- Inorganic Chemistry - B. R.. Puri, L. R. Sharma and K. C. Kallia – Milestone Publications (2013).

******

SCHEME OF VALUATION FOR ALLIED CHEMISTRY PRACTICALS

Internal assessment: 25 Marks

External assessment: 75 marks

Total: 100 marks

Max. Marks: 75

Record: 15 Marks

Volumetric Analysis: 30 Marks

Organic Analysis : 30 Marks

Volumetric Analysis : 30 Marks (Maximum)

Procedure : 5 Marks

Error upto 2 % : 25 Marks

2.1 to 3 % : 20 Marks

3.1 to 4 % : 15 Marks

4.1 to 5 % : 10 Marks

> 5 % : 5 Marks

Arithmetic error : Deduct 1 mark

Wrong calculation : Deduct 20 % of marks scored

No calculation : Deduct 40 % of marks scored

Organic Analysis : 30 Marks

Preliminary Reactions : 4 Marks

Aliphatic or Aromatic : 4 Marks

Saturated or unsaturated : 4 Marks

Tests for 3 elements : 9 Marks (3 x 3)

Tests for functional group : 9 Marks.

THIRUVALLUVAR UNIVERSITY

B.Sc. MICROBIOLOGY

SYLLABUS
UNDER CBCS PATTERN
(With effect from 2017-2018)

SEMESTER I

PAPER - 1

FUNDAMENTALS OF MICROBIOLOGY

Objective

To make the students to understand the fundamentals on microbes.

UNIT-I

Definition and scope of Microbiology - History of Microbiology. The origin of Microbial life - Theory of spontaneous generation. Pasteurs's Tyndall experiments fermentation studies. Contributions of Leewenhoek, Lister, Robert Koch, Thomas J.Burrill, Sergei N. Winogeadsky, Willen Beijerinck, Emil Christian Hansen, S.A. Wakmann, Alexander flaming, Stanely Iwenewsky - Impact of Microbiology and the future.

UNIT-II

Microscopy - simple, compound, dark field, phase contrast, Florescence & Electron microscopy. Staining methods and its principles.

UNIT-III

Microbial Evolution and Diversity - Endosymbiotic theory. Binomial nomenclature of Microbes. Classification - Five kindom concept - eight kindom concept (Cavalier Smith).

UNIT-IV

Anatomy of prokaryotes - cell wall, cytoplasmic membrane, cilia flagella capsule, cytoplasmic inclusions, sporulation.

UNIT-V

Sterilization - methods of sterilization and Disinfection. Antimicrobial chemotherapy - tests for sensitivity to antimicrobial agents.

Text Books:

1. Rajan. S and Selvi Christy (2015). Essentials of Microbiology, Anjanaa Book House Publishers, Chennai.
2. Pelczar Jr. M.J. Chan. E.C.S and Kreig. N.R (2006). "Microbiology"- 5th Edition Mc Graw Hill Inc. New York.
3. Ananthanarayan and Panikers (2013) Textbook Microbiology 9th edition, Universities Press (India) Private Ltd.
4. David, B.D., Delbecco, R., Eisen, H.N and Ginsburg, H.S (1990) "Microbiology" 5th Edition. Harper & Row, New York.
5. Dubey RC and Maheswari DK (2005). A text book of Microbiology, Revised Multicolour edition, S.Chand Publishers, New Delhi.
6. Purohit SS (2005). Microbiology - Fundamentals and Applications. Student Edition Publishers, Jodhpur.
7. Powar & daginawala (2005). General Microbiology Vol.I & II 8th Edition, Himalaya Publishing House, Mumbai.
8. Salle, AJ (2001). Fundamentals & Principles of Bacteriology. 7th edition. Tata McGraw-Hill, Davis,
9. Delbecco, Eisen & Ginsburg (1990) Microbiology 5th Edition Harper & raw, New York

Reference Books:

1. Lansing M. Prescott., John. P. Harley., Donald A, Klein, "Microbiology"-Mc Graw Hill Inc. New York.
2. Robert F.Boyd., "General Microbiology" 2nd Edition, Times MIRROR/Moshy College Publishing Virginia.

ALLIED - 1
PAPER - 1
BIOCHEMISTRY I

UNIT-I: Chemistry of Carbohydrates

Definition and Classification of carbohydrate. Monosaccharides - occurrence, structure; physical and chemical properties, linear and ring forms (Haworth formula) for glucose and fructose. Disaccharides - occurrence, structure; physical and chemical properties of sucrose and lactose. Polysaccharides - occurrence, structure, physical and chemical properties of starch.

UNIT-II: Chemistry of amino acids

Definition and classification of amino acids. Reaction with ninhydrin, common properties of amino acids, amphoteric nature, isoelectric point, isoelectric pH and Zwitter ion.

UNIT-III: Chemistry of Proteins

Classification based on solubility, shape and size. Physical properties: salting in and salting out, denaturation, peptide bond. Structure of protein: primary, secondary, tertiary and quaternary structure.

UNIT-IV: Chemistry of Lipids

Definition, classification and functions of lipids. Occurrence, chemistry and biological functions of simple lipids, compound lipids (e.g. phospholipids) and derived lipids: steroids (e.g. cholesterol). Physical property-emulsification. Chemical property-saponification. Functions of bile acids and bile salts.

UNIT-V: Chemistry of Nucleic acids

Definition - nucleoside, nucleotide and polynucleotide. Double helical model of DNA and its biological functions. Structure, types and functions of RNA: tRNA, mRNA and rRNA. Differences between DNA and RNA.

References:

1. Lehninger Principles of Biochemistry-David L. Nelson, Michael M. Cox, Macmillan worth Publishers.
2. Harper's Biochemistry-Rober K. Murray, Daryl K. Grammer, McGraw Hill, and Lange Medical Books. 25th edition.
3. Fundamentals of Biochemistry-J.L. Jain, Sunjay Jain, Nitin Jain, S. Chand & Company.
4. Biochemistry-Dr. Amit Krishna De, S. Chand & Co., Ltd.
5. Biochemistry-Dr. Ambika Shanmugam, Published by Author.
6. Biomolecules-C. Kannan , MJP Publishers, Chennai - 5.

SEMESTER II
PAPER - 2
MICROBIAL PHYSIOLOGY

Objective

To make the students to understand the physiology of microbes.

UNIT-I

Basic concepts of metabolism - Nutritional types of microorganisms uptake of nutrient in to the cell. Transport of nutrients by active and passive ways.

UNIT-II

Cultivation of microbes - Bacteria fungi, virus. Culture technique - media preparation. Types of media. Isolation of pure culture - preservation of cultures.

UNIT-III

Microbial growth - Growth curve measurement of microbial growth - Measurement of cell number, measurement of cell mass. Factors affecting growth.

UNIT-IV

Control of microbial growth by Antiseptics. Antiparasitic and Antiviral drugs - Antimicrobial resistance.

UNIT-V

Basic concepts of metabolism - Mechanism of ATP formation - Substrate phosphorylation. Electron transport, phosphorylation, photophosphorylation. Energy production during oxidation of organic substrate - Amino acid and assimilatory pathway. Bacterial enzymes - coenzymes - isoenzymes - structure, classification and properties.

Text Books:

1. Rajan. S and Selvi Christy (2015). Essentials of Microbiology, Anjanaa Book House Publishers, Chennai.

2. Ananthanarayan and Panikers (2013) Textbook Microbiology 9th edition, Universities Press (India) Private Ltd.

10. Delbecco, Eisen & Ginsburg (1990) Microbiology 5th Edition Harper & raw, New York

Reference Books:

1. Stainer, R.Y., Ingraham, J.L., Wheelis, M.L and Painter, P.R. (1986). "General Microbiology" -Mac Milan Education Ltd. London.

2. Dall, D.O and Rao, K.K (1995) "Photosynthesis" –Cambridge University press.

3. Chandar Sbekar, C.N. (2006). Manipal Manual of Physiology, CBS Publishers and distributors Pvt. Ltd., Chennai.

4. Pal, G.K and Pravathi Pal (2016), A text book of Practical Physiology, 4th Edition Universities Press (India) Pvt Ltd,

CORE PRACTICAL
PAPER 1 & 2

Objective:

To impart hand on training on basics of microbiology and microbial physiology.

1. Cleaning of glass ware.

2. Sterilization principle and methods-moist heat - dry heat and filtration methods.

3. Media preparation: Liquid media, solid media, Agar deep, Agar slants, Agar plates, Basal, enriched, selective media preparation - quality control of media, growth supporting properties and sterility check of media.

4. Pure culture technique: Streak plate, pour plate, spread plate, decimal dilution.

5. Cultural characteristics of microorganisms: Growth on different media, growth characteristics and description. Demonstration of pigment production and extraction.

6. Microscopy: Light microscopy, bright field microscopy, dark field microscopy and phase contrast microscopy.

7. Motility demonstration: Hanging drop preparation, wet mount, dark field microscopy, semisolid agar, Craigies tube method.

8. Staining techniques: Smear preparation, simple staining, Gram's staining, Acid fast staining, staining for metachromatic granules.

9. Morphology of microorganisms: Morphological variations in algae. Morphology of fungi, yeasts, slide culture techniques.

10. Antibiotic sensitivity testing: Disc diffusion test - Quality control with standard strains.

11. Micrometry: Determination of size of Bacteria, yeast. Fungal filaments.

12. Physiological characteristics: IMViC test, MR-VP test, H_2S, Oxidase, catalase, urease test, gelatin liquefaction, casein, starch degradation. Carbohydrate fermentation, Maintenance of pure culture, Paraffin method - Stab culture - maintenance of mound culture.

References Book:

1. Rajan. S and Selvi Christy (2015). Experimental Procedures in Life Sciences, Anjanaa Book House Publishers, Chennai.

ALLIED - 1

PAPER - 2
BIOCHEMISTRY II

UNIT-I: Metabolism

Glycolysis, TCA cycle and its energetics, HMP shunt pathway. Deamination, transamination reaction, transaminase enzymes, Urea cycle.

UNIT-II: Metabolic Disorders

Diabetes mellitus, Glycogen storage diseases, Glycosuria, Ketosis, Jaundice, Phenyl ketonuria, Alkaptonuria. Dehydration: definition, causes, symptom and prevention.

UNIT-III: Enzymes

Definition, classification of enzymes with one example. Mechanism of enzyme action - Lock and key mechanism, Induced Fit theory. Michaleis-Menton equation. Enzyme inhibition: competitive, uncompetitive and non competitive. Biological functions of enzymes.

UNIT-IV: Molecular Biology

Central dogma of molecular biology. DNA and RNA act as genetic material. Replication: Definition, types, mode of action of replication, mechanism of replication. General mechanism of transcription and translation. Genetic code.

UNIT-V: Vitamins

A brief outline of source, requirement, biological function and deficiency of Vitamins (fat soluble and water soluble vitamins).

References:

1. Lehninger Principles of Biochemistry-David L. Nelson, Michael M. Cox, Macmillan worth Publishers.
2. Harper's Biochemistry-Robert K. Murray, Daryl K. Grammer, McGraw Hill, and Lange Medical Books. 25th edition.

5. Biochemistry-Dr. Ambika Shanmugam, Published by Author.
6. Biomolecules-C. Kannan, MJP Publishers, Chennai-5.

ALLIED PRACTICAL
BIOCHEMISTRY I & II

PRACTICAL I

Volumetric Estimation

1. Estimation of HCl using Na2CO3 as link and NaOH as primary standard.

2. Estimation of Iron in Ferrous Ammonium Sulphate using potassium permanganate as link solution and oxalic acid as primary standard.

3. Estimation of Glucose by Benedict's method.

4. Estimation of Glycine by formal titration.

5. Estimation of Ascorbic acid.

****

SEMESTER III
PAPER - 3
IMMUNOLOGY

Objective:

To make the students to understand the immune system

UNIT-I

History of Immunology - Immunohaematology. Blood groups - Blood transfusion - Host parasite relationships. Microbial infections.

UNIT-II

Structure and function of the cells, tissues and organs of immune system. Types of immunity - Humoral and cell-mediated, innate, acquired immunity. Complement system - function and pathways.

UNIT-III

Antigen - types, properties. Hapten, adjuvants, Immunoglobulins: Structure types properties and their function - Theory of antibody production.

UNIT-IV

Vaccines and Immunization - Types and their characteristics. Monoclonal Antibody - Hybridoma Technology. Cell mediated immune response - Lymphokines, Cytokines.

UNIT-V

Antigen-antibody interaction in vitro Agglutination, complement fixation, Precipitation, ELISA, RIA, Flow cytometry and Fluorescence immunoblotting – Hypersensitivity. Skin tests (In vivo).

Text Books:

1. Roitt, I.M (1998) Essential Immunology Blackwell Scientific Publishers.
2. Kuby, J. (1994) Immunology, 2nd edition, W.H. Freeman and Company. New York.
3. Leffel, Donnenberg, A: and rose, W.1997 hand book of human Immunology Boca Raton Fla: C.R.C Press.
4. Ajoy Paul (2016). Text Book of Immunology, Books and Allied (P) Ltd, Kolkatha.
5. Sudha Gangal and Shubhangi Sontakke, (2013) Text Book of basic and clinical Immunology, Universities Press (India) Private Ltd.

Reference Book:

1. Abbas, A.K. Lichtman, A.M. and Pober, J.S. (1997) Cellular and Molecular immunology 3rd edition Philadelphia: W.B. Saunders.

ALLIED - 2
PAPER - 3
HUMAN ANATOMY AND PHYSIOLOGY

Objective: To make the students to understand the importance of human anatomy.

UNIT-I: Respiratory System (RS) and Special Sensory Organs (SSS)

Introduction to applied human anatomy and physiology.

Respiratory System (RS): Different organs of the Respiratory System. Functions of the different organs of the Respiratory System.

Special Sensory Organs (SSS): Introduction to special sensory organs. Function and functions of eye, ear, nose, tongue, and skin.

UNIT-II: Gastro Intestinal (GI) System

Gastro Intestinal (GI) System: Different organs associated with the Gastro Intestinal system: (Salivary glands, Pancreas, Liver and Gall bladder and others).

UNIT-III: Musculoskeletal System (MSS), Skin and Nervous System (NS)

Musculoskeletal System (MSS) and Skin: Introduction of musculo-skeleton system. Different parts of involved in skeleton system. Function of skeleton. Parts and function of skin.

Nervous System (NS): Introduction to nervous system. Different organs and function of central nervous system (CNS) and peripheral nervous system PNS and related to infection

UNIT-IV: Circulatory System (CS) and Endocrine System (ES)

Circulatory System (CS): Blood: Site of formation, composition, functions of blood cells, Different parts of the circulatory system and its function.

Endocrine System (ES): Introduction to endocrine system.

UNIT-V: Reproductive System (RS) and Urinary System (US)

Reproductive System (RS): Introduction Male reproductive system – physiological anatomy, spermatogenesis and its regulation, testicular hormones, composition of semen Female reproductive system – menstrual cycle, pregnancy and parturition, lactation and family planning.

Urinary System (US): Different organs and Functions of Urinary System.
Mechanism of urine formation and composition of urine.

Text books:

1. Sampath Madhyastha, (2016) Manipal Manual of Anatomy, 3rd Edition, CBS Publishers and Distributors Pvt Ltd. Chennai.

6. Guyton AC and Hall JE. Guyton Human Physiology and Mechanisms of Disease. Hartcourt Publishers, Limited, 1996.
7. Williams PL (Ed). Gray' anatomy, Churchill Livingstone, London.

SKILL BASED SUBJECT
PAPER - 1
HEMATOLOGY AND BLOOD BANKING

UNIT-I

Blood: Definition, Characters, Composition. Collection of Blood - Capillary Blood: from Adults / Infants, Examinations employed. Advantages/Disadvantages - venous blood: from Adults / Infants, Examinations employed Advantages/Disadvantage. Anticoagulants: Definition - Type: Wintrobes /EDTA /Heparin /Citrate, Concentration, Examinations, Advantages /Disadvantage.

UNIT-II

Counting of Blood Cells: Neubaeur counting chamber - Total RBC count : diluting fluids , Macro dilution / Micro dilution technique , Falsely Law and High Counts , Normal values - Total WBC count : diluting fluids , Macro dilution / Micro dilution technique , Falsely Law and High Counts , Normal values - correction for TWBC - Absolute Eosinophil count - Differential Leucocyte count: Granulocyte / Agranulocytes, Morphology / Function, Staining Technique - Platelet Count : Morphological characters / Functions , Direct /Indirect method - Reticulocyte count, Dry/ Wet smear technique. Haemoglobin: Composition/Normal Values: Determinations: Tallqvist/Acid Haematin /Alkaline Haematin, Haldane's Carboxy/Drabkins /Dare, Spencers/Specific gravity/ Gasometric, Chemical.

UNIT-III

Coagulation Mechanism: Factors: Bleeding time, Clotting time. Halmotological indices:- Packed cell volume : Wintrobes / Micro HCT method - Mean corpuscular Volume - Mean corpuscular haemoglobin - Mean Corpuscular haemoglobin concentration - Volume index- volume thickness index - Mean corpuscular diameter - saturation index. Erythrocyte sedimentation etc, Principle-Determination: introbes / Westegren Method - advantages / disadvantages - Factors influencing.

UNIT-IV

Preparations of stains and staining techniques: Wright stain - Leishmans stain - Gienisa's stain -Jaswanth singh and Bhattarcharji stain - Fields stain - Peroxidase stain: Examination of Blood smear:-Peripheral smear report: Size/colour/shapes/inclusions -Blood parasites: Malarial parasite/Microfilaria.

UNIT-V

ABO Grouping: History/Discovery - slide / Tube technique - Rh. Typing: Slide / Tube technique, Bovine replacement technique - Coombs test: Direct /Indirect - Donor screening - Cross matching: Major / Minor - Collection Of blood / preservation /storage.

NON-MAJOR ELECTIVE
PAPER - 1
COMPUTER APPLICATIONS IN BIOLOGY

Objective

To make the students to understand the applications of computers in biology.

UNIT-I

Introduction to Computers. History of Computers, Basic Anatomy of Computers.

UNIT-II

Input and output devices, hardware and software. Operating system. MS Windows, Desk top publishing: MS Word, Data bases and graph generation: MS-Excel, project presentation: MS-PowerPoint.

UNIT-III

Programming in C (Basic) Introduction, simple programs, Decision is making and looping, functions, structures, input and output filing system.

UNIT-IV

Basic of WEB Design using HTML: Basic HTML, text styles, list and special characters, adding pointers and links, adding pictures, backgrounds and music, tables and frames.

UNIT-V

Computers in Taxonomy and Systemic Data Analysis in Microbiology. Computers in clinical microbiology - Computer applications in fermentation - Technology Computers in Drug - Designing using various software's in Drug designing.

Text Books:

1. Dave Taylor 1995 HTML. Tata McGraw - Hill Publishing Company Ltd, New Delhi

2. Paul McFedries 1997. Microsoft office 97 sams publishing techmedia, New Delhi.

3. Rajagopalan 1987. Understanding Computers Tata McGraw-Hill Publishing Company Ltd, New Delhi.

4. Sharon Crawford 1998. Windows 98 No Experience Required. BPB publications, New Delhi.

5. Yashwant Canetrar 1980. Let us C. BPP Publishers, New Delhi.

SEMESTER IV
PAPER - 4
MICROBIAL GENETICS

Objective:

To make the students to understand the genetics of microbes.

UNIT-I

Genetics - Historical Introduction - Discovery of DNA structure and organization of DNA and RNA - DNA and RNA as genetic material - Genetic code.

UNIT-II

Organization & functioning of prokaryotic genome plasmids - Structure and types - Replication of DNA.

UNIT-III

Gene transfer mechanism - transformation, transduction, Conjugation.

UNIT-IV

Oncogenes and cancer - Mutation - its types, transforming viruses carrying oncogenes - Retroviral oncogenes - Immortalization & transformation.

UNIT-V

RNA and Protein synthesis in prokaryotes and eukaryotes. Operon concept - Lac & Try Operon. Mutagenesis - Mutation - Mutants - Types of mutants - DNA repair mechanism.

Text Books:

1. Lodish, H. Baltimore Daerk . A. Zipsury, S.L. Marsudaisa. P. Darnel. J. (1995) Molecular cell biology.

2. Gardner- Simon snustad Principles of genetics, 8th Edition. John Wiley & sons. Inc. New York.

Reference books:

1. Maloy, S.R. Cronan Jr. J.E, Freifelder D (1994), Microbial genetics. Jones and Barlett publishers.

2. Ajoy Paul (2011). Text Book of Genetics- from Genes to Genomes, Books and Allied (P) Ltd, Kolkatha.

CORE PRACTICAL - 2
PAPER 3 & 4

Objective:

To impart hands on training on immunology and microbial genetics.

1. Blood groups and Rh. typing coomb's test.

2. Precipitation reaction in gel. Ouchterlony double immuno diffusion test, single redial immuno diffusion test.

3. VDRL, RPR

4. Agglutination reactions: Slide and Tube methods RBC agglutination IHA, TPHA, Bacterial agglutination: Widal, typing of bacteria Latex agglutination: RA, ASLO (Latex) B HCG.

5. Complement fixation test. Titration of amboceptor complements (Demonstration only)

6. Immunofluorescence, ELISA (Demonstration only).

7. Isolation of Buffy coat, using heparin lymphocytes (T cells, B cells) enumeration of different cells types, Peripheral blood cell counts, absolute cell counts.

8. Antibody productions in rabbits against sheep RBC and its titration (Demonstration only).

9. Anaphylactic reactions in guinea pigs. Authorities' reaction in rabbits. (Demonstration).

10. Skin tests. Both immediate and delayed hypersensitivity reactions of egg proteins, bacterial, fungal antigens.

ALLIED - 2
PAPER - 4
BIOSTATISTICS

Objective:

To make the students to understand the biostatistics.

UNIT-I

Nature and scope of statistical methods and their limitations - compilation Classification and tabulation of statistical - data.

UNIT-II Events and sets - samples space - concepts of probability - Addition and multiplication theorem on probability - conditional probability and independence of events.

UNIT-III

Coefficient of correlation - scattered diagram - regression lines.

UNIT-IV

Standard distributions - Binomial Poisson and normal distributions - Standard distributions - Binomial Poisson and normal distributing. To test based on normal - t, Chi - square and R- non parametric test run median, Sign, Mann, Whitney and Wilcox signed rank test.

UNIT-V

Principles of scientific experiment Randomization replication and local control Analysis of Variance - One way and two way classifications.

ALLIED PRACTICAL-2
(Subjects covering Paper- Allied - 2 Paper – 3 only)

HUMAN ANATOMY AND PHYSIOLOGY

Objective:

To impart hands on training on human anatomy and physiology

1. Absolute Eosinophil Count
2. Demonstration of ECG/Echo and its interpretation techniques.
3. Determination of Bleeding Time and Clotting Time
4. Determination of Erythrocyte Sedimentation Rate
5. Determination of Specific Gravity of Blood
6. Estimation of Bile Salt
7. Estimation of Hemoglobin Concentration
8. Estimation of Urine albumin,
9. Estimation of Urine sugar
10. Hair perforation Test
11. Measurement of Pulse, BP
12. Preparation and Examination of Blood smear
13. Serum cholesterol analysis
14. Serum Sugar analysis
15. Study of different histological slides
16. Total Platelet count

Reference books:

1. Rajan. S and Selvi Christy (2010). Experimental Procedures in Life Sciences, Anjanaa Book House Publishers, Chennai.
2. Pal, G.K and Pravathi Pal (2016), A text book of Practical Physiology, 4th Edition Universities Press (India) Pvt Ltd.

SKILL BASED SUBJECT
PAPER - 2
VERMITECH

UNIT-I

General properties of the soil - structure of the soil -sand, clay, salt, types of soils - soil organisms.

UNIT-II

Physical properties of soil - soil colour, soil moisture, soil temperature, bulk density of soil, chemical properties of soil PH, Electrical conductivity, organic, Nitrogen, Phosphate and potash.

UNIT-III

Soil biota -Earthworms -Ecological classification of earth worms as Epigeics - Introduction to earthworm biology -physical and chemical effects of earth worms on soils - Role of earthworms in soil -classification of earthworms based on ecological strategies- Burrowing activity of earthworms- Drilospheres -Microorganisms and their relationship with earthworms.

UNIT-IV

Composing -anaerobic composing, aerobic composing, types of composing, vermicompost- earthworm species used in vermicompost production - endemic species, exotic species.

UNIT-V

Vermicopost -setting up vermicompost quality N, P, K, C, N, Microbial quality applications - vermiculture -vermiwash -role of vermicompost in organic farming - its quality and advantages over chemical inputs. Earthworms in Bio-reclamation of soil. Problems in vermiculture units - remedial suggestions. Vermicomposting as a tool for solid waste management - a small scale industry and its economics.

Reference Books:

1. Brady, C.N, 1974 "The Nature and Properties of soils" Macmillan publishing Co. New York, London. 2. Edwards, C.A., and Bohlen, P.J., 1996. Biology and Ecology of Earthworms, Chapman and Hall, London Ismail, S.A., 1997, Vermicology: The Biology Earth worm Orient Longman.

4. Satchell, J.E., 1983 Earthworm ecology: From Darwin to Agriculture. Chapman and Hall, London StephensonJ., 1923. The fauna of British India -Oligo.

NON MAJOR ELECTIVE
PAPER – 2
HUMAN MICROBIAL DISEASES, CAUSES AND CONTROL

UNIT I:

Morphology, pathogenicity and laboratory diagnosis of Gram positive organisms, *Staphylococcus aureus, Streptococcus pyogenes, Bacillus anthracis, Corynebacterium diphtheriae, Clostridium perfringens, Clostridium tetani*. Morphology, pathogenicity and laboratory diagnosis of Gram negative organisms - *Escherichia coli, Klebsiella pneumoniae, Proteus mirabilis, Salmonella typhi, Shigella dysentriae, Pseudomonas aeuruginosa, Vibrio cholerae*.

UNIT II:

Morphology, pathogenicity and laboratory diagnosis of *Mycobacterium tuberculosis, Mycobacterium leprae, Treponema pallidum, Leptospira icterohaemorragens, Chlamydia trachomatis, Rickettsia rickettsi.*

UNIT III:

Mycology, superficial infections – Dermatophytes – *Microsporum – Trichophyton, Epidermophyton* – Madura mycosis – Opportunistic fungal infections – *Candida albicans, Aspergillus, Mucor.*

UNIT IV:

Parasitic diseases – *Plasmodium vivax, Giardia, Taenia solium, Ancylostoma, Ascariasis, Wuchereria bancrofti, Enterobius, Trichuris trichura*.

UNIT V:

Antibiotics and chemotherapeutic agents – mechanism of actions – Drug resistance – Antimicrobial susceptibility testing – Disc diffusion – Kirby Bauer - MIC, MBC, Serum killing power.

Text books:

1. Ananthanarayanan, R. and C.K., Jayaram Paniker, Textbook of Microbiology. Orient Longman, 5th Edition, (1994).
2. Jawetz, E., Melnic, J.L. and Adelberg E. A., Review of Medical Microbiology Lange Medical publications, USA, 4th Edition, (1998).

2. Chakraborty, P. A text book of microbiology, New central Book agency pvt Ltd. Calcutta, 2nd Edition, (1995).
3. Bailey and Scotts, Diagnostic Microbiology, Baron and Finegold CV Mosby publications, 9th Edition, (1994).

SEMESTER V
PAPER - 5
MOLECULAR BIOLOGY AND GENETIC ENGINEERING

Objective

To make the students to understand the molecular biology and genetic engineering.

UNIT-I

Historical perspectives - Synthetic DNA, DNA amplification technique - PCR.

UNIT-II

Preparation of genomic library, DNA library, gene cloning system, vectors enzymes, expression system.

UNIT-III

Application of genetic engineering in medical field - genetherapy, vaccines preparation, Hybridoma and monoclonal antibody techniques.

UNIT-IV

Application in agricultural field - Production of biotechnological products. Food - SCP (algae, yeast, mushrooms, Biopesticide) 'Nif' gene - transfer - development of resistant plant variety,

UNIT-V

Application in Pharmaceuticals - antigens, interferons, vaccines, insulin, Social impact of recombinant DNA technology.

Text Books:

1. Old, R.S. and Primrose, S.B. (1995) Principles of Gene manipulation. An introduction to genetic Engineering. 5th Edition. Blackwell Scientific Publication, London.

2. Lodish, H. Baltimore Daerk . A. Zipsury, S.L. Marsudaisa. P. Darnel. J. (1995) Molecular cell biology.

Reference Books:

1. Click. B.R. and-Pasternat J.J. (1994) Molecular Biotechnology. ASM press. Washington DC.

2. Benjamin Lewin (1997) Genes VI, Oxford University Press.

3. Ajoy Paul (2007). Textbook of Cell and Molecular Biology, Books and Allied (P) Ltd, Kolkatha.

PAPER - 6
MEDICAL BACTERIOLOGY

Objective:

To make the students to understand the medical bacteriology.

UNIT-I

Normal microbial flora of human body; General attributes and virulence factors of bacteria causing infections. Host Parasite relationships.

UNIT-II

Specimen Collection, Transport and Storage; Specimen processing. (Blood, Urine, GSF, Sputum, other body fluids)

UNIT-III

Classification morphology, cultural characteristics, pathogenicity, epidemiology, laboratory diagnosis, treatment, prevention and control of diseases caused by: Staphylococci, Streptococci, Pneumococci, Neisseriae (Gonococci and Meningococci), Corynebacterium, Mycobacterium, Clostridium, Bacillus, Pseudomonas and Haemophilus.

UNIT-IV

Human Pathogens - of Salmonella, Shigella, Vibrios, Brucella, Bordetella, Escherichia, Gramnegative anaerobes, Spirochaetes, Rickettsiae, Chlamydiae, Mycoplasmas and Ureoplasmas.

UNIT-V

Zoonotic diseases and their control; Hospital acquired infections and their control; Hospital waste disposal; Ethical committee and their functions.

Text Books:

1. Ananthanarayanan R. and Jayaram Panicker C.K. (1994). Text book of Microbiology. Orient Longman.
2. Balasubramanian, A. and Senthil kumar, P.K, (2017) Medical Microbiology. Darshan Publication, Rasipuram.
3. Salle, A.J. (1992). Fundamental Principles of Bacteriology. 7th Edition, Mc. Graw Hill Publishing Co. Ltd., New York.
4. Baron, E.J. and Finegold S.M. (1995). Scientific Company. Diagnostic Microbiology. Blackwell Scientific Company.

Reference Book: 1. Bergeys Manual of determinative Bacteriology.

PAPER - 7
MEDICAL VIROLOGY, MYCOLOGY AND PARASITOLOGY

Objective

To make the students to understand the medical virology, mycology and parasitology.

UNIT-I

General properties of viruses - Detection of viruses and antigens in clinical specimens - Serological diagnosis of virus infections. Cultivation of viruses. Structure & properties of viroids, prions.

UNIT-II

Arthropod borne and rodent borne virus diseases - Picorna viruses and diseases, Hepatitis viruses-Rabies and other neuro viruses - Orthomyxo and paramyxo viruses. Pox, Adeno, Horpes, Reo, Rota and AIDS viruses. Oncogenic viruses. Viral vaccines, their preparation and their immunisation schedules. Viruses of importance to plants and soil.

UNIT-III

Viruses of importance to bacteria - Bacteriophages - Their structure, types - Uses in Microbiology - Typing and application in bacterial genetics.

UNIT-IV

General Introduction Morphology and taxonomy of fungi of medical importance. Detection and recovery of fungi from clinical specimens. Dermatophytes and agents of superficial mycoses. Yeasts of medical importance dimorphic fungi causing systemic mycoses.

UNIT-V

Classification Morphology, Pathogenicity, lab diagnosis of common protozoan diseases - Amoebiasis, Giardiasis, Balantidiosis, Trypanosomiasis, Malaria, Toxoplasmosis, Leishmaniasis. Classification Morphology, Pathogenicity, lab diagnosis of common parasitic metazoan diseases – Ascariasis, Hook worm, Filariasis, Hydatidosis, Taenia infection.

Text Books:

1. Rajesh Karykarte and Ajit Damle (2003). Medical Parasitology, 3rd Edition. Books and Allied (P) Ltd, Kolkatha.

ELECTIVE
PAPER - 1

HERBAL TECHNOLOGY

OBJECTIVES

To enable the students to understand the basic knowledge in Herbal technology.

UNIT - I

Pharmacognosy: Pharmacology - Definition and history, Indian systems of medicine - Siddha, ayurvedha, and Unani systems. Taxonomy of locally available medicinal plants, their chemical constituents and medicinal uses - Classification of Crude drugs - Chemistry of Drugs - Future of pharmacognosy.

UNIT - II

Classification of medicinal plants - Vernacular name and family - Geographical source, cultivation, collection, and processing for market and commerce in crude drugs. Morphological and histological studies, chemical constituents - Therapeutic and other pharmaceutical uses. Underground stem - ginger, Alpinia - Roots - Rauolfia - Belladona - Aerial parts - Bark - Cinchona.

UNIT - III

Leaves - Adathoda, Eucalyptus - Flower - Clove fruits seeds - Nux vomica Nutmegs, Gooseberry - unorganized drugs - Gum - Acacia - Resin - Turpentine, fixed oil - castor oil.

UNIT - IV

Herbal medicines for Human ailments - Drugs acting on cardiac diseases, cerebral diseases, Nasal, diseases - Blood pressure Drugs acting on Nervous system - Depressants. - stimulants - Respiration and Drugs - Urogenital system and drugs - Psychoactive plants.

UNIT - V

Propagation of medicinal plants - Micro and macro propagation conservation of rare medicinal plants Role of biotechnology in medicinal plants banks - cultivation of medicinal and aromatic plants - Drug adulteration - methods of Drug evaluation, Herbal food - Food processing - packaging - Herbal sale and Export of medicinal plants - marketing - Intellectual property rights - Export laws.

Reference books:

7. Kokate, C.K., Durohit, A.P. and Gokhale, S.R., Pharmacognosy by 12th edition - Nirali Prakasham Publishers, Pune.
8. Kumar N.C. (1993) Introduction to Medical Botany and Pharmacognosy.
9. Nadkarni (1981) Indian Materia Medica.
10. Shah, S.C. and Qudary (1990). A text book of Pharmacognosy.

SKILL BASED SUBJECT
PAPER - 3
MUSHROOM-CULTURE TECHNIQUES

UNIT-I

Edible and non-edible mushroom (Historical account, most commonly cultivated mushrooms in the world, distribution and production in various countries).

UNIT-II

Cultivation of button mushroom -morphology raising a pure culture & spawn preparation. Preparation of compost & cultivation of Agaricus bisporus, Pleurotus flabelltus, harvest.

UNIT-III

Cultivation of oyster and paddy straw mushroom - preparation of pure culture & spawn cultivation methods, harvest.

UNIT-IV

Pests and diseases of Edible mushrooms (Environmental, fungal, bacterial, viral, insect pests and Nematode diseases and competitor moulds.

UNIT-V

Economics of mushroom cultivation (fixed assets, recurring expenditure, labour, economics of cultivation throughout the year and seasonal growing formulation of project report for getting finance from funding agencies). Precautions in mushroom cultivation (precaution to be taken while selecting the area, spawn preparation, spawn run, during cropping harvesting etc.). Mushroom recipes (western and Indian recipes, pickles, powders, jams etc.

Reference books:

1. Changs. T. W.A. Hayanes 1978. "Biology and cultivation of Mushrooms" Acad Press.N.Y.

2. Zadrazil. F & K. Grabbe 1983 "Edible Mushroom, Biotechnology" Vol. 3, Weinheim: Verlag Chemie, Berlin.

3. Kannaiyan. 2001. Handbook of Edible Mushrooms" TNAU Publication.

SEMESTER VI
PAPER - 8
FOOD MICROBIOLOGY

Objective

To enable the students to understand the microbes in the food.

UNIT – I

Food as a substrate for microorganisms - factors affecting the growth of micro-organism in food. Mold, yeast and bacteria- general characteristics, classification & importance.

UNIT – II

Principles of food preservation – Methods of food preservation – asepsis, removal of microorganism anaerobic conditions, high temperature- low temperature, drying and food additives – Canning.

UNIT – III

Contamination and spoilage of milk and milk products, meat and meat products, fish and fish products, vegetables and fruits and canned food.

UNIT – IV

Fermented foods – Bread, malt beverages, Beer & wine, vinegar, fermented vegetables – Fermented Dairy products. Microorganisms as food –SCP.

UNIT –V

Food bore disease – food borne infections and intoxication – laboratory testing – preventing measures - food sanitation – plant sanitation.

Text books:

1) Frazier, W.C and Westhoff, D.C (1988). Food microbiology, 4th edition, Tata Mac Graw Hill, New Delhi.

2) Adams, M.R and Moss M.O (1995) Food Microbiology New Age International (p) Limited Publishers.

3) Banwart, G.J., (1989). Basic Food Microbiology, 2nd Edition CBS Publishers and Distributors, New Delhi.

4) Robinson R.K (1990) Dairy Microbiology, Elsevier Applied science, London.

5) Hobbs BC Roberts D (1993). Food Poisoning and Food Hygiene Edward Arnold, London.

PAPER - 9

SOIL, AGRICULTURAL AND ENVIRONMENTAL MICROBIOLOGY

Objective

To enable the students to understand the microbes in the Agriculture and environment.

UNIT-I

Soil – physical and chemical properties of soil – types of sil – Microflora of soil.

UNIT-II

Biogeochemical cycles – carbon, nitrogen, phosphorus, sulphur and iron. Organic matter decomposition - Composting & Vermicomposting. Biopesticide (Bacterial, Viral & Fungal).

UNIT-III

Microbial interaction between microorganisms, plants and animals – Rhizosphere, phyllosphere. Rumen microbiology.

UNIT-IV

Microbiology of air – Sources of microorganisms in air – Assessment of air quality – air sampling techniques – Enumeration of air borne organisms – air borne diseases – air sanitation.

UNIT-V

Aquatic Microbiology – Ecosystems – Fresh water (Ponds, Lakes, Streams, Marine, Esturies, Mangrooves, Deep sea). Microbial assessment of water quality – Water purification. Water borne diseases. Waste treatment – Solid and liquid waste treatment.

Text Books:

1. Alexander. (1997). Introduction to soil Microbiology. John Wiley and Sons. N.Y.

2. Subba Rao, N.S. (1995) .Soil Micro organisms and plant growth, Oxford and IBH publishing Co. Pvt. Ltd.

3. Subba Rao, N.S. (1995). Biofertilizers in Agriculture and Forestry. 3rd Edition. Oxford and IBH publication Co. Pvt. Ltd., New Delhi.

PAPER - 10
INDUSTRIAL AND PHARMACEUTICAL MICROBIOLOGY

Objective

To enable the students to understand microbial processes in industries and pharmaceutical companies.

UNIT-I

Industrially important microbes and their products, screening, strain development strategies.

UNIT-II

Food fermentations and food produced by microbes, bread, fermented dairy products. Microbial cell as food, feed, SCP.

UNIT-III

Bioreactors – Structure and types. Fermentation media, media sterilization, Types of fermentation (Batch and Continuous) and downstream processing.

UNIT-IV

Microbial productions of citric acid, lactic acid, acetic acid, alpha amylase. Ethanol. Production of pharmaceutical compounds through microbes – TPA, Insulin, Recombinant Vaccines.

UNIT-V

Tannery technology – Tanning – types of tanning – chrome tanning and vegetable tanning. Tanning Process (pre tanning, tanning, post tanning and finishing). Treatment of tannery effluents by microbes.

Text Books:

1. Hugo, W.B., Russell, A.D, pharmaceutical Microbiology 4th edition. Blackwell scientific publications / Oxford.
2. Balasubramanian D, Bryce CFA, Dharmalingam K, Green J, Jayaraman K. (1996). Concepts in Biotechnology, University Press, India.
3. Satyanarayana.U, Biotechnology, Books and Allied (P) Ltd, Kolkatha: 2005.
4. Glazer AN, Nikaido H. (1994) Microbial Biotechnology - Fundamentals of Applied Microbiology WH Freeman and Company, New York.
5. Arumugam, N. and Kumaresan, V. (2016) Fundamentals of Biotechnology, Saras Publication, Nagercoil.

Reference Books:

1. Russell and Ayliffe, G.A.J (1982) Principles and practice of Disinfection, preservation and sterilization Oxford:

2. Gregory P.H. Microbiology of the atmosphere, 2nd edition. Leonard Hill.

3. Mann, I. Process of utilization of Animal by products, FAO Rome 1962.

4. Scaria .K.J. Mahendrakumar and Divakaran, S. Animal byproducts – Their processing and utilization, CLRI, Madras, 1961.

CORE PRACTICAL - 3

PAPERS 5, 6 & 7

Objective

To impart hands on training on molecular biology, genetic engineering and medical microbiology.

1. General requirements of collections, transport of clinical specimens Direct examinations - staining of specimens, - Methods of enriched, selective and enrichment culture techniques used to isolate organisms from clinical materials.
2. Wet mounts examinations of stool for parasites. Cholera stool, vaginal specimens for Trichomonas.
3. KOG and Lacto phenol preparations for skin scrapings, for fungi and for scables mites.
4. Simple, differential and special staining of clinical materials viz. Throat swab, vaginal swab, slit smears, pus, urine, sputum, stool etc.,
5. Enumeration of Bacteria in urine. Quantitative test for yeasts.
6. Estimation of worm burden in stool. Floatation and sedimentation techniques of stool examination.
7. Germ tube, Assimilation, fermentation tests for yeasts.
8. Isolation and identification of bacterial pathogens from clinical specimens their biochemical reactions.
9. Antimicrobial sensitivity testing and determination of MIC and quality control.
10. Identification of pathogenic microbes including viruses in slides / smears / specimens as spotters.

CORE PRACTICAL - 4

PAPERS - 8 & 9

Objective

To impart hands on training on microbes of food, agriculture and environment and industrial and pharmaceutical microbiology.

1. Water analysis by MPN technique Presumptive coli forms test Confirmed coli forms test Completed coli forms test.

2. Isolation of microorganisms from air - air sampler technique - settle plate method.

3. Isolation and counting of fecal bacteria from water.

4. Detection of bacteria in milk by SPC - Dye reduction test Detection of number of bacteria in milk.

5. Litmus mil reaction. 6. Isolation of lactobacilli and staphylococcus from curd.

7. Azolla - Morphological study; Seed inoculation with rhizobia.

8. Isolation of bacteria and fungi from spoiled food. 9. Isolation of fungi from molting leaves.

ELECTIVE
PAPER - 2
BIOINOCULANTS TECHNOLOGY

UNIT- I

General account of the microbes used as biofertilizers for crop plants and their advantages. Symbiotic N2 fixers: Rhizobium - Isolation, characterization, identification, Classification, inoculum production and field application. Frankia - Isolation, characterization - actinorrhizal nodules - non-leguminous crop symbiosis.

UNIT- II

Non - Symbiotic N2 fixers - Azospirillum - Free living - Azotobacter - free isolation, characterization, mass inoculum production and field application.

UNIT-III

Symbiotic N2 fixers - Cyanobacteria, Azolla - Isolation, characterization, mass multiplication - Role in rice cultivation - Crop response – field application - immobilization.

UNIT-IV

Phosphate solubilizers - Phosphate solubilizing microbes - Isolation, characterization, mass inoculum production, field application - Phosphate solubilization mechanism.

UNIT-V

Mycorrhizal bioinoculants - classification - importance of mycorrizal Ectomycorzhizae - Endomycorrhizae - Ectendo mycorrhizae - Taxonomy of mycorrhizae - Isolation of VA mycorrhizae - Quantification and assessment of VAM in roots - Mass inoculum production of VAM - field applications of Ectomycorrhizae and VAM.

4. Subba Rao N.S (1995) Soil microorganisms and plant growth Oxford and IBH publishing co. Pvt. Ltd. NewDelhi.
5. Subba Rao N.S. (1988) Biofertilizers in Agriculture and forestry Oxford and IBH Publishing Co., Ltd., New Delhi.

ELECTIVE
PAPER - 3
FOOD ANALYSIS AND QUALITY CONTROL

Objectives: The paper focuses on physical, chemical, microbial and sensory analysis of food, concepts of quality control and quality management, national and international food loss and adulterants in various food products

UNIT-I

Sampling – Sampling techniques and preparation of food samples.

Techniques used in food analysis – Chromatography, Electrophoresis, Electrometric determinations, Refractometry and Polarimetry Spectrophotometry, Fluorimetry, Radio - active tracer techniques, Atomic absorption

UNIT-II

Physico chemical methods for food analysis - Moisture and Total solids, Carbohydrates, Proteins, Fats, Fiber, Ash and its types, Minerals, Vitamins. Enzymatic methods

Biological methods of food analysis - Standard plate count; Plate loop method; Spiral plate; Droplet technique; Dye reduction; Catalase test and ELISA. Testing of food for organisms such as *B. cereus, C. botulinum, E. coli, L. monocytogenes, S.aureus, Salmonella* and *Shigella.*

UNIT-III

Sensory assessment of food quality –Appearance of food, Flavor of food, Texture of food.

Sensory Tests – Difference, Rating and Sensitivity tests. Types of panels, Testing area and schedule.

Quality control of following food products – Milk and milk products, Oils and Fats, Cereal grains and flours, Fruits and vegetable products, Canned foods, Egg and egg products, Meat and Meat products

UNIT-IV

Food quality management – Objectives, Importance and Functions of quality control. Total quality, management, Good manufacturing practices, seven principles of HACCP and codex in food. Quality control, methods of – a. raw materials, b. manufacturing process and c. finished products.

UNIT-V

Food Safety – Role of voluntary agencies and legal aspects of consumer protection. National and International food laws – PFA, FDA, BIS, AGMARK, Essential Commodity Act, Export (quality and inspection act, Consumer protection act), Nutritional labeling requirements of foods, Food adulteration.

INDUSTRIAL VISIT: Food and Pharmaceuticals Industry and Report.

SKILL BASED SUBJECT
PAPER - 4
BIOINSTRUMENTATION

UNIT-I

Centrifuge: Basic principles of sedimentation – relative centrifugal force – Types of centrifuges (clinical, high speed, refrigerated and ultra). Centrifugation - Principles and various types – Applications.

UNIT-II

Calorimetry – principle, Beer – Lambert's law – Applications. Spectrophotometry – UV & Visible, Parts of a spectrophotometer – IR, NMR & Atomic absorption spectrophotometry – Applications.

UNIT-III

Chromatography – Paper, TLC, Column, Adsorption, Ion exchange, GC & HPLC – Principle & applications.

UNIT-IV

Electrophoresis techniques: proteins and nucleic acids – Types of electrophoresis – Paper, Gel, Immunoelectrophoresis.

UNIT-V

Radioisotopes and their applications. Radioisotopic techniques – RIA. Detection and measurement of radioactivity – GM counter, Scintillation counter, Autoradiography. Biosensor & its types.

Text books:

1. Keith Wilson and John Walker, 1994. Practical Biochemistry – principles and techniques. Cambridge Press, New York.

Industrial Visit (IV)

Factory Industrial Visit (M. Sc. Applied Microbiology)

Course Objectives: Students will be exposed to professional work environment to acquire the knowledge, independent working capacity and leadership so that at the end of the course they will be able to manage the laboratory and research work with full responsibility and reliability.

Factory Industrial Visit Guide Line: Internship will be conducted in an institute under the supervision of supervisor/s.

During the **Industrial Visit**, students should his/her visiting work should be submitted to the supervisor/department. A report of an industrial Visit should be submitted to the department after completion of the work should be authorized by the concerned supervisor of the institute/factory.

THIRUVALLUVAR UNIVERSITY

BACHELOR OF COMPUTER APPLICATIONS

SYLLABUS
UNDER CBCS

(with effect from 2017 - 2018)

SEMESTER I

PAPER – 1
Digital Logic &Programming in C

Objective :

Provide basic knowledge on Digital Electronics to understand the working principles of Digital computer and to develop programming skill using C language .

UNIT I: Number systems and Boolean Algebra

Number Systems -Decimal, Binary, Octal, Hexadecimal and their inter conversions, - Binary Arithmetic -1's complement, 2's complement and 9's complement .Binary codes - BCD, Excess-3, Graycode.

Boolean Algebra : Boolean Laws - Simplification of Boolean Functions - Logic gates and Truth Table – Universal Gates (NAND and NOR) - The K-map method up to five variables, don't care conditions, POS & SOP forms.

UNIT-II: Combinational and Sequential Circuits

Combinational Logic: Half/Full adder/subtractor , code conversion, Multiplexers,demultiplexers, encoders, decoders, Combinational design using MUX & DEMUX. BCD adder, magnitude comparator.**Sequential logic**: Flip flops (RS, Clocked RS, D, JK, JK Master Slave)-Counters & types Synchronous and Asynchronous counters- Registers, Shift registers and their types.

UNIT –III: C Basics and Control constructs

C fundamentals- Operators- Constants- Expression – Library functions- Decision making and branching- Switch- FOR,WHILE, DO WHILE loops- Continue- break

Unit IV: Arrays, Functions and Structures

Arrays-Multi dimensional arrays- User defines functions- Call by Value and reference- Recursion- Storage classes- Structures and Union –Self referential structures

Unit – V: Pointers and Files

Pointers- Pointer operations and Arithmetic- File management in C :File opening and closing- - I/O operations on files - Error handling during I/O operations - Random access to files - Command line arguments

Text Book:

1. Morris Mono M. "**Digital Logic and Computer Design**",PHI Latest Pub. Ed. (Unit I and 2)
2. ReemaThareja,**" Programming in C "** Oxford University Press

Reference Book

1. Albert Paul Malvino, Donald P Leach, **Digital principles and applications**TMH,1996.
2. Balagurusamy," Programming in C" TMH

CORE PRACTICAL – I

PROGRAMMING IN C- LAB

1. Summation of Series: Sin(x) (Compare with built in functions)
2. Summation of Series Cos(x) (Compare with built in functions)
3. Counting the no. of vowels, consonants, words, white spaces in a line of text
4. Reverse a string & check for palindrome without built in string function
5. ${}^{n}P_{r}$, ${}^{n}C_{r}$ in a single program using function
6. Matrix Addison, subtraction and multiplication
7. Linear Search of a number in an array
8. Sorting an array in ascending and descending order
9. Finding maximum and minimum of list of numbers
10. Call by value and call by reference of functions
11. Employee pay bill using structure
12. Preparing an EB bill using file

ALLIED

PAPER - I

MATHEMATICAL FOUNDATIONS - I

Objectives

To know about Logical operators, validity of arguments, set theory and set operations, relations and functions, Binary operations, Binary algebra, Permutations & Combinations, Differentiation, Straight lines, pair of straight lines, Circles, Parabola, Ellipse, Hyperbola.

UNIT-I: SYMBOLIC LOGIC

Proposition, Logical operators, conjunction, disjunction, negation, conditional and bi-conditional operators, converse, Inverse, Contra Positive, logically equivalent, tautology and contradiction. Arguments and validity of arguments.

UNIT-II: SET THEORY

Sets, set operations, venndiagram, Properties of sets, number of elements in a set, Cartesian product, relations & functions,

Relations : Equivalence relation. Equivalence class, Partially and Totally Ordered sets,

Functions: Types of Functions, Composition of Functions.

UNIT-III: BINARY OPERATIONS

Types of Binary Operations: Commutative, Associative, Distributive and identity, Boolean algebra: simple properties. Permutations and Combinations.

UNIT-IV: DIFFERENTIATION

Simple problems using standard limits,

$$\lim_{x \to a} \frac{x^n - a^n}{x - a}, \lim_{x \to 0} \frac{\sin x}{x}, \lim_{x \to 0} \frac{\tan x}{x}, \lim_{x \to 0} \frac{e^x - 1}{x}, \lim_{n \to \infty} (1 + 1/n)^n, \lim_{n \to 0} (1+n)^{1/n}$$

Differentiation, successive differentiation, Leibnitz theorem, partial differentiation, Applications of differentiation, Tangent and normal, angle between two curves.

UNIT-V: TWO DIMENSIONAL ANALYTICAL GEOMETRY

Straight Lines - Pair Straight Lines

Text Book.

P.R. Vittal, Mathematical Foundations – Maragham Publication,

Chennai.

Reference Books

1. U. Rizwan, Mathematical Foundation - SciTech, Chennai
2. V.Sundaram& Others, Dircrete Mathematical Foundation - A.P.Publication, sirkali.
3. P.Duraipandian& Others, Analytical Geometry 2 Dimension - Emerald publication 1992 Reprint.
4. Manicavachagompillay&Natarajan. Analytical Geometry part I - Two Dimension - S.Viswanathan (printers & publication) Put Ltd., 1991.

SEMESTER II

CORE THEORY PAPER – 2

C++ AND DATA STRUCTURE

Objective: To develop Object oriented programming skills using C++ and to introduce data structure concepts.

UNIT-I : Object Oriented Concepts and C++

C++ Fundamentals - Operators, Expressions and Control Structures: If, If..Else, Switch - Repetitive Statements- for, while, do..while - Input and Output in C++ - manipulators- manipulators with parameters. - Pointers and arrays

UNIT-II : Functions and Classes

Functions in C++ - Main Function - Function Prototyping - Parameters Passing in Functions - Values Return by Functions - inline Functions - Function Overloading.
Classes and Objects; Constructors and Destructors; and Operator Overloading - Type of Constructors

UNIT – III : Inheritance, Polymorphism & Files

Inheritance : Single Inheritance - Multilevel inheritance - Multiple inheritance - Hierarchical Inheritance - Hybrid Inheritance - Polymorphism - Working with Files : Classes for File Stream Operations - Opening and Closing a File - End-of-File Detection - Updating a File - Error Handling during File Operations .

UNIT-IV : Fundamental Data Structures

Definition of a Data structure - primitive and composite Data Types, Stacks (Array) - Operations –Linked Stack-Operations- Applications of Stack (Infix to Postfix Conversion).

Queue (Array)- operations-Linked Queue- Operations- - Singly Linked List - Operations, Application of List (Polynomial Addition)-. Doubly Linked List - Operations.

UNIT-V : Trees and Graphs

Trees: Binary Trees –Binary Search Tree- Operations - Recursive Tree Traversals- Recursion
Graph - Definition, Types of Graphs, Graph Traversal –Dijkstras shortest path- DFS and BFS.

Text Books

1. Mastering in C++, K.R.Venugopal, Raj Kumar, T.Ravisankar – McGraw Hill, 2011.
2. C++ Plus Data Structure by Nell Dale ,Narosa Publications, 2000

Reference Books:

1.ReemaThareja , Object Oriented Programming with C++, Oxford University Press, 2015

2. Balagurusamy, c++ programming, TMH.

3. Fundamentals of Data Structures in C++ by Ellis Horowitz, SartajSahni and Dinesh Mehtha, Second Edition, University Press

4. Data Structures using C++ byVarshaH.Patil. Oxford University Press, 2012

PRACTICAL – II

C++ & DATA STRUCTURE - LAB

1. Implementing classes, object, constructors and member functions for calculating area and perimeter of a circle.
2. Implementing function overloading(Find area/volume of rectangle, circle, sphere, cylinder, cone etc).
3. Implementing operator over loading(Addition, subtraction, multiplication of matrices)
4. Implementing single , multiple , hierarchical inheritance.
5. Implementing sequential file operations using error handling functions.
6. Implementing PUSH, POP operations of stack using Arrays.
7. Implementing add, delete operations of a queue using Arrays.
8. Implementing Infix to postfix conversion of an expression using stack
9. Implementing Binary tree recursive traversals (in-order, pre-order, and post-order).
10. Implementing Polynomial addition using linked list.

ALLIED II

MATHEMATICAL FOUNDATIONS II

Objectives

To know about Matrix Operations, Symmetric, Skew-Symmetric, Hermitian, Skew-Hermitian, Orthogonal, Unitary Matrices. Rank of a Matrix Solutions of linear equations Consistency and Inconsistency, Characteristic roots and Characteristics Vectors, Cayley - Hamilton Theorem, Integration of rational functions, Integration by parts, Reduction formulae, Area and volume using integration, Planes, Straight lines, Spheres, Curves, Cylinders.

UNIT-I: MATRICES

Multiplication of matrices, Singular and Non-Singular matrices, Adjoint of a Matrix, Inverse of a matrix Symmetric and Skew-Symmetric, Hermitian and Skew-Hermition, Orthogonal and unitary matrices, Rank of a matrix, Solution of Simultaneous Linear equations by

(i) Cramer's rule.

(ii) Matrix Inversion Method.

UNIT-II: MATRICES

Test for Consistency and Inconsistency of linear equations, (Rank Method), characteristic roots and characteristic vectors, Cayley - Hamilton theorem, matrix of linear transformations: reflection about the x, y axes and the line y=x, rotation about the origin through an angle, expansion or compression, shears, translation.

UNIT-III

Integration Simple problems, integration of rational function involving algebraic expressions of the form

$$\frac{1}{\sqrt{ax^2+bx+c}}, \frac{1}{\sqrt{ax^2+bx+c}\sqrt{ax^2+bx+c}}, \frac{px+q}{\sqrt{ax^2+bx+c}}, \frac{px+q}{\sqrt{ax^2+bx+c}}, \sqrt{px+q}$$

integrations using simple substitutions integrations involving trigonometric functions of the form

$$\frac{1}{a+b\cos x}, \frac{1}{a^2\sin^2 x+b^2\cos^2 x}$$

Integration by parts.

UNIT-IV

Properties of definite integrals. Reduction formulae for

$\int x^n e^{ax} dx$, $\int \sin^n x dx$, $\int \cos^n x dx$, $\int x^m (1-x)^n dx$, applications of integration for (i) Area under plane caurves, (ii) Volume of solid of revolution.

UNIT-V: ANALYTICAL GEOMETRY OF THREE DIMENSION

Planes, straight lines.

Text Book.

P.R.Vittal, Mathematical Foundations - Margham Publication, Chennai.

Reference Books

1. U. Rizwan, Mathematical Foundation - SciTech, Chennai
2. V.Sundaram& Others, Dircrete Mathematical Foundation - A.P.Publication, sirkali.
3. P.Duraipandian& Others, Analytical Geometry 3 Dimension – Emerald publication 1992 Reprint.
4. Manicavachagompillay&Natarajan. Analytical Geometry part II - three Dimension - S.Viswanathan (printers & publication) Put Ltd., 1991.

SEMESTER III

CORE THEORY PAPER – 3

JAVA Programming

Objectives:
To improve Object Oriented Programming gathered already through an independent platform.

Unit – I: BASICS, ESSENTIALS, CONTROL STATEMENT AND CLASSES & OBJECTS

Computer and its Languages – Stage, Origin and Features for Java - JDK–OOP; Java Essentials:Program – API - Variables& Literals - Data Types - String Class – Operators - Type conversion - Constants - Scope – Comments - Keyboard Input; Control Statements: Conditional Statements – Looping Statements - Break and Continue Statements; Classes and Objects: Modifiers - Arguments - Constructors - Packages and import - Static Class - Overloaded Methods and Constructors - Returning Objects – toString() - this reference – Enumeration - Garbage Collection.

Unit – II: ARRAYS, INHERITANCE, INTERFACES AND PACKAGES

Arrays - Three or More Dimensions; Inheritance: Basics - Calling the Superclass Constructor - Overriding Superclass Methods - Inheritance from Subclasses – Polymorphism -Abstract Classes and Methods - Interfaces: Fields - Multiple inheritance - Interface inheritance; Packages: Creating packages – Accessing package from other packages- Access Specifier.

Unit – III: STRING HANDLING, EXCEPTION HANDLING AND MULTITHREADING

String Handling: Basics - Operations –String Methods - String Buffer class - String Builder – to String method -String Tokenizer class. Exception Basics: try and catch block - Multiple catch block - Nested try - throws keyword - Throw vs Throws - Final vs Finally vs Finalize - Method Overriding - Custom Exception - Multithreading: Life Cycle - Methods in Thread - thread application – Thread priority – Synchronization - Inter-thread communication - Suspending, Resuming, and Stopping Threads;

Unit – IV: APPLET AND GUI APPLICATION

Applets: Basis - Lifecycle - Applet classes - Application – Graphics; AWT-I: GUI Programming - AWT classes - Windows fundamentals- Creating Windows - Dialog Boxes - Layout Managers - Radio Buttons and Check Boxes – Borders-Swing

Unit – V: JAVA DATABASE CONNECTIVITY

JDBC - Types of Drivers- Architecture- Classes and Interfaces - Developing JDBC Application - New Database and Table with JDBC - Working with Database Metadata.

Text Book

1. S.Sagayaraj, R.Denis, P.Karthik & D.Gajalakshmi, "Java Programming", Universities Press, 2017

References

1. Patrick Naughton and Herbert Schildt. "The Complete Reference JAVA 2". 3rd Edition. Tata McGraw-Hill Edition, 1999.
2. Muthu C. "Programming with JAVA". 2nd Edition. Vijay Nicole Imprints, 2011.
3. Ken Arnold Gosling and Davis Holmen. "The Java Programming Language". 3rd Edition. Addition Wesley Publication.

CORE THEORY PAPER – 4

E-Commerce

UNIT-I

Electronic Commerce Framework, Traditional vs. Electronic business applications, the anatomy of E-commerce applications.

UNIT-II

Network infrastructure for E-Commerce - components of the I-way - Global information distribution networks - public policy issues shaping the I-way.The internet as a network infrastructure.The Business of the internet commercialization.

UNIT-III

Network security and firewalls - client server network security - firewalls and network security - data and message security - encrypted documents and electronic mail.

UNIT-IV

Electronic Commerce and world wide web, consumer oriented E-commerce, Electronic payment systems, Electronic data interchange (EDI),EDI applications in business ,EDI and E-commerce EDI implementation.

UNIT-V

Intraorganizational Electronic Commerce supply chain management.
Electronic Commerce catalogs, Document Management and digital libraries.

Text Book

1. R. Kalakota and A. B. Whinston, Frontiers of Electronic Commerce, Addison Wesley, 1996.

Reference Books

1.R.Kalakota and A.B.Whinston,Readings in Electronic Commerce, Addison Wesley, 1997.
2. David Kosiur, Understanding Electronic Commerce, Microsoft Press, 1997.
3. E-Commerce and E-Business, P.Rizwan Ahmed, Margham Publications.

CORE THEORY PAPER – 5

RESOURCE MANAGEMENT TECHNIQUES

Objectives: To improve the skills of solving very common problems which we come across in various fields like transportation and industries with machines. To develop computational skill and logical thinking in formulating industry oriented problems as a mathematical problem and finding solutions.

UNIT – I: Introduction and Linear Programming

.

BASICS OF OPERATIONS RESEARCH: Development – Definition – Characteristics – Phases – Models – Advantages and Limitations **LINEAR PROGRAMMING :** Formulation – Graphical Method of Solution – General Linear Programming Problem – Canonical and Standard form of LPP – Simplex method.

UNIT – II: Transportation and Assignment Model

TRANSPORTATION MODEL : Definition – Formulation and Solution – Additional Problems **ASSIGNMENT MODEL :** Definition – Solution of Assignment Models – Hungarian Method – Additional Problems – Traveling Salesman problem.

UNIT – III : SEQUENCING MODLES

Sequencing Problems – Assumptions – Processing *n* jobs through two machines – Processing *n* jobs through three machines – Processing of two jobs through *m* machines.

UNIT – IV: REPLACEMENT MODELS

Introduction – Replacement of items that deteriorate – Replacement of items whose maintenance and repair cost increase with time – Replacement of items that fail suddenly – group replacement policy.

UNIT – V: NETWORKING ANALYSIS

Project – Project Planning – Project Scheduling – Project Controlling – Activity on Node diagram – Critical Path Method – Program Evaluation and Review Technique

TEXT BOOK

Operations Research, P. K. Gupta and D.S. Hira, , S. Chand & Co, 5th Edition,-2008.

REFERENCES:

1. Operations Research , S.D.Sharma-Kedarnath - Ramnath Delhi 16th Revised Edition, 2010.
2. Introduction to Operations Research, Hiller & Libermann , CBS Publishes, 1st Edition, 1994.

CORE PRACTICAL

Practical 3- JAVA Programming LAB

List of Practical's

1. Implementing Package, inheritances and interfaces
2. Implementing Flow, Border and Grid Layouts
3. Implementing Dialogs , Menu and Frame
4. Implementing User defined Exception Handling
5. Implementing Multithreading
6. Implementing I/O Stream File handling
7. Implementing a Calculator using Swing
8. CRUD operation Using JDBC
9. Client Server using TCP and UDP Socket
10. GUI application with JDBC

ALLIED - 2

FINANCIAL ACCOUNTING - I

Objective:

To gain knowledge of accounting in general and to understand the system of Financial Accounting.

Unit - I: Introduction

Meaning of accounting – objectives of accounting – advantages and limitations of accounting- Accounting concepts and conventions - Methods of accounting -Rules of debit and credit- Journal - Ledger accounts– Trial Balance - Errors and their rectification - Rectification of Errors without suspense a/c - Rectification errors with suspense a/c (effect of rectification on profit and rectification during subsequent accounting year are excluded) - Bank Reconciliation Statement.

Unit - II: Depreciation, Provisions and Reserve

Meaning of depreciation – causes for depreciation – need for charging depreciation – Methods of calculating depreciation: straight line method and written down value method (change in method of depreciation is excluded) – Methods of recording depreciation: by charging depreciation to assets account or by creating provision for depreciation account.

Unit - III: Bills of exchange

Meaning of bill of exchange - features and advantages of bill of exchange- types of bill of exchange: Trade bills and accommodation bills - Accounting treatment of trade bills (accommodation bills are excluded).

Unit - IV: Final accounts

Meaning of final accounts – adjustments in preparation of final accounts – preparation of trading, profit & loss account and balance sheet of sole proprietorship concern.

Unit V: Accounts from incomplete records

Meaning of single entry system – features and limitations of single entry system – Distinction between single entry system and double entry system - Methods of calculation of profit: Statement of affairs method and Conversion method **–** Distinction between statement of affairs and balance sheet.

Note: Questions in section A,B and C shall be in the proportion of 20: 80 between theory and problems

Text books

4. Murugadoss, Jaya, Charulatha and Baskar, Financial Accounting, Vijay Nicholes Imprint Pvt. Ltd., Chennai.

SKILL BASED SUBJECT – PAPER 1

DESIGN AND ANALYSIS OF ALGORITHMS

Objective: To build a solid foundation of the most important fundamental subject in computer science. Creative thinking is essential to algorithm design and mathematical acumen and programming skills.

UNIT -I: ALGORITHM AND ANALYSIS

What is an Algorithm? - Algorithm Specification- Performance Analysis- Randomized Algorithms.

UNIT - II: DIVIDE AND CONQUER

General Method - Binary Search - Finding the Maximum and Minimum-Merge Sort - Quick Sort - Selection Sort- Stassen's Matrix Multiplications.

UNIT - III: THE GREEDY METHOD

The General Method - Knapsack Problem – Tree Vertex Splitting - Job Sequencing with Deadlines- Minimum Cost Spanning Trees - Optimal Storage on Tapes - Optimal Merge Pattern - Single Source Shortest Paths.

UNIT - IV: DYNAMIC POGRAMMING

The General Method – Multistage Graphs - All pair shortest path - String Editing - 0/1 Knapsack – Reliability Design - The Traveling Salesperson Problem

UNIT - V: TRAVERSAL, SEARCHING & BACKTRACKING

Techniques for Binary Trees- Techniques for Graphs - The General Method - The 8-Queens Problem – Sum of Subsets- Graph Coloring- Hamiltonian Cycles

TEXT BOOK

Fundamentals of Computer Algorithms, Ellis Horowitz, SartajSahni, SanguthevarRajasekaran, GalgotiaPublications, 1998.

REFERENCE BOOKS:

1. Introduction to Algorithms ,Coremen T.H.,Leiserson C.E. and Rivest R.L., PHI 1998.

2. Introduction to the Design and Analysis of Algorithms, AnanyLevitin, Pearson Education, 2nd Edition.

NON MAJOR ELECTIVE – I

INTRODUCTION TO INFORMATION TECHNOLOGY

Objective:

To enable the student to be proficient with Information Technology with a better knowledge of Computer

UNIT – I

Introduction to Computers: Definition - Characteristics of a Computer - Classification of Computers -Basic Anatomy of the Computer - Applications / Uses of Computers in different fields

UNIT – II

Input and Output Devices: Input Devices - Output Devices - Data Representation - Programming Languages / Computer Languages - **Software**: System Software - Application Software

UNIT – III

Data Communication and Computer Networks: Data Communication - Computer Network - The Uses of a Network - Types of Networks - Network Topologies- Transmission Media: Guided Transmission Media - Wireless Transmission

UNIT – IV

Internet and its Applications : History of Internet - Uses of Internet - Advantages of Internet - ISP - Internet Services - IP Address - Web Browser - URL - DNS - Internet Explorer - Types of internet connections - E-mail - Search Engine.

UNIT – V

Operating System: Evolution of operating systems - Function of Operating System - Classification of Operating –System - Example of Operating System – DOS –Windows – UNIX - Linux

TEXT BOOKS:

1. Alexis Leon and Mathews Leon, "Fundamentals of Information Technology", Vikas Publishing House Pvt. Ltd.
2. Introduction to Information Technology, P.Rizwan Ahmed, Second Edition, Margham Publications, 2016
3. Introduction to Information Technology, PelinAksoy, Laura DeNardis, Cengage Learning India Private Limited.

SEMESTER IV

CORE THEORY PAPER – 6

DATABASE MANAGEMENT SYSTEM

Objective: To incorporate a strong knowledge on databases to students

UNIT - I Database Basics

Introduction: Flat File – Database System – Database – Actionable for DBA. The Entity – Relationship Model: Introduction – The Entity Relationship Model. Data Models: Introduction – Relational Approach – The Hierarchical Approach – The Network Approach.

UNIT – II Relational Algebra

Structure of Relational Databases – Fundamental Relational Algebra Operations –Additional Relational Algebra Opearations - Extended Relational Algebra Operations - Null Values - Modification of the Database - The Tuple Relational Calculus – The Domain Relational Calculus

UNIT – III Normalization

Normalization: Introduction - Normalization – Definition of Functional Dependence (FD) – Normal Forms: 1NF, 2NF, 3NF and BCNF.

UNIT – IV Structured Query Language

Structured Query Language: Features of SQL – Select SQL Operations – Grouping the Output of the Query – Querying from Multiple Tables – Retrieval Using Set operators – Nested Queries. T-SQL – Triggers and Dynamic Execution: Transact-SQL..

UNIT – V Procedural Language

Procedural Language- SQL: PL/SQL Block Structure – PL/SQL Tables. Cursor Management and Advanced PL/SQL: Opening and Closing a Cursor – Processing Explicit Cursor – Implicit Cursor – Exception Handlers – Sub Programs in PL/SQL – Functions – Precaution While Using PL/SQL Functions – Stored Procedure – Object Oriented Technology.

Text Book

1. Rajesh Narang, "Database Management Systems", PHI Learning Private Limited, New Delhi, sixth printing, 2010.

Reference

1. S.K. Singh, "Database Systems – Concepts, Design and Appplications", Dorling Kindersley (India) Pvt. Ltd., Second Impression, 2008

2. Database System Concepts , Abraham Silberchatz, Henry F Korth , S.Sudarshan, McGraw-Hill - 5th Edition - 2006.

CORE THEORY PAPER – 7

ENTERPRISE RESOURCE PLANNING

UNIT - I

Business function and Business process: Functional areas and Business Process - functional area of operations - Business process - Marketing Sales - supply chain management - Accounting and finance - Human Resource - Functional areas of information system - The development of ERP system SAP R/3 - New directions in ERP - significance and benefits of ERP software and systems.

UNIT - II

Marketing information system and sales order process in ERP: sales and Distribution in ERP - Pre sales activities - sales order processing - inventory Sourcing - Delivery - Billing - payment - Customer relationship Management - benefits of CRM.

UNIT - III

Production and supply chain management information system: Production overview - The production planning process - The SAP ERP Approach to production planning - Sales forecasting - sales and operation Planning - Demand management - Material requirement planning in SAP ERP - ERP and supplier - Supply chain

UNIT - IV

Accounting in ERP: Accounting activities - using ERP for accounting Information - operational decision making problem - credit management - Industrial credit management in SAP ERP - product profitability analysis - Management reporting with ERP system - Document flow for customer Service.

UNIT - V

Human resource process in ERP: HR with ERP - Advance HR features - Time management - Payroll - Travel management - Training and Development - Management by objectives - ERP process modeling.

Text Book:

1) ELLEN MONK and BRET WAGNER, ENTERPRISE RESOURCE PLANNING - 3rd edition - MGH.

CORE THEORY PAPER – 8

DECISION SUPPORT SYSTEM

UNIT I

DECISION-MAKING AND COMPUTERIZED SUPPORT-Management Support Systems: An Overview, Decision Making, Systems, Modeling, and Support.

UNIT II

DECISION SUPPORT SYSTEMS-An Overview, Data Management: Warehousing, Access, and Visualization , Modeling and Analysis , Knowledge based Decision Support and Artificial Intelligence , User Interface and Decision Visualization Applications , Constructing a Decision Support System and DSS Research.

UNIT III

COLLABORATION, COMMUNICATION, AND ENTERPRISE SUPPORT SYSTEMS-Networked Decision Support: The Internet, Intranets, and Collaborative Technologies, Group Decision Support Systems, Executive Information and Support Systems.

UNIT IV

FUNDAMENTALS OF EXPERT SYSTEMS AND INTELLIGEN SYSTEMS-Fundamentals of Expert Systems, Knowledge Acquisition and Validation, Knowledge Representation, Inferences, Explanations, and Uncertainty, Building Expert Systems: Process and Tools.

UNIT V

CUTTING-EDGE DECISION SUPPORT TECHNOLOGIES-Neural Computing: The Basics, Neural Computing Applications, Genetic Algorithms, Fuzzy Logic, and Hybrid Intelligent Systems , Intelligent Agents and Creativity , Implementing and Integrating Management Support Systems , Organizational and Societal Impacts of Management Support Systems.

Text Book :

1. Efraim Turban, Jay E. Aronson, "Decision Support Systems and Intelligent Systems", Prentice Hall, New Delhi, 2004

Reference book:

1. George Marakas, "Decision Support Systems in the 21st Century", Prentice Hall, New Delhi, 2003
2. Robert J Thierauf, "User Oriented Decision Support Systems", Prentice Hall, New Delhi

PRACTICAL – IV

RDBMS Lab

1. Table creation and simple Queries
2. Queries using Aggregate Function and Set Operations
3. Table creation with various Joins
4. Nested Sub queries and correlated Sub queries
5. View creation and manipulation
6. PL/SQL program for cursor
7. PL/SQL program for packages
8. PL/SQL program for triggers and its type
9. PL/SQL program for procedures and functions

ALLIED – II

FINANCIAL ACCOUNTING - II

Objective:

To gain a knowledge of accounting in general and to understand the system of Financial Accounting.

Unit - I: Branch accounts

Meaning – objects of branch accounts – accounting in respect of dependent branches: debtors system; stock and debtors system; wholesale branch system and final accounts system - Independent branches – incorporation of branch trial balance in head office books.

Unit - II: Departmental Accounting

Meaning of departments and departmental accounting – Distinction between departments and branches- need for departmental accounting – advantages of departmental accounting - Apportionment of indirect expenses – Inter departmental transfers at cost and selling price - preparation of departmental trading, profit & loss account and balance sheet.

Unit - III: Hire purchase and Instalment purchase systems

Meaning and features of hire purchase system - calculation of interest – books of hire purchaser and books of hire vendor - default and repossession (Hire purchase trading account excluded)

Meaning of instalment system -distinction between hire purchase system and instalment system - calculation of interest – books of buyer and books of seller.

Unit - IV: Partnership accounts (fundamentals and reconstitution of partnership)

Meaning and features of partnership – Partnership deed - calculation of Interest on capital and interest on drawings – preparation of profit & loss appropriation account – preparation of capital accounts (fixed and fluctuating) – admission of a partner – retirement of a partner – death of a partner – treatment of goodwill as per AS 10.

Unit - V: Partnership Accounts (Dissolution of partnership firms)

Dissolution of a firm – insolvency of a partner (Garner Vs Murray rule) – Insolvency of all the partners – Piecemeal distribution: proportionate capital method and maximum loss method.

Note: Questions in section A, B and C shall be in the proportion of 20: 80 between theory and problems.

2. Shukla&Grewal,AdvancedAccounting,S.Chand&Co.NewDelhi.
3. Parthasarathy,S.&Jaffarulla,A.FinancialAccounting,KalyaniPublishers,NewDelhi.
4. Murugadoss, Jaya, Charulatha and Baskar, Financial Accounting, Vijay Nicholes Imprint Pvt. Ltd., Chennai.

SKILLED BASED SUBJECT - II

COMPUTER ORGANISATION AND ARCHITECTURE

Objective: To enable the student to have a better understanding of architecture of computer and prepare the student for higher level of programming

UNIT - I

Instruction Codes – Computer Registers – Computer Instructions – Timing and Control – Instruction Cycle – Memory Reference Instructions – Input-Output and Interrupts.

UNIT - II

Control Memory – Address Sequencing – Micro program Examples – Design of Control Unit.

UNIT - III

Introduction – General Register Organization – Instruction Formats – Addressing Modes.

UNIT – IV

Peripheral Devices – I/O interface – Asynchronous Data Transfer – Modes of Transfer - Direct Memory Access – Input Output Processor (Excluding IBM and Intel IOPs).

UNIT - V

Auxiliary Memory – Main Memory – Auxiliary Memory - Associative Memory – Cache Memory -Virtual Memory.

NON MAJOR ELECTIVE II

INTERNET AND ITS APPLICATION

Objective: To equip students to basics of Internet usage and prepare them for digital

UNIT- I

Introduction to Computers Programming Language types History of Internet Personal Computers History of World Wide Web- Micro software .NET Java-Web resources.

UNIT – II

Web Browsers- Internet Explorer- connecting to Internet Features of Internet explorer6 Searching the Internet- online help and tutorials- File Transmission Protocol (FTP) Browser settings.

UNIT – III

Attaching a file, Electronic mail Creating an E-mail id Sending and Receiving mails-attaching a file-Instance messaging- other web browsers.

UNIT - IV

Introduction to HTML headers - Linking- Images-special characters and line breaks- unordered lists- simple HTML programs.

UNIT - V

E-marketing consumer tracking Electronic advertising search engine-CRM- credit card Payments- Digital cash – e wallets – smart card.

Textbook

Internet and World Wide Web Third edition H.M.Deital, P.J. Deital and A.B.Goldberg-PHI

Book for Reference

1. The Internet- Complete Reference Harley hahn, Tata McGraw hill
2. Internet and its Applications, P.Rizwan Ahmed, Margham Publication, 2014

SEMESTER V

CORE THEORY PAPER – 9

MOBILE APPLICATIONS DEVELOPMENT

Objectives:

This course aims to provide the students with a detailed knowledge on Mobile Application and Development and covers Android programming from fundamentals to building mobile applications for smart gadgets.

UNIT I Introduction to Mobile Applications:

Native and web applications - Mobile operating systems and applications - Mobile Databases. Android: History of Android - Android Features – OSS – OHA - Android Versions and compatibility - Android devices - Prerequisites to learn Android -– Setting up software – IDE - XML. Android Architecture: Android Stack - Linux Kernel - Android Runtime - Dalvik VM - Application Framework - Android emulator - Android applications.

UNIT II Android development:

Java - Android Studio – Eclipse – Virtualization – APIs and Android tools – Debugging with DDMS – Android File system – Working with emulator and smart devices - A Basic Android Application - Deployment. Android Activities: The Activity Lifecycle – Lifecycle methods – Creating Activity. Intents – Intent Filters – Activity stack.

UNIT III Android Services:

Simple services – Binding and Querying the service – Executing services.- Broadcast Receivers: Creating and managing receivers – Receiver intents – ordered broadcasts. Content Providers: Creating and using content providers – Content resolver. Working with databases: SQLite – coding for SQLite using Android – Sample database applications – Data analysis.

UNIT IV Android User Interface:

Android Layouts – Attributes – Layout styles - Linear – Relative – Table – Grid – Frame. Menus: Option menu – context menu - pop-up menu – Lists and Notifications: creation and display. Input Controls: Buttons-Text Fields-Checkboxes-alert dialogs-Spinners-rating bar-progress bar.

UNIT V Publishing and Internationalizing mobile applications :

Live mobile application development: Game, Clock, Calendar, Convertor, Phone book. App Deployment and Testing: Doodlz app – Tip calculator app – Weather viewer app.

3. http://www.developer.android.com

CORE THEORY PAPER - 10

OPERATING SYSTEM

Objective: Enable the student to get sufficient knowledge on various system resources.

Unit – I Operating System Basics

Basic Concepts of Operating System - Services of Operating System-Classification of Operating System- Architecture and Design of an Operating System-Process Management -Introduction to Process-Process State -PCB - Process Scheduling - Interprocess Communication

Unit –II Operating System Scheduling

CPU Scheduling**:** Introduction - Types of CPU Scheduler - Scheduling Criteria - Scheduling Algorithms - FCFS Scheduling – SJF Scheduling;-Priority Scheduling - Round-Robin Scheduling- Multilevel Queue Scheduling - Deadlock - Basic Concept of Deadlock- Deadlock Prevention - Deadlock Avoidance- Deadlock - Detection and Recovery

Unit- III Memory management

Memory Management - Basic Concept of Memory - Address Binding; Logical and Physical Address Space- Memory Partitioning - Memory Allocation-Protection-Fragmentation and Compaction

Unit – IV Swapping

Swapping- Using Bitmaps - Using Linked Lists- Paging-Mapping of Pages to Frames - Hierarchical Page Tables- Segmentation - Virtual Memory - Basic Concept of Virtual Memory-Demand Paging - Transaction Look aside Buffer (TLB) - Inverted Page Table-Page Replacement Algorithms

Unit –V File Management

File Management - Basic Concept of File-Directory Structure-File Protection-Allocation Methods – Various Disk Scheduling algorithms

Text Books:

Abraham Silberschatz Peter B. Galvin, G. Gagne, “Operating System Concepts”, Sixth Edition, Addison Wesley Publishing Co., 2003.

Reference

1. Operating systems - Internals and Design Principles, W. Stallings, 6th Edition, Pearson
2. Willam-Stalling “Operating System” Fourth Edition, Pearson Education, 2003.

CORE THEORY PAPER - 11
DATA COMMUNICATION & NETWORKS

Objective:

To equip students to basics of Data Communication and prepare them for better computer networking

UNIT I

Introductory Concepts - Network hardware - Network software – Network Architecture - Physical layer - Guided transmission media - Cable television.

UNIT II

Data Link Layer - Design issues - Channel allocation problem - Multiple access protocols - Ethernet - Wireless LAN - 802.11 architecture.

UNIT III

Network Layer : Design issues, Routing Algorithms, Shortest path routing, Flooding, Broadcast & Multicast routing congestion, Control & internetworking.

UNIT IV

Transport Layer - Transport service - Elements of transport protocols - User Datagram Protocol - Transmission Control Protocol.

UNIT V

Application Layer - DNS - Electronic mail - World Wide Web - Multimedia - Network security.

TEXT BOOK

1. Tannenbaum, A.S., 2003 : Computer Networks, Prentice Hall.

REFERENCES

1. Stallings, William, 2008 : Local and Metropolution Area Networks : An Introduction, Macmillian Publishing Co.
2. Black : Data Network, Prentice Hall of India.
3. W. Stallings, "Data and Computer Communication", Pearson Education, Fifth Edition, 2001

CORE PRACTICAL – 5

MOBILE APPLICATIONS DEVELOPMENT – LAB

1. Intent and Activity
2. Using Controls
3. Alert Dialogs
4. List View
5. Options Menu
6. Seek Bars
7. Shared Preferences
8. Status Bar Notifications
9. Tab Widgets Talking Clock.
10. Tween Animation
11. Grid View
12. Internal Storage - Files
13. SQlite - Database
14. Google Map
15. Permissions

CORE PRACTICAL – 6

OPERATING SYSTEM LAB

1. Implementing the Process system calls.
2. Implementing I/O system calls.
3. Implementing IPC using message queues.
4. Implementing CPU& scheduling algorithm for first come first serve scheduling.
5. Implementing CPU scheduling algorithm for shortest job first scheduling.
6. Implementing perform priority scheduling.
7. Implementing CPU scheduling for Round Robin Scheduling.
8. Implementing pipe processing.
9. Implementing first fit, best fit algorithm for memory management.
10. A program to simulate producer-consumer problem using semaphores.
11. A Shell Program to find factorial of a given number
12. A shell program to generate Fibonacci number

Elective – 1

A. DATA MINING

Objective: Enable the student to get sufficient knowledge on mining the data .

UNIT - I: Data Mining Basics

Introduction: Definition of data mining - data mining vs. query tools - machine learning - steps in data mining process - overview of data mining techniques.

UNIT - II: Data Models

Multidimensional Data Model - Data Cube - Dimension Modeling - OLAP Operations - Meta Data - Types of Meta Data.

UNIT - III: Data Editing

Data Pre-Processing And Characterization :Data Cleaning - Data Integration and Transformation - Data Reduction - Data Mining Query Language - Generalization - Summarization - Association Rule Mining

UNIT - IV: Classification

Classification: Classification - Decision Tree Induction - Bayesian Classification - Prediction - Back Propagation - Cluster Analysis - Hierarchical Method - Density Based Method - Grid Based Method - Outlier Analysis.

UNIT - V: Analysis

Cluster analysis: Types of data - Clustering Methods - Partitioning methods - Model based clustering methods - outlier analysis. Advanced topics: Web Mining - Web Content Mining - Structure and Usage Mining - Spatial Mining - Time Series and Sequence Mining.

TEXT BOOKS:

1. PaulrajPonnaiah, "Data Warehousing Fundamentals", Wiley Publishers, 2001.

2. Jiawei Han, MichelineKamber, "Data Mining: Concepts and Techniques",Morgan Kaufman Publishers, 2006.

3. Alex Berson, Stephen Smith, Kurt Thearling, "Building Data Mining Applications for CRM", Tata McGraw Hill, 2000.
4. Margaret Dunham, "Data Mining: Introductory and Advanced Topics", Prentice Hall, 2002.
5. Daniel T. Larose John Wiley & Sons, Hoboken, "Discovering Knowledge in Data: An Introduction to Data Mining", New Jersey, 2004

B. COMPUTER GRAPHICS

Objectives: To equip students to basics of computer drawing and prepare them for computer modeling of objects

UNIT – I : OVERVIEW OF GRAPHICS SYSTEMS AND OUTPUT PRIMITIVES
Video Display Devices- Raster Scan System- Random Scan Systems- Hard Copy Deices- Graphic Software- Line Drawing Algorithms: DDA- Bresenham's Line -Circle Generating Algorithms

UNIT – II : ATTRIBUTES AND TWO DIMESIONAL TRANSFORMATIONS
Line Attributes- Curve Attributes-Color And Gray Scale Level- Area Fill Attributes- Character Attributes- Inquiry Functions- Basic Transformations - Composite Transformation – Other transformation

UNIT – III : TWO DIMENSIONAL VIEWING AND CLIPPING
The Viewing Pipeline- Window To Viewport Transformation –Clipping Operations- Point Clipping- Line Clipping: Cohen Sutherland- Liang Barsky-Sutherland Hodgeman Polygon Clipping- Text Clipping- Exterior Clipping- Logical Classification Of Input Devices- Interactive Picture Construction

UNIT – IV : THREE DIMENSION TRANSFORMATION, VIEWING AND CLIPPING
Translation-Rotation-Scaling-Viewing Pipeline- Viewing Coordinates- Projections -View Volumes and General Projection Transformation- Clipping -

UNIT – V : VISIBLE SURFACE DETECTION METHODS
Classification of Visible Surface Detection Algorithms - Back Face Detection - Depth Buffer Method - A Buffer Method - Scan Line Method - Depth Sorting Method- BSP Tree Method - Area Sub Division Method - Octree Methods - Ray Casting Method

TEXT BOOK:

Computer Graphics(C version), Donald Hearn and M.Pauline Baker, Pearson- 2nd Edit. 2012.

REFERENCE BOOKS:

1. Interactive Computer Graphics–A top down approach using Open GL, Edward Angel , Pearson, 5th Edition.

2. Computer Graphics, Peter Shirley, Steve Marschner, Cengage Learning, Indian Edition,2009.

C. INFORMATION SECURITY

Objective: To enable the student to understand various methodology available for securing information

UNIT I Information Security Basics

INTRODUCTION -History, What is Information Security?, Critical Characteristics of Information, NSTISSC Security Model, Components of an Information System, Securing the Components, Balancing Security and Access, The SDLC, The Security SDLC

UNIT II Security Investigation

SECURITY INVESTIGATION - Need for Security, Business Needs, Threats, Attacks, Legal, Ethical and Professional Issues

UNIT III Security Analysis

SECURITY ANALYSIS-Risk Management: Identifying and Assessing Risk, Assessing and Controlling Risk

UNIT IV Security Models

LOGICAL DESIGN-Blueprint for Security, Information Security Poicy, Standards and Practices, ISO 17799/BS 7799, NIST Models, VISA International Security Model, Design of Security Architecture, Planning for Continuity

UNIT V Security Physical Design

PHYSICAL DESIGN-Security Technology, IDS, Scanning and Analysis Tools, Cryptography, Access Control Devices, Physical Security, Security and Personnel.

Text Book

1. Michael E Whitman and Herbert J Mattord, "Principles of Information Security", Vikas Publishing House, New Delhi, 2003

Reference

1. Micki Krause, Harold F. Tipton, " Handbook of Information Security Management", Vol 1-3 CRC Press LLC, 2004.
2. Stuart McClure, Joel Scrambray, George Kurtz, "Hacking Exposed", Tata McGraw-Hill, 2003
3. Matt Bishop, " Computer Security Art and Science", Pearson/PHI, 2002.

SKILL BASED SUBJECT - 3

SOFTWARE ENGINEERING

Objective:
This course introduces the concepts and methods required for the construction of large software intensive systems.

UNIT-I:
Introduction - Evolving Role of Software - Changing Nature of Software – SoftwareMyths; A Generic View of Process: Layered Technology - Process Models: Waterfall Model - Evolutionary Process Models.

UNIT-II:
Requirements Engineering: Tasks - Initiating the Requirements Engineering Process - Eliciting Requirements - Building the Analysis Model - Requirements Analysis - Data Modeling Concepts.

UNIT-III:
Data Engineering: Design Process and Design Quality - Design Concepts - The Design Model Creating an Architectural Design: Software Architecture - Data Design -Architectural Design - Mapping Data Flow into Software Architecture; Performing User Interface Design: Golden Rules.

UNIT-IV:
Testing Strategies: Strategic Approach to Software Testing- Test Strategies for Conventional and Object Oriented Software - Validation Testing - System Testing -Art of Debugging. Testing Tactics: Fundamentals - White Box- Basis Path - Control Structure - Black Box Testing Methods

UNIT-V:
Project Management: Management Spectrum - People - Product - Process - Project. Estimation: Project Planning Process - Resources - Software Project Estimation - Project Scheduling - Quality Concepts - Software Quality Assurance - Formal Technical Reviews.

TEXT BOOK:
Roger S Pressman, "Software Engineering - A Practitioner's Approach", Sixth Edition, McGraw Hill International Edition, New York: 2005.

REFERENCES:

1. Ian Somerville, "Software Engineering", 7th Edition, Pearson Education, 2006.
2. Mall Rajib, " Software Engineering", 2/E, PHI, 2006.

SEMESTER VI

CORE THEORY PAPER – 12

CLOUD COMPUTING

Objective:

To enable the students to learn the basic functions, principles and concepts of cloud Systems.

UNIT I: UNDERSTANDING CLOUD COMPUTING

Cloud Computing – History of Cloud Computing – Cloud Architecture – Cloud Storage – Why Cloud Computing Matters – Advantages of Cloud Computing – Disadvantages of Cloud Computing – Cloud Services.

UNIT II: DEVELOPING CLOUD SERVICES

Types of Cloud Service Development – Software as a Service – Platform as a Service – Web Services – On-Demand Computing – Discovering Cloud Services Development Services and Tools – Amazon Ec2 – Google App Engine – IBM Clouds.

UNIT III: CLOUD COMPUTING FOR EVERYONE

Centralizing Email Communications – Collaborating on Schedules – Collaborating on To-Do Lists – Cloud Computing for the Community – Collaborating on Group Projects and Events.

UNIT IV: PROGRAMMING MODEL

Parallel and Distributed Programming Paradigms – Map Reduce, Twister and Iterative Map Reduce – Hadoop Library from Apache – Mapping Applications - Programming Support - Google App Engine, Amazon AWS - Cloud Software Environments -Eucalyptus, Open Nebula, Open Stack, Aneka, CloudSim.

UNIT V: SECURITY IN THE CLOUD

Security Overview - Cloud Security Challenges and Risks - Software-as-a-Service Security- Security Governance - Risk Management - Security Monitoring - Security Architecture Design - Data Security - Application Security - Virtual Machine Security - Identity Management and Access Control - Autonomic Security.

TEXT BOOK:

1. Michael Miller, “Cloud Computing: Web-Based Applications That Change the Way You Work and Collaborate Online”, Que Publishing, August 2008.

REFERENCES:

1. Kai Hwang, Geoffrey C Fox, Jack G Dongarra, "Distributed and Cloud Computing, From Parallel Processing to the Internet of Things", Morgan Kaufmann Publishers, 2012.

3. Toby Velte, Anthony Velte, Robert Elsenpeter, "Cloud Computing, A Practical Approach", TMH, 2009.
4. Kumar Saurabh, "Cloud Computing – insights into New-Era Infrastructure", Wiley India, 2011.
5. George Reese, "Cloud Application Architectures: Building Applications and Infrastructure in the Cloud" O'Reilly

CORE THEORY PAPER – 13

OPEN SOURCE PROGRAMMING

Objectives:
To discuss techniques that can be effectively applied in practice about HTML5, JavaScript, PHP , CSS and Linux

UNIT I : INTRODUCTION TO HTML5,JAVA SCRIPT, PHP AND CSS
Introduction to Dynamic Web content- HTTP and HTML- Request and Response Procedure- The Benefits of PHP, JAVA Script, CSS, and HTML5- Introduction to HTML5- The Canvas - The HTML5 Canvas- HTML5 Audio and Video- Introduction to CSS- CSS Rules-Style Types- CSS Selectors- CSS Colors.

UNIT-II : LINUX

Introduction : Linux Essential Commands – File system Concept – Standard Files – The Linux Security Model – Vi Editor – Partitions Creation – Shell Introduction – String Processing – Investigation and Managing Processes – Network Clients – Installing Application.

UNI- III : MYSQL

Introduction to MY SQL – The show Databases and Table – The USE command – Create Database and Tables – Describe Table – Select, Insert, Update, and Delete statement – Some Administrative detail – Table Joins – Loading and Dumping a Database.

UNIT-IV : PHP

PHP Introduction – General Syntactic Characteristics – PHP Scripting – Commenting your code – Primitives, Operations and Expressions – PHP Variables – Operations and Expressions Control -statement – Array – Functions.

UNIT – V PHP

Basic Form Processing – File and Folder Access – Cooking – Sessions – Database Access with PHP – MySQL - MySQL Functions – Inserting Records – Selecting Records – Deleting Records – Update Records.

Text Books

1. "Learning PHP, MySQL, Java Script, CSS and HTML5", Robin Nixon, O'Reilly Publications, 3rd Edition, 2014.
2. Steven Holzner, "HTML Black Book", Dreamtech Press &Paraglyph Press Publishers, 2007
3.

Reference Books

Open Source Software, P.Rizwan Ahmed, Margham Publication, Chennai, 2015

Core Practical

PRACTICAL – VII

ASP.NET Lab

1. Implement Validation Controls
2. Write a Program to implement ad rotator control
3. Write a Program to implement state management techniques
4. Write a Program to implement view State and Session State.
5. Write a Program to displaying data with the grid view
6. Write a Program to implement ASP.Net Server Side Controls.
7. Write a Program to implement ASP.Net Master Pages, Themes and Skins.
8. Write a Program working with forms using ASP.Net
9. Write a Program working with pages using ASP.Net.
10. Write a Program to access data sources through ADO.NET

Core Practical

PRACTICAL – VIII

Open Source Programming Lab

1. Create a web page with Frames and Tables.
2. Create a web page incorporating CSS (Cascading Style Sheets)
3. Write a shell program to find the factorial of an integer positive number
4. Write a shell program for checking whether a given string is a palindrome or not.
5. Create a simple calculator in Java script.
6. Write a JavaScript program to scroll your name in the scroll bar.
7. Develop a program and check message passing mechanism between pages.
8. Develop a program and check file system functions, date &time functions.
9. Create a student database table in MYSQL and manipulate records (insert, delete, update) records in a web browser.
10. Develop a program using cookies and session.

Elective II PAPER – 2

(A) SOFTWARE TESTING

Objective: To make the student more proficient with error free software development

UNIT-I PRINCIPLES OF TESTING

A test in time - The cat and the saint - Test the tests first - The Policemen on the bridge - Phase of software project - Quality, Quality Assurance and Quality Control - Testing, Verification and Validation -Process model to represent different phases - Life cycle models.

UNIT-II BLACK BOX AND WHITE BOX TESTING

White box testing - Challenges - Static testing - Structural testing - Black box testing.

UNIT-III INTEGRATION, SYSTEM AND ACCEPTANCE TESTING

Integration testing - Types - Phase of testing - Scenario testing - Defect bash - System and Acceptance testing: Overview - Functional vs. Non-Functional testing - Functional system testing - Non-functional testing-Acceptance testing.

UNIT-IV PERFORMANCE AND REGRESSION TESTING

Introduction - Factors Governing - Methodology for Performance testing - Tools and Process for Performance Testing - Regression Testing - Types of Regression testing - How to do Regression Testing?

UNIT-V INTERNATIONALIZATION AND ADHOC TESTING

Introduction to Internationalization - Primer on Internationalization - Test phases for Internationalization testing - Enabling testing - Locale testing - Internationalization Validation- Fake language testing - Language testing - Localization testing - Tools used for Internationalization - Challenges and Issues - Overview of Ad Hoc testing - Buddy, Pair, Exploratory, Iterative, Agile and Extreme Testing - Defect Seeding.

TEXT BOOK:

1. Srinivasan Desikan, Gopalaswamy Ramesh, “Software Testing: Principles and Practices”, Pearson Publications, 2006.

REFERENCES:

1. RenuRajani, Pradeep Oak, “Software Testing- Effective Methods, Tools and Techniques”, Tata McGraw Hill, 2004.
2. Boris Beizer, “Software Testing Techniques”, Dream Tech Press, Second Edition, 2003.

Elective II PAPER – 2

(B) MOBILE COMPUTING

Objective: To impart good knowledge of wireless communication to students

UNIT I **WIRELESS COMMUNICATION FUNDAMENTALS**

Cellular systems- Frequency Management and Channel Assignment- types of handoff and their characteristics, dropped call rates & their evaluation -MAC – SDMA – FDMA –TDMA – CDMA – Cellular Wireless Networks.

UNIT II **TELECOMMUNICATION NETWORKS & WIRLESS LAN**

Telecommunication systems – GSM – GPRS - Satellite Networks ,Wireless LAN – IEEE 802.11 - Architecture – services – MAC – Physical layer – IEEE 802.11a -802.11b standards – HIPERLAN – Blue Tooth.

UNIT III **MOBILE NETWORK LAYER & TRANSPORT LAYER**

Mobile IP – Dynamic Host Configuration Protocol - Routing – DSDV – DSR – Alternative Metrics. Traditional TCP, Mobile TCP

UNIT IV **APPLICATION LAYER**

WAP Model- Mobile Location based services -WAP Gateway –WAP protocols – WAP user agent profile- caching model-wireless bearers for WAP - WML – WML Scripts

UNIT V **DATABASE ISSUES**

Database Issues : Hoarding techniques, caching invalidation mechanisms, client server computing with adaptation, power-aware and context-aware computing, transactional models, query processing, recovery, and quality of service issues.

TEXT BOOKS:

1. Jochen Schiller, “Mobile Communications”, Second Edition, Pearson Education, 2003.
2. William Stallings, “Wireless Communications and Networks”, Pearson Education, 2002.

REFERENCE BOOKS:

1. KavehPahlavan, PrasanthKrishnamoorthy, “Principles of Wireless Networks”, PHI/Pearson Education, 2003.

2. UweHansmann, LotharMerk, Martin S. Nicklons and Thomas Stober, “Principles of Mobile Computing”, Springer, 2003..

Elective II PAPER – 2

C. MICROPROCESSORS AND ITS APPLICATIONS

Objective:
To learn the architecture, programming, interfacing and rudiments of system design of microprocessors.

Unit-I : 8085 MICROPROCESSOR AND ARCHITECTURE
Microprocessors - Memory - I/O Devices - Memory Mapped I/O - Pin diagram and internal architecture of 8085 - Registers, ALU, Control & Status Registers - Instruction and Machine Cycles. Interrupts

Unit II : PROGRAMMING THE 8085
Introduction to 8085 Assembly language programming - 8085 instructions - Programming techniques with Additional instructions - Counters and Time Delays - Stack and Subroutines - Code Conversions

Unit-III : 8086 MICROPROCESSOR AND ARCHITECTURE
Pin Details and Internal Architecture of 8086 - Register organization, Bus interface unit, Execution unit, Memory addressing, Memory segmentation. Operating modes - Hardware and Software interrupts - Addressing Modes.

Unit-IV : PROGRAMMING THE 8086
8086 Assembly Language Programming - Implementing Standard Program Structures - String - Procedure and Macros. Instruction Description and Assembler Directives

Unit-V : INTERFACING PERIPHERALS
8255 PPI , 8253/8254 PIT, 8237 DMAC,8259 PIC, 8251 USART.

TEXT BOOK

1. Microprocessor Architecture, Programming and Applications with 8085, Ramesh S.Gaonkar, Penram International Publishing (India) Pvt. Ltd. 4th Ed. (for Units I,II and V)
2. Microprocessors and Interfacing,Douglas V. Hall, Tata McGraw Hill , 2nd Ed. (for Units III and IV)

REFERENCE BOOKS:

1. Assembly Language Programming the IBM PC ,Alan R. Miller, SubexInc, 1987.
2. Advanced Microprocessors and Peripherals, Ray A K ,Bhurchandi K M , TMH.

Elective III PAPER – 3

(A) Internet of Things

Objective: To prepare the student for better application of internet technology.

Unit – I IoT Introduction

Introduction to Internet of Things: Definition – Characteristics of IOT – Physical Design of IoT – Things in IoT – IoT Protocols – Logical Design of IoT – Iot Functional Blocks – IoT Communication Models – IoT Communication APIs – IoT Enabling Technologies

Unit – II Domain Specific IoT - 1

Domain Specific IoT – I : Smart Lighting – Smart Appliances – Intrusion Detection – Smoke / Gas Detection – Smart Parking – Smart Roads – Structural Health Monitoring – Surveillance – Emergency Response – Weather Monitoring –

Unit – III Domain Specific IoT II

Domain Specific IoT – II : Air Pollution Monitoring – Noise Pollution Monitoring – Forest Fire Detection – River Flood Detection – Smart Grids- Smart Vending Machines – Route Generation & Scheduling – Fleet Tracking – Shipment Monitoring –

Unit – IV Domain Specific IoT III

Domain Specific IoT – III: Remote Vehicle Diagnostics – Smart Irrigation - Green House Control – Machine Diagnosis & Prognosis – Indoor Air Quality Monitoring – Health & Fitness Monitoring – Wearable Electronics

Unit – V IoT and M2M

IoT And M2M: M2M – Difference Between Iot And M2M – SDN And NFV For IoT – IoT System Management With NETCONF – YANG : Need For Iot Systems Management – SNMP-Network Operator Requirements – NETCONF – YANG-IoT Systems Management With NETCONF - YANG

Text Books:

1. Interconnecting Smart Objects with IP: The Next Internet, Jean-Philippe Vasseur, Adam

Dunkels, Morgan Kuffmann.

Reference

1. Internet of Things, P.Rizwan Ahmed, Margham Publications, Chennai.

2. Designing the Internet of Things , Adrian McEwen (Author), Hakim Cassimally

(B) System Software

Objective: To make the student to become more proficient with system programming

Unit – I LANGUAGE PROCESSORS

Language Processing Activities – Fundamentals of Language Processing – Fundamentals of Language Specification – Language Processor Development Tools.

UNIT II ASSEMBLERS AND MACRO

Elements of Assembly Language Programming – Overview of Assembly Process - Design of a Two – Pass Assembler - Macro Definition and Call – Macro Expansion – Nested Macro Calls.

UNIT III COMPILER I

Scanning: Finite State Automate – Regular Expressions – Building DFA – Performing Semantic Action – Writing a Scanner – Parsing: Parse Tree and Abstract Syntax Trees – Top Down Parsing – Bottom-Up Parsing.

UNIT IV COMPILER II AND INTERPRERTERS

Aspects of Compilation –Memory Allocation - Compilation of Expressions-Compilation of Control Structure-Code Optimization - Interpreters.

UNIT V LINKERS

Relocation and Linking Concepts – Design of a Linker – Self-Relocating Programs – Linking for Overlays - Loader.

TEXT BOOK

D.M. Dhamdhere, “System Programming And Operating Systems”, New Delhi: Tata McGraw-Hill Publishing Company Limited, 1993.

Elective III PAPER – 3

(C) Multimedia Systems

Objective :

This course presents the Introduction to Multimedia, Images & Animation and enable the students to learn the concepts of Multimedia.

UNIT I Introduction to Multimedia:

Introduction to Multimedia PCs – Components of Multimedia – Multimedia Tools Sound and Graphics : Digital Sound – Editing and Mixing sound files – MIDI creation – Tracking Procedure – Interactive and Non Interactive Graphics – High Resolution Graphics – Difference between TV and Computer Display.

UNIT II Video and Animation :

Digital Image concepts – Video Capturing – Scanning Images – Digital Filters Morphing and Warping – Two Dimensional and Three dimensional animation – Animation Tools – Layering technique – Blue Screen technique – Latest movie technologies – Motion Tracking System – Motion Capturing System.

UNIT III Creating Presentation:

Script Writing and creating interactive and non-interactive presentation – Linear and Non Linear Editing – Authoring Tools – File Formates SOUND, VIDEO, ANIMATION, Presentation Images. Multimedia Programming: Text Links – Hyper Text system – Form Creation – File storing - Error Trapping.

UNIT IV Sound Links:

Multimedia interfaces – MCI- API- High Level Multimedia Functions – WAVE , MIDI file processing. Animation : Color Palette – Events – ROPs.

UNIT V Imaging Special Visual Effects :

Bitmap – Brushes – Dissolve –Hotspot Editor – Scorlling. Media Control Interface : Simple Commands – API functions – CD Player – Video Capturing – Form – AVI Play Form.

Text Books :

1. Kaliyaperumal Karthikeyan,"Introduction to Multimedia System", LAP Lambert Academic Publishing, 2011
2. TayVaughan, "Multimedia Making It Work Eighth Edition", Tata McGraw-Hill Publishing Company, 2011
3. ParagHavaldarand Gerald Medioni, "Multimedia Systems", Cengage Learning, 2011
4. S. K. Bansal,"Multimedia Systems", Aph Publishing Corporation, 2011

Skilled Based Subject IV – Paper 4

ASP .NET

Objective: Students to become well aware of .NET technology

UNIT I : ASP.NET Basics

Introduction to ASP.NET: .NET Framework (CLR, CLI, BCL), ASP.NET Basics, ASP.NET Page Structure, Page Life Cycle. Controls: HTML Server Controls, Web Server Controls, Web User Controls, Validation Controls, Custom Web Controls.

UNIT II : Form

Form validation: Client side validation, Server side validation, Validation Controls: Required Field Comparison Range, Calendar Control, Ad rotator Control, Internet Explorer Control. State Management: View State, Control State, Hidden Fields, Cookies, Query Strings, Application State, Session State.

UNIT III : ADO.NET

Architecture of ADO. NET, Connected and Disconnected Database, Create Database, Create connection Using ADO.NET Object model, Connection Class, Command Class, Data Adapter Class, Dataset Class, Display data on data bound controls and Data Grid.

UNIT IV : Database accessing

Database accessing on Web Applications: Data Binding Concept with web, Creating Data Grid, Binding standard web server controls, Display data on web form using Data Bound Controls.

UNIT V : XML

Writing Datasets to XML, Reading datasets with XML. WEB services: Remote method call using XML, SOAP, Web service description language, Building and Consuming a web service, Web Application deployment.

Textbook:

Professional ASP.NET 1.1 Bill Evjen , Devin Rader , Farhan Muhammad, Scott Hanselman , SrivakumarWrox

REFERENCE BOOKS:

1. Introducing Microsoft ASP .NET 2.0 Esposito PHI
2. Professional ADO.NET BipinJoshi, Donny Mack, Doug Seven , Fabio Claudio Ferracchiati, Jan D Narkiewiez Wrox
3. Special Edition Using ASP.NET Richard Leineker Person Education
4. The Complete Reference ASP.NET Matthew MacDonald TMH
5. ASP.NET Black Book DreamTech

SYLLABUS
UNDER CBCS
(With effect from 2017-2018)
SEMESTER I
CORE PAPER - 1
FINANCIAL ACCOUNTING – I

Objective:

To gain knowledge of accounting in general and to understand the system of Financial Accounting.

Unit - I: Introduction

Meaning of accounting – objectives of accounting – advantages and limitations of accounting- Accounting concepts and conventions - Methods of accounting - Rules of debit and credit- Journal - Ledger accounts– Trial Balance - Errors and their rectification - Rectification of Errors without suspense a/c - Rectification errors with suspense a/c (effect of rectification on profit and rectification during subsequent accounting year are excluded) - Bank Reconciliation Statement.

Unit - II: Depreciation, Provisions and Reserve

Meaning of depreciation – causes for depreciation – need for charging depreciation – Methods of calculating depreciation: straight line method and written down value method (change in method of depreciation is excluded) – Methods of recording depreciation: by charging depreciation to assets account or by creating provision for depreciation account.

Unit - III: Bills of exchange

Meaning of bill of exchange - features and advantages of bill of exchange- types of bill of exchange: Trade bills and accommodation bills - Accounting treatment of trade bills (accommodation bills are excluded).

Unit - IV: Final accounts

Meaning of final accounts – adjustments in preparation of final accounts – preparation of trading, profit & loss account and balance sheet of sole proprietorship concern.

Unit V: Accounts from incomplete records

Meaning of single entry system – features and limitations of single entry system – Distinction between single entry system and double entry system - Methods of calculation of profit: Statement of affairs method and Conversion method – Distinction between statement of affairs and balance sheet.

Note: Questions in section A, B and C shall be in the proportion of 20: 80 between theory and problems

Text books

1. Jain &Narang, Financial Accounting, Kalyani Publishers, New Delhi.
2. T.S. Reddy & Dr. A. Murthy, Financial Accounting, Margham Publications, Chennai.

Reference books

1. Gupta, R.L & Gupta,V.K, Advanced Accounting, Sulthan Chand & Sons, New Delhi.
2. Shukla & Grewal, Advanced Accounting, S. Chand & Co. New Delhi.
3. Parthasarathy, S. & Jaffarulla, A. Financial Accounting, Kalyani Publishers, New Delhi.
4. Murugadoss, Jaya, Charulatha and Baskar, Financial Accounting, Vijay Nicholes Imprint Pvt. Ltd., Chennai.

CORE PAPER – 2

Business Application & Accounting Software

UNIT – I Word and Excel

MS Word: Creating and Editing Documents –Menus, Commands, Toolbars and Icons—Formatting document – Creating Tables – Mail Merger.
MS Excel: Spreadsheet Overview – Menus, Toolbars, Icons-Creating worksheets – Editing and Formatting – excel Formulas and Functions – Creating a Chart Data Forms, Sort, and Filter.

UNIT – II PowerPoint and Access

MS Power Point – Introduction – Menus – Toolbars – Text and Formats – Animation, Art and Sound – Making the presentation template.
MS Access: Database overview – Creating a database – Modifying table and Creating Form – Query – Creating reports – Mailing Labels.

UNIT-III Tally introduction

Introduction to Tally – Company Creation – Alter – Display – Accounts info – Ledger Creation – Voucher Creation – Bank Reconciliation Statement – Bill wise Details – Cost Centre and Cost Category – Multi Currency – Interest calculation – Budgets and Credit Limits – Day Book.

UNIT-IV Inventory

Inventory info – Stock Group – Stock Category – Stock Item – Unit of Measures – Godowns – Inventory vouchers – Re-order level and status – Batch-wise Details – Bill of Material.

UNIT-V Taxation

Statutory and Taxation – Value Added Tax (VAT) – Tax Deducted at Source (TDS) – Tax Collected at Source (TCS) – Service Tax – Security Control and Tally audit – Export and Import – Backup and Restore – Open Database Connectivity.

Text Books:

TEXT BOOKS:

1. MS Office 2000 for Every One - Vikas Publishing House Pvt. Ltd., Sanjay Saxena.
2. MS Office 2000 Professional Fast & Easy – June Slton, BPB publications.
3. Guide to MS Office 2000 PH. - I Loura Acklen.
4. The ABC & MS Office Professional Edition - Guy Hart-Davis.
5. Tally 9.0 – A complete Reference – Tally Solutions (P) Limited.

ALLIED 1

(To choose any 1 out of 3)

PAPER - 1

A. INDIAN ECONOMY - I

Objective

To acquire sufficient knowledge about India's Economic features; occupational structure and the relative shares of the different Sectors. Students should know that India is an emerging economic power in the World market.

UNIT-I

Features of less developed and developing Economies. - Economic and Non-Economic factors impeding Economic development - Concept of growth and development - Indicators - Factors in Economic Development.

UNIT-II

Capital Formation - Human and Physical, Savings and Investment pattern since 1991 - National Income - Methods, trends, limitation - Distribution - Recent trends in National Income - Black Money - Corruption.

UNIT-III

Human Resources - Human Resource Development Size and growth of population-Causes, impact-measures to control population-Recent Population Policy.

UNIT-IV

Agriculture - It's Contribution to Economic Development - Food Problems - Methods of solving it - Agricultural productivity - Land Reforms - Green Revolution

UNIT-V

Agricultural labour – Definition – Features- Problems – Remedies Agricultural Credit - Grameen Bank.

BOOKS FOR REFERENCE:

1. Agrawal, A.N. : Indian Economy, Vikas Publishing House, New Delhi.
2. Alak Ghosh : Indian Economy, The World Press, Kolkata.
3. Arora, R.C. : Integrated Rural Development, S. Chand & Co.,
4. Arthur Lewis : The Theory of Economic Growth.
5. Arun Ghosh : India in Transition, Economic Policy Options, S. Chand & co.,

19.	Ray, S.K.	:	Economics of Development - Prentice Hall of India.

ALLIED - 1

PAPER - 1

B. BUSINESS STATISTICS – I

Objective

To understand and apply statistical tools in business.

UNIT-I

Statistics - Definitions - Scope and Limitations - Collection of Data - Primary and Secondary Data - Questionnaire - Classification and Tabulation - Diagrammatic and graphical representation of data.

UNIT-II

Measures of Central tendency - Mean - Median - Mode - Harmonic Mean and Geometric Mean,

UNIT-III

Measures of Dispersion - Range - Quartile deviation - Mean Deviation - Standard Deviation - Coefficient of Variation - Lorenz Curve.

UNIT-IV

Measures of Skewness - Karl Pearson's and Bowlay's Coefficient of Skewness - Kurtosis - Characteristics of Kurtosis - Measures - Calculation.

UNIT-V

Statistical Quality Control - Control Charts - X, P, C, R - Charts - Acceptance sampling only.

(Weightage of Marks = Problems - 80%, Theory - 20%)

Text Books:

1. Dr. S.P. Gupta, Business Statistics & Operation Research - Sultan Chand.
2. PA. Navanitham, Business Statistics & Operation Research, Jai Publications, Trichy.
3. S.P. Rajagopalan & R. Sattanathan, Business Statistics & Operation Research 3rd Edition, Vijay Nicole Publications, Chennai.

Reference Books:

1. Dr. S.P. Gupta, Statistical Methods - Sultan Chand.
2. R.S.N. Pillai & Bhagavathi, Statistics.
3. J.K. Sharma, Business Statistics - Pearson Education.
4. B. Agarwal, Basic Statistics - Wiley Eastern.

ALLIED - 1

PAPER - 1

C. CONSUMER PROTECTION AND CONSUMER RIGHTS

Objective:

To make students to acquire basic knowledge of consumer laws, consumer rights and consumer welfare and protection.

Unit - I

Introduction of Consumer Protection Act 1986 – Objectives - Consumer Protection Act 2006 (Amendments) – Salient features.

Unit - II

Definitions of the term: - Consumer – Types of Consumer Appropriate authority – Complainant – Consumer dispute – Restrictive Trade Practice.

Unit - III

The various Consumer Rights: - Right to Safety, Right to Information, Right to Choose, Right to be heard – Right against exploitation – Right to Consumer Education.

Unit - IV

Consumer Production Council: - Composition and Powers of National Commission, State Commission and District Consumer Forum.

Unit - V

Redressal of consumer grievances-Goods & Services covered under Consumer Protection Act-Procedure for filing of complaints with District Forum, State Commission , National Commission.

Books for reference

1. Lecture on Torts and Consumer Protection Laws by Dr. Rega Surya Rao – Asia Law House, Hyderabad.
2. Consumer Protection Laws – By Prof. RakeshKhanna – Central – Law Agency.
3. Consumer Protection (Amendment) Act, 2002. S. Chand & Sons.2012.

SEMESTER – II

CORE PAPER - 3

FINANCIAL ACCOUNTING – II

Objective:

To gain a knowledge of accounting in general and to understand the system of Financial Accounting.

Unit - I: Branch accounts

Meaning – objects of branch accounts – accounting in respect of dependent branches: debtors system; stock and debtors system; wholesale branch system and final accounts system - Independent branches – incorporation of branch trial balance in head office books.

Unit - II: Departmental Accounting

Meaning of departments and departmental accounting – Distinction between departments and branches- need for departmental accounting – advantages of departmental accounting - Apportionment of indirect expenses – Inter departmental transfers at cost and selling price - preparation of departmental trading, profit & loss account and balance sheet.

Unit - III: Hire purchase and Instalment purchase systems

Meaning and features of hire purchase system - calculation of interest – books of hire purchaser and books of hire vendor - default and repossession (Hire purchase trading account excluded)

Meaning of instalment system -distinction between hire purchase system and instalment system - calculation of interest – books of buyer and books of seller.

Unit - IV: Partnership accounts (fundamentals and reconstitution of partnership)

Meaning and features of partnership – Partnership deed - calculation of Interest on capital and interest on drawings – preparation of profit & loss appropriation account – preparation of capital accounts (fixed and fluctuating) – admission of a partner – retirement of a partner – death of a partner – treatment of goodwill as per AS 10.

Unit - V: Partnership Accounts (Dissolution of partnership firms)

Dissolution of a firm – insolvency of a partner (Garner Vs Murray rule) – Insolvency of all the partners – Piecemeal distribution: proportionate capital method and maximum loss method.

Note: Questions in section A, B and C shall be in the proportion of 20: 80 between theory and problems.

Text books

1. Jain & Narang, Financial accounting, Kalyani publishers, New Delhi.
2. T.S. Reddy & Dr. A.Murthy, Financial accounting, Margham publications, Chennai.

Reference books

1. Gupta, R.L & Gupta, V.K, Advanced Accounting, Sultan Chand & Sons, New Delhi.
2. Shukla & Grewal, Advanced Accounting, S.Chand & Co.New Delhi.
3. Parthasarathy, S.& Jaffarulla, A.Financial Accounting, Kalyani Publishers, New Delhi.
4. Murugadoss, Jaya, Charulatha and Baskar, Financial Accounting, Vijay Nicholes Imprint Pvt. Ltd., Chennai.

CORE PAPER - 4

Software & Tally Lab

MS.WORD:

1. a. Starting MS-WORD, Creating, Saving, Printing (with options), Closing and Exiting.
   b. Study of Word – Menu / toolbars.
2. a. Create a document, save it and edit the document as follows:
   i) Find and Replace options.
   ii) Cut, Copy, Paste options.
   iii) Undo and Redo options.
   b. Format the document:
   i) Using Bold, Underline and Italic.
   ii) Change Character size sing the font dialog box.
   iii) Formatting paragraph: Center, Left aligns & Right align
   iv) Changing paragraph and line spacing, Using Bullets and Numbering in Paragraphs.
   v) Creating Hanging Paragraphs.
3. Using tap settings enhancing the documents (Header, Footer, Page Setup, Border, Opening & Closing Toolbars, Print Preview).
4. Creating Tables in a document, Selecting Rows & Column sort the record by using tables format painter and Auto Format.
5. Drawing flow chart using (creating main document, data source, inserting merge fields and veiwing merge data, viewing and printing merged letter, using mail merge to print envelope creating mailing labels).

MS-EXCEL

1. a. Create a worksheet, moving/ copying/ inserting/ deleting rows and columns (usage of cut, paste, commands, copying a single cell, copying a range of data, filling up a cell. Undo command, inserting a row, column, deleting rows and columns).
   b. Formatting work sheets.
   1. Bold style.
   2. Italic style.
   3. Font size changing.
   4. Formatting numbers (Auto fill, Selection Command, Currency format, Currency)
   5. Specifying percentage (%) Scientific notations.
   6. Drawing border around cells.
   7. Printing a work sheet (Pring preview, Margin Setting, Header, Footer).
2. a. Database Concept: database, record field and filed name – creating and sorting a data base and maintaining a database (data form).
   b. Using auto filter, advanced filter
   c. Creating subtotals and grad totals - using database fucntions.

3. Creating charts
   - i) Using chart wizard (five steps)
   - ii) Changing the chart type (Pie,Bar, Line)
   - iii) Inserting titles for the axes X. Y
   - iv) Changing colors.
   - v) Printing charts.

4. a. Using date, time, maths functions:
   - i) entering current data.
   - ii) Using date arithmetic (adding and subtracting dates)
   - iii) Date functioins (day, month, second)

   b. Math Functions
   - i) SUM, COUNT, AVERAGE
   - ii) MAX, MIN
   - iii) STDDEV, VAR
   - iv) ABS, EXP, INT
   - v) LOG 10 AND LOG
   - vi) MOD, ROUND, SORT
   - vii) Using auto sum

   c. Logical and Financial Functions
   - i) Logical (IP / AND / OR / NOT)
   - ii) Financial (PMD, FV, NPER, RATE)

5. i) Creating and running a macro.
   - ii) Assigning button to a defined macro.
   - iii) Editing a macro.

MS-POWER POINT:

1. Creating a presentation using auto content wizard.
2. Different views in power point presentation.
3. Setting animation effects / grouping / ungrouping / cropping power / point objects.
4. Printing a presentation / Importing – Exporting files
5. Creating an organisation chart in Power Point.

TALLY:

1. Company Information

a. Company creation
b.Select Company
c. Shut Company
d. Alter Company
e. Split Company Data
f. Backup and Restore

2. Gateway of Tally

a.Accounts info

i) Groups
ii) Ledgers
iii) Voucher Types

b. Inventory info

i) Stock Group
ii) Stock Category
iii) Stock item
iv) Unit of Measures
v) Godown

c. Accounting Vouchers
d. Inventory Vouchers

3. Statutory and Taxation

a. Value Added Tax (VAT)
b. Tax Deducted at Source (TDS)
c. Tax Collected at Source (TCS)
d. Service Tax

4. Display

a. Trial Balance
b. Day Book
c. Accounts Book
d. Statement of Accounts
e. Inventory Books
f. Statement of Inventory
g. Statutory Info
h. Statutory Reports
i. Cash flow and Fund flow

ALLIED - 2

(To choose any 1 out of 3)

PAPER – 2

A. INDIAN ECONOMY II

UNIT-I

Role of Technology - Information Technology BPO in India - their impact on Economic Development – Cyber Crime.

UNIT-II

Role of industries - Cottage & Small Scale industries - Some Large Scale industries (Cotton, Sugar, Iron & Steel, Tea & Petro Chemical) Industrial Policy - 1991 and after - Public sector Enterprises - Dis-investment and Privatisation.

UNIT-III

Transport - Importance of Transport (Roadways, Railways, Shipping and Civil Aviations) to Economic growth - Evaluation of Government in Policy in relation to privatisation policy - Transport Coordination.

UNIT-IV

Planning in India - Strategy of Indian Planning - Resources for Financing Plan - Agriculture and Industrial Development - Planning techniques - Investment Priorities – General Objectives – Targets, Achievements and Failures – 11^{th} and 12^{th} five year plans- NITIAYOG

UNIT-V

Poverty in India - Poverty Eradication Programmes - Recent Employment scheme- Swaraj Bharat Mission - Role of Micro finance - (SHG, Cottage and Household Sector etc.,) - Regional Development Disparities -India's Foreign Trade and Balance of Payments.

ALLIED - 2

PAPER - 2

B. LOGISTIC MANAGEMENT

Objective:

To understand the comprehensive nature of Logistics Management.

UNIT-I

Logistics - definition - scope - functions - objectives of Logistics Management - customer service and logistics.

UNIT-II

Supply Chain - components - role of logistics in supply chain - Warehousing - functions - types - warehouse layout - material handling and logistics - Inventory Management.

UNIT-III

Transportation - infrastructure - freight management - transportation network - route planning - containerization.

UNIT-IV

Logistical packaging - logistics information needs - logistics design for distribution channels - logistics outsourcing.

UNIT-V

Government policies and regulations - Motor Vehicles Act, carriage by air, sea, multi-modal transportation etc., Documentation - Airway Bill, Railway Receipt, Lorry Receipt, Bill of Lading etc.

Text Books:

1. Ronal H. Ballou, Business Logistics / Supply Chain Management, Pearson Education, Prentice Hall, New Delhi - 2001.

Reference Books:

CORE PAPER – 7
BANKING THEORY, LAW AND PRACTICE

Objective:

To study in detail about the Central Bank and Commercial Banking System including the latest directives and decisions of Reserve Bank of India. To study the recent developments in Indian banking system.To acquire the basic knowledge about the banking transactions.

Unit - I

Origin of banks – Banking Regulation Act, 1949 – Roll of Banks and Economic Development – Central Banking and Role of RBI and their functions - Credit Control Measures of Central Bank.

Unit - II

Commercial Banks – Functions – E-Banking – ATM Cards, Debit cards, Personal Identification Number – Online enquiry and update facility – Electronic Fund Transfer – Electronic Clearing System – Credit Creation and Credit Control – Role of SBI in the Economic Development of India.

Unit - III

Types of Bank Accounts - Savings Account, Current Account - Types of Deposit Account – Fixed and Recurring Deposits Account – Procedure for opening of an Account – Types of customers (Individuals, firms and Companies) – Importance of CRM – Customer grievances and redressal – Ombudsman.

Unit - IV

Negotiable instruments – Promissory Note – Bills of Exchange, Cheque, Draft – Definitions, Features – Crossing – Endorsement – Material Alteration – Dishonour of Cheques – Paying Banker – Rights, Duties and Statutory Protection to Paying Banker – Collecting banker – Rights and Duties.

Unit - V

Principles of lending – Types of Loans – Precautions to be taken by a banker while lending against LIC Policies, Shares, Gold, Silver Ornament and Jewellery.

Text Books:

1. Banking Law Theory and Practice – Sundaram and Varshney – Sultan Chand Co.
2. Banking and Financial Systems – B. Santhanam, Margham Publishers.
3. Banking Law Theory and Practice – S.N. Maheswari – Kalyani Publications.
4. Banking Theory Law and Practice, Dr. S. Guruswamy, 3rd Edition, Vijay Nicholes Imprint Pvt. Ltd., Chennai.

Reference Books:

1. Indian Banking – Parameswaran – S. Chand and Co.
2. Financial Services – Dr. S. Gurusamy, Tata McGraw-Hill Education India.
3. Banking Theory Law Theory and Practice – Dr. S. Gurusamy, Tata McGraw-Hill Education India.

CORE PAPER - 8

MANAGEMENT INFORMATION SYSTEM

Unit-I:

Management Information – Meaning of Information – Information needs of Managers – Web Data basis – Data warehousing – Knowledge management – Information system for decision making.

Unit-II:

Types of Information System – Transaction Processing System – Office Automation System – Decision Support System – Executive Support System – MIS – Evolution of MIS – Computer and MIS.

Unit-III:

System Analysis – System Planning and Mutual Investigation – System Design - The Process and Stages of System Design – Input / Output forms Design – File Organisation – System Implementation.

Unit-IV:

Management Information Needs and Communication links for Marketing system, Production System, Accounting System, Manufacturing System, Inventory Control System and Budget Control System - IS Organisation – Top Management Responsibility – Processing Group Responsibility.

Unit-V:

Development – Maintenance of MIS – Operation of manual Information System – Role of Computer in MIS – Data base Concept – Expert Systems – System Audit.

Text Book:

1. M. Assam – Fundamentals of Management Information System – Vijay Nicole Imprints Private Ltd., Chennai.
2. Effy Oz, "Management Information Systems", Second edition, Thomson Learning Course Technology, 2002.
3. JawadekarW.S, "Management Information Systems", Tata McGraw Hill Publishing Company Ltd, 2002.

PAPER - 3

MOBILE COMPUTING

Unit I : INTRODUCTION

Mobile Computing – Mobile Computing Vs wireless Networking – Why Go Mobile- Mobile Computing Applications – Characteristics of Mobile computing – Types of Wireless Devices Structure of Mobile Computing Application- Mobile Communication Networks.

Unit II : WIRELESS MAC PROTOCOLS & MOBILE INTERNET PROTOCOL

Wireless MAC Protocols- FDMA TDMA – CDMA – Advantages and Disadvantages- Why Mobile IP- What is Mobile IP-Motivations for Mobile IP- What Mobile IP does-Requirements to Mobile IP- Mobile IP terminologies- Mobile IP features-Key Mechanism in Mobile IP-Data transfer to the mobile system- Data transfer from mobile system- Key Mechanism in Mobile IP-DHCP.

Unit III : MOBILE TELECOMMUNICATION SYSTEM

Global System for Mobile Communication(GSM)-What is GSM-GSM Services- GSM Subscriber Services-GSM Supplementary Services- GSM Architecture- Mobile Station-General packet radio service(GPRS)-GPRS Services-Advantages of GPRS-Applications of GPRS-Universal Mobile Telecommunications System(UMTS).

Unit IV : MOBILE PLATFORMS AND APPLICATIONS

Mobile Device Operating Systems – Special Constraints & Requirements – Commercial Mobile Operating Systems – Windows Mobile- Palm OS- Symbian OS- iOS- Android- Blackberry Operating system-Software Development Kit - M-Commerce – Structure – Pros & Cons –Mobile Payment System – Bluetooth Security-Security Issues.

Unit V : E-BUSINESS, E-COMMERCE & M-COMMERCE

Introduction, Potential Benefits, Limitations, Classifications, Impact of E-Commerce on Business models.

E-Commerce Applications: Entertainment, E-Marketing, E-Advertising, Search Engines, E-Banking, Mobile Commerce, Online Trading, ELearning, E-Shopping.

Text Books:

1. Prasant Kumar Pattinaik, Rajib Mall , "Fundamentals of Mobile Computing", PHI Learning Pvt Ltd, New Delhi, 2012
2. E-Commerce: A Managerial Perspective: Micheal change, etc. A1
3. Electronic Commerce – Security: Greenstein & Feinman Risk Management & Control

SKILL BASED SUBJECT – I

PAPER – 1

ELEMENTS OF INSURANCE

Objective:

To gain a knowledge of insurance and its importance.

UNIT-I

Definition of insurance - classification of Contracts of insurance - marine and non-marine - general principles of law as applied to non-marine insurance.

UNIT-II

Life Assurance - objects of life Assurance - principles of life Assurance - different plans of life Assurance and annuities - policy condition and privilege - assignment and nomination - lapses and revivals - surrender values and loans - claims - double insurance.

UNIT-III

Marine insurance - principles of marine insurance - functions of marine insurance - proximate clause - subrogation and contribution

UNIT-IV

Types of marine policy - clauses in general use - warranties - kinds of marine losses - reinsurance and double insurance.

UNIT-V

Fire insurance - principles of law as applied to fire insurance - the subject matter of fire insurance - fire waste - hazard types of fire policy - cover notes - surveys and inspection average - re-insurance - renewals.

Text and Reference Books:

1. Dr. B. Vardharajan - Insurance Vol 1 and 2. - Tamil Text Book.
2. R.S. Sharma - Insurance Principle & Practice - Vara Bombay, 2006.

A. Murthy - Elements of Insurance Risk management & Insurance - Harrington, 2006 - Tata McGraw Hill pub.

NON-MAJOR ELECTIVE – I

PAPER – 1

ELEMENTS OF ACCOUNTANCY

Objectives:

To facilitate the non- commerce students to have a basic knowledge in Book-Keeping and Accounting.

Unit - I:

Need for Accounting – Definition (AICPA) – Steps – Objectives — Double Entry System - Meaning of Debit and Credit - Advantages – Limitations – Types of Accounts – Accounting Rules – Accounting Terminology – Accounting Concepts and Conventions – Meaning and Types – Accounting Equation.

Unit - II:

Journal – Ledger Accounts – Trial Balance.

Unit - III:

Subsidiary Books – Meaning – Types (no problems from Bills Receivable Book and Bills Payable Book but only theory) – Advantages over Journal – Ledger Accounts – Trial Balance.

Unit - IV:

Errors – Classification – Rectification (Rectification after the preparation of final account is excluded) – Suspense Account – Meaning and Need.

Unit - V:

Closing and Adjustment Entries – Final Accounts with simple Adjustments.

(Weightage: Theory: 25%, Problems: 75%)

1. Jaisankar, Marketing, Margham Publications, Chennai
2. L. Natarajan, Marketing, Margham Publications, Chennai
3. Dr. K. Sundar, Essentials of Marketing, Vijay Nicole Imprints Private Ltd., Chennai.

CORE PAPER – 11

RELATIONAL DATABASE MANAGEMENT SYSTEMS

UNIT-I

Purpose of Database - Overall System Structure - Entity Relationship Model.

UNIT-II

Relational Model - Structure - Formal Query Language - Relational Algebra - Tuple and Domain Relational Calculus.

UNIT-III

Structured Query Language - Basic Structure - Set Operations - Aggregate Functions – Date and Numeric - Modification Of Databases - Joined Relations-DDL - Embedded SQL.

UNIT-IV

Relational Database Design - Pitfalls - Normalisation Using Functional Dependencies - First Normal Form-Second Normal Form-Third Normal Form.

UNIT-V

Oracle - Introduction - SQL (DDL, DML, DCL Commands) - Integrity Constraints - PL/SQL - PL/SQL Block - procedure, function.

Text Books:

1. Singh-Database systems: Concepts, Design & applications, Pearson Education.
2. Abraham Silberschatz, H.F.Korth And S.Sudarshan-Database System Concepts Mcgraw Hill Publication
3. Gerald V.Post - DBMS-Designing And Business Applications - McGraw Hill Publications
4. Michael Abbey And Michael.J.Corey-Oracle- A Beginners guide TMH

CORE PAPER – 12

RDBMS LAB

1. Create a table student_master with the following fields name, regno, dept and year with suitable data types. Use Select command to do the following.

   a) Select the student's name column.
   b) Eliminate the duplicate entry in table.
   c) Sort the table in alphabetical order.
   d) Select all the Students of a particular department.

2. Create a table master_book to contain the information of magazine code, magazine name, and publisher. Write PL/SQL block to perform insert, update, delete operations on the above table.

3. Create a table to contain phone number, user name, address of the phone user. Write a function to search for a address using phone numbers.

4. Create a table to store the salary details of the employees in a company. Declare the Cursor to contain employee number, employee name and net salary . Use Cursor to update the employee salaries.

5. Create a table to contain the information about the voters in a particular constituency. Write a proper trigger to update or delete a row in the table.

6. Create a table to store the details of the Alumni in an institution. Write a PL/SQL block to change address of particular alumni. Write proper exceptions and appropriate error messages.

PAPER - 4

E-COMMERCE AND ITS APPLICATIONS

Unit - I:

Introduction to E-Commerce – Meaning – Working of E-Commerce – Electronic Business – Categories of E-Commerce Application – Global Trading Environment and Adoption of E-Commerce – Product suitability – Comparison between Traditional and Electronic Commerce – Advantages and Disadvantages of E-Commerce.

Unit - II:

Business Models of E-Commerce – Introduction – Major challenges of B2C E-Commerce – Meaning of B2B Exchange – Development of B2B E-Commerce – Types of B2B Markets – Difference between B2C and B2B Commerce.

Unit - III:

Introduction to E-Hub Concept – Introduction to B2G Concept – E-filing.

Unit - IV:

Internet – Internet Operation – Internet Explorer – Creation of E-mail ID, E-mail etiquettes.

Unit - V:

Web Browsing – Role of Website in B2C E-Commerce, Website strategies and goals. Websites Design Principles for E-Commerce websites.

Text Books:

E-Commerce – SrinivasaVallabhan. S.V – Vijay Nicole Imprints Private Ltd.,

Chennai.

SKILL BASED SUBJECT – II

PAPER - 2

INDUSTRIAL ORGANIZATION

Objective:

To gain knowledge of the basic industrial structure and its working.

UNIT-I

Meaning of Industrial Organisation – Industrial Revolution – Industrial Growth – Aggregation, Consolidation, Integration - Mass Production – Importance, Advantages, Limitations – Specialisation – division of labour – its advantages and disadvantages – Industrial growth in India – major industries in India – current scenario.

UNIT-II

Industrial ownership – Sole Proprietorship - Features, merits and demerits – partnership - Features, merits and demerits - Joint Stock Company - Features, merits and demerits - Types – Public Ltd and Private Ltd companies.

UNIT-III

Physical facilities – plant location – need for selection of location – stages in selection of location – plant layout – definition, objectives, advantages, types – factors influencing plant layout – tools used for design of plant layout – principles of a good plant layout.

UNIT-IV

Production management – product design – characteristics of a good product design – design of production system – its types – design of work study – motion study – time study - production planning – objectives, levels – production control – factors determining production control operation – functions of production planning and control.

UNIT-V

Materials management – its meaning, objectives, advantages, functions – purchasing-types of purchasing policy – store keeping – organisation of stores department – inventory control – its objectives, functions, benefits.

Text Book:

1. Dr. A. Murthy, Industrial Organisation, Margham Publications, Chennai.

Reference Books:

1. L Bethel, Atwater, Smith and Stackman, Industrial Organisational Management, McGraw Hill.
2. Kimball & Kimball, Principles of Industrial Organisation, McGraw Hill.

A. ENTREPRENEURIAL DEVELOPMENT

Objective:

To encourage students to become entrepreneurs.

UNIT-I

Meaning of Entrepreneur – Entrepreneur and Enterprise – Entrepreneur and Manager – Entrepreneur and Intrapreneur – Qualities (Traits) of True Entrepreneur – Characteristics of Entrepreneur – Types of Entrepreneurs – Functions of an Entrepreneur – Roles of Entrepreneurs in the Economic Development.

UNIT-II

Establishing an Enterprise – Project Identification – Selection of the Product – Project Formulation – Assessment of Project Feasibility – Preparation of Project Report – Selection of Site (Location).

UNIT-III

Selection of Types of Organization – Sole Proprietorship – Partnership Joint Stock Company – Factors Influencing the Choice of Organization – Sources of Project Finance – Sources of Long Term Finance – Sources of Short Term Finance.

UNIT-IV

Incentives and Subsidies – Meaning of Incentives and Subsidies – Need and Problems – Incentives for Development of Backward Area – Incentives for SSI Units in Backward Areas – Taxation Benefits to SSI Units – Subsidies and Incentives in Tamil Nadu.

UNIT-V

Women Entrepreneurs – Concept – Functions and Role – Problems of Women Entrepreneurs – Suggestions for Development of Women Entrepreneurs – Rural Entrepreneurship – Need – Problems – How to Develop Rural Entrepreneurship.

Text Books:

1. C.B. Gupta, Entrepreneurship development in India – Sultan Chand.
2. Gupta C.B and SrinivasanN.P. Entrepreneurial Development, Sultan Chand & Sons, New Delhi.

Reference Books:

1. P Sarvanavel, Entrepreneurial development – Ess Pee kay Publishing House.
2. S.S. Khanka, Entrepreneurial Development, S. Chand & Co., New Delhi.

ELECTIVE–I

PAPER - 1

B. PRACTICAL AUDITING

Objective:

To gain knowledge of the principles and practice of auditing.

UNIT-I

Meaning and Definition of Auditing – Nature and Scope of Auditing – Accountancy and Auditing, Auditing and Investigation – Objectives of Auditing – Limitations of Audit – Advantages of Audit – Classification of Audit

UNIT-II

Meaning and Definition of Audit Programme – Advantages and Disadvantages – Audit File, Audit Note Book, Audit Working Papers – Purposes and Importance of Working Papers – Internal Check – Meaning, Object of Internal Check – Features of Good Internal Check System – Auditors duty with regards to Internal Check System – Internal Check and Internal Audit.

UNIT-III

Vouching – Meaning – Objects – Importance of Vouching – Meaning of Voucher – Vouching of Cash Receipts and Vouching of Cash Payments – Vouching of Trading Transactions.

UNIT-IV

Verification and Valuation of assets and liabilities – Meaning and objects of verification – Vouching and verification – Verification and Valuation of different kinds of Assets and Liabilities.

UNIT-V

The Audit of Limited Companies – Necessity of Company Audit – Qualification and Disqualification of Auditors – Appointment – Removal – Remuneration – Status of Auditors – Rights – Powers – Duties and Liability of Auditors – Auditor's Report – Importance and Contents.

Text Books:

1. B.N. Tandon, Sultan Chand – A handbook of practical auditing
2. B.N. Tandon, Sudharsanam, Sundharabahu – S Chand – Practical auditing.
3. Sundar. K and Pari. K, Vijay Nicole Imprints Private Ltd., Chennai.

Reference Books:

1. Sharma, SahityaBhavan, Agra – Auditing
2. Dr.N.Premavathy, Practical Auditing, Sri Vishnu Publications, Chennai.
3. Dr.N.Premavathy, Practical Auditing (in Tamil), Sri Vishnu Publications, Chennai.

ELECTIVE–I

PAPER – 1

C. INCOME TAX LAW AND PRACTICE - I

Objective:

To enable the students to have a knowledge of law of practice of Income tax.

Unit - I: Introduction

Income Tax Act 1961- Basic Concepts – Assessment Year – Previous Year – Person – Assessee – Income – Gross Total Income – Total Income - Agricultural Income – Casual Income – Capital and Revenue Receipts – Capital and Revenue Expenditures – Exempted Incomes u/s 10.

Residential status of an individual- Residential status of a HUF – Residential status of a firm and association of persons – Residential status of a company – incidence of tax liability.

Unit - II: Salaries

Meaning and features of Salary – Allowances – Perquisites – Profits in lieu of Salary – Provident Fund and its types – payments exempted u/s 10: Leave travel concession; gratuity; pension; leave encashment; retrenchment compensation; VRS – Deductions from salary: EA and professional tax- deduction u/s 80C- taxable salary

Unit - III: Income from House Property

Annual value – Determination of annual value- Income from let out house property – Income from self-occupied house property – Deductions allowed from Income from house property u/s 24.

Unit - IV: Profit and Gains of Business or profession and depreciation

Meaning of business and profession – deductions expressly allowed – expenses expressly disallowed – treatment/ admissibility of certain expenses and incomes – income from business- income from profession.

Meaning of depreciation – conditions for depreciation – actual cost – written down value – computation of allowable depreciation.

Unit - V: Income tax authorities

CBDT – powers – Director General of income tax – Chief commissioner of income tax – Assessing officer – appointment – Jurisdiction – powers relating to search and seizure.

Note: Questions in Sec. A, B & C shall be in the proportion of 20:80 between Theory and Problems.

Text books

1. Gaur & Narang, Income Tax Law & Practice, Kalyani Publishers.
2. Dr. A. Murthy, Income Tax Law & Practice, Vijay Nicole Imprints Pvt. Ltd. Chennai
3. Reddy,T.S. & Hariprasad Reddy,Y,Income Tax Theory, Law & Practice, Margham Publications, Chennai.

Reference books

1. Mehrotra-Income Tax Law & Accounts, Sahithiya Bhavan Publications.
2. Vinod, K. Singhania, Students Guide to Income Tax, Taxman Publications Pvt. Ltd.

SKILL BASED SUBJECT – III

PAPER - 3

COMPUTER APPLICATION IN BUSINESS

Objective:

To provide basic knowledge of computer applications in business.

UNIT-I

Introduction to Computer – Characteristics of a Computer – History of Computer – Computer generation - Hardware – Software – System Software and application software.

UNIT-II

MS - Word Processing: Starting MS word - MS word environment - working with word documents, text, tables - checking spelling and grammar - printing a documents.

UNIT-III

MS Excel - MS Excel Sheet - MS Excel environment - Working with Excel workbook - worksheet - Formulas and functions - Inserting charts - printing in Excel.

UNIT-IV

MS Power Point - Starting MS Power Point - MS power point environment - working with power point - working with different views – designing, presentation & printing in Power Point.

UNIT-V

Electronic Commerce - Types - Advantages and Disadvantages - Electronic data interchange (EDI) working of EDI - EDI benefits & Limitations - SMART card - SMART card applications.

TEXT BOOK

1. Ananthi Sheshasaayee: Computer Application in Business and Management, Margam Publication.
2. Leon & Leon, Computer Applications in Business, Vijay Nicholes Imprint Pvt. Ltd.,– Chennai

REFERENCE BOOK

3. A. Zakiudeen Ahmed: Computer Application in Business, Margam Publication.

SEMESTER – VI

CORE PAPER - 17

COST ACCOUNTING - II

Objective:

To understand the basic concepts and methods of Cost Accounting.

UNIT-I

Job, Batch, Contract Costing: Job Costing – definition – Features – Procedure – WIP – Cost Accumulation, Batch Costing – EBQ, Contract Costing – Definition, Features, Work Certified and Uncertified – Incomplete Contact – Escalation Clause – Cost Plus Contract – Contract Account

UNIT-II

Process Costing : Definition – Features – Job Vs Process Costing – Process Account – Losses – By Products and Joint Products – WIP – Equivalent Units and its Calculation - Closing WIP with or without Process Loss.

UNIT-III

Operating Costing (Transport Costing): Cost Unit – Cost Classification – Operating Cost sheet.

UNIT-IV

Marginal Costing: Definition – Advantages and Limitation – Break Even Point – Margin of Safety – P/V Ratio – Key factor – Make or Buy Decision – Selection of Product Mix – Changes in Selling Price – Foreign Market Offer – Desired Level of Profit.

UNIT-V

Reconciliation of Cost and Financial Accounts.

(Weightage of Marks = Problems - 80%, Theory - 20%)

Text Books:

1. T.S. Reddy &Hari Prasad Reddy – Cost Accounting – Margham Publications, Chennai
2. A.Murthy and S. Gurusamy, Cost Accounting 2nd Edition, Vijay Nicole Imprints Private Ltd., Chennai.
3. A.Murthy and S. Gurusamy, Cost Accounting, Tata McGraw-Hill Publishing Company Ltd. New Delhi.
4. Tulsian P.C. – Cost Accounting – Tata McGraw Hills.

Reference Books:

1. S.P.Jain and Narang – Cost Accounting – Kalyani Publishers, New Delhi
2. S.N.Maheswari – Principles of Cost Accounting – Sultan Chand & sons, New Delhi
3. S.P.Iyangar – Cost Accounting – Sultan Chand & Sons, New Delhi.

CORE PAPER – 18

WEB TECHNOLOGY

UNIT-I

Internet Basic - Introduction to HTML - List - Creating Table - Linking document Frames - Graphics to HTML Doc.

UNIT-II

Style sheet - Style sheet basic - Add style to document - Creating Style sheet rules - Style sheet properties - Font - Text - List - Color and background color - Box - Display properties.

UNIT-III

Introduction - Object in HTML - Event Handling - Window Object - Document object - Browser Object - Form Object - Navigator object Screen object - Build in Object - User defined object.

UNIT-IV

HTML server controls - Anchor, Tables, Forms, Files. Basic Web server Controls- L.able, Textbox, Button, Image, Links, Check & Radio button, Hyperlink. Data List Web Server Controls - Check box list, Radio button list, Drop down list, List box, Data grid, Repeater.

UNIT-V

Request and Response Objects, Cookies, Working with Data - OLEDB connection class, command class, transaction class, data adaptor class, data set class.

Reference Books:

1. Deitel&Deitel ,internet & world wide web How to program, Pearson Education
2. I. Bayross, Web Enable Commercial Application Development Using HTML, DHTML, Javascript, Pen CGI, BPB Publications, 2000
3. J. Jaworski, Mastering Javascript, BPB Publications, 1999
4. T. A. Powell, Complete Reference HTML (Third Edition),TMH, 2002
5. G. Buczek, ASP.NET Developers Guide, TMH, 2002

CORE PAPER - 19

WEB TECHNOLOGY LAB

1. Create a simple page introducing yourself how old you are, what you do, what you like and dislike. Modify the introduction to include a bullet list of what you do and put list the 5 things you like most and dislike as numbered lists. Create another page about your favorite hobby and link it to (and from) your main page. Center something, and put a quote on one of your pages
2. Put an existing image on a web page. Create a table, use a heading and at least one use of row span/col. span. Color a page and some text within the page. Link to another site
3. Create a new file called index. html.
   - ❖ Put the normal HTML document structure tags in the file.
   - ❖ Give it a title.
   - ❖ At the bottom of the page (i.e. the last thing between the body tags) put the following:
     - ♦ A horizontal rule.
     - ♦ A Link to your e-mail Address (With your name between the tag) ; remember to put the link to your E- Mail address within address tags.
     - ♦ A line break.
     - ♦ The date. (I have this same structure at the bottom of this page).
     - ♦ Above this block (which is called the footer), put a title in heading tags.
     - ♦ Add some text describing yourself (you can split this into multiple headings and Paragraphs if you wish).
4. Write a script to create an array of 10 elements and display its contents.
5. Create a document that accepts the user's name in a text field form and displays the sanie the next time when the user visits the site informing him that he has accessed the site for the second time, and so on.

ELECTIVE– II

PAPER - 2

A. INCOME TAX LAW AND PRACTICE – II

Objective:

To enable the students to have a knowledge of law of practice of Income tax.

Unit I: Capital gains

What are capital assets? – what are not capital assets? – kinds of capital assets – transfer u/s 2 (47) – cost of acquisition – cost of improvement – computation of short term capital gain - computation of long term capital gain – exemptions from capital gains.

Unit II: Income from other sources

Specific incomes chargeable to tax – general incomes chargeable to tax – Interest on securities – Interest exempt from tax u/s 10 (15) - deductions allowed from Income from other sources – computation of income from other sources.

Unit III: Clubbing of Incomes and Set off and carry forward of losses

Income transfer without asset transfer – cross transfer –transfer for the benefit of son's wife – capital gain on an asset gifted before marriage – gifted money used for construction of house by spouse – income including losses – clubbing of business income – clubbing of minor's income – computation of total income.

Provisions relating to set off of losses- Provisions relating to set off and carry forward of losses – unabsorbed depreciation – order of set off – computation of total income.

Unit IV: Agricultural Income and Deductions from gross total income

Meaning of agricultural income – types of agricultural income – income from growing and manufacturing rubber - income from growing and manufacturing coffee - income from growing and manufacturing tea – income of a sugar mill growing its own sugarcane – computation of tax of an assessee having agricultural income.

Permissible deductions from gross total income – section 80C, 80CCC, 80CCD, 80D, 80DD, 80DDB, 80E, 80G, 80GG, 80GGA, 80QQB, 80RRB, 80U.

Unit V: Assessment of Individuals and Assessment procedures

Sources of income of an individual – computation of total income and tax liability of an individual.

Filing of returns – permanent account number (PAN) –Usage of PAN – TDS - types of assessment – self assessment – Best judgement assessment – Income escaping assessment (reassessment) – Advance payment of tax

Note: Questions in Sec. A, B & C shall be in the proportion of 20:80 between Theory and Problems.

Text books

1. Gaur & Narang, Income Tax Law & Practice, Kalyani Publishers.
2. Murthy.A,IncomeTaxLaw&Practice,VijayNicoleImprintsPvt.Ltd.Chennai
3. Reddy, T.S. &Hariprasad Reddy, Y, Income Tax Theory, Law & Practice, Margham Publications, Chennai.

Reference books

1. Mehrotra-Income Tax Law & Accounts, Sahithiya Bhavan Publications.
2. Vinod, K.Singhania, Students Guide to Income Tax, Taxman Publications Pvt. Ltd.

ELECTIVE–II

PAPER - 2

B. BUSINESS ENVIRONMENT

UNIT-I

The concept of Business Environment - Its nature and significance - Brief overview of political - Cultural - Legal - Economic and social environments and their impact on business and strategic decisions.

UNIT-II

Political Environment - Government and Business relationship in India - Provisions of Indian constitution pertaining to business

UNIT-III

Social Environment - Cultural heritage - Social attitudes - impact of foreign culture - castes and communities - Joint family systems - Linguistic and Religious groups - Types of Social Organization

UNIT-IV

Economic Environment - Economic Systems and their impact of Business - Macro Economic Parameters like GDP - Growth Rate - Population - Urbanization - Fiscal deficit - Plan investment - Per capita Income and their impact on business decisions

UNIT-V

Financial Environment - Financial System - Commercial banks - RBI - IDBI - Non-Banking Financial Companies NBFC's

Text Books:

1. Dr. S. Sankaran - Business Environment. Margham Publications, Chennai
2. Aswathappa - Business Environment, Himalaya Pub. House, 2009.

Reference Books:

1. Dasgupta and Sengupta - Government and Business in India.
2. Srinivasan K - Productivity and Social Environment.
3. International Business Environment - Prentice - Hall of India.
3. Dhanabakiyam & M. Kavitha, Business Environment, Vijay Nicole Imprints Pvt. Ltd. Chennai.

ELECTIVE–II

PAPER - 2

C. SERVICES MARKETING

Objective:

To enable the students to acquire a deep knowledge in services marketing.

UNIT-I

Concept of service – Meaning, definitions – Components and types – Service Vs goods – Service Marketing mix characteristics – Advertising – objectives – Advertising message and media selection – merits – personal selling – process - Advantages

UNIT-II

Physical evidence – Essential and peripheral evidence – Guidelines for physical evidence – Managing demand and supply Capacity constraints – demand patterns – Capacity planning and types – Managing capacity to match demand – Managing demand to match capacity

UNIT-III

Pricing in services – objectives – types of pricing – characteristics and factors affecting pricing decisions – customer relationship marketing – objectives and requisites – benefits

UNIT-IV

Quality of service – five dimensions of quality – Gap analysis and causes for customer gap – key factors leading to Customer Gap – Provider Gaps

UNIT-V

Marketing of Services by Insurance business – Banks – Education – Tourism – Transport.

REFERENCE BOOKS:

1. S.M.Jha, Services Marketing, Himalaya Publications, New Delhi
2. M.K.Rampal & S.L.Gupta, Services Marketing, Galgotta Pub. House
3. Dr.B.Baly, Services Marketing, S. Chand & Co., New Delhi
4. Vasanthi Venugopal & Raghu V.N, Services Marketing, Himalaya Publications, New Delhi.
5. Dr.L.Natarajan, Services Marketing, Margham Publications, Chennai.

ELECTIVE–III

(To choose any 1 out of 3)

PAPER – 3

A. SOFTWARE ENGINEERING

UNIT-I:
Introduction - Evolving Role of Software - Changing Nature of Software – Software Myths; a Generic View of Process: Layered Technology - Process Models: Waterfall Model - Evolutionary Process Models.

UNIT-II:
Requirements Engineering: Tasks - Initiating the Requirements Engineering Process - Eliciting Requirements - Building the Analysis Model - Requirements Analysis - Data Modeling Concepts.

UNIT-III:
Data Engineering: Design Process and Design Quality - Design Concepts - The Design Model Creating an Architectural Design: Software Architecture - Data Design -Architectural Design - Mapping Data Flow into Software Architecture; Performing User Interface Design: Golden Rules.

UNIT-IV:
Testing Strategies: Strategic Approach to Software Testing- Test Strategies for Conventional and Object Oriented Software - Validation Testing - System Testing -Art of Debugging. Testing Tactics: Fundamentals - White Box- Basis Path - Control Structure - Black Box Testing Methods

UNIT-V:
Project Management: Management Spectrum - People - Product - Process - Project. Estimation: Project Planning Process - Resources - Software Project Estimation - Project Scheduling - Quality Concepts - Software Quality Assurance - Formal Technical Reviews.

TEXT BOOK:

1. Roger S Pressman, "Software Engineering - A Practitioner's Approach", Sixth Edition, McGraw Hill International Edition, New York: 2005.

REFERENCES:

1. Ian Somerville, "Software Engineering", 7th Edition, Pearson Education, 2006.
2. Mall Rajib," Software Engineering", 2/E, PHI, 2006.

ELECTIVE–III
PAPER - 3
B. DATA MINING

UNIT-I

Data Mining - Introduction - Meaning- importance of Data mining - various kinds of data - Data Mining Functionalities – Various kinds of Patterns - Pattern Interesting Classification of Data mining Systems - Data mining Task Primitives – Integration of Data Mining System – Major issues in Data Mining.

UNIT-II

Data Processing - Process the Data Descriptive Data Summarization – Measuring Central Tendency Dispersion of Data Graphic Displays of –Basic Descriptive Data Summaries Data Cleaning Data Integration and Transformation data Reduction Data Discrimination - Concept Hierarchy Generation

UNIT-III

Data Warehouse OLAP Technology An overview - Data Warehouse Multidimensional Data Model Data Warehouse Architecture Data Warehouse Implementation from Data Warehouse to Data mining

UNIT-IV

Mining – Frequent Patterns Associations Correlations - Basic Concepts Road Map Efficient Scalable Frequent Item set Mining methods Mining – Various Kinds of Association rules Analysis - Association mining to Correlation Constrain Based Association mining

UNIT-V

Applications Trends - Data mining Applications Data mining – System Products Research Prototype Additional Themes on Data Mining Social impact of Data mining Trends in Data mining

Text Book:

1. **Data Mining** (Concepts and Techniques) Second Ed (Chapter 1,2,3,5,11)

Author: Jiawei Han and Micheline Kamber **Publishers:** Morgan Kaufmann Publishers (An imprint of Elsevier)

Reference Books:

1. Data Mining (Next Generation Challenges and Future Directions) Author: Karguta, Joshi, Sivakumar & Yesha **Publishers:** Printice Hall of India (2007)
2. Data Mining (Practical Machine Learning Tools and Techniques (Second Edition) **Author:** Ian H. Witten &Eibe Frank **Publishers:** Morgan Kaufmann Publishers (An imprint of Elsevier)
3. Data Warehousing, Data mining & OLAP (Edition 2004) **Author:** Alex Benson, Stephen V. Smith **Publishers:** Tata McGraw – Hill

ELECTIVE–III

PAPER – 3

C. ENTERPRISE RESOURCE PLANNING

UNIT - I

Business function and Business process: Functional areas and Business Process - functional area of operations - Business process - Marketing Sales - supply chain management - Accounting and finance - Human Resource - Functional areas of information system - The development of ERP system SAP R/3 - New directions in ERP - significance and benefits of ERP software and systems.

UNIT - II

Marketing information system and sales order process in ERP: sales and Distribution in ERP - Pre sales activities - sales order processing - inventory Sourcing - Delivery - Billing - payment - Customer relationship Management - benefits of CRM.

UNIT - III

Production and supply chain management information system: Production overview - The production planning process - The SAP ERP Approach to production planning - Sales forecasting - sales and operation Planning - Demand management - Material requirement planning in SAP ERP - ERP and supplier - Supply chain

UNIT - IV

Accounting in ERP: Accounting activities - using ERP for accounting Information - operational decision making problem - credit management - Industrial credit management in SAP ERP - product profitability analysis - Management reporting with ERP system - Document flow for customer Service.

UNIT - V

Human resource process in ERP: HR with ERP - Advance HR features - Time management - Payroll - Travel management - Training and Development - Management by objectives - ERP process modeling.

Reference Book:

1) ELLEN MONK and BRET WAGNER, ENTERPRISE RESOURCE PLANNING - 3rd edition - MGH.

SKILL BASED SUBJECT – IV

PAPER – 4

INDUSTRIAL RELATIONS

Objective: To enable the students to learn the concepts of Industrial Relations including trade unions, collective bargaining and various labour enactments.

Unit - I: Industrial Relations (IR)

Concept of Industrial Relations; Nature of Industrial Relations; Objectives of IR; Factors affecting IR in changing Environment, Evolution of IR in India; Role of State; International Dimensions of IR.

Unit - II: Trade Union

Trade Union: Origin and growth, unions after Independence, unions in the era of liberalization; Factors affecting growth of Trade Unions in India, Major Provisions of Trade Union Act 1926.

Unit - III: Collective Bargaining and Worker's Participation in Management

Collective Bargaining: Meaning, Nature, Types, Process and Importance of Collective Bargaining Status of Collective Bargaining in India, Functions and role of Trade Unions in Collective bargaining.

Workers' Participation in Management: Consent, practices in India, Works Committees, Joint management councils; Participative Management and co-ownership; Productive Bargaining and Gain Sharing.

Unit - IV: The Industrial Disputes Act, 1947:

Definitions of Industry, workman, and Industrial Dispute; Authorities under the Act; Procedure, Powers and Duties of Authorities; Strikes and Lock outs; Lay-off and Retrenchment; Provisions relating to Layoff, Retrenchment, and closure.

Unit - V: The Factories Act, 1948:

Provisions relating to Health, Safety, Welfare facilities, working hours, Employment of young persons, Annual Leave with wages.

Text Books:

1. B. Nandhakumar, *Industrial Relations and Labour Welfare and Labour Laws* - Vijay Nicole Imprints Private Ltd., Chennai.
2. JP Sharma, *Simplified Approach to Labour Laws*, Bharat Law House (P) Ltd.

Reference Books:

1. PK Padhi, *Industrial Relations and Labour Law*, PHI Learning.
2. Arun Monalppa, *Industrial Relations and Labour Law*, McGraw Hill Education.
3. SC Srivastav, *Industrial Relations and Labour Law*, Vikas Publishing House.
4. C.S. Venkata Ratnam, *Industrial Relations*, Oxford University Press.
5. P.L. Malik's *Handbook of Labour and Industrial Law*, Vol 1 and Vol 2, Eastern Book Company.

******

Question Paper Pattern:

Pattern	Total Questions	To answer	Marks per Question	Total Marks
Section A	10	10 (All)	2	20
Section B	8	5	5	25
Section C	5	3	10	30

Instructions to Paper Setter:

Section-A: Minimum 2 Questions to be asked from each of the five Units

Section-B: Minimum 1 Question to be asked from each of the five Units.

Section-C: 1 Question to be asked from each of the five Units.

THIRUVALLUVAR UNIVERSITY

BACHELOR OF SCIENCE

B.SC. BIOCHEMISTRY

SYLLABUS
UNDER CBCS
(With effect from 2017 - 2018)

SEMESTER I

PAPER - 1

CELL BIOLOGY

UNIT - I

An overall view of cells - origin and evolution of cells. Cell theory. Classifications of cell - Prokaryotic and Eukaryotic cells. Differences between prokaryotic and eukaryotic cells. Molecular composition of Cells - Water, Carbohydrates, Lipids, Nucleic acids and Proteins.

UNIT - II

Cell membrane- Fluid Mosaic Model of membrane structure. Membrane proteins and their properties. Membrane carbohydrates and their role. Transport across membranes- diffusion, active and passive transport.

UNIT - III

Endoplasmic reticulum - types, structure and functions. Golgi apparatus- structures and functions. Lysosomes- structure and functions, Ribosomes - types, structure and functions.

UNIT - IV

Mitochondria: Structure and function. Cytoskeleton: Types of filaments and their functions. Microtubules: Chemistry and function (esp. cilia and flagella)

UNIT – V

Chromosome-chromatin structure, the cell cycle - phases of cell cycle. Meiotic and mitotic cell divisions, cell- cell communications, cell recognition, cell adhesion and cell functions.

References:

1. Cell biology structure and functions-David and Sadava, Jones Bartlett publishers.
2. Molecular Cell Biology - Lodish, Berk, Zipursky, Baltimore, Freeman.
3. Cytology-P.S. Verma, V.K. Agarwal, S. Chand Publications.
4. Lehninger Principles of Biochemistry-David L. Nelson, Michael M. Cox, Macmillan Worth Publishers.
5. Biochemistry - Garrett Grishmam. 3rd edition. International student's edition.
6. Biochemistry by L . Veerakumari , MJP publishers,Chennai-5.

ALLIED

CHEMISTRY – I

OBJECTIVE:

- Basic knowledge on Metallurgy, Cycloalkanes, Polarising Effects, Stereochemistry, Chemical Kinetics, Catalysis, Photochemistry, VSEPR Theory, Fuels, Osmosis, Nuclear Chemistry, Petroleum Chemistry, Chemistry of Naphthalene, Conductors and Applications wherever necessary are to be taught for I- Semester.

UNIT – I

1.1General Metallurgy - Extraction of Metals - Minerals and Ores- Difference between Minerals and Ores – Minerals of Iron, Aluminum and Copper - Ore Dressing or Concentration of Ores - Types of Ore Dressing- Froth Floatation process, Gravity separation and Magnetic separation.

1.2 Calcination, Smelting, Roasting, Fux, Slag - Definition - Reduction methods - Goldschmidt Aluminothermic process and Carbon Reduction method - Refining of Metals - Electrolytic, Van Arkel and Zone Refining.

1.3 Ores of Titanium and Cobalt - Extraction of Titanium and Cobalt.

UNIT – II

2.1 Cycloalkanes - Preparation – Wurtz reaction and Dieckmann's condensation - Properties of Cycloalkanes – Substitution and Ring opening reactions.

2.2 Polarisation - Inductive effect, Mesomeric effect and Steric effect (Acid and Base Strength).

2.3Stereoisomerism – Types - Cause of Optical Activity – Enantiomers - Diastereomers - Meso form - Optical Activity of Lactic acid and Tartaric acid - Racemisation and Resolution – Definition and Methods - Geometrical isomerism – Definition and example - Maleic and Fumaric acid – Differences.

UNIT – III

3.1 Chemical Kinetics – Rate of a reaction – Definition of Order and Molecularity – Distinction between Order and Molecularity - Derivation of First order rate equation - Half Life Period of first order reaction.

3.2 Catalysis - Catalyst - Autocatalyst - Enzyme catalyst - Promoters - Catalytic poisons – Active Centre - Differences between Homogeneous and Heterogeneous Catalysis - Industrial Applications of Catalysts.

3.3 Photochemistry – Grothus-Draper's law – Stark-Einstein's law - Quantum yield – Photosynthesis - Phosphorescence – Fluorescence.

UNIT – IV

4.1 VSEPR Theory – Hybridisation and Shapes of simple molecules BF_3, PCl_5, SF_6 and XeF_6.

4.2 Fuels – Classification of Fuels - Calorific value of Fuels – Water gas, Carbureted Water gas and Producer gas – Composition and Uses - Non-Conventional fuels - Need of Solar Energy - Applications - Biofuels – Oil gas, Natural gas and LPG – Uses.

4.3 Osmosis - Osmotic pressure - Reverse osmosis – Definition - Desalination of Sea water.

UNIT – V

5.1Nuclear Chemistry – Atomic number, Mass number - Isotopes, Isobars and Isotones – Definition and Examples - Definition of Half life period - Nuclear Binding Energy, Mass Defect and N/P ratio - Nuclear Fission and Nuclear Fusion (Elementary idea) - Applications of Radioisotopes in Medicine, Agriculture and Industries – Carbon Dating.

5.2 Crude Oil - Petroleum - Petroleum Refining - Cracking - Applications of Cracking – Naphthalene – Preparation – Haworth's method – Properties – Oxidation, Reduction and Uses of Naphthalene - Structure of Naphthalene (Structural elucidation not necessary).

5.3 Conductors, Insulators, Semiconductors, N- and P- Type Semiconductors – Definitions and Examples.

SEMESTER II

PAPER – 2

BIOMOLECULES

UNIT-I: Carbohydrates

Classification of carbohydrates, stereo isomerism and optical isomerism of sugars, anomeric form and mutarotation. Occurrence, structure and biological importance of mono, di and polysaccharides (esp. starch, glycogen and cellulose). Reaction of Carbohydrates due to the presence of hydroxyl, aldehyde and ketone groups.

UNIT-II: Proteins

Classification and structure of amino acids based on structure. Introduction, classification of proteins based on solubility, size and shape. Structure of proteins - primary, secondary, tertiary and quaternary.

UNIT-III: Lipids

Introduction, definition, classification and functions of Lipids - simple lipids, compound lipids - phospholipids (esp. lecithin cephalin, phospotidyl inositol and phospotidyl serine) and derived lipids - steroid (cholesterol).

UNIT-IV: Nucleic acids

Nature of genetic material, structure of purine and pyrimidine nucleotides. Composition of DNA and RNA-Watson crick model of DNA. Types of nucleic acid (DNA and RNA).

Properties of nucleic acids-Tm, denaturation and renaturation, hypo and hyper chromicity.

UNIT-V: Vitamins

Dietary Sources, deficiency manifestation and biological functions of fat soluble and water soluble vitamins.

References:

1. Lehninger Principles of Biochemistry-David L. Nelson, Michael M. Cox, Macmillan Worth Publishers.
2. Harper's Biochemistry-Rober K. Murray, Daryl K. Grammer, McGraw Hill, Lange Medical Books. 25th edition.
3. Fundamentals of Biochemistry-J.L. Jain, Sunjay Jain, Nitin Jain, S. Chand & Company.
4. Biochemistry-Dr. Amit Krishna De, S. Chand & Co., Ltd.
5. Biochemistry-Dr. Ambika Shanmugam, Published by Author.
6. Biomolecules-C.Kannan , MJP Publishers,Chennai-5.

CORE PRACTICAL - I

Objectives

1. Students should know the principles, theory and calculations of each experiment.

2. They should know to prepare all the solutions by themselves. They should standardize their solutions individually.

1. EXPERIMENT INVOLVING TITRIMETRIC PROCEDURES

a. Estimation of amino acids by formal titration.

b. Estimation of ascorbic acid by titrimertic method using 2, 6-dichlorophenol indo phenol.

c. Determination of saponification value of edible oil.

d. Determination of Acid number of edible oil.

e. Estimation of reducing sugar from biological fluids by Benedict's titrimertic method.

f. Iodine number of oil.

2. QUALITATIVE ANALYSIS.

a. Reactions of simple sugars including glucose, fructose, galactose, mannose, pentose, maltose, sucrose, lactose, starch, glycogen and dextrin.

b. Reactions of proteins - solubility, Biuret, Millon's, Xanthoproteic test, denaturation by heat, pH change and precipitation by acidic reagents. Color reactions of amino acids like tryptophan, tyrosine, cysteine, methionine, arginine, proline and histidine.

c. Reactions of lipids - solubility, saponification tests for unsaturations, Liebermann-Burchard test for Cholesterol.

ALLIED – 2

CHEMISTRY – II

OBJECTIVE:

- Basic knowledge on Coordination Chemistry, Industrial Chemistry, Carbohydrates, Aminoacids, Proteins, Electrochemistry, Paints and Pigments, dyes, Vitamins, Medicinal Chemistry, Corrosion and Applications wherever necessary are to be taught for II- semester.

UNIT – I

1.1 Coordination Chemistry - Nomenclature of Coordination Compounds - Ligands, Central Metal Ion and Complex Ion – Definition and Examples – Coordination Number - Werner's Theory of Coordination Compounds - Chelates - Functions and Structure of Haemoglobin and Chlorophyll.

1.2 Industrial Chemistry - Fertilisers and Manures – Biofertilisers - Organic Manures and their importance - Role of NPK in plants - Preparation and Uses of Urea, Ammonium Nitrate, Potassium Nitrite and Super Phosphate of Lime.

1.3 Contents in Match Sticks and Match Box - Industrial making of Safety Matches – Preparation and Uses of Chloroform, DDT, Gammexane and Freons.

UNIT – II

2.1 Carbohydrates - Definition and Examples - Classification – Oxidation and Reduction Reactions of Glucose - Structure of Glucose (Structural elucidation not necessary) - Uses of Starch - Uses of Cellulose Nitrate and Cellulose Acetate.

2.2 Amino Acids – Definition and Examples - Classification of Amino Acids - Preparation - Gabriel Phthalimide Synthesis – Properties – zwitterion and Isoelectric point - Structure of Glycine.

2.3 Proteins – Definition - Classification of Proteins based on Physical properties and Biologcal functions - Primary and Secondary Structure of Proteins (Elementary Treatment only) – Composition of RNA and DNA and their Biological role - Tanning of Leather - Alum (Aluminum chloride tanning) - Vegetable tanning – Chrome Tanning.

UNIT – III

3.1 Electrochemistry - Electrolytes – Definition and Examples – Classification - Specific and Equivalent Conductance - their determination – Variation of Specific and Equivalent conductance with Dilution – Ostwald's Dilution Law and its Limitations.

3.2 Kohlrausch's Law - Determination of Dissociation Constant of weak Electrolytes using Conductance measurement - Conductometric titrations.

3.3 pH – Definition and pH determination by indicator method - Buffer solutions - Buffer action - Importance of buffers in the living systems.

UNIT – IV

4.1Paints - Components of Paint – Requisites of a Good Paint - Pigments – Classification of Pigments on the basis of Colour – Examples - Dyes – Definition – Chromophores and Auxochromes – Examples - Colour and Dyes - Classification based on Constitution and Application – Examples.

4.2 Vitamins – Definition – Classification – Water Soluble and Fat Soluble – Occurrence - Biological Activities and Deficiency Diseases caused by Vitamin A, B, C, D, E and K - Hormones – Definition and Examples – Biological Functions of Insulin and Adrenaline.

4.3 Chromatography - Principles and Applications of Column and Paper chromatography- R_f value.

UNIT – V

5.1 Drugs - Sulpha Drugs – Preparation and Uses of Sulphapyridine and Sulphadiazine - Mode of Action of Sulpha Drugs - Antibiotics - Uses of Penicillin, Chloramphenicol and Streptomycin - Drug Abuse and Their Implication - Alcohol – LSD.

5.2 Anaesthetics - General and Local Anaesthetics - Antiseptics - Examples and their Applications - Definition and One Example each for Analgesics, Antipyretics, Tranquilizers, Sedatives - Causes, Symptoms and Treatment of Diabetes, Cancer and AIDS.

5.3 Electrochemical Corrosion and its Prevention – Electroplating – Applications.

ALLIED PRACTICAL

CHEMISTRY

VOLUMETRIC ANALYSIS

1. Estimation of HCl – Standard sulphuric acid.
2. Estimation of Borax - Standard Sodium Carbonate.
3. Estimation of NaOH – Standard Oxalic Acid.
4. Estimation of $FeSO_4$ – Standard FAS.
5. Estimation of Oxalic acid – Standard $FeSO_4$.
6. Estimation of FAS – Standard Oxalic Acid.
7. Estimation of Oxalic acid – Standard Oxalic Acid.
8. Estimation of Fe^{2+} using Diphenylamine / N- Phenyl Anthranilic acid as indicator.

ORGANIC ANALYSIS

Systematic Analysis of Organic Compounds containing One Functional Group and Characterisation by Confirmatory Tests.

Reactions of Aromatic Aldehyde, Carbohydrates, Mono and Dicarboxylic acids, Phenol, Aromatic Primary Amine, Amide and Diamide.

- Understanding chemistry – C. N. R. Rao, Universities Press – 2011.

SEMESTER III

PAPER – 3

BIOCHEMICAL TECHNIQUES – I

UNIT - I

Units of measurements of solutes in solution, e.g. Normality, Molality, Molarity, Ionic strength, Millimoles. Osmosis, Osmotic pressure, Osmolarity and its application. Concept of isotonic, hyper and hypotonic solution and its importance in biology.

UNIT - II

Concept of pH, pOH, buffer and its application, buffer capacity. Henderson - Hasselbalch equation and its importance. Buffer in body fluids, Red blood cells, white blood cells, tissues and its role.

UNIT - III

Principle, instrumentation and applications of hydrogen electrode, glass electrode in determination of pH. Principle, instrumentation and applications of Clark oxygen electrode.

UNIT - IV

General principle of chromatography. Partition and adsorption chromatography. Principle, operation procedure and applications of paper chromatography and their types. Principle, instrumentation, application of thin layer chromatography, ion exchange chromatography, and molecular gel exclusion chromatography and its application in separation of macromolecules.

UNIT – V: Basic principle of centrifugation techniques, sedimentation rate, Svedberg unit / sedimentation coefficient. Preparative ultracentrifuge, Differential centrifugation, density gradient centrifugation, rate zonal, isopycnic, equilibrium centrifugation. Analytical ultracentrifuge method - determination of molecular weight by sedimentation in an ultra centrifuge.

4. Analytical Biochemistry - R.B. Turner, Elsevier, N.Y.
5. Biochemistry Laboratory: Modern theory and techniques -Rodney Boyer, Prentice Hall
6. Instrumental methods of chemical analysis - Chatwal -Anand, Himalayan Publication.
7. Biophysical Chemistry - Upadhyay and Upadhyay Nath, Himalayan Publication.

ALLIED - 3

1. MICROBIOLOGY – I

UNIT - I

Definition and scope of Microbiology, History and Recent Developments, Spontaneous generation, Biogenesis, Contribution of Louis Pasteur, Leewen Holk, Lazzarn - Spallanzani, John Tyndall, Joseph Lister, Robert Koch, Microscopy - Simple, Compound, Light Microscopy Dark ground, Phase contrast, Flurescence and Election microscopy.

UNIT - II

Five Kingdom consept cell Theory, Binomial Nomendature of microbes, species concept, classical approach with examples, Anatomy of Prokaryotes and Eukaryotes, ultra structure and function of cellwall and cell organelles.

UNIT - III

Culture Techniques, Media preparation, Preservation of cultures, Aerobic and Anaerobic culture techniques, Microbial morphology - wet mount, Hanging drop staining methods, Dyes, Simple - Differential and Special staining techniques Acid fast staining spore stain, Capsule stain, staining for met achromatic Granules, Development of Laboratory Techniques for pure and Mixed culture.

UNIT - IV

Antimicrobial chemotheraphy - Antibiotics - source, classification mode of action - Antimicrobial resistance - Tests for Sensitivity to Antimircrobial agents and its Quality control classical techniques of Microbial identification - Morphological, Physiological and Biochemical properties.

UNIT - V

Measurement of microbial growth Batch and continuous culture, Growth Determination - Growth curve. Structural characteristics of algae - Cholrella, Fungi - Mucor and Protozoa - Entamoeba.

ALLIED – 3

2. ZOOLOGY I

Objective:

To acquire knownledge about different kinds of animal species.

To study the systematic and fuctional morphology of invertebrates and chordates.

UNIT – I:
Type study includes life history.

Protozoa - Entamoeba, **Porifera** - Sycon. **Coelenterata** - Obelia geniculata. **Platyhelminthes** - Teania solium.

UNIT - II

Annelida - Earthworm, **Arthropoda** - Prawn, **Mollusca** - Fresh water mussel, **Echinodermata** - Sea star.

UNIT – III:
Type study includes Morphology, digestive system, respiratory system, circulatory system and urinogenital system of Chordate.

Chordata - Genaral charters, **Prochordata:** Morphology of Amphioxus. **Vertebrates: Pisces** - Shark.

UNIT - IV

Amphibia: Frog, **Reptiles:** Calotes

UNIT - V

Aves: Pigeon, **Mammalia:** Rabbit.

SKILL BASED SUBJECT

PAPER – 1

FUNDAMENTALS OF COMPUTER

UNIT - I

Computer fundamentals - Introduction, Definition, importance and advantages. Binary number system, types of computer, computer language, package, operating system, network. Differences between computer and human being.

UNIT - II

Classification of computers - digital, analog, hybrid, micro, mini and super computers. Generations of computer, personal and advanced computers and their types. Microsoft windows - windows fundamental. Managing the file system, printing in windows, windows accessories, control panel.

UNIT - III

Memory unit- primary and Auxiliary. Computer hardware - Input unit, Central processing Unit (CPU), output unit, UPS and external modem. MS Word - Introduction, starting MS Word, Standard menus–file, edit, view, Formatting a text, layouts, inserting a diagram, graph, page numbers, borders, bullet and numbering, spelling and grammar, letter and mailing, mail merge, tables and its applications.

UNIT - IV

MS Excel - Introduction, starting MS excel, creating a worksheet, page setup, print area, paste special, formula. Insert and formatting - cells, rows, columns and sheets. Functions, hyperlink, pivot charts, sorting, filters, header and footers, formula bars, status bar, options and its application.

UNIT - V

MS Power point- - Introduction, power point file types, creating a presentation, using color schemes, viewing a presentation, managing slide shows , adding pictures, transaction effects, animations, action setting and action buttons and its application.

NON MAJOR ELECTIVE

PAPER – 1

HEALTH AND NUTRITION

UNIT-I

Introduction and definition of food and Nutrition. Basic Food groups-Energy yielding, Body Building, Protective Foods. Basic concepts of Energy Expenditure, Unit of Energy, Calorific values of Proteins, Carbohydrates and Fats. BMR.

UNIT-II

Physiolgical role and Nutritional significance of Carbohydrates, Proteins, Lipids, Vitamins and Minerals. Biological value of Proteins (Animal and Plant), Single cell Proteins.

UNIT-III

Composition of Balanced Diet, RDA for Infants, Children, Adolescent, Adult male, female, Pregnant, Lactating women and Old age.

UNIT-IV

Food processing, Food Preservation. Principles of Diet therapy, therapeutic diets for Anaemia, heart diseases, obesity and Diabetes Mellitus.

UNIT-V

Protein Malnutrition (Kwashiorkar), Undernutrition (Marasmus) their preventive and curative measures. Deficiency diseases of Vitamins.

References

1. Text Book of Physiology and Nutrition-M.Swaminathan.
2. Human Nutrition &Dietetics-Davidson and Passemore.
3. Nutrition and Dietetics-Shubangini Joshi.

SEMESTER IV

PAPER – 4

BIOCHEMICAL TECHNIQUES – II

UNIT - I

Principles of electrophoresis, factors affecting electrophoretic mobility - sample, electric field, supporting medium, composition of buffer. Sodium dodecyl sulphate, polyacrylamide gel electrophoresis (SDS- PAGE) and its application. Determination of molecular weight of protein by SDS PAGE.

UNIT - II

Principle, methodology and application of immuno electrophoresis. Tiselius moving boundary electrophoresis and its application in serum protein separation. Principle, methods and application of Agarose gel electrophoresis.

UNIT - III

Basic principle of electromagnetic radiation, energy, wavelength, wave number, frequency. Absorption and emission spectra. Beer Lambert's law. Basic principle, instrumentation, application of colorimetry techniques. Principle, instrumentation, application of UV- visible spectroscopy.

UNIT - IV

Principle and instrumentation of spectrofluorimetry techniques. Principle, instrumentation and application in atomic absorption spectroscopy. Principle and instrumentation of flame photometry. Application in analysis of trace elements- sodium and potassium.

UNIT - V

Radiation, type of radioactive decay, half-life, unit of radioactivity. Detection and measurement of radioactivity - Methods based upon ionization (GM Counter), excitation (Scintillation counter). Application of radioisotopes in the elucidation of metabolic pathyways, clinical scanning and radio dating, RIA. Biological hazards of radiation and safety measures in handling radio isotopes.

4. Analytical Biochemistry - R.B. Turner, Elsevier, N.Y.
5. Biochemistry Laboratory: Modern theory and techniques -Rodney Boyer, Prentice Hall
6. Instrumental Methods of chemical analysis - Chatwal -Anand,Himalayan Publication.
7. Biophysical Chemistry - Upadhyay and Upadhyay Nath, Himalayan Publication.

CORE PRACTICAL – II

1. BIOCHEMICAL PREPARATIONS

a. Isolation of Lecithin from egg yolk.

b. Isolation of Cholesterol from egg yolk and its estimation.

c. Isolation of Starch from potato.

d. Isolation of Casein and Lactalbumin from milk.

e. Isolation of Lipids by Folch's methods.

f. Isolation of Chromosomal DNA from liver cells.

2. CHROMATOGRAPHIC SEPARATION

a. Paper chromatographic separation and detection of aminoacid & Simple sugars.

b. Chromatographic separation of Chlorophyll & Carotenes of flower pigments by using Column chromatography.

c. Verification of Chargaff's rule by paper chromatography (Demonstration only).

3. PREPARATION OF BUFFERS

Phosphate buffer, Tris buffer and Citrate buffer.

4. COLORIMETRIC ESTIMATION

a) Estimation of Amino acid by Ninhydrin method.

b) Estimation of Protein by Biuret method.

c) Determination of DNA by Diphenylamine method.

d) Determination of RNA by Orcinol method.

ALLIED - 4

1. MICROBIOLOGY – II

UNIT - I

Soil Microbiology - Soil structure, Soil formation, Characterisation of Soil Types and importance, Biofertilizers.

UNIT - II

Aquatic Microbiology, Sewage Treatment - Physiological and Biological. Microbes in air, Distribution and Source of Airborne Organisms.

UNIT - III

Food Microbiology, Microbial Spoilage of food, food preservation techniques, Microbes in Milk and their source, Pasteurisation techniques. Industrial Production - Pencillin.

UNIT - IV

Morphology, Classification, Characteristics Pathogenecity, Laboratory diagnosis and prevention of Infections caused by following organisms mycobacteria, dermatophytes, Hepatitis, Entamoeba histolytica, Antigens - Antibody reactions.

UNIT - V

Biotechnology - Definition of a Gene, structure, Cloning Techniques, Genomic library. Nan technology - SCP production. Gene Theraphy methods.

ALLIED

2. ZOOLOGY II

Objective:

To study the principles of cell biology, genetics, developmental biology, physiology, ecology and evolution.

UNIT - I

Cell Biology - structure of animal cell, **Genetics:** molecular structure of gene - gene function, sex linked inheritance. Genetic Engineering and its application.

UNIT - II

Embryology - cleavage and gastrulation of Amphioxus.

Human Physiology: Digestion, Circulation - blood components, structure of heart, heart function.

UNIT - III

Diseases of Circulatory system - blood pressure, heart disease - Ischemia, Myocardial Infarction, Rheumatic heart disease, stroke.

Excretion - structure of kidney and mechanism of urine formation.

UNIT - IV

Environmental Biology - Biotic factors and Abiotic factors, food chain and food web. Pollution - Environmental degradation, (Air, Water and Land) - Green house effect - Bioremediation, Biodegradation - Global warming - acid rain.

UNIT - V

Evolution: Theories of Lamarkism & Darwinism.

ALLIED PRACTICAL

1. MICROBIOLOGY – I & II

1. Clearing of glassware, sterilization techniques.

2. Gram stain, Motility (Hanging drop)

3. Enumeration of soil microbes.

4. Enumeration of sewage microbes.

5. Assessment of milk quality by MBET test.

6. Streak plate, pour plate techniques.

7. Isolation of puncture techniques.

8. Wet mount preparation fungal material.

9. Serial dilation techniques.

10. Slant preparation.

11. Study of SCP, blue greens algee

12. Assessment of Air quality

13. Plant viral diseases like TMV, Tomato milting HIV, Virus structure diseases.

14. Micro photographs in Biotechnology of Microbes and Microbial products demonstration and identification.

15. Diseases like Tuberculosis, Chorine beefier diphtheria demonstration identification.

16. Medically important pathogens micro photographs demonstration.

17. Root Nodules Rhizobium isolation and identification methods.

ALLIED PRACTICAL

2. ZOOLOGY

I MAJOR PRACTICAL

DISSECTIONS

Cockroach: Digestive and nervous system

Prawn: Nervous system

II MINOR PRACTICAL

MOUNTING

1. Mouth parts of **Mosquito** and **Honey bee**

2. **Earthworm** - Body setae

3. Placoid scales of **shark**

III SPOTTERS

Entamoeba, Sycon, Obelia, Taenia solium (entire, scolex) earthworm (entire, Pineal setae) Prawn (entire), Fresh water mussel, Sea star, Amphioxus - Entire, Amphioxus - T.S. through pharynx, Shark, Frog, Calotes, Pigeon, feathers of pigeon and Rabbit.

Sphygnomanometer, Stethoscope, Rain gauge.

SKILL BASED SUBJECT

PAPER – 2

COMPUTER APPLICATIONS

UNIT - I

Operating system - MS DOS, DOS Features, MS DOS opening and closing, DOS commands, Batch Files. Windows XP- opening and closing, background setting, date and time adjustment, note pad, word pad, painting. Unix features and commands.

UNIT - II

Introduction to telecommunication, Networking. Internet - Introduction, Importance, requirements for internet. Electronic mailing, chatting, search engine, web pages.

Multimedia - Introduction, applications, components and its uses. Multimedia design, multimedia concept.

UNIT – III

Computer maintenance - causes of failure, components failure, temperature and humidity, dust and other particle, power line problems. Downloading software and files, copying CD/DVD. Computer virus- introduction, types, symptoms, virus avoiding methods, antivirus programs.

UNIT – IV

Computer application in banking, industries, educational institutions, hospitals, Research institutions - ISRO, BARC. Network - local area network, wide area network.

UNIT – V

HTML – Introduction – history – basic tags – tables – frames – images – anchor tags – hyperlinking documents – web browsers.

NON MAJOR ELECTIVE

PAPER – 2

FIRST AID

Unit I

First Aid: Important Rules of First Aid, First Aid Box. Injuries (Head, Spinal, Eye, Ear), Sprains and Strains.

Unit II

Cuts and Abrasions, Bleeding, Fractures, Dislocations of bones, Burns, Amputations, Nose bleeds, Electric Shock, Radiation burns.

Unit III

Common medical emergencies - First aid during Chest pain, Stroke, Seizures, Breathing difficulties, Epilepsy.

Unit IV

Common medical emergencies - First aid during Diabetic emergencies, Choking, Fainting, Heart attack, Low Blood Pressure.

Unit V

Poisonous Bites (Insects and Snakes) and Stings (Honey bee) - Animal bites (Dog) – Some Common Poisons and their antidotes – Acid Poisoning – Alkali Poisoning – Poisoning by Disinfectant.

Reference

1. Jayashree Ghosh – A Textbook of Pharmaceutical Chemistry, 1st Ed – S.S. Chand & Company

SEMESTER V

PAPER – 5

ENZYMES AND INTERMEDIARY METABOLISM

UNIT-I: Enzymes

Definition, units, various classifications, nomenclature, specificity, isoenzymes, factors affecting enzyme activity - pH, temperature, enzyme concentration. Lock and key mechanism, Induced Fit theory. Michaelis Menten equation, Line weaver Burk plot. Enzyme inhibition - Competitive, Non competitive and Uncompetitive (Concepts with example) inhibition.

UNIT-II: Carbohydrates Metabolism

Role of high energy compounds-Electron transport chain and Oxidative phosphorylation. Glycolysis, Glycogenesis and glycogenolysis, Citric acid cycle, Gluconeogenesis, HMP shunt.

UNIT III: Lipid Metabolism

Oxidation of fatty acids – Beta oxidation, alpha oxidation and omega oxidation. Oxidation of fatty acids with odd number of carbon atoms. Ketogenesis. Biosynthesis of saturated fatty acids and unsaturated fatty acids. Biosynthesis and degradation of triacyl glycerol and phospholipids. Biosynthesis and degradation of cholesterol.

UNIT-IV: Protein Metabolism

Degradation of proteins, Oxidative, Non-oxidative, deamination and decarboxylation of amino acids, Urea Cycle and Creatinine formation.

UNIT-V: Nucleic acid Metabolism

Biosynthesis and degradation of purine and pyrimidine nucleotides, uricotelic and urotelic system, inhibitors of nucleotides biosynthesis.

PAPER – 6

GENETICS AND MOLECULAR BIOLOLGY

UNIT-I

Mendelian genetics: Mendel's law of inheritance, test cross, back cross and law of incomplete dominance.

UNIT-II

Definition of gene, organization of genes and non coding DNA in prokaryotes. Eukaryotes – unique, moderately repetitive and highly repetitive DNA sequence, satellite DNA. Cot value. DNA is the genetic material - experimental evidence – Griffith, McLeod, McCarty and Avery, Hershey – Chase experiments. Definition and types of replication, experimental proofs for semi-conservative replication. Replication in prokaryotes and inhibitors of replication - requirements and mechanism of prokaryotic DNA-Replication.

UNIT-III

Prokaryotic transcription-RNA polymerases, role of sigma factor, initiation, elongation and termination. (Rho - dependent and independent). Post transcriptional modification in prokaryotes. Post-transcriptional modifications of mRNA, rRNA and tRNA. Inhibitors of transcription. Reverse transcription.

UNIT-IV

Translational activation of amino acids, initiation, elongation and termination of protein synthesis in prokaryotes. Inhibitors of protein synthesis. Post translational modification of proteins. Genetic code - definition, deciphering and salient features of genetic code. Composition of prokaryotic and eukaryotic ribosomes. Structure of t-RNA. Coding and non coding strands of DNA. Role of signal peptides.

UNIT - V

DNA repair mechanism-excision, SOS and UV repair. Prokaryotic gene regulation – Operon concept, Lac operon, positive and negative control. Gene mutation types - point, transition, transversion, frame shift, insertion and deletion.

PAPER – 7

HUMAN PHYSIOLOGY AND NUTRITIONAL BIOCHEMISTRY

UNIT-I: Respiratory and Circulatory Systems

Respiratory System: Components of transport of Oxygen and Carbon dioxide, Role of hemoglobin in transport. Mechanism of respiration, Chloride shift, Bohr's effect.

Circulatory System: Structure and functions of Heart, Blood vessels and its types, cardiac cycle, factors controlling blood pressure, electrocardiogram.

UNIT-II: Digestive and Excretory systems

Digestive system: Components of Digestive system, Digestion, absorption of carbohydrates, proteins and lipids. Mechanism of HCl formation, Role of various enzymes involved in digestive process.

Excretory System: Physiology of excretion, Kidney, GFR, Urine formation, Urine concentration, Micturition, Renin-Angiotensin system.

UNIT-III: Endocrine and Nervous systems

Endocrine glands: Hormones and its types, Functions of hormones. Brief outline of various endocrine hormones and their functions.

Nervous System: Brain, spinal cord, nerve cells, and nerve fibers. Synapse, chemical and electrical synapses, nerve impulses, action potential and neurotransmission.

UNIT-IV: Nutrition and Dietary Systems

Definition of food nutrition, basic food groups, Physiological role and nutritional significance of carbohydrates, protein, lipids, vitamins and minerals. Protein calorific malnutrition – Aetiology, management of Marasmus and Kwashiorkor. Nutrigenetics, Nutrigenomics (brief outline).

UNIT-V: Nutritive and Calorific Value of Food

Unit of energy measurements of food stuffs by Bomb colorimeter, calorific value and RQ of food stuffs. Basic metabolic rate (BMR) - its measurements and influencing factors, SDA of food. Essential amino acids. Nutritive value of protein. Composition of balanced diet for infants, pregnancy and lactating women and old age.

6. Guide to physiology- Y. Rajakshmi, S. Chand & Co., Ltd.

ELECTIVE

PAPER – 1

MEDICAL LABORATORY TECHNOLOGY – I

UNIT-I: Laboratory care and instrumentation

Code of conduct for laboratory personnel - safety measures in the laboratory-chemical/Reagents, labelling, storage and usage. First Aid in laboratory accidents - Precautions and first aid equipments.

UNIT-II: Laboratory equipments

Working of microscope - Phase contrast, Fluorescence, Electron microscope. Centrifuge, analytical balance, colorimeter - Usage and care. Glass wares, serological water bath, incubator.

Reporting laboratory tests and keeping records. Sterilization, preparation of reagents. General approach to quality control, quality control of quantitative data.

UNIT-III: Urine Analysis

Composition, collection, preservation, gross examination, interfering factors, chemical examination. Significance of sugar in urine, ketone bodies in urine, bile pigments, hematuria, uric acid, microscopic examination of the urinary sediment.

UNIT- IV: Stool Examination

Specimen collection- inspection of faeces- odour, pH, Interfering substance. Test for occult blood, faecal fat, microscopic examination of stool specimen.

UNIT-V: Clinical Hematology

Collection of blood - Anticoagulant, preservation, Estimation of Hb, PCV, WBC, RBC, Platelets, ESR. Clotting time, bleeding time - normal value, clinical interpretation.

SKILLED BASED SUBJECT

PAPER – 3

BIOSTATISTICS – I

UNIT - I

Nature and scope of statistical methods and their limitations. Collection, classification, tabulation of statistical data.. Organization of data - Individual series, discrete series, continuous series / class interval. Diagrammatic and graphical representation of statistical data (bar diagram, line diagram, pictogram, histogram & horizontal and vertical bar diagram).

UNIT - II

Measure of central tendency - Introduction, Characteristics of a good average, Mean, Median, Mode (Raw, Discrete & Continuous data) Merits and demerits.

UNIT - III

Measure of Dispersion- Introduction, definition, classification & properties. Range - Introduction, definition, location of range in individual, discrete, continuous series, merits and demerits of Range. Standard deviation, Variance, Coefficient of Variation.

UNIT - IV

Probability - Introduction, Definition, Kinds of Probabilities. Sample Space - Addition and Introduction, definition of mean deviation, quartile deviation – simple problems. Permutation and Combination - Definition, Factorial symbol, formula with example.

UNIT - V

Correlation Analysis - Introduction, Definition, uses, correlation and causation, kinds of correlation. Types of correlation - Positive and negative, linear and non linear, simple and multiple, partial and total correlation.

10. Zar. J - BioStatistical analysis, prentice Hall of India.

SEMESTER VI

PAPER – 8

CLINICAL BIOCHEMISTRY

UNIT-I: Diseases related to carbohydrate metabolism

Regulation of blood sugar, Glycosuria - types of glycosuria. Oral glucose tolerance test in normal and diabetic condition. Diabetes mellitus and Diabetes insipidus - hypoglycemia, hyperglycemia. Ketonuria, ketosis.

UNIT-II: Diseases related to lipid and lipoproteins metabolism

Lipids and lipoproteins: Classification, composition, mode of action.Cholesterol - Factors affecting blood cholesterol level. Dyslipoproteinemias, IHD, atheroscelorosis- risk factor, fatty liver.

UNIT-III: Inborn errors of metabolism

Introduction - clinical importance, phenyl ketonuria, cystinuria, alkaptonuria, Fanconi's syndrome, galactosemia, albinism, tyrosinemia and hemophilia.

UNIT-IV: Organ function test

Liver function tests: Metabolism of bilirubin, jaundice - types, differential diagnosis. Liver function test - Icteric index, Vandenberg test, plasma protein changes, PT.

Renal function tests: Clearance test – Urea, Creatinine, Inulin, PAH test, Concentration and dilution test.

Gastric function tests: Collection of gastric contents, examination of gastric residuum, FTM, stimulation test, tubeless gastric analysis.

UNIT-V: Clinical enzymology

Functional and non-functional plasma enzymes. Isoenzymes with examples. Enzyme patterns in acute pancreatitis, liver damage, bone disorder, myocardial infarction and muscle wasting.

References:

1. Text book of Clinical Biochemistry - Carl A. Burdis and Edward R Ashwood
2. Text book of Medical Biochemistry - Dr. M.N. Chatterjee and rane shinde

5. Clinical Biochemistry with clinical correlation – Devin, Wiley
6. Practical clinical biochemistry – Harold Varley, CBS, New Delhi

PAPER – 9

BIOTECHNOLOGY

UNIT – I

Biotechnology: Definition and scope, types and branches of biotechnology. Enzymes for in vitro manipulation - Restriction endonucleases, SI nucleases, DNA ligases, Alkaline phosphatase, Reverse transcriptase, DNA polymerase, polynucleotide kinase, terminal transferase. Use of Linkers and Adapters. Cloning vectors, Plasmids - properties of ideal vectors and its types – pBR322, pUC18, pUC19. Bacteriophage ʎ, Cosmid, YAC, and Shuttle vector.

UNIT - II

Methods of gene transfer - transfection, microinjection, electroporation. Recombinant selection and screening methods, Insertional inactivation. Blotting Techniques - Southern, Northern and Western blotting techniques, DNA hybridization techniques, PCR.

UNIT - III

Plant tissue culture - Media composition, nutrients, growth regulators, initiation and differentiation. Callus and suspension culture. Micro propagation, Somatic embryogenesis and somoclonal variation. Protoplast isolation, protoplast fusion and regeneration of plants.

UNIT - IV

Equipments and requirements for animal cell culture - laminar flow, CO_2 incubator, natural media, synthetic media, substrate for cell culture, substrate treatment, disaggregation of tissues, Cell lines – types and properties.

UNIT - V

Applications of genetic engineering: Transgenic plants, transgenic mice (SCID and KNOCK OUT mice), transgenic sheep, transgenic fish, diagnostic and therapeutic applications of monoclonal antibodies.

References:

1. Concept in biotechnology - D. Balasubraniam et al., Universal press India 1996.
2. Plant tissue culture - Razdan, Oxford IBH Publisher.
3. Animal cell culture - Freshney, IRL Press.

5. Molecular biotechnology 2006 - Channarayappa Univ. Press
6. Molecular Biology & Biotechnology - H.D. Kumar(1997), Vivas publishing house Pvt .Ltd
7. Molecular biotechnology - principle and application of recombinant DNA 3rd edition Bernard, R. Glick Jack, J. Pasternak 2003, Library of Congress cataloging in publication data.
8. A text book of Biotechnology - R. C. Dubey, S. Chand & co
9. Biotechnology - Prakash S. Lohar, MJP publisher, Chennai -5.

CORE PRACTICAL – III

COLORIMETRIC ESTIMATION

1. Estimation of creatinine by Jaffe's method.
2. Estimation of urea by Diacetyl monoxine method.
3. Estimation of glucose by Folin Wu method
4. Estimation of glucose by O- Toludine method

EXPERIMENTS ON ENZYMES

1. Effect of pH, temperature and substrate concentration and determination of Km for amylase and Urease.
2. Assay of activity of alkaline phosphatase in serum.
3. Assay of serum Transaminases (SGOT, SGPT).

BIOTECHNOLOGY EXPERIMENTS

1. Preparation of media – liquid, solid, slant
2. Culture techniques – streak plate, pour plate, spread plate
3. Immuno diffusion – single diffusion

DEMONSTRATION EXPERIMENTS

1. Separation of proteins by SDS-PAGE
2. Isolation of plasmid DNA and separation by electrophoresis

ELECTIVE

PAPER – 2

MEDICAL LABORATORY TECHNOLOGY – II

UNIT - I: Blood Banking

Blood grouping- ABO System, ABO Grouping, Rh typing. Coomb's test. Blood transfusion - Blood donors, donor screening, drawing of blood, compatibility testing, cross matching, blood transfusion complications.

UNIT - II: CSF and Other Body Fluids

Cerebrospinal fluid analysis. Semen analysis, sputum examination, pregnancy test - Interpretation.

UNIT - III: Endocrine Function Test

Thyroid function test - thyroid hormones and its function. Clinical disorder - diagnosis.T_4, ^{131}I Uptake, TSH, Stimulation test, FT_4, FTI, TSH, TBG.

UNIT - IV: Medical Parasitology

Amoebiasis, malarial parasites – life cycle, pathogenesis of malaria – acute and chronic filariasis – diagnosis.

UNIT - V Medical Microbiology

Culturing of organisms from various specimens. Culture media and antibiotic sensitivity test (pus, urine, stool, sputum, throat swab, gram staining, Ziehl –Neilson staining (TB, Lepra bacilli). Safety procedure in microbiological techniques.

References:

1. Medical Laboratory Technology - K. Mukherjee. Vol. I, II, III. Tata Mcgraw-Hill Publishing Company Ltd.

4. Medical Lab Technology - Ramnik Sood.

ELECTIVE

PAPER – 3

IMMUNOLOGY

UNIT - I

Immunity: Types of immunity-Innate and Acquired immunity, Humoral and cell mediated immune response, primary and secondary lymphoid organs, structure of T, B and NK cell, structure and function of Neutrophils, Eosinophils and Basophils, Macrophages – Phagocytosis and inflammation.

UNIT - II

Antigens: Properties, Specificity, Immunogenicity, antigenic determinants, haptens and adjuvants, Major Histocompatibility Complex [MHC]. Antibodies: Properties, Structure, Classes, Subclasses of Immunoglobins, Monoclonal antibodies - Production and its applications, complement pathways.

UNIT - III

Allergy and Hypersensitivity – types – I, II, III and IV and their clinical manifestations. Autoimmunity, mechanism of autoimmunity, Autoimmune diseases – Rheumatoid arthritis and Myasthenia gravis.

UNIT - IV

Transplantation – Immunologic response, Graft vs Host reaction, mechanism and prevention of graft rejection (skin), immunosuppressive drugs. Immunology of malignancy: Tumour antigens, immune response in malignancy and immunotherapy of cancer.

UNIT - V

Antigen and antibody interactions - precipitation and agglutination reactions, Precipitation in gel (Ouchterlony procedure, radial immunodiffusion, Immuno electrophoresis), Electro immunediffusion. RIA and ELISA.

References:

1. Immunology - J. Kannan, MJP Publishers, Chennai-5

7. Immunology - Geoffrey Zubay, W.M.C, Brown publishers, 4th edition 1992.
8. Immunology - The immune system in health and disease, 3rd edition.

ELECTIVE PRACTICAL

MEDICAL LABORATORY TECHNOLOGY

1. HAEMATOLOGY

Hematology – Haemoglobin by Sahli's method, RBC count, PCV, ESR, Total and differential WBC count, Platelet count, Blood grouping, ABO system, Rh System, Clotting time, Bleeding time.

Serology – VDRL, CRP, RA, HIV, HBsAg, Pregnancy test.

2. MICROBIOLOGY

Sterilization and disinfection, culture, gram staining, media preparation, antibiotic sensitivity testing

3. URINE AND FAECES ANALYSIS

1. Collection of urine and faecal samples
2. Faecal analysis to detect fats, undigested food and blood
3. Qualitative analysis of urine for normal and pathological conditions.

References:

1. Practical clinical Biochmistry - Harold Varley, CBS, New delhi
2. Medical Laboratory Technology – Kanai L. Mukherjee, Tata McGraw Hill Publication and co. ltd., Vol, I, II, III
3. Clinical chemistry – Ranjana Chawla
4. laboratory Manual in Biochemistry – Jayaraman
5. Biochemical methods – S.Sadasivan And Manickam
6. Introduction to practical biochemistry – David T. Plummer.

SKILLED BASED SUBJECT
PAPER – 4
BIOSTATISTICS – II

UNIT - I

Theoretical Distribution – Definition, Type of Theoretical Distribution, Binomial distribution and Poisson distribution- Definition, characteristics and Properties. Normal distribution, normal curve, standard Normal distribution - characteristics and Properties.

UNIT - II

Regression Analysis – Introduction, Definition, uses, types of regression- Positive and negative, linear and non linear, simple and multiple, partial and total. Regression equation – Regression equation of X on Y and Y on X.

UNIT - III

F-test and it's application, testing of Hypothesis – Null hypothesis, alternative hypothesis, standard error.

UNIT – IV

Chi- Square test- Introduction, Characteristics of Chi- Square test, Assumption, degree of freedom, application of chi- square test, t-test – Application and its Uses.

UNIT - V

Analysis of Variance- Introduction, techniques of Analysis of variance (ANOVA) – One way and two way classification, steps involved in analysis.

THIRUVALLUVAR UNIVERSITY

B.Sc., CHEMISTRY SYLLABUS UNDER CBCS

(With effect from 2017 - 2018)

SEMESTER I

PAPER – 1 GENERAL CHEMISTRY – I

Objective:

Basic concepts regarding Atomic Structure, Periodic Properties, Bonding Concepts, Ionic Bond, VSEPR and MO Theories, Nomenclature of Organic Compounds, Hybridisation, Reaction Intermediates, States of Matter, Principle of Volumetric Analysis, Related Problems and Applications wherever necessary are to be taught for I- Semester.

UNIT-I ATOMIC STRUCTURE

1.1 Quantum numbers n, l, m and s – Pauli's exclusion principle – Energy distribution and orbitals - Hund's rule of maximum multiplicity - Aufbau's principle - Electronic Configuration of elements - Stability of Half-filled and completely filled orbitals.

1.2 Classification of elements – General characteristics of s, p, d and f- Block elements – Periodicity of properties- Definition and Periodicity of the following properties – Atomic radii and Ionic radii - Factors affecting the Atomic radii and Ionic radii.

1.3 Ionisation potential, Electron affinity and Electronegativity - Factors affecting the Ionisation potential, Electron affinity and Electronegativity – Pauling scale – Mulliken electronegativity scale – Applications of Electronegativity regarding the Bonding nature.

UNIT- II CHEMICAL BONDING

2.1 Ionic bond - Conditions for the formation of ionic bond - General properties – Energetics of formation of NaCl from Na^+ and Cl^- - Hydration energy, Lattice energy and their applications – Born-Haber cycle - Fajan's rule - Characteristics of Electrovalent compounds.

2.2 Valence Bond Theory - Conditions for the formation of covalent bond - General properties - Polarity of bonds - Orbital overlap - Bond lengths and Bond energies - Hybridisation - Sigma and Pi bonds - VSEPR theory - Geometries of BF_3 , NH_3 , H_2O, PCl_5 and SF_6 molecules - Partial ionic character of covalent bond - Percentage of ionic character.

2.3 Molecular Orbital theory – Bonding and Anti-bonding orbitals - Relative order of Energies of molecular orbitals - MO diagram of H_2, He_2, O_2, N_2, F_2 and CO - Bond Order - Stability and Magnetic properties of the molecules - Comparison of VB and MO theories.

UNIT- III BASIC CONCEPTS OF ORGANIC CHEMISTRY

3.1 Classification of Organic Compounds – Nomenclature of Organic Compounds – Functional Groups - Homologous Series - IUPAC Recommendations for Naming Simple Aliphatic and Alicyclic Compounds.

3.2 Basic concepts of bonding in organic chemistry - Hybridisation – Definition – Geometry of Molecules - Methane, Ethane, Ethylene, Acetylene and Benzene - Electron displacement effects - Inductive - Inductomeric - Electromeric – Mesomeric Effect - Resonance - Hyperconjugation and Steric Effects.

3.3 Cleavage of bonds - Homolytic and Heterolytic fission of carbon-carbon bond – Methods to determine the Reaction Mechanism - Reaction intermediates - Structure and Stability of Carbocations, Carbanions and Free radicals.

UNIT-IV STATES OF MATTER

4.1 Gaseous state - Kinetic gas equation - Derivation - Gas laws from the kinetic gas equation - Kinds of velocities - Mean, RMS, Most Probable Velocities - Calculation of molecular velocities - Maxwell's distribution of Molecular Velocities (No derivation) - Effect of Temperature on velocity distribution - Equipartition of energy - Heat capacity on molecular basis - Virial equation of state - Boyle temperature - Coefficient of Compressibility and Thermal expansion.

4.2 Liquid state - Density – Diffusion - Viscosity – Evaporation - Surface tension - Effect of temperature on surface tension - Parachor - Definition and Applications only - Coefficient of Viscosity - Effect of Temperature and Pressure - Liquid crystals - Classification and Molecular arrangements.

4.3 Solid State - Crystal lattices - Laws of Crystallography - Symmetry elements in crystals - Seven crystal systems - Unit cell - Space lattice - Bravais lattices - Law of Rational Indices - Miller indices.

UNIT-V PRINCIPLES OF VOLUMETRIC ANALYSIS

5.1 Definitions of Molarity, Molality, Normality and Mole Fraction - Their Calculations - Definition and Examples for Primary and Secondary standards - Calculation of Equivalent Weight of Acid, Base, Oxidising Agent, Reducing Agent and Salts.

5.2 Principles of Volumetric Analysis - Theories of Acid- Base, Redox, Complexometric Iodometric and Iodimetric titrations.

5.3 Theories of indicators - Acid-base indicators - Choice of indicators - Redox, Metal ion and Adsorption indicators.

ALLIED

1. PHYSICS - I

UNIT – I: PROPERTIES OF MATTER

Elasticity : Hooke's Law – Elastic Constants – bending of beam – Bending moment – Cantilever Depression at the loaded end of a cantilever – determination of Young's modulus by non-uniform bending.

Torsion : Torsion couple – Potential energy in a twisted wire – Torsional pendulum – Time period – Determination of rigidity modulus by Torsional oscillation (without masses).

Viscosity: Viscosity of a liquid – Viscous force – Co-efficient of viscosity of a liquid – Poiseuille's formula .

Surface Tension: Surface Tension – Surface Tension and interfacial surface tension by the method of drops.

UNIT – II: HEAT

Heat: Specific heat – Newton's law of cooling – determination of specific heat of a liquid using Newton's law of cooling – Emissivity and Emissive Power.
Low Temperature: J.K. Effect – Positive Effect – Negative Effect – Temperature of Inversion – Super conductors. Type I and II – Meisner Effect – Helium I and II.

UNIT – III: ELECTRICITY AND MAGNETISM

Electricity: Potentiometer – Principle – Calibration of low range voltmeter – Measurement of internal resistance of cell – measurement of an unknown resistance.

Magnetism – Moment and pole strength of a magnet – Deflection magnetometer – Tan C position – Vibration magnetometer – Theory – Period of Oscillation – Determination of M and B_H using the deflection magnetometer in Tan C position and the vibration magnetometer.

UNIT – IV: SOUND AND ACOUSTICS OF BUILDING

Sound: Transverse vibration of strings – Velocity and frequency of vibrations of a stretched string – laws – sonometer – A.C. Frequency – Steel Wire – Brass wire.

Ultrasonics – Production by Piezo – electric method – properties and uses.
Acoustics of buildings: Reverberation – Reverberation time – Sabine's formula (definition only) – Sound absorption co-efficient of surface – conditions for the perfect acoustics.

UNIT – V: OPTICS

Interference: Air Wedge – Description – Test for optical flatness of glass plate – Determination of diameter of a thin wire by air wedge.

Diffraction: Theory of transmission grating – Normal Incidence – Determination of Wavelength of monochromatic source and Wavelength of mercury line using a grating by normal Incidence.

Fibre optics: principle-classification of optical fibres-fibre optic communication system block diagram.

6. A text book of Sound – by M. Narayanamoorthy and other National Publishing Companies (1986).
7. Modern Physics – R. Murugesan S. Chand & Co. (2004).
8. Introduction to Fibre optics- K.Thyagarajan and Ajay Ghatak,Cambridge,University Press(1999).

ALLIED

3. ZOOLOGY I

Objective:

To acquire knownledge about different kinds of animal species.

To study the systematic and fuctional morphology of invertebrates and chordates.

UNIT – I:
Type study includes life history.

Protozoa - Entamoeba, **Porifera** - Sycon. **Coelenterata** - Obelia geniculata. **Platyhelminthes** - Teania solium.

UNIT - II

Annelida - Earthworm, **Arthropoda** - Prawn, **Mollusca** - Fresh water mussel, **Echinodermata** - Sea star.

UNIT – III:
Type study includes Morphology, digestive system, respiratory system, circulatory system and urinogenital system of Chordate.

Chordata - Genaral charters, **Prochordata:** Morphology of Amphioxus. **Vertebrates: Pisces** - Shark.

UNIT - IV

Amphibia: Frog, **Reptiles:** Calotes

UNIT - V

Aves: Pigeon, **Mammalia:** Rabbit.

4. BIOCHEMISTRY I

UNIT-I: Chemistry of Carbohydrates

Definition and Classification of carbohydrate. Monosaccharides - occurrence, structure; physical and chemical properties, linear and ring forms (Haworth formula) for glucose and fructose. Disaccharides - occurrence, structure; physical and chemical properties of sucrose and lactose. Polysaccharides - occurrence, structure, physical and chemical properties of starch.

UNIT-II: Chemistry of amino acids

Definition and classification of amino acids. Reaction with ninhydrin, common properties of amino acids, amphoteric nature, isoelectric point, isoelectric pH and Zwitter ion.

UNIT-III: Chemistry of Proteins

Classification based on solubility, shape and size. Physical properties: salting in and salting out, denaturation, peptide bond. Structure of protein: primary, secondary, tertiary and quaternary structure.

UNIT-IV: Chemistry of Lipids

Definition, classification and functions of lipids. Occurrence, chemistry and biological functions of simple lipids, compound lipids (e.g. phospholipids) and derived lipids: steroids (e.g. cholesterol). Physical property-emulsification. Chemical property-saponification. Functions of bile acids and bile salts.

UNIT-V: Chemistry of Nucleic acids

Definition - nucleoside, nucleotide and polynucleotide. Double helical model of DNA and its biological functions. Structure, types and functions of RNA: tRNA, mRNA and rRNA. Differences between DNA and RNA.

5. MATHEMATICS – I*

Objectives of the Course:

To Explore the Fundamental Concepts of Mathematics

UNIT-I: ALGEBRA

Partial Fractions - Binomial, Exponential and logarithmic Series (without Proof) - Summation - Simple problems

UNIT-II : THEORY OF EQUATIONS

Polynomial Equations with real Coefficients - Irrational roots - Complex roots- Transformation of equation by increasing or decreasing roots by a constant - Reciprocal equations - Newton's method to find a root approximately - Simple problems.

UNIT-III : MATRICES

Symmetric - Skew-Symmetric - Orthogonal and Unitary matrices - Eigen roots and eigen vectors – Cayley - Hamilton theorem (without proof)-Verification and computation of inverse matrix

UNIT-IV: TRIGONOMETRY

Expansions of $\sin^n \theta$, $\cos^n \theta$, $\sin n\theta$, $\cos n\theta$, $\tan n\theta$ - Expansions of $\sin \theta$, $\cos \theta$, $\tan \theta$ in terms of θ.

UNIT-V: DIFFERENTIAL CALCULUS

Successive differentiation upto third order, Jacobians -Concepts of polar co-ordinates-Curvature and radius of curvature in Cartesian co-ordinates and in polar co-ordinates.

SEMESTER II

PAPER – 2

GENERAL CHEMISTRY - II

OBJECTIVES:

- Basic knowledge on s- and p- Block Elements, Group Study, Hydrocarbons, Cycloalkanes, Dienes, Quantum Chemistry, Thermochemistry, First Law of Thermodynamics, Derivation of Equations, Related Problems, Reaction Mechanism and Applications wherever necessary are to be taught for II- Semester.

UNIT-I s- and p- Block Elements

1.1 Alkali metals - Li, Na, K, Rb and Cs - Occurrence - Comparative study of Elements with respect to Oxides, Halides, Hydroxides and Carbonates - Exceptional property of Lithium - Diagonal Relationship of Li with Mg.

1.2 Alkaline earth metals - Be, Mg, Ca, Sr and Ba - Occurrence - Comparative study of the elements with respect to Oxides, Hydroxides, Halides, Sulphates and Carbonates - Exceptional property of Beryllium - Diagonal relationship of Be with Al - Comparison of Alkaline Earth Metals with Alkali Metals - Magnesium acting as bridge element between II A and II B groups - Magnesium resembles Zinc.

1.3 p- Block elements - Boron family - Group discussion - Anomalous behaviour of Boron - Diagonal Relationship between Boron and Silicon - Electron deficiency and Electron acceptor behaviour of Boron trihalides - Bonding in Diborane (Hydrogen-bridge structure) - Preparation, Properties, structure and Uses of Borazine - $NaBH_4$ - Preparation and Uses.

UNIT-II HYDROCARBONS

2.1 Alkanes - Methods of preparation of alkanes - Wurtz method, Kolbe's method and Reduction of alkyl halides - Physical and Chemical Properties of alkanes - Mechanism of Free Radical Substitution in alkanes – Halogenation and Reactivity.

2.2 Alkenes - Properties of alkenes – Electrophilic and Free radical addition - Addition reactions of Alkenes with mechanism - Addition of Hydrogen, Halogens, Hydrogen Halide (Markownikoff''s rule) - Hydrogen bromide (Peroxide effect) - Sulphuric Acid, Water, BH_3, Ozonolysis, Hydroxylation with $KMnO_4$ - Allylic substitution by NBS.

2.3 Alkynes - Acidity of alkynes - Addition of hydrogen - Hydroboration - Hydrohalogenation - Addition of hypohalous acid, Hydration - Addition of water with $HgSO_4$ catalyst - Oxidation with $KMnO_4$ – Ozonolysis - Formation of Acetylides.

UNIT-III DIENES AND CYCLOALKANES

3.1 Dienes – Classification - Conjugated, Isolated and Cumulative Dienes - Stability of Dienes - 1, 2- and 1, 4- Addition reactions of H_2 and HX with mechanisms – Synthesis of dienes – 1, 3 - Butadiene, Isoprene and Chloroprene - Diels-Alder reaction.

3.2 Cycloalkanes - Preparation using Wurtz's reaction, Dieckmann's ring closure and Reduction of aromatic hydrocarbons - Substitution and Ring opening reactions.

3.3 Stability of Alkanes, Alkenes and Cycloalkanes - Bayer's strain theory - Theory of Strainless rings.

UNIT-IV QUANTUM CHEMISTRY AND THERMOCHEMISTRY

4.1 Planck's Quantum theory of radiation - Photoelectric Effect - Compton Effect - Wave mechanical concept of the atom - de Broglie's relationship – Davisson and Germer experiment - Wave nature of electron - Heisenberg's Uncertainty Principle.

4.2 Schrodinger wave equation (Without derivation) - Significance of wave functions ψ and ψ^2 - Shapes of s, p and d- orbitals.

4.3 Thermodynamics - Definition and Explanation of terms - System, Boundary, Surroundings - Homogeneous and Heterogeneous systems - Isolated system - Closed system - Open system - Intensive and Extensive properties - State of a system - Independent state variables - Dependent state variables - Thermodynamic functions - State and Path functions.

UNIT-V THERMODYNAMICS

5.1 Thermodynamic processes - Types of processes - Cyclic - Reversible – Irreversible - Isothermal – Adiabatic Process - Exact and Inexact Differentials - Concept of Heat and Work - Zeroth Law of Thermodynamics.

5.2 First law of Thermodynamics - Statement and Equation – C_p and C_v Relationship - Calculation of W, Q, ΔE and ΔH for the Expansion of Ideal Gases under Reversible, Isothermal and Adiabatic Conditions.

5.3 Thermochemistry - Heat of a reaction - Exothermic and Endothermic reactions - Calculation of ΔH from ΔE and vice versa - Thermochemical equations - Bond dissociation energy - Calculation from thermochemical data - Variation of Heat of a reaction with temperature - Kirchoff's Equation and Its significance.

CORE PRACTICAL

Paper – 1

VOLUMETRIC ANALYSIS

Acidimetry

1. Estimation of Borax - Standard Sodium Carbonate

2. Estimation of Sodium Hydroxide - Standard Sodium Carbonate

3. Estimation of HCl – Standard Oxalic Acid.

Iodometry

4. Estimation of Copper - Standard Copper Sulphate

5. Estimation of Potassium Dichromate - Standard Potassium Dichromate

Complexometry

6. Estimation of Magnesium using EDTA.

7. Estimation of Zinc using EDTA

Dichrometry

8. Estimation of Ferrous Iron using Diphenyl amine / N- pPhenylanthranillic acid as indicator.

Precipitation titration

9. Estimation of Chloride in neutral medium (Demonstration experiment).

Permanganometry

10. Estimation of Ferrous Sulphate – Standard FAS.

11. Estimation of Oxalic Acid – Standard Oxalic Acid.

- Students must write Short Procedure for the given estimation in Ten Minutes during the examination and submit the Paper for Evaluation.

ALLIED – 2

1. PHYSICS II

UNIT – I: WAVE MECHANICS

Wave Mechanics – De Broglie Waves – Dual Nature – Experimental Study of Matter Waves – Davission and Germer's Experiment – G.P. Thomson's Experiment _ Heisenberg's uncertainty Principle – The position and moment of a particle.

UNIT – II : NUCLEAR PHYSICS

Particle accelerators – cyclotron, particle detectors – GM Counter Artificial Transmutation – Rutherford's Experiment – The Q value equation for nuclear reaction – Threshold energy – Nuclear Reactions.

Conservation Laws: Conservation of Charge – Conservation of Nucleons – Conservation of Mass – Energy – Conservation of Parity – Quantities conserved and quantities not conserved in a nuclear reaction.

UNIT – III : ENERGY PHYSICS

Sources of conventional energy – Need for non-conventional energy resources – solar energy utilization – solar water heater – solar drier – conversion of light into electrical energy – solar cell – merits and demerits of solar energy – wind energy – its conversion systems – energy from Bio mass – Bio gas generation – Industrial and space application.

UNIT – IV: CRYSTALLOGRAPHY

Crystallography : The crystal structure – Unit Cell –Bravais lattice- structures of simple cubic-BCC and FCC- co ordination number, packing factor calculation for the above structures –Hexogonal closed packed(HCP) structure -Miller indices – concept of Reciprocal Vectors.

UNIT – V: ELECTRONICS

Electronics: Transistor characteristics in common base and common emitter mode- Transistor single stage amplifier- Expression for input impedence, output impedence and current gain.
Digital Electronics : NAND and NOR as universal building blocks- De Morgan's theorem –statement and proof- Fabrication of diodes and transistors using Monolithic technology– limitations.

Books for Study & Reference

1. Allied Physics – R. Murugesan S. Chand & Co. First Edition (2005).
2. Allied Physics – Dr. K. Thangaraj, Dr. D. Jayaraman Popular Book Department, Chennai.
3. Allied Physics – Prof. Dhanalakshmi and others.
4. Elements of Properties of Matter – D.S. Mathur, S. Chand & Co. (1999).
5. Heat and Thermodynamics – N. Brijlal and Subramaniam S. Chand & Co.
6. A text book of Sound – by M. Narayanamoorthy and other National Publishing Companies (1986).
7. Modern Physics – R. Murugesan S. Chand & Co. (2004).
8. Electronic Principles and Applications – A.B. Bhattacharya, New Central Book Agency, Calcutta.
9. Introduction to Solid State Physics – C. Kittel, 5^{th} Edition Wiley Eastern Ltd.
10. Renewable & Sustainable energy sources – Agarwal.

3. ZOOLOGY II

Objective:

To study the principles of cell biology, genetics, developmental biology, physiology, ecology and evolution.

UNIT - I

Cell Biology - structure of animal cell, **Genetics:** molecular structure of gene - gene function, sex linked inheritance. Genetic Engineering and its application.

UNIT - II

Embryology - cleavage and gastrulation of Amphioxus.

Human Physiology: Digestion, Circulation - blood components, structure of heart, heart function.

UNIT - III

Diseases of Circulatory system - blood pressure, heart disease - Ischemia, Myocardial Infarction, Rheumatic heart disease, stroke.

Excretion - structure of kidney and mechanism of urine formation.

UNIT - IV

Environmental Biology - Biotic factors and Abiotic factors, food chain and food web. Pollution - Environmental degradation, (Air, Water and Land) - Green house effect - Bioremediation, Biodegradation - Global warming - acid rain.

UNIT - V

Evolution: Theories of Lamarkism & Darwinism.

4. BIOCHEMISTRY II

UNIT-I: Metabolism

Glycolysis, TCA cycle and its energetics, HMP shunt pathway. Deamination, transamination reaction, transaminase enzymes, Urea cycle.

UNIT-II: Metabolic Disorders

Diabetes mellitus, Glycogen storage diseases, Glycosuria, Ketosis, Jaundice, Phenyl ketonuria, Alkaptonuria. Dehydration: definition, causes, symptom and prevention.

UNIT-III: Enzymes

Definition, classification of enzymes with one example. Mechanism of enzyme action - Lock and key mechanism, Induced Fit theory. Michaleis-Menton equation. Enzyme inhibition: competitive, uncompetitive and non competitive. Biological functions of enzymes.

UNIT-IV: Molecular Biology

Central dogma of molecular biology. DNA and RNA act as genetic material. Replication: Definition, types, mode of action of replication, mechanism of replication. General mechanism of transcription and translation. Genetic code.

UNIT-V: Vitamins

A brief outline of source, requirement, biological function and deficiency of Vitamins (fat soluble and water soluble vitamins).

5. Biochemistry-Dr. Ambika Shanmugam, Published by Author.
6. Biomolecules-C. Kannan, MJP Publishers, Chennai-5.

5. MATHEMATICS – II*

Objectives of the Course

To Explore the Fundamental Concepts of Mathematics

UNIT-I: Application of Integration

Evaluation of double, triple integrals - Simple applications to area, volume -Fourier series for functions in $(0,2\pi)$ and $(-\pi, \pi)$.

UNIT-II: Partial Differential Equations

Formation, complete integrals and general integrals - Four standard types, Lagrange's equations.

UNIT-III: Laplace Transforms

Laplace Transformations of standard functions and simple properties - Inverse Laplace transforms - Applications to solutions of linear differential equations of order 1 and 2-simple problems

UNIT-IV: Vector Analysis

Scalar point functions - Vector point functions - Gradient, divergence, curl - Directional derivatives - Unit to normal to a surface.

UNIT-V: Vector Analysis (continued)

Line and surface integrals - Guass, Stoke's and Green's theorems (without proofs) - Simple problem based on these Theorems.

ALLIED PRACTICAL

1. PHYSICS

(Any 15 Experiments)

1. Young's modulus – non uniform bending – pin and microscope.
2. Rigidity modulus – Static Torsion Method Using Scale and Telescope.
3. Ridigity modulus – Torsional oscillation method (without symmetric masses).
4. Determination of Co-efficient of Viscosity – Graduated Burette.
5. Surface Tension and Interfacial Tension – By drop weight method.
6. Specific Heat Capacity of a liquid – by Newton's Law of Cooling.
7. Sonometer – Determining A.C. Frequency. (Screw Gauge is given).
8. Sonometer – frequency of tuning fork.
9. Newton's Rings – Radius of Curvature.
10. Air Wedge – Determination of thickness of thin wire.
11. Spectrometer Grating – Minimum Deviation – Mercury Lines.
12. Spectrometer – Refractive Index of a liquid – Hollow Prism.
13. Potentiometer – Calibration of High Range Ammeter.
14. Potentiometer – Calibration of Low Range Voltmeter.
15. Determination of M and B_H using Deflection Magnetometer in Tan C position and vibration magnetometer.
16. Figure of merit and voltage sensitiveness of table galvanometer.
17. Construction of AND, OR gates using diodes and NOT by transistors.
18. Zener diode – Voltage Regulation.
19. NAND / NOR as universal gate.
20. Demorgan's theorem verification.

3. ZOOLOGY

I - MAJOR PRACTICAL

DISSECTIONS

Cockroach: Digestive and nervous system

Prawn: Nervous system

II - MINOR PRACTICAL

MOUNTING

1. Mouth parts of **Mosquito** and **Honey bee**

2. **Earthworm** - Body setae

3. Placoid scales of **shark**

III - SPOTTERS

Entamoeba, Sycon, Obelia, Taenia solium (entire, scolex) earthworm (entire, Pineal setae) Prawn (entire), Fresh water mussel, Sea star, Amphioxus - Entire, Amphioxus - T.S. through pharynx, Shark, Frog, Calotes, Pigeon, feathers of pigeon and Rabbit.

Sphygnomanometer, Stethoscope, Rain gauge.

ALLIED PRACTICAL

4. BIOCHEMISTRY I & II

PRACTICAL I

Volumetric Estimation

1. Estimation of HCl using Na2CO3 as link and NaOH as primary standard.

2. Estimation of Iron in Ferrous Ammonium Sulphate using potassium permanganate as link solution and oxalic acid as primary standard.

3. Estimation of Glucose by Benedict's method.

4. Estimation of Glycine by formal titration.

5. Estimation of Ascorbic acid.

SEMESTER – III

PAPER – 3

GENERAL CHEMISTRY – III

OBJECTIVE:

Basic concepts regarding the Principles of Inorganic Analysis and Applications of Qualitative Analysis, Types of Solvents, p- Block Elements, Group Study, Aromaticity, Electrophilic and Nucleophilic Substitution Reactions, Elimination Reactions, Reaction Mechanism, Second Law of Thermodynamics, Derivation of Equations, Related Problems and Applications wherever necessary are to be taught for III semester.

UNIT-I

1.1 Semimicro Techniques - Principles of Acid-Base Equilibria - Common ion effect - Solubility Product and its Applications in Qualitative Analysis - Principles of Inorganic Analysis.

1.2 Reactions involved in the Separation and Identification of Cations and Anions in Qualitative analysis - Spot test reagents - Aluminon, Cupferon, DMG, Thiourea, Magneson, Alizarin and Nessler's reagent.

1.3 Types of solvents - Protic and Aprotic solvents - Amphiprotic / Amphoteric solvents - Aqueous and Non-aqueous solvents - Liquid Ammonia as a solvent.

UNIT-II

2.1 Carbon family – Group study - Comparative study of Elements with respect to Valency, Oxides, Halides, Hydrides and Oxyacids - Catenation - Comparison of Properties of Carbon and Silicon – Silicates - Classification and Structure - Silicones- Preparation, Properties and Uses.

2.2 Nitrogen family - Group study - Comparative study of N, P, As, Sb and Bi with respect to Oxides, Oxyacids, Halides and Hydrides – Hydrazine and Hydroxylamine - Preparation, Properties, Structure and Uses.

2.3 Oxygen family - Group study - Comparative study of O, S, Se and Te with respect to Catenation, Oxides, Halides, Hydrides and Oxyacids - Anomalous Behaviour of Oxygen - Oxyacids of Sulphur (Structure only) - Peracids of Sulphur - Preparation, Properties and Structure - Differences Between Permonosulphuric Acid and Perdisulphuric Acid.

UNIT-III

3.1 Aromaticity - Modern Theory of Aromaticity - Huckel's (4n +2) Rule and Its Simple Applications to Benzenoid and Non- benzenoid Compounds.

3.2 Electrophilic substitution reactions in Aromatic Compounds - Mechanisms of Nitration, Halogenations, Sulphonation, Friedel-Crafts Acylation and Alkylation.

3.3 Directive influence - Orientation - Ortho/Para ratio - Nuclear and Side chain Halogenation.

UNIT-IV

4.1 Aliphatic Nucleophilic Substitutions - Mechanisms of S_N1, S_N2 and S_Ni Reactions – Effect of Structure of Substrate, Solvent, Nucleophile and Leaving Group.

4.2 Elimination reactions - Mechanism of E1 and E2 reactions - Hoffmann and Saytzeff''s rules - Cis and Trans Eliminations.

4.3 Aromatic Nucleophilic Substitutions - Unimolecular Nucleophilic Substitution, Bimolecular Nucleophilic Substitution and their Mechanism.

UNIT-V

5.1 Second Law of Thermodynamics - Need for the II Law of Thermodynamics - Spontaneous Process – Criteria of Spontaneity - Different Forms of Statements of the Second Law – Cyclic Process – Definition - Heat Engines.

5.2 Carnot's cycle - Efficiency - Carnot's theorem (Statement only) - Concept of Entropy - Definition and Mathematical Statement - Randomness and Entropy – Standard Entropy - Derivation of Entropy from Carnot Cycle.

5.3 Entropy change of an Ideal Gas during Isothermal Process - Entropy changes in Cyclic, Reversible and Irreversible Processes - Entropy Changes in Physical Transformations - Calculation of Entropy Changes with Changes in T, V and P - Entropy of Mixing of Ideal Gases – Physical Significance of Entropy.

ALLIED

1. PHYSICS - I

UNIT – I: PROPERTIES OF MATTER

Elasticity : Hooke's Law – Elastic Constants – bending of beam – Bending moment – Cantilever Depression at the loaded end of a cantilever – determination of Young's modulus by non-uniform bending.

Torsion : Torsion couple – Potential energy in a twisted wire – Torsional pendulum – Time period – Determination of rigidity modulus by Torsional oscillation (without masses).

Viscosity: Viscosity of a liquid – Viscous force – Co-efficient of viscosity of a liquid – Poiseuille's formula .

Surface Tension: Surface Tension – Surface Tension and interfacial surface tension by the method of drops.

UNIT – II: HEAT

Heat: Specific heat – Newton's law of cooling – determination of specific heat of a liquid using Newton's law of cooling – Emissivity and Emissive Power.
Low Temperature: J.K. Effect – Positive Effect – Negative Effect – Temperature of Inversion – Super conductors. Type I and II – Meisner Effect – Helium I and II.

UNIT – III: ELECTRICITY AND MAGNETISM

Electricity: Potentiometer – Principle – Calibration of low range voltmeter – Measurement of internal resistance of cell – measurement of an unknown resistance.

Magnetism – Moment and pole strength of a magnet – Deflection magnetometer – Tan C position – Vibration magnetometer – Theory – Period of Oscillation – Determination of M and B_H using the deflection magnetometer in Tan C position and the vibration magnetometer.

UNIT – IV: SOUND AND ACOUSTICS OF BUILDING

Sound: Transverse vibration of strings – Velocity and frequency of vibrations of a stretched string – laws – sonometer – A.C. Frequency – Steel Wire – Brass wire.

Ultrasonics – Production by Piezo – electric method – properties and uses.
Acoustics of buildings: Reverberation – Reverberation time – Sabine's formula (definition only) – Sound absorption co-efficient of surface – conditions for the perfect acoustics.

UNIT – V: OPTICS

Interference: Air Wedge – Description – Test for optical flatness of glass plate – Determination of diameter of a thin wire by air wedge.

Diffraction: Theory of transmission grating – Normal Incidence – Determination of Wavelength of monochromatic source and Wavelength of mercury line using a grating by normal Incidence.

Fibre optics: principle-classification of optical fibres-fibre optic communication system block diagram.

4. BIOCHEMISTRY I

UNIT-I: Chemistry of Carbohydrates

Definition and Classification of carbohydrate. Monosaccharides - occurrence, structure; physical and chemical properties, linear and ring forms (Haworth formula) for glucose and fructose. Disaccharides - occurrence, structure; physical and chemical properties of sucrose and lactose. Polysaccharides - occurrence, structure, physical and chemical properties of starch.

UNIT-II: Chemistry of amino acids

Definition and classification of amino acids. Reaction with ninhydrin, common properties of amino acids, amphoteric nature, isoelectric point, isoelectric pH and Zwitter ion.

UNIT-III: Chemistry of Proteins

Classification based on solubility, shape and size. Physical properties: salting in and salting out, denaturation, peptide bond. Structure of protein: primary, secondary, tertiary and quaternary structure.

UNIT-IV: Chemistry of Lipids

Definition, classification and functions of lipids. Occurrence, chemistry and biological functions of simple lipids, compound lipids (e.g. phospholipids) and derived lipids: steroids (e.g. cholesterol). Physical property-emulsification. Chemical property-saponification. Functions of bile acids and bile salts.

UNIT-V: Chemistry of Nucleic acids

Definition - nucleoside, nucleotide and polynucleotide. Double helical model of DNA and its biological functions. Structure, types and functions of RNA: tRNA, mRNA and rRNA. Differences between DNA and RNA.

5.MATHEMATICS – I*

Objectives of the Course:

To Explore the Fundamental Concepts of Mathematics

UNIT-I: ALGEBRA

Partial Fractions - Binomial, Exponential and logarithmic Series (without Proof) - Summation - Simple problems

UNIT-II : THEORY OF EQUATIONS

Polynomial Equations with real Coefficients - Irrational roots - Complex roots- Transformation of equation by increasing or decreasing roots by a constant - Reciprocal equations - Newton's method to find a root approximately - Simple problems.

UNIT-III : MATRICES

Symmetric - Skew-Symmetric - Orthogonal and Unitary matrices - Eigen roots and eigen vectors – Cayley - Hamilton theorem (without proof)-Verification and computation of inverse matrix

UNIT-IV: TRIGONOMETRY

Expansions of $\sin^n \theta$, $\cos^n \theta$, $\sin n\theta$, $\cos n\theta$, $\tan n\theta$ - Expansions of $\sin \theta$, $\cos \theta$, $\tan \theta$ in terms of θ.

UNIT-V: DIFFERENTIAL CALCULUS

Successive differentiation upto third order, Jacobians -Concepts of polar co-ordinates-Curvature and radius of curvature in Cartesian co-ordinates and in polar co-ordinates.

SKILL BASED SUBJECT

PAPER – 1

WATER TREATMENT AND ANALYSIS

Objective:

- To impart knowledge about the various methods of Water Analysis and Treatment of Water.

UNIT-I

1.1 Introduction - Characteristics of water - Alkalinity - Hardness - Unit of hardness – Total solids - Oxidation - Transparency - Silica content.

1.2 Purification of Water for drinking purpose - Potability of water – Clarification - Coagulation - Contact and Electrochemical Coagulation.

1.3 Sterilisation and Disinfection of water - Precipitation - Aeration - Ozonisation - Chlorination.

UNIT-II

2.1 Water Softening Methods - Clark's process - Lime soda process - Modified lime soda process - Permutit or Zeolite process - Ion exchange process - Demineralisation of water.

2.2 Determination of Hardness of water - Titration method - Complexometric method using EDTA - Expressing Hardness.

2.3 Equivalents of Calcium Carbonate - Problems to determine Temporary and Permanent Hardness.

UNIT-III

3.1 Hard water and Industries - Industrial water treatment - Boiler feed water method of Softening - Prevention of plumbo solvency - Scales in boilers - Consequences - Internal conditioning methods.

3.2 Desalination of Brackish water - Elecrodiaysis - Reverse osmosis - Removal of Fe, Mn and Silicic acid.

3.3 Effluent Treatment of Water from Paper Industry, Petrochemicals, Fertilizer industry and Power station.

UNIT-IV

4.1 Water analysis - Sampling of Water for analysis - Chemical Substances affecting Potability - Colour, Turbidity, Odour, Taste, Temperature, pH and Electrical Conductivity.

4.2 Analysis of Solids present in water - Suspended Solids - Dissolved Solids - Total Acidity - Alkalinity - Free CO_2 - Free Chlorine - Ca, Mg, Fe, Mn, Ag and Zn.

4.3 Water in Industry – Pollution of Water by Fertilisers, Detergents, Pesticides and Industrial wastes.

UNIT-V

5.1 Analysis of Chemical Substances Affecting Health - NH_3, Nitrate, Nitrite, Cyanide, Sulphate, Sulphide, Chloride and Fluoride.

5.2 Measurement of Toxic Chemical Substances - Analysis of Chemical Substances indicative of Pollution - Dissolved oxygen - Biochemical Oxygen Demand (BOD) - Chemical Oxygen Demand (COD)

5.3 Bacteriological Examination of Water - Total Count Test - E. coli test - E. coli index - Most Probable Number method - Biological Examination of Water - Physical Examination of Water - Radioactivity of Water - Methods of removing Radioactivity from Water.

Reference Books

1. Industrial Chemistry (Including Chemical - Engineering) - B. K. Sharma - Goel Publishing House, Meerut (1987).

2. Pollution Control in Process Industries - S. P. Mahajan - Tata McGraw Hill Publishing Company Ltd., New Delhi (1991).

3. Water Pollution and Management - C. K. Varashney - Wiley Eastern Ltd., Chennai -20 (1991).

NON-MAJOR ELECTIVE

PAPER – 1

MEDICINAL CHEMISTRY

Objectives:

- To learn the basic idea of Drugs and Names of Common Drugs, Blood, Blood Pressure, Diabetes, AIDS, Vitamins, Indian Medicinal Plants and First Aid.

UNIT-I

1.1 Clinical Health and Biochemical Analysis - Definition of Health - WHO standard.

1.2 Sterilisation of Surgical Instruments - Biochemical Analysis of Urine and Serum.

1.3 Blood – Composition of Blood - Blood grouping and Rh factor.

UNIT-II

2.1 Common Drugs - Antibiotics, Antipyretics and Analgesics - Examples, Uses and Side effects.

2.2 Anti-inflammatory agents, Sedatives, Antiseptics and Antihistamines - Examples, Uses and Side effects.

2.3 Tranquilizers, Hypnotics and Antidepressant drugs - Definition, Examples, Uses and Side effects.

UNIT-III

3.1 Vital Ailments and Treatment - Blood pressure - Hypertension and Hypotension.

3.2 Diabetes, Cancer, AIDS - Causes, Symptoms and Treatment.

3.3 Vitamins – Classification of Vitamins – Sources and Deficiency diseases caused by Vitamins.

UNIT-IV

4.1 Indian Medicinal Plants - Palak, Vallarai, Kizhanelli and Thumbai - Chemical Constituents and Medicinal Uses.

4.2 Hibiscus, Adadodai, Thoothuvalai – Chemical Constituents and Medicinal Uses.

4.3 Nochi, Thulasi, Aloe Vera - Chemical Constituents and Medicinal Uses.

UNIT- V

5.1 First Aid and Safety - Treatment of Shock, Haemorrage, Cuts and Wounds.

5.2 Burns - Classification - First Aid.

5.3 Asbestos, Silica, Lead Paints, Cement, Welding fumes and Gases - Hazard alert and Precautions for Safety.

Reference Books

1. Applied Chemistry, Jayashree Ghosh - S. Chand and Company Ltd., 2006

2. Biochemistry, S. C. Rastogi - Tata McGraw Hill Publishing Co., 1993.

3. Medicinal Plants of India, Rasheeduz Zafar - CBS Publishers and Distributors, 2000.

4. Hawk's Physiological Chemistry, B. L. Oser - Tata-McGraw Hill Publishing Co. Ltd.

5. Practical Pharmaceutical Chemistry, A. H. Beckett and J. B. Stenlake - Vol. I - CBS Publishers and Distributors, 2000.

SEMESTER – IV

PAPER – 4

GENERAL CHEMISTRY – IV

OBJECTIVE:

Noble gases, Carboxylic Acids, Amines, Alcohols, Phenols, Naphthols, Important Name Reactions, Mechanism, Thermodynamics, Derivation of Equations, Partial Molar Properties, Chemical Potential, Related Problems and Applications are to be taught for IV semester.

UNIT-I

1.1 Noble gases - Electronic Configurations – Position of Noble Gases in the Periodic Table - Chemical inertness of Noble gases – Reason.

1.2 Compounds of Xenon - Hybridization and Geometry of XeF_2, XeF_4, XeF_6 and $XeOF_4$ (Preparation, Properties – Not necessary).

1.3 Clathrates - Definition and Applications - Uses of Noble gases.

UNIT-II

2.1 Monocarboxylic acids – Acetic acid and Benzoic acid – Preparation by Grignard method – Conversion of Acids to their derivatives – Amide, Ester, Anhydride and Acid Chloride – Strength of Carboxylic Acids – Effect of Substituents on the Strength of Acids.

2.2 Dicarboxylic acids – Oxalic acid, Malonic acid, Succinic acid, Glutaric acid and Adipic acid - Preparation – Properties – Action of Heat on Dicarboxylic acids.

2.3 Amines – Ethylamine and Aniline – Preparation – Basicity of Amines – Effect of Substituents on Basicity - Reactivity of Amines – Distinction between Primary, Secondary and Tertiary Amines.

UNIT-III

3.1 Alcohols – Preparation by Grignard method – Oxidation of alcohols – Difference between Primary, Secondary and Tertiary alcohols – Preparation and Properties of Allyl alcohol.

3.2 Phenols - Acidic character of phenols - Kolbe's reaction, Reimer-Tiemann reaction, Gattermann , Lederer-Manasse, Houben-Hoesh, Friedel-Crafts, Schotten-Baumann and Liebermann's Nitroso Reaction.

3.3 Preparation, Properties and Uses of Alpha- and Beta- Naphthols.

UNIT-IV

4.1 Free energy and Work function - Gibbs free energy – Helmholtz free energy – Relationship between Gibbs free energy and Helmholtz free energy – Their variations with Temperature, Pressure and Volume – Free energy change as criteria for Equilibrium and Spontaneity.

4.2 Maxwell's Relations – Thermodynamic Equation of State.

4.3 Gibbs-Helmholtz equation - Derivation and Applications - Clausius-Clapeyron equation - Derivation and Applications.

UNIT-V

5.1 Third Law of Thermodynamics - Entropy at Absolute Zero - Nernst Heat Theorem – Statement of III law of thermodynamics – Planck's formulation of III law of thermodynamics.

5.2 Evaluation of Absolute Entropy from Heat Capacity Measurements - Exceptions to III law – Applications of III law.

5.3 Partial molar properties - Chemical Potential – Definition - Effect of Temperature and Pressure on Chemical Potential - Gibbs-Duhem equation.

CORE PRACTICAL

PAPER – 2

INORGANIC QUALITATIVE ANALYSIS AND PREPARATION

Analysis of mixture containing two cations and two anions (One will be an interfering anion). Semimicro methods using the conventional scheme are to be adopted.

Cations to be studied

Lead, Copper, Bismuth, Cadmium, Iron, Aluminium, Zinc, Manganese, Cobalt, Nickel, Barium, Calcium, Strontium, Magnesium and Ammonium.

Anions to be studied

Carbonate, Sulphide, Sulphate, Nitrate, Chloride, Bromide, Fluoride, Borate, Oxalate and Phosphate.

Preparation of Inorganic compounds

- Tetraamminecopper(II) Sulphate
- Tris(thiourea)copper(I) Chloride
- Potassium trioxalatoferrate(II)
- Ferrous Ammonium Sulphate
- Microcosmic Salt
- Manganese(II) Sulphate

References

- Vogel's Text Book of Quantitative Chemical Analysis, 5th Edition, ELBS/ Longman, England, 1989.
- Inorganic Semimicro Qualitative Analysis, V. V. Ramanujam.

ALLIED – 4

1.PHYSICS II

UNIT – I: WAVE MECHANICS

Wave Mechanics – De Broglie Waves – Dual Nature – Experimental Study of Matter Waves – Davission and Germer's Experiment – G.P. Thomson's Experiment _ Heisenberg's uncertainty Principle – The position and moment of a particle.

UNIT – II : NUCLEAR PHYSICS

Particle accelerators – cyclotron, particle detectors – GM Counter Artificial Transmutation – Rutherford's Experiment – The Q value equation for nuclear reaction – Threshold energy – Nuclear Reactions.

Conservation Laws: Conservation of Charge – Conservation of Nucleons – Conservation of Mass – Energy – Conservation of Parity – Quantities conserved and quantities not conserved in a nuclear reaction.

UNIT – III : ENERGY PHYSICS

Sources of conventional energy – Need for non-conventional energy resources – solar energy utilization – solar water heater – solar drier – conversion of light into electrical energy – solar cell – merits and demerits of solar energy – wind energy – its conversion systems – energy from Bio mass – Bio gas generation – Industrial and space application.

UNIT – IV: CRYSTALLOGRAPHY

Crystallography : The crystal structure – Unit Cell –Bravais lattice- structures of simple cubic-BCC and FCC- co ordination number, packing factor calculation for the above structures –Hexogonal closed packed(HCP) structure -Miller indices – concept of Reciprocal Vectors.

UNIT – V: ELECTRONICS

Electronics: Transistor characteristics in common base and common emitter mode- Transistor single stage amplifier- Expression for input impedence, output impedence and current gain.
Digital Electronics : NAND and NOR as universal building blocks- De Morgan's theorem –statement and proof- Fabrication of diodes and transistors using Monolithic technology– limitations.

Books for Study & Reference

11. Allied Physics – R. Murugesan S. Chand & Co. First Edition (2005).
12. Allied Physics – Dr. K. Thangaraj, Dr. D. Jayaraman Popular Book Department, Chennai.
13. Allied Physics – Prof. Dhanalakshmi and others.
14. Elements of Properties of Matter – D.S. Mathur, S. Chand & Co. (1999).
15. Heat and Thermodynamics – N. Brijlal and Subramaniam S. Chand & Co.
16. A text book of Sound – by M. Narayanamoorthy and other National Publishing Companies (1986).
17. Modern Physics – R. Murugesan S. Chand & Co. (2004).
18. Electronic Principles and Applications – A.B. Bhattacharya, New Central Book Agency, Calcutta.
19. Introduction to Solid State Physics – C. Kittel, 5^{th} Edition Wiley Eastern Ltd.
20. Renewable & Sustainable energy sources – Agarwal.

3. ZOOLOGY II

Objective:

To study the principles of cell biology, genetics, developmental biology, physiology, ecology and evolution.

UNIT - I

Cell Biology - structure of animal cell, **Genetics:** molecular structure of gene - gene function, sex linked inheritance. Genetic Engineering and its application.

UNIT - II

Embryology - cleavage and gastrulation of Amphioxus.

Human Physiology: Digestion, Circulation - blood components, structure of heart, heart function.

UNIT - III

Diseases of Circulatory system - blood pressure, heart disease - Ischemia, Myocardial Infarction, Rheumatic heart disease, stroke.

Excretion - structure of kidney and mechanism of urine formation.

UNIT - IV

Environmental Biology - Biotic factors and Abiotic factors, food chain and food web. Pollution - Environmental degradation, (Air, Water and Land) - Green house effect - Bioremediation, Biodegradation - Global warming - acid rain.

UNIT - V

Evolution: Theories of Lamarkism & Darwinism.

4.BIOCHEMISTRY II

UNIT-I: Metabolism

Glycolysis, TCA cycle and its energetics, HMP shunt pathway. Deamination, transamination reaction, transaminase enzymes, Urea cycle.

UNIT-II: Metabolic Disorders

Diabetes mellitus, Glycogen storage diseases, Glycosuria, Ketosis, Jaundice, Phenyl ketonuria, Alkaptonuria. Dehydration: definition, causes, symptom and prevention.

UNIT-III: Enzymes

Definition, classification of enzymes with one example. Mechanism of enzyme action - Lock and key mechanism, Induced Fit theory. Michaleis-Menton equation. Enzyme inhibition: competitive, uncompetitive and non competitive. Biological functions of enzymes.

UNIT-IV: Molecular Biology

Central dogma of molecular biology. DNA and RNA act as genetic material. Replication: Definition, types, mode of action of replication, mechanism of replication. General mechanism of transcription and translation. Genetic code.

UNIT-V: Vitamins

A brief outline of source, requirement, biological function and deficiency of Vitamins (fat soluble and water soluble vitamins).

5.MATHEMATICS – II*

Objectives of the Course

To Explore the Fundamental Concepts of Mathematics

UNIT-I: Application of Integration

Evaluation of double, triple integrals - Simple applications to area, volume -Fourier series for functions in $(0,2\pi)$ and $(-\pi, \pi)$.

UNIT-II: Partial Differential Equations

Formation, complete integrals and general integrals - Four standard types, Lagrange's equations.

UNIT-III: Laplace Transforms

Laplace Transformations of standard functions and simple properties - Inverse Laplace transforms - Applications to solutions of linear differential equations of order 1 and 2-simple problems

UNIT-IV: Vector Analysis

Scalar point functions - Vector point functions - Gradient, divergence, curl - Directional derivatives - Unit to normal to a surface.

UNIT-V: Vector Analysis (continued)

Line and surface integrals - Guass, Stoke's and Green's theorems (without proofs) - Simple problem based on these Theorems.

ALLIED PRACTICAL - 2

1.PHYSICS

(Any 15 Experiments)

21. Young's modulus – non uniform bending – pin and microscope.
22. Rigidity modulus – Static Torsion Method Using Scale and Telescope.
23. Ridigity modulus – Torsional oscillation method (without symmetric masses).
24. Determination of Co-efficient of Viscosity – Graduated Burette.
25. Surface Tension and Interfacial Tension – By drop weight method.
26. Specific Heat Capacity of a liquid – by Newton's Law of Cooling.
27. Sonometer – Determining A.C. Frequency. (Screw Gauge is given).
28. Sonometer – frequency of tuning fork.
29. Newton's Rings – Radius of Curvature.
30. Air Wedge – Determination of thickness of thin wire.
31. Spectrometer Grating – Minimum Deviation – Mercury Lines.
32. Spectrometer – Refractive Index of a liquid – Hollow Prism.
33. Potentiometer – Calibration of High Range Ammeter.
34. Potentiometer – Calibration of Low Range Voltmeter.
35. Determination of M and B_H using Deflection Magnetometer in Tan C position and vibration magnetometer.
36. Figure of merit and voltage sensitiveness of table galvanometer.
37. Construction of AND, OR gates using diodes and NOT by transistors.
38. Zener diode – Voltage Regulation.
39. NAND / NOR as universal gate.
40. Demorgan's theorem verification.

Allied Practical
3. ZOOLOGY

I - MAJOR PRACTICAL

DISSECTIONS

Cockroach: Digestive and nervous system

Prawn: Nervous system

II - MINOR PRACTICAL

MOUNTING

1. Mouth parts of **Mosquito** and **Honey bee**

2. **Earthworm** - Body setae

3. Placoid scales of **shark**

III - SPOTTERS

Entamoeba, Sycon, Obelia, Taenia solium (entire, scolex) earthworm (entire, Pineal setae) Prawn (entire), Fresh water mussel, Sea star, Amphioxus - Entire, Amphioxus - T.S. through pharynx, Shark, Frog, Calotes, Pigeon, feathers of pigeon and Rabbit.

Sphygnomanometer, Stethoscope, Rain gauge.

ALLIED PRACTICAL

4. BIOCHEMISTRY I & II

PRACTICAL I

Volumetric Estimation

1. Estimation of HCl using Na2CO3 as link and NaOH as primary standard.

2. Estimation of Iron in Ferrous Ammonium Sulphate using potassium permanganate as link solution and oxalic acid as primary standard.

3. Estimation of Glucose by Benedict's method.

4. Estimation of Glycine by formal titration.

5. Estimation of Ascorbic acid.

SKILL BASED SUBJECT

PAPER – 2

FOOD CHEMISTRY

Objective:

- To impart knowledge about Different Foods, Their Nutritive Values and Food Preservation.

UNIT-I

1.1 Cereals - Definition – Classification - Processing - Structure of Cereals - Composition and Nutritive value – Pulses - Definition - Classification - Processing - Structure of Pulses - Composition and Nutritive Value - Toxic Constituents in Pulses - Medicinal value of Cereals and Pulses.

1.2 Sugar - Structure and Properties - Nutritive value - Sugar composition in different food items.

1.3 Sugar related products - Classification and Nutritive value - Artificial sweeteners – Examples – Saccharin and Cyclamate - Advantages and Disadvantages.

UNIT-II

2.1 Vegetables and Fruits - Classification - Composition and Nutritive values.

2.2 Fungi and Algae as food - Enzymatic Browning and Non- enzymatic Browning.

2.3 Nutritive value of some common foods - Milk, Egg and Soyabeans.

UNIT-III

3.1 Beverages - Definition - Examples – Classification.

3.2 Fruit Beverages - Milk Based Beverages - Malted Beverages - Examples – Alcoholic and Non-Alcoholic Beverages – Examples.

3.3 Appetizers - Definition - Classification - Examples - Water - Functions and Deficiency.

UNIT-IV

4.1 Food Preservatives - Definition - Classification - Food Spoilage - Definition - Prevention.

4.2 Methods of Preservation - Classification - Low and High temperature – Preservatives – Examples.

4.3 Dehydration - Osmotic pressure - Food irradiation.

UNIT-V

5.1 Food Additives - Definition – Artificial sweeteners – Saccharin and Cyclamate - Classification - Their functions - Chemical substances.

5.2 Packaging of Foods – Classification - Materials used for Packaging.

5.3 Food Colours – Restricted use – Spurious Colours – Taste Enhancers – MSG – Vinegar.

NON – MAJOR ELECTIVE

PAPER – 2

CHEMISTRY IN EVERY DAY LIFE

Objectives:

- To know the basics of Chemistry in our life
- To know about the Food Colours, Plastics, Drugs etc.,

UNIT- I

1.1 General Survey of Chemicals used in everyday life.

1.2 Cosmetics - Talcum Powder, Tooth pastes, Shampoos, Nail Polish and Perfumes - General formulation - Preparation - Hazards of Cosmetic use.

1.3 Soaps and Detergents – Types - Preparation and Uses.

UNIT-II

2.1 Food and Nutrition - Carbohydrates, Proteins, Fats and Minerals – Examples.

2.2 Vitamins – Definitions – Classification - Sources and their Physiological importance - Balanced diet.

2.3 Adulterants in Milk, Ghee, Oil, Coffee Powder, Tea, Asafoetida, Chilli Powder, Pulses and Turmeric Powder - Identification.

UNIT-III

3.1Food colours used in food - Soft drinks and its Health hazards.

3.2 Food Preservatives – Definition – Examples - Methods of preservation - Low and High temperature.

3.3 Dehydration - Osmotic pressure - Food irradiation.

UNIT-IV

4.1 Plastics, Polythene, PVC, Bakelite, Polyesters, Resins and their Applications.

4.2 Natural Rubber - Synthetic rubbers - Vulcanisation - Preparation and its Applications.

4.3 Antipyretics, Analgesics, Anaesthetics, Sedatives – Definition - Examples and Uses.

UNIT-V

5.1 Gobar gas – Production – Feasibility and Importance of Biogas with special reference to Rural India.

5.2 Fertilizers – Definition – Classification - Urea, NPK and Super phosphates - Need - Uses and Hazards.

5.3 Sweetening agents – Sucrose and Glucose – Artificial Sweetening agents – Saccharin – Cyclamate – Advantages and Disadvantages.

Reference Books

Ltd., New Delhi – 2010.

8. Applied chemistry - K. Bagavathi Sundari - MJP Publishers (2006).

SEMESTER – V
PAPER – 5
INORGANIC CHEMISTRY – I

Objectives:

- To study about the Halogens and Related compounds.
- To give students a firm grounding in Co-ordination chemistry and Solid state Chemistry.

UNIT-I

1.1 Halogens – Group discussion - Comparative study of F, Cl, Br, I and At - Reactivities – Comparison of Fluorine with Oxygen.

1.2 Classification of Halides - Exceptional properties of Fluorine - Oxyacids of Halogens (Structure only).

1.3 Interhalogen compounds - Preparation, Properties and Geometry of AX, AX_3, AX_5 and AX_7 type of Compounds – Pseudohalogens - Cyanogen and Thiocyanogen – Comparison of Pseudohalogens and Halogens - Basic Properties of Iodine - Evidences.

UNIT-II

2.1 Coordination compounds - Definition of terms used - Classification of Ligands - Chelation and Effect of Chelation - Applications of Complexes - Coordination Number and Stereochemistry of Complexes.

2.2 IUPAC Nomenclature of Complexes - Isomerism in Complexes - Ionisation isomerism, Hydrate Isomerism, Linkage Iomerism, Ligand Isomerism, Coordination Isomerism and Polymerisation Isomerism.

2.3 Geometrical and Optical Isomerism in 4- and 6- Coordinated Complexes – Werner's theory of Coordination Compounds.

UNIT-III

3.1 Sidgwick's Theory - EAN rule - Theory of Bonding - Valence Bond Theory – Postulates of VBT – Hybridisation, Geometry and Magnetic properties - Failure of VBT.

3.2 Crystal field theory - Spectrochemical series - Splitting of d - orbitals in Octahedral, Tetrahedral and Square Planar Complexes - Crystal Field Stabilisation Energy - Calculation of CFSE In Octahedral and Tetrahedral Complexes.

3.3 Low Spin and High Spin Complexes – Explanation of Magnetic Properties, Colour and Geometry Using CFT.

UNIT-IV

4.1 Comparison of VBT and CFT.

4.2 Applications of Coordination Compounds in Qualitative and Quantitative Analysis - Estimation of Nickel using DMG and Aluminium using Oxine – Detection of Potassium ion – Separation of Copper and Cadmium ions.

4.3 Bonding, Hybridization and Structure of Carbonyls of Ni, Cr, Fe, Co, Mn, W and V.

UNIT-V

5.1 The nature of the Solid State – Amorphous and Crystalline – Differences - Close Packing in Crystals – Examples for Cubic, BCC and FCC Lattices - Bragg's law – Application of XRD to Crystal studies – Structure of NaCl, CsCl, CaF_2 and ZnS.

5.2 Band theory of Solids, Metals, Semiconductors and Insulators.

5.3 Defects in solids – Scottky Defect and Frenkel Defect – Metal Excess and Metal Deficiency Defects - Conductors in Ionic Solids – Electrical and Magnetic properties.

PAPER – 6

ORGANIC CHEMISTRY – I

Objectives:

- To effectively impart knowledge about Carbohydrates, Stereochemistry, Conformational Analysis, Nitroalkanes and Heterocyclic chemistry.
- To make the students more inquisitive in learning the Mechanistic details in Organic Chemistry through the teaching of the named reactions.

UNIT- I

1.1 Carbohydrates - Classification – Aldoses and Ketoses, Reducing and Non-reducing Sugars - Reactions of Glucose and Fructose - Osazone formation, Mutarotation and their Mechanism - Structural elucidation of Glucose and Fructose - Pyranose and Furanose forms – Haworth's method.

1.2 Determination of Ring Size- Haworth Projection Formula - Configuration of Glucose and Fructose - Epimerization - Chain lengthening and chain shortening of Aldoses - Inter conversion of Aldoses and Ketoses – Uses of Glucose.

1.3 Disaccharides and Polysaccharides - Reactions and Structural elucidation of Sucrose and Maltose - Properties, Structure and Uses of Starch and Cellulose.

UNIT- II

2.1 Stereoisomerism – Definition - Classification into Optical and Geometrical isomerism. Conditions for Optical Activity – Asymmetric centre – Chirality – Achiral molecules - Meaning of (+) and (-) and D- and L- notations – Elements of symmetry - Projection formulae - Fischer, Flying Wedge, Sawhorse and Newmann projection formulae - Notation

of optical isomers - Cahn - Ingold - Prelog rules - R, S notation of Optical isomers with one Asymmetric carbon atoms – Erythro and Threo representations.

2.2 Optical activities in Compounds not containing Asymmetric Carbon Atoms - Biphenyl, Allenes and Spiranes - Racemisation - Methods of Racemisation (By substitution and Tautomerism) – Resolution - Methods of Resolution (Mechanical, Biochemical and Conversion To Diastereomers) - Asymmetric Synthesis (Partial and Absolute Synthesis) - Walden inversion.

2.3 Geometrical isomerism - Cis - Trans, Syn - Anti and E-Z Notations - Geometrical Isomerism In Maleic and Fumaric Acids and Unsymmetrical Ketoximes - Methods of Distinguishing Geometrical Isomers using Melting Points, Dipole Moment, Dehydration, Cyclisation, Heat of Hydrogenation and Combustion.

UNIT- III

3.1 Conformational analysis - Introduction of terms - Conformations, Configuration, Dihedral Angle, Torsional Strain - Differences between Conformational isomers and Configurational isomers.

3.2 Conformational analysis of Ethane and n-Butane including energy diagrams.

3.3 Conformations of Cyclohexane (Chair, Boat and Twist-Boat forms) - Axial and Equatorial bonds - Ring flipping showing Axial and Equatorial bonds Interconversions – Conformations of Methyl Cyclohexane, Dimethyl Cyclohexane and their stability - 1,2 and 1,3 - Interactions.

UNIT- IV

4.1 Nitroalkanes – Preparation – Properties – Structure – Nitro-Acinitro Tautomerism – Uses of Nitroalkanes – Differences between Primary, Secondary and Tertiary Nitroalkanes.

4.2 Reagents and their Applications in Organic Chemistry – Anhydrous $AlCl_3$, P_2O_5, H_2/ Pd- $BaSO_4$, Zn/ Hg- HCl and Ag_2O.

4.3 Mechanism of Aldol, Perkin and Benzoin condensations - Knoevenagel, Claisen, Wittig, Cannizzaro, Reformatsky and Michael addition reactions.

UNIT- V

5.1 Heterocyclic compounds - Huckel's rule – Aromaticity of Heterocyclic compounds - Preparation, Properties, Structure and Uses of Furan, Pyrrole and Thiophene.

5.2 Preparation and properties of Pyridine and Piperidine - Comparative study of Basicity of Pyrrole, Pyridine and Piperidine with Amines – Nucleophilic and Electrophilic substitution reactions of Pyridine.

5.3 Condensed Five and Six Membered Heterocyclic Compounds - Preparation of Indole, Quinoline and Isoquinoline – Fischer-Indole synthesis, Skraup Quinoline synthesis and Bischler-Napieralski synthesis - Electrophilic substitution reactions.

PAPER- 7

PHYSICAL CHEMISTRY – I

Credits: 4 **Hours/ Week: 4**

Objectives:

- To impart knowledge about the Solutions, Phase Rule and its Applications, Colligative properties, Chemical Equilibrium, Phase Rule and its Applications, Electrochemistry and its Applications.

Unit-I Solutions

1.1 Solutions of liquids in liquids - Raoult's law – Vapour pressure of ideal solutions – Activity of a component in an ideal solution – Gibbs-Duhem-Margules equation – Thermodynamics of Ideal Solutions.

1.2 Vapour pressure of Non-ideal solutions – Fractional distillation of Binary liquid solutions – Azeotropic mixtures - Distillation of immiscible liquids - Partially miscible liquids - Phenol - Water, Triethylamine – Water and Nicotine – Water systems.

1.3 Nernst distribution law – Definition - Thermodynamic derivation – Applications.

Unit-II Phase rule

2.1 Definition of the terms - Phase, Components and Degrees of freedom – Derivation of Gibbs phase rule

2.2 Applications of phase rule - One component system - Water and Sulphur system – Reduced phase rule - Two components system - Simple eutectic system – Lead-silver system, KI-water system - Freezing mixtures.

2.3 Thermal analysis and cooling curves, Compound formation with congruent melting point – Zn-Mg, $FeCl_3$- Water system - Compound formation with incongruent melting point - Na-K System.

Unit-III Colligative properties and Chemical Equilibrium

3.1 Colligative properties - Lowering of vapour pressure - Osmosis and osmotic pressure - Thermodynamic Derivation of Elevation of boiling point and Depression of freezing point – Determination of molar mass – Van't Hoff factor.

3.2 Chemical Equilibrium - Law of Chemical Equilibrium - Thermodynamic derivation of Law of Chemical Equilibrium.

3.3 Van't Hoff Reaction Isotherm - Temperature Dependence of Equilibrium Constant – Van't Hoff Isochore - Le Chatelier's Principle and Its Applications.

UNIT-IV Electrochemistry - I

4.1 Specific conductance and Equivalent conductance - Measurement of equivalent conductance - Variation of Equivalent Conductance and Specific Conductance with Dilution – Ostwald's Dilution Law and Its Limitations.

4.2 Debye-Huckel's theory of Strong Electrolytes - Onsagar equation (No derivation) - Verification and Limitations - Kohlrausch law and its Applications.

4.3 Migration of ions - Ionic Mobility - Ionic Conductance - Transport Number and its determination – Hittorff's method and Moving Boundary method.

UNIT- V Electrochemistry - II

5.1 Applications of Conductometric Measurements - Determination of Degree of Dissociation of Weak Electrolytes, Ionic Product of water - Solubility Product of sparingly soluble salt - Conductometric Titrations.

5.2 Concept of pH - Buffer solutions, Buffer action - Henderson equation - Applications of Buffer Solutions.

5.3 Hydrolysis of Salts - Expressions for Hydrolysis Constant, Degree of Hydrolysis and pH of aqueous salt solutions.

ELECTIVE

PAPER – 1

A. ANALYTICAL CHEMISTRY – 1

Objective:

- To impart knowledge about Data Analysis, Purification of organic compounds, Different Spectroscopic Techniques and their Application.

UNIT – I

1.1. Data analysis – Types of errors – Correction of determinate errors - Idea of Significant Figures and their Importance with examples – Precision and Accuracy – Methods of expressing Accuracy.

1.2. Error analysis – Minimising errors – Methods of expressing Precision – Average deviation – Standard Deviation and Confidence Limit.

1.3. Purification of Solid Organic Compounds – Solvent extraction – Recrystalisation - Use of immiscible solvents – Soxhlet extraction – Crystallisation – Use of miscible solvents – Fractional Crystallisation and Sublimation.

UNIT – II

2.1 Purification of liquids – Experimental Techniques of Distillation – Fractional Distillation – Vacuum Distillation – Steam Distillation – Tests of Purity.

2.2 Gravimetric Analysis – Characteristics of Precipitating Agents – Condition of Precipitation – Types of Precipitants – Purity of Precipitate – Co-precipitation and Post precipitation – Precipitation from Homogeneous Solution – Digestion and Washing of precipitate – Ignition of precipitate – Uses of Sequestering Agents.

2.3 Definition of spectrum – Electromagnetic radiation – Quantization of different forms of energies in molecules (Translational, Rotational, Vibrational and Electronic) – Born-Oppenheimer approximation – Condition of energy of absorption of various types of spectra.

.**UNIT – III**

3.1 Microwave Spectroscopy – Theory of Microwave Spectroscopy – Selection Rule – Calculation of Moment of Inertia and Bond Lengths of Diatomic molecules – Effect of Isotopic Substitution.

3.2 UV – Visible Spectroscopy – Absorption laws - Calculations involving Beer- Lambert's law – Instrumentation – Photocalorimeter and Spectrophotometer – Block diagrams with description of components – Theory of Electronic Spectroscopy.

3.3 Types of Electronic Transitions – Chromophore and Auxochromes – Absorption bands and Intensity – Factors influencing Position and Intensity of Absorption Bands - Frank-Condon Principle – Applications.

UNIT – IV

4.1 IR Spectroscopy – Principle – Theory of IR spectra – Vibrational Degrees of Freedom - Modes of Vibration of Diatomic Molecules –Triatomic linear (CO_2) and Non-linear Molecules (H_2O) - Stretching and Bending vibrations – Symmetric and Asymmetric Stretching vibrations - Selection rules.

4.2 Expression for Vibrational Frequency (Derivation not needed) – Calculation of Force constant – Factors influencing Vibrational Frequencies - IR Spectrophotometer - Instrumentation – Source, Monochromator, Cell, Detectors, Recorders and Sampling Techniques.

4.3 Applications of IR Spectroscopy – Identification of Functional Groups - Interpretation of the spectra of Alcohols, Aldehydes, Ketones and Esters (Aliphatic and Aromatic) - Hydrogen bonding.

UNIT – V

5.1 Raman Spectroscopy - Rayleigh and Raman scattering – Selection rule – Raman shift - Stokes and Anti-stokes lines - Differences between Raman and IR Spectroscopy.

5.2 Raman Spectrophotometer - Instrumentation – Block diagram – Components and their Functions – Advantages of using Laser in Raman Spectroscopy – Applications – Structural elucidation in the study of Inorganic and Organic Compounds.

5.3 Rotational-Raman spectra of Non - Centrosymmetric molecules - Mutual exclusion principle (CO_2 and N_2O) - Applications – Structural diagnosis.

PAPER – 1

B. BASICS OF COMPUTER PROGRAMMING IN C AND ITS APPLICATIONS IN CHEMISTRY

Objective:

- To introduce the basics of computers.
- To learn C language and its applications in solving problems in Chemistry.

Unit-I

1.1 Basic Computer Organisation, Processor and Memory – Main Memory, Secondary Storage Devices and Storage Hierarchy.
1.2 Software – Relationship between Hardware and Software – Types of Software.
1.3 Planning the Computer Program – Algorithm and Flowcharts - Basics of Operating Systems.

Unit-II

2.1 Computer Languages – Machine Language, Assembly Language, Assembler, Compiler, Interpreter and Programming Languages.
2.2 C language – Introduction - C Compiler - Operating Systems and Preprocessor Directives.
2.3 Variables, Constants, Operators, Input and Output Functions.

Unit-III

Control Structures – Conditional, Looping, Goto, Break, Switch and Continue Statements, Functions, Arrays And Pointers.

Unit-IV

4.1 Applications in Chemistry – Calculation of the Radius of the first Bohr orbit for an Electron.

4.2 Calculation of Half-life Time for an integral order reaction - Calculation of Molarity, Molality and Normality of a solution.

4.3 Calculation of Pressure of Ideal Gases and Van der Waal's gases - Calculation of Electronegativity of an Element using Pauling's relation.

Unit-V

5.1 Applications in Chemistry - Calculation of Empirical Formulae of Hydrocarbons - Calculation of Reduced Mass of a few Diatomic Molecules.

5.2 Determination of the Wave Numbers of Spectral lines of Hydrogen atom - Calculation of Work of Expansion in Adiabatic Process.

5.3 Calculation of pH, Solubility Product and Bond Energy using Born-Lande equation - Calculation of Standard Deviation and Correlation Coefficient.

Reference Books

- Computers in Chemistry, K. V. Raman, 8th Edition, Tata McGraw Hill Publishers, 2005.
- Programming with C, Venugopal and Prasad, 11th Edition, 1971. .

PAPER – 1

C. ORGANIC SYNTHESIS

Objectives

- To know the Basics of Retrosynthesis.
- To impart knowledge about the Ring Synthesis.

UNIT-I

DISCONNECTION APPROACH

1.1 An introduction to Synthons and Synthetic Equivalent.

1.2 Disconnection Approach - Functional Group Interconversions.

1.3 The importance of the Order of Events in Organic Synthesis - One group C-X and Two group C-X disconnections – Chemoselectivity - Reversal of Polarity.

UNIT-II

PROTECTING GROUPS

2.1 Principle of Protection of Alcoholic group and Amino group.

2.2 Principle of Protection of Carbonyl group and Carboxyl group.

2.3 Activation of Functional Groups.

UNIT-III

ONE GROUP C-C DISCONNECTIONS

3.1 Alcohols and Carbonyl Compounds.

3.2 Regioselectivity and Alkene Synthesis.

3.3 Uses of Acetylenes and Aliphatic Nitro Compounds in Organic Synthesis.

UNIT-IV

TWO GROUP C-C DISCONNECTIONS

4.1 Diels-Alder Reaction - 1, 3 - Difunctionalised Compounds.

4.2 α, β- Unsaturated Carbonyl Compounds - Control in Carbonyl Condensations.

4.3 1, 5 - Difunctionalised Compounds - Michael Addition and Robinson Annulation reactions.

UNIT-V

RING SYNTHESIS

5.1 Saturated Heterocyclic Compounds.

5.2 Synthesis of 3-, 4- and 6- Membered Rings Aromatic Heterocycles in Organic Synthesis.

5.3 Application of the above in the Synthesis of Camphor, Longifoline, Cortisone and Reserpine.

Reference Books

- Some Modern Methods of Organic Synthesis, W. Carruthers, Cambridge University Press, UK.
- Advanced Organic Chemistry, F. A. Carey and R. J. Sundberg, Part- B, Plenium Press.
- Modern Synthetic Reactions. H. O. House and W. A. Benjamin,

ELECTIVE

PAPER – 2

A. PHARMACEUTICAL CHEMISTRY

Objective:

- To effectively impart knowledge about Various Diseases and Their Treatment, Importance of Indian Medicinal Plants and Different Types of Drugs. Preparation, Synthesis and Structural Determination are not required for the Compounds mentioned.

UNIT-I

1.1 Definition of the following terms - Drug, Pharmacophore, Pharmacology, Pharmacopoeia, Bacteria, Virus, Chemotherapy and Vaccine.

1.2 Causes, Symptoms and Treatment for Jaundice, Cholera, Malaria and Filaria - First Aid for Accidents - Antidotes for Poisoning.

1.3 Organic Pharmaceutical Aids - Their Role as Preservatives, Antioxidants, Colouring, Flavouring and Sweetening agents – Examples.

UNIT-II

2.1 Causes, Detection and Control of Anaemia and Diabetes - Diagnostic tests for Sugar, Salt and Cholesterol in Serum and Urine.

2.2 Blood - Composition of Blood and Blood Plasma – RBC – Structure and Functions - Functions of Haemoglobin – WBC - Structure and Functions - Rh Factor – Blood Coagulation – Identification and Estimation of Cholesterol in Blood - Blood Pressure – Hypertension and Hypotension - Normal, High and Low to Control.

2.3 Indian Medicinal Plants and Their Uses - Tulasi, Neem, Kizhanelli, Mango, Semparuthi, Adadodai and Thoothuvelai.

UNIT-III

3.1 Antibacterials - Sulpha drugs – Sulphanilamide Derivatives – Mode of action of Sulpha drugs - Examples - Prontosil, Sulphathiazole and Sulphafurazole – Uses - Antibiotics - Definition – Gram positive and Gram negative bacteria - Uses of Ampicillin, Streptomycin and Tetracyclines.

3.2 Antiseptics and Disinfectants - Definition and Distinction - Phenolic compounds, Chloro compounds and Cationic surfactants.

3.3 Vitamins – Definition – Classification of Vitamins – Sources and Uses – Deficiency Diseases caused by Vitamins.

UNIT-IV

4.1 Analgesics – Definition - Classification - Narcotic and Non- narcotic – Antipyretic analgesics – Mechanism of action - Morphine and its derivatives - Pethedine and Methadone - Salicylic acid derivatives – Antipyretics and Antiinflammatory Agents - Definition and Actions – Aspirin, Paracetamol, Ibuprofen - Disadvantages and Uses.

4.2 Anaesthetics – Definition – Classification - Local and General – Volatile – Uses of volatile liquids as Inhalation Anaesthetics – Chloroform - Gaseous Anaesthetics - Nitrous Oxide, Ether and Cyclopropane - Uses and Disadvantages – Intravenous Anaesthetic Agents – Thiopental sodium, Methohexitol and Propanidid.

4.3 Drugs affecting CNS - Definition, Distinction and Examples for Tranquilizers, Sedatives (Phenobarbital, Diazepam) - Hypnotics, Psychedelic Drugs – LSD, Hashish- Their effects.

UNIT-V

5.1 Antineoplastic Drugs - Causes and Types of Cancer - Treatment of Cancer – Antineoplastic Agents – Antimetabolites - AIDS - AZT, DDC.

5.2 Hormones – Definition - Classification – Physiological Functions of Insulin, Adrenaline, Thyroxin and Oxytacin.

5.3 Sex hormones – Androsterone, Testosterone, Progesterone and Estrogen - Biological functions – Disorders of Hyposecretion and Hypersecretion of Hormones.

Reference Books

1. A Text Book of Pharmaceutical Chemistry - Jayashree Ghosh - S. Chand Company Ltd, 2015.
2. Pharmaceutical Chemistry - S. Lakshmi - Sultan Chand, 2011.
3. Pharmacology and Pharmatherapeutics - R. S. Satoskar - Popular Prakashan - Vol.I and Vol. II.
4. Medicinal Chemistry - Asuthosh Kar - New Age International Publishers, 2007.
5. A Text Book of Synthetic Drugs - O. D. Tyagi - Ammol Publications.
6. Introduction to Biological Chemistry - J. Awapara, Prentice Hall.
7. A Text Book of Biochemistry - Ambika.S.
8. Biochemistry - A. L. Leninger, II Edition, Kalyani Publishers, Ludhiana, 1998.
9. Essentials of Biological Chemistry - James Fanley - East West Press.
10. Medicinal Chemistry - Gurdeep Chatwal – Himalaya Publishers House, 2012.
11. Medicinal Chemistry - Ahluwalia – Ane Books, 2008.
12. A Text Book of Pharmaceutical Chemistry – Viva Books Private Ltd., New Delhi, 2009.
13. Medicinal Plants of India – Rasheeduz Zafar – CBS Publishers and Distributors, 2000.

ELECTIVE

PAPER – 2

B. POLYMER CHEMISTRY

Objective:

- To impart Knowledge about the Types of Polymers, Polymerization Techniques, Commercial Polymers and their Applications.

UNIT-I

1.1 Introduction to Polymers – Monomers, Oligomers, Polymers and their Characteristics - Classification of Polymers – Addition and Condensation Polymers – Natural and synthetic – Linear, Branched, Cross-Linked and Network – Plastics – Elastomers – Fibres – Homopolymers and Copolymers.

1.2 Bonding in Polymers – Primary and Secondary bond forces in Polymers – Cohesive energy and Decomposition of Polymers.

1.3 Chain Growth Polymerisation – Cationic, Anionic and Free radical polymerisation – Stereoregular polymers – Ziegler Natta polymers – Step Growth Polymers.

UNIT-II

2.1 Polymerization Techniques - Bulk, Solution, Suspension and Emulsion Polymerisation - Melt Polycondensation - Polymer Processing – Calendering - Die Casting and Rotational Casting.

2.2 Molecular weight of polymers – Number average – Weight average – Sedimentation and Viscosity – Average molecular weight - Molecular weight and Degree of Polymerisation – Methods of determination of Molecular Weight – Gel permeation chromatography – Ultracentrifugation.

2.3 Reactions – Hydrolysis – Hydrogenation –Addition – Substitution –Cross linking – Vulcanisation – Cyclisation.

UNIT-III

3.1 Plastics and Resins – Definitions – Thermoplastic and Thermosetting Resins – Constituents of Plastic Fibres – Dyes, Pigments, Plasticisers, Lubricants and Catalysts.

3.2 Important Thermoplastic Resins – Acrylics, Polyvinyl and Cellulose Derivatives - Important Thermosetting Resins – Phenolic resins – Epoxy resins.

3.3 Adhesives – Shellac resins – Vegetable glues and Animal glues.

UNIT-IV

4.1 Chemistry of Commercial Polymers - General methods of Preparation and Uses of the following - Teflon, Polyethylene, PTFE, Polystyrene, Polycarbonates and PVC.

4.2 Textile fibres – Definition and Polymer requirement for fibres – Polyamides – Nylon 66 - Nylon 6 – Polyesters – Terylene – Cellulose acetate – Viscose rayon.

4.3 Natural and Synthetic Rubber – Constitution of Natural rubber – Natural Rubber – Isoprene – Synthetic Rubber - Butyl, Buna, Buna- S, SBR, Thiocol, Neoprene, Polyurethane and Silicone Rubber – Ebonite.

UNIT-V

5.1 Advances in Polymers - Biopolymers, Biomaterials, Polymers in Medical Field, High temperature and Fire Resistant Polymers – Applications of Silicones.

5.2 Conducting Polymers – Elementary idea – Examples – Polysulphur Nitriles,

Polyparaphenylene, Polypyrrole, Polythiophene, Polyaniline and Polyacetylene.

5.3 Acrylic polymers – Polmers of Acrylic Acid, Methacrylic Acid and Polyacrylates.

Reference Books

1. Text Book of Polymer Science, F. W. Bill Meyer, Jr. John, Wiley & Sons - 1984.
2. Polymer Science – V, R. Gowarikar, N. V. Viswanathan, Jayader Sreedhar - Wiley Eastern Ltd., New Delhi - 2005
3. Polymer Chemistry, B. K. Sharma - Goel Publishing House, Meerut - 1989.
5. Polymer Chemistry – M. G. Arora, M. S. Vadar - Anmol Publications (p) Ltd., New Delhi -1998.
6. Polymer Chemistry - An introduction - M. P. Stevens, Oxford - 2002.

ELECTIVE

PAPER – 2

C. GREEN CHEMISTRY

Objective:

- To impart knowledge about Green Solvents, Green Techniques, Green Catalysts and Green Reactions.

UNIT-I Green Chemistry – Introduction

1.1 Need for Green Chemistry – Principles of Green Chemistry – Atom economy – Definition with example (Ibuprofen synthesis) – Green oxidants – Hydrogen peroxide.

1.2 Green synthesis – Evaluation of the type of the reaction – Rearrangements (100 % Atom economic) - Addition reaction (100 % Atom economic).

1.3 Organic reactions by Sonication method – Apparatus required – Examples of Sonochemical Reactions (Heck, Hundsdiecker and Wittig reactions).

UNIT-II Green Solvents

2.1 Selection of Solvents – Aqueous Phase Reactions - Diels-Alder reaction in water – Catalysis in water (Aerobic Oxidation of Alcohols catalysed by Pd (II) / Bathophenanthroline).

2.2 Reactions in ionic liquids - Simple preparation – Types – Properties and Applications – Ionic liquids in Organic Reactions (Heck reaction, Suzuki reactions, Epoxidation), Industrial (Battery) and Analytical Chemistry (Matrices for MALDI-TOF MS, Gas Chromatography Stationary Phases) – Advantages and Disadvantages.

2.3 Solid Supported Synthesis - Supercritical CO_2 – Preparation, Properties and Applications (Decaffeination, Dry cleaning) – Environmental impact.

UNIT-III Green Techniques

3.1 Microwave and Ultrasound Assisted Green Synthesis – Apparatus required – Examples

of MAOS (Synthesis of Fused Anthroquinones, Leukart reductive Amination of Ketones) – Advantages and Disadvantages of MAOS – Aldol condensation – Cannizzaro condensation - Diel's-Alder reaction – Strecker's synthesis.

3.2 Photochemical reactions using Sunlight – Photoreduction of Benzophenone to Benzopinacol using Sunlight - Photochemical alternative to Friedel- Crafts reaction.

3.3 Nanoparticles - Introduction – Types of Nanoparticles – Techniques to prepare Nanoparticles – Top down and Bottom up approaches – Common growth methods.

UNIT-IV Green Catalysis

4.1 Green Catalysis - Heterogeneous catalysis – Uses of Zeolites, Silica, Alumina, Clay supported catalysis – Biocatalysis – Enzymes and Microbes.

4.2 Phase Transfer Catalysis (PTC) – Principles, Catalysts and Lipophility of ions – Two phase systems – Solid-Liquid, Liquid-Liquid, Gas-Liquid – Triphase systems – Inverted PTC – Applications in Synthesis.

4.3 Micellar Catalysis, Surfactants and Synthesis in water – Principles, Materials and Synthetic Applications.

UNIT- V Green Reactions

5.1 Acetylation of Primary Amine, Base catalysed Aldol condensation (Synthesis of Dibenzalpropanone), Halogen addition to C = C bond (Bromination of Trans- Stilbene), [4+2] Cycloaddition reaction (Diels-Alder reaction between Furan and Maleic acid).

5.2 Rearrangement reaction (Benzil- Benzilic acid rearrangement), Coenzyme catalyzed Benzoin condensation (Thiamine hydrochloride catalysed synthesis of Benzoin), Pechmann condensation for Coumarin synthesis (Clay catalysed Solid State Synthesis of 7- Hydroxy- 4- methylcoumarin).

5.3 Electrophilic Aromatic Substitution Reactions (Nitration of phenol, Bromination of Acetanilide) – Green oxidation reactions (Synthesis of adipic acid, Preparation of Manganese (III) acetylacetonate) – Zeolite catalyzed Friedel-Crafts acylation.

Books for Study

- Green Chemistry: Environmental Friendly Alternatives, Rs. Sanghi and M. M. Srinivatava, Narosa Publishing House, New Delhi.
- Green Chemistry, V. Ahluwalia, Narosa, New Delhi (2011).

- Nanobiotechnology, S. Balaji, MJP Publishers, Chennai (2010).
- Nano: The Essentials, T. Pradeep, Tata Mc-Graw Hill, New Delhi (2007).

Books for Reference

- Methods and Reagents for Green Chemistry, P. Tundo, A. Perosa and F. Zechini, John Wiley & Sons Inc., New Jercy, (2007).
- The Chemistry of Nanomaterials: Synthesis, Properties and Applications, Vol. I and II, CNR Rao, Springer (2006).
- Nanotechnology: Basic Science and Emerging Technologies, Mick Wilson, Kamali Kannangara, Geoff Smith, Michelle Simmons, Burkhard Raguse, Overseas Press (2005).
- Nanochemistry, G. B. Segreev, Elsevier, Science, New York, (2006)

SKILL BASED SUBJECT

PAPER – 3

APPLIED CHEMISTRY

Objective:

- To impart Knowledge about Petrochemicals, Paper Technology, Sugar Industry, Explosives, Photography and Diary Chemistry,

UNIT I

1.1 Petroleum - Origin – Composition of Petroleum - Inorganic, Engler and Modern theories – Classification – Refining (Simple Refinery) – Cracking – Thermal and Catalytic – Knocking – Octane Rating – Antiknock Compounds – Cetane Rating – Synthetic Petrol – LPG.

1.2 Gobar Gas – Production – Feasibility and Importance of Biogas with special reference to Rural India.

1.3 Petrochemicals – Elementary study – Definition - Chemicals from Natural Gas, Petroleum, Light naphtha and Kerosene – Origin – Composition - Synthetic Gasoline.

UNIT II

2.1 Paper technology – Introduction – Manufacture of pulp – Various raw materials used for the preparation of pulp - Preparation of Sulphite pulp, Soda pulp and Rag pulp.

2.2 Various processes - Beating, Refining, Filling, Sizing and Colouring.

2.3 Manufacture of Paper – Calendering – Uses.

UNIT III

3.1 Sugar industry - Sugar industries in India – Sugarcane and sugar beet - Manufacture of cane sugar – Extraction of juice – Concentration – Separation of crystals.

3.2 Recovery of Glucose from Molasses – Defection – Sulphitation – Carbonation – Testing and Estimation of Sugar – Double Sulphitation Process.

3.3 Preparation of Bagasse – Use of Bagasse for Manufacture of Paper and Electricity -

Preparation of Alcohol from Molasses - Preparation of Absolute Alcohol - Manufacture of Wine, Beer, Methylated Spirit and Power Alcohol.

UNIT IV

4.1 Explosives – Primary, Low and High Explosives – Single compound explosives - Binary explosives – Plastic explosives – Dynamites – Blasting explosives - Preparation and Uses of Lead Azide, Nitroglycerine, Nitrocellulose, TNT, Cordite, Picric Acid and Gun Powder – Introduction to Rocket Propellants.

4.2 Photography – Chemical Principle – Preparation of Sensitive Emulsion – Exposure – Developing – Fixing and Printing – Colour photography – Xerographic copying.

4.3 Coal – Classification by rank – Proximate and Ultimate analysis – Low and High Temperature Carbonisation – Otto-Hoffmann's by-product - Distillation of Coal Tar.

UNIT V

5.1 Milk – Definition – Physico-Chemical properties of milk - Constituents of milk and Their Physico-chemical Properties.

5.2 Chemical change taking place in Milk due to Processing Parameters - Boiling, Pasteurisation, Sterilisation and Homogenisation.

5.3 Definition and Composition of Creams, Butter, Ghee and Ice Creams - Milk Powder - Definition, Need for making powder - Principles involved in Drying process - Spray drying and Drum drying.

Reference Books

1. Fundamental Concepts of Applied Chemistry - Jayashree Ghosh - 1st Edition, S. Chand & Co. Ltd, New Delhi, 2006.
2. Milk and Milk Products - Clarence Henry Eckles, Willes Barnes Combs, Harold Macy - 4th Edition, Tata McGraw Hill Publishing Company Ltd, Reprint 2002.
3. Industrial Chemistry - B. K. Sharma - 13th Edition, Goel Publishing House, 2008.

SEMESTER – VI
PAPER – 8
INORGANIC CHEMISTRY – II

Objectives:

- To impart knowledge about Nuclear chemistry, Radioactivity, Metallurgy, Chemistry of f- Block Elements, Organometallic Compounds and Bio-inorganic Chemistry.

UNIT-I NUCLEAR CHEMISTRY

1.1 Introduction - Composition of Nucleus – Fundamental Particles of Nucleus - Nuclear Forces operating between the Nucleons - N/P ratio – Nuclear Stability - The whole number rule and Packing fraction.

1.2 Isotopes, Isobars and Isotones – Detection and Separation of isotopes

1.3 Nuclear Binding Energy - Mass defect - Simple calculations involving Mass Defect and Binding Energy per Nucleon - Magic Numbers – Liquid drop model - Shell model.

UNIT-II RADIOACTIVITY

2.1 Natural Radioactivity – Properties of Alpha, Beta and Gamma rays - Detection and measurement of Radioactivity - Radioactive series including Neptunium series – Soddy's Group Displacement Law.

2.2 Rate of disintegration and Half - Life period – Derivation - Average life period - Artificial Radioactivity - Induced Radioactivity - Uses of Radioisotopes - Hazards of radiations.

2.3 Nuclear fission - Nuclear energy - Nuclear reactors - Nuclear fusion -Thermonuclear reactions - Energy source of the Sun and Stars – Comparison of Nuclear Fission and Nuclear Fusion.

UNIT-III METALLURGY

3.1 General metallurgy and Metallurgical processes – Methods of Concentration – Gravity separation, Froth floatation process, Magnetic separation – Reduction methods – Smelting, Calcination, Goldschmidt Aluminothermic process - Purification methods – Zone refining, Van Arkel method and Electrolytic refining.

3.2 Comparative study of Ti, V, Cr, Mn and Fe group elements with special reference to Occurrence, Oxidation States, Magnetic Properties and Colour.

3.3 Ocurrence and Extraction of Ti, Mo, W and Co - Preparation and Uses of Ammonium Molybdate and $V_2 O_5$.

UNIT-IV INNER TRANSITION ELEMENTS

4.1 General Characteristics of f- Block elements – Position of Lanthanides in the periodic table – Separation of Lanthanides (Ion exchange method).

4.2 Comparative study of Lanthanides and Actinides - Occurrence, Oxidation states, Magnetic properties, Colour and Spectra.

4.3 Lanthanide Contraction – Causes and Consequences - Comparison between Lanthanides and Actinides – Positon of Actinides in the periodic table – Extraction of Thorium and Uranium

UNIT-V ORGANOMETALLIC COMPOUNDS AND BIOINORGANIC CHEMISTRY

5.1 Organometallic Compounds - Definition - Nomenclature – Classification – Organo-Lithium and Organo-Boron Compounds - Preparation, Properties, Structure and Uses.

5.2 Biological Functions of Iron, Copper and Zinc – Biologically Important Compounds – Myoglobin, Cytochrome, Haemoglobin and Ferritin.

5.3 Binary Metallic Compounds – Hydrides, Borides, Carbides and Nitrides – Classification - Preparation, Properties, Structure and Uses.

CORE PRACTICAL

PAPER – 3

GRAVIMETRIC ESTIMATION

1. Estimation of Sulphate as Barium Sulphate.
2. Estimation of Barium as Barium Sulphate.
3. Estimation of Barium as Barium Chromate.
4. Estimation of Lead as Lead Chromate.
5. Estimation of Calcium as Calcium Oxalate Monohydrate.

References

- Qualitative Inorganic Analysis, A.I. Vogel – 7th Edition, Prentice Hall.
- Quantitative Chemical Analysis, A.I. Vogel – 6th Edition, Prentice Hall.

PAPER - 9

ORGANIC CHEMISTRY – II

Objectives:

- To kindle interest in students in learning Bio-organic chemistry through the introduction of topics such as Proteins, Nucleic acids, Terpenes, Alkaloids etc.
- To generate Keen Interest and Thinking in Understanding the Mechanisms of Molecular Rearrangements and Synthetic Applications of Acetoacetic Ester, Benzene Diazonium Chloride, Grignard Reagents and Diazomethane.

UNIT- I Molecular rearrangements

1.1 Rearrangements - Classification – Anionotrpic, Cationotropic and Free Radical Rearrangements - Intermolecular and Intramolecular Rearrangements – Examples – Cross over experiment – Differences between Intermolecular and Intramolecular rearrangements.

1.2 Mechanisms, Evidences, Migratory Aptitude, Intermolecular or Intramolecular nature of the following rearrangements - Pinacol-Pinacolone, Benzil-Benzilic acid and Beckmann rearrangement.

1.3 Mechanism of Hoffmann, Curtius, Baeyer-Villiger, Claisen (Sigmatropic), Fries rearrangement, Cope and Oxy-Cope rearrangements.

UNIT-II Amino acids and Polypeptides

2.1 Amino acids – Classification - Essential and Non- Essential amino acids – Acidic, Basic and Neutral Amino Acids – Alpha, Beta and Gamma- Amino acids - Preparation of alpha amino acids – Gabriel's Phthalimide synthesis, Strecker synthesis and Erlenmeyer Azlactone synthesis - Glycine, Alanine and Tryptophan.

2.2 General properties of Amino acids - Reactions of Amino acids due to Amino group and Carboxyl group - Zwitterions - Isoelectric point.

2.3 Peptides - Synthesis - Bergmann Method - Structural Determination of Polypeptides - End Group Analysis – N-Terminal and C-Terminal Amino Acids Determination.

UNIT- III Proteins and Nucleic Acids

3.1 Proteins - Definition - Classification based on Physical Properties, Chemical Properties and Physiological Functions - Primary and Secondary Structure of Proteins - Helical and Beta Sheet Structures (Elementary Treatment Only) – Denaturation of Proteins.

3.2 Nucleic acids – Nucleoproteins - Definition - Types of Nucleic Acids – RNA and DNA - Nucleoside, Nucleotide, Degradation of Nucleotide Chain - Components of RNA and DNA.

3.3 Differences between DNA and RNA - Structures of Ribose and 2- Deoxyribose – Double Helical Structure of DNA - Biological functions of Nucleic Acids - Elementary ideas on Replication and Protein Synthesis.

UNIT-IV Chemistry of Natural Products

4.1 Antibiotics – Definition – Structural elucidation of Penicillin and Chloramphenicol – Uses of Penicillin and Chloramphenicol.

4.2 Alkaloids – Classification – Isolation of alkaloids – General methods of Determination of structure of Alkaloids - Synthesis and Structural Elucidation of Piperine, Coniine and Nicotine.

4.3 Terpenoids – Definition - Classification - Isoprene rule - Synthesis and Structural elucidation of Citral, Menthol and Alpha- pinene.

UNIT- V Organo-Synthetic Reagents

5.1 Acetoacetic ester – Preparation by Claisen ester condensation – Reactions – Synthetic Applications.

5.2 Benzene diazonium chloride – Preparation from aniline – Synthetic Applications – Coupling reactions.

5.3 Grignard Reagents – Preparation – Synthetic Applications – Diazomethane – Preparation by Von-Pechmann method – Synthetic Applications.

CORE PRACTICAL

PAPER – 4

ORGANIC QUALITATIVE ANALYSIS AND PREPARATIONS

Analysis of organic compounds containing one functional group and characterisation with a derivative.

Reactions of the following Functional Groups:

Aldehyde, Ketone, Carboxylic Acid (Mono and Di), Ester, Carbohydrate (Reducing and Non-Reducing), Phenol, Aromatic Primary Amine, Amide, Nitro Compounds, Diamide and Anilide.

Organic Preparations

Acylation

1. Acetylation of Salicylic acid or Aniline.
2. Benzoylation of Aniline or Phenol.

Nitration

3. Preparation of m- Dinitrobenzene
4. Preparation of p- Nitroacetanilide

Halogenation

5. Preparation of p- Bromoacetanilide
6. Preparation of 2,4,6-Tribromophenol

Diazotisation /Coupling

7. Preparation of Methyl Orange

Oxidation

8. Preparation of Benzoic Acid from Toluene or Benzaldehyde.

Hydrolysis

9. Hydrolysis of Ethyl Benzoate (Or) Methyl Salicylate (Or) Benzamide.

Reference Books

- Practical Chemistry - A. O. Thomas - Scientific Book Center, Cannanore.
- Practical Chemistry - 3 Volumes - S. Sundaram and others.
- Text Book of Practical Organic Chemistry – A. I. Vogel, A. R. Tatchell, B. S. Furnis, A. J. Hannaford and P.W. G. Smith – 5^{th} Edition - 1996.
- Comprehensive Practical Organic Chemistry - Preparation and Quantitative Analysis - V. K. Ahluwalia, Renu Agarwal – Universities Press – 2013.

PAPER- 10

PHYSICAL CHEMISTRY – II

Objectives:

- To impart Knowledge about Electrochemistry, Surface Chemistry, Photochemistry, Chemical Kinetics and Theories of reaction rates.

UNIT- I Electrochemistry - III

1.1 Galvanic cells - Daniel cell - Reversible and Irreversible Cells – EMF of a Cell and its Measurement - Standard Weston Cadmium Cell – Evaluation of Thermodynamic Quantities.

1.2 Derivation of Nernst equation for Electrode Potential and Cell emf –Types of reversible electrodes - Electrode reactions - Electrode potentials.

1.3 Reference electrodes - Standard Hydrogen Electrode - Standard Electrode Potential - Sign conventions - Electrochemical Series and its Applications.

UNIT- II Electrochemistry - IV

2.1 Liquid Junction Potential - Concentration cells With Transference and Without Transference.

2.2 Applications of Concentration cells - Valency of ions, Solubility and Solubility Product - Activity Coefficient of electrolytes - Determination of pH using Hydrogen, Quinhydrone and Glass electrodes – Potentiometric titrations.

2.3 Polarisation - Overvoltage – Storage Cells - Decomposition potential - Lead Storage Battery - Fuel Cells (H_2-O_2 Cell) - Mechanism of Discharging and Recharging Fuel Cells.

UNIT- III Chemical Kinetics

3.1 Definitions of the terms – Order and Molecularity – Rate of the reaction - Derivations of expressions for Zero, First, Second and Third order rate equations - Study of kinetics by Volumetric, Polarimetric and Spectrophotometric methods - Methods of Determination of Order of a reaction.

3.2 Effect of Temperature on reaction rate - Arrhenius equation - Theories of reaction rates – Bimolecular Collision Theory – Lindmann's theory of Unimolecular Reactions.

3.3 ARRT - Thermodynamic treatment of ARRT – Eyring equation - Comparison of Collision Theory and ARRT.

UNIT- IV Surface Chemistry

4.1 Adsorption – Characteristics of adsorption – Physisorption and Chemisorption – Differences between Physical and Chemical Adsorption - Applications of Adsorption – Adsorption of Gases by Solids – Different Types of Isotherms - Freundlich adsorption isotherm - Langmuir theory of adsorption – Derivation.

4.2 Catalysis – Definition - General Characteristics of Catalytic Reactions – Acid-Base catalysis – Enzyme catalysis – Michaelis-Menton Equation – Effect of Temperature and pH on Enzyme Catalysis.

4.3 Homogeneous catalysis – Function of a catalyst in terms of Gibb's free energy of activation - Heterogeneous catalysis - Kinetics of Unicellular Surface Reactions.

UNIT- V Photochemistry

5.1 Laws of photochemistry - Grothus-Draper law, Stark-Einstein's law – Primary and Secondary processes – Quantum yield and its determination.

5.2 Qualitative description of Fluorescence, Phosphorescence, Luminescence, Chemiluminescence, Bioluminescence and Photosensitized Reactions.

5.3 Kinetics of Photochemical Reactions - H_2-Cl_2 and H_2-Br_2 reactions - Photodimerisation of Anthracene

CORE PRACTICAL

PAPER – 5

PHYSICAL CHEMISTRY EXPERIMENTS

1. Kinetics

Determination of the Order of the following reactions

a) Acid catalysed Hydrolysis of an Ester (Methyl or Ethyl acetate)

b) Saponification of an Ester (Methyl or Ethyl Acetate)

c) Iodination of Acetone.

2. Molecular weight of a solute - Rast's method using Naphthalene or Diphenyl as Solvents.

3. Heterogeneous equilibria

a) *Phenol-Water system – CST

b) Effect of impurity – 2 % NaCl or Succinic acid solutions on Phenol -Water system - Determination of the Concentration of the given solution

4. **Determination of the Transition Temperature** of the given salt hydrate. $Na_2S_2O_3.5H_2O$, $CH_3COONa.3H_2O$, $SrCl_2.6H_2O$, $MnCl_2.4H_2O$

5. **Electrochemistry**

Conductivity

a) Determination of Cell Constant and Equivalent Conductivities ofthe solutions of two different concentrations.
b) Conductometric titration of a Strong Acid against a Strong Base.

6. Potentiometric titration of a Strong Acid against a Strong Base.

7. Colorimetry- Determination of unknown concentration using Photoelectric colorimeter.

8. Determination of pKa of acetic acid using pH Meter.

***Need not be given in examination.**

Students must write Short Procedure / Formula with explanation in Ten Minutes for evaluation during the university practical examination.

ELECTIVE

PAPER – 3

A. ANALYTICAL CHEMISTRY – II

Objective:

- To impart knowledge about Different Chromatographic and Spectroscopic Techniques.

UNIT – I

1.1Chromatography – Principles and Techniques of Column, Paper and Thin Layer Chromatography – Column Chromatography – Preparation of Column - Adsorption - Adsorbents – Elution – Recovery of Substances.

1.2 TLC - Choice of Adsorbent and Solvents – Preparation of Chromatogram and Applications - R_f value - Paper Chromatography – Solvents used – Factors affecting R_f value – Separation of Amino Acid Mixtures – Radial Paper Chromatography - Applications.

1.3 lon exchange chromatography – Principle – Experimental Techniques – Types of Resins – Reqirement of a Good Resin – Action of Ion Exchange Resins – Experimental Techniques and Applications – Separation of Zinc- Magnesium, Cobalt - Nickel and Cadmium - Zinc ions.

UNIT – II

2.1 High Pressure Liquid Chromatography and Gas Chromatography – Principle and Applications.

2.2 Gas Chromatography – Mass Spectrophotometer (GC-MS) - Liquid Chromatography - Mass Spectrophotometer (LC-MS) - Principle and Applications.

2.3 Polarography – Principle – DME – Advantages and Disadvantages – Ilkovic equation and its significance (No Derivation) - Polarography as an Analytical tool in Quantitative and Qualitative Analysis – Amperometric Titrations.

UNIT – III

3.1 NMR Spectroscopy – Principle of Nuclear Magnetic Resonance – Basic Instrumentation.

3.2 Number of Signals – Chemical Shift – Shielding and Deshielding – Factors influencing Chemical Shift - Spin-Spin Coulpling and Coupling constants - TMS as NMR standard.

3.3 Splitting of Signals – NMR Spectra of simple Organic Molecules – Applications in Structural Elucidation.

UNIT – IV

4.1 Mass Spectroscopy – Basic principles of Mass Spectrum - Instrumentation – Molecular ion peak- Base peak - Metastable peak - Isotopic peak and their Uses.

4.2 Fragmentation – Factors affecting Cleavage Patterns - Nitrogen rule – Ring rule – McLafferty rearrangement - Determination of Molecular Formulae with examples.

4.3 Mass spectrum of simple organic compounds – Identification – Alcohols, Aldehydes and Aromatic hydrocarbons.

UNIT – V

5.1 ESR Spectroscopy – Condition – Selection Rule for Transition - Theory of ESR Spectra – Basic Instrumentation - ESR Spectrometer – Components and their Functions - Hyperfine splitting – ESR Spectra of simple radicals – CH_3, CD_3, Naphthalene radical ions only – Applications in structural elucidation.

5.2 Thermoanalytical methods – Principle involved in Thermogravimetric analysis (TGA) and Differential Thermal Analysis (DTA) – Instrumentation- Discussion of Various Components with Block Diagram.

5.3 Characteristics of TGA ($CaC_2O_4.H_2O$, $CuSO_4.5H_2O$) and DTA curves – Factors Affecting TGA and DTA Curves – Thermometric Titrations – Principle and Applications.

17. Elementary Organic Spectroscopy – Principles and Chemical Applications – Y. R. Sharma, S. Chand & Company Private Limited, V Revised Edition – 2013.

ELECTIVE PAPER – 2

B. TEXTILE CHEMISTRY

Objective:

- To impart knowledge about the Production, Properties and Applications of Natural and Synthetic Fibres, Colour and Constitution, Classification of Dyes and Concept of Dyeing in Textile Industry.

UNIT – I

1.1 General Classification of Fibres – Chemical structure – Production – Properties – Count, Denier, Tex, Staple Length, Spinning Properties, Strength, Elasticity and Creep.

1.2 Applications of the following Natural Cellulose Fibres (Cotton and Jute).

1.3 Natural Protein Fibres (Wool and Silk) – General characteristics.

UNIT – II

2.1 Chemical Structure, Production and properties of the following Synthetic Fibres - Man-made Cellulose Fibres (Rayon and Modified cellulose fibres).

2.2 Polyamide Fibres (Different types of Nylons) - Preparation – Nylon degradation – Polyester Fibres – Preparation - Degradation – Polyacrylonitrile fibre - Preparation and Properties – Viscose fibre - Preparation and Properties.

2.3 Identification tests for Cellulose, Cotton, Wool, Silk, Rayon, Acrylic, Viscose, Polyamide and Polyester Fibres.

UNIT – III

3.1 Impurities in Raw Cotton and Grey Cloth, Wool and Silk.

3.2 General principles of the Removal, Scouring - Purpose, Alkali Scouring and Acid Scouring – Bleaching (Methods - Hypochlorite, Peroxide and Bleaching Powder) - Desizing (Hydrolytic and Enzymatic), Kier Boiling and Chemicking.

3.3 Dyeing of Polyester and Blends – Functions of Dispersing agents - Fibre swelling – Carrier dyeing - High temperature dyeing - Selection of dyestuff.

UNIT – IV

4.1 Colour and Constitution – A general treatment – Chromophores – Auxochromes - Bathochromes and Hypsochromes.

4.2 Classification of dyes – Acidic, Basic, Direct, Mordant, Azoic, Ingrain, Vat and Reactive Dyes - Classification as per Chemical constitution – Azo dyes – Triphenyl Methane Dyes, Phthalein Dyes, Indigo and Anthraquinone Dyes.

4.3 Structure, Preparation and Uses – Methyl Orange, Phenolphthalein and Malachite Green.

UNIT – V

5.1 Dyeing - Dyeing of Wool and Silk – Fastness properties of dyed materials.

5.2 Dyeing of Nylon, Terylene and other Synthetic Fibres – Finishing – Finishes given to Fabrics – Mechanical finishes on Cotton, Wool and Silk.

5.3 Method used in process of Mercerizing – Anticrease and Antishrink finishes – Water Proofing.

ELECTIVE

PAPER – 3

C. NANO CHEMISTRY

Objectives:

- To introduce the Basics of Nanotechnology.
- To learn the Instrumental Techniques used in Characterisation of Nanomaterials.

UNIT-I Basics of Nanochemistry

Introduction – Definition – Length scales – Importance of Nanoscale and its Technology – Self Assembly of Materials – Self Assembly of Molecules – Porous solids, Nanowires, Nanomachines and Quantum Dots.

UNIT-II Nanoparticles

Introduction – Types of Nanoparticles – Preparation, Properties and Uses of Gold, Silicon, Silver, Zinc Oxide, Iron Oxide, Alumina and Titania Nanoparticles.

UNIT-III Synthetic Techniques

Techniques to Synthesise Nanoparticles – Top down and Bottom up Approaches – Common Growth Methods – Characterisation of Nanoparticles – Applications and Toxic effects of Nanomaterials.

UNIT-IV Nanomaterials

Preparation, Properties and Applications of Carbon Nanotubes, Nanorods, Nanofibres and Nanoclays.

UNIT-V Instrumental Techniques

Electron Microscopes – Scanning Electron Microscopes (SEM) – Transmission Electron Microscopes (TEM) – Scanning Probe Microscopy – Atomic Force Microscopy (AFM) – Scanning Tunneling Electron Microscope (STEM) – Basic Principles only.

Books for Study

- Nanotechnology, S. Shanmugam, MJP Publishers, Chennai (2010).
- A Handbook on Nanochemistry, Patrick Salomon, Dominant Publishers and Distributers, New Delhi.
- Nanobiotechnology, S. Balaji, MJP Publishers, Chennai (2010).

Books for Reference

- The Chemistry of Nanomaterials: Synthesis, Properties and Applications, Vol. I and II, CNR Rao, Springer (2006).
- Nanotechnology: Basic Science and Emerging Technologies, Mick Wilson, Kamali Kannangara, Geoff Smith, Michelle Simmons, Burkhard Raguse, Overseas Press (2005).

SKILL BASED SUBJECT

PAPER – 4

AGRICULTURE AND LEATHER CHEMISTRY

OBJECTIVE:

- To learn about Soil fertility and Productivity, Soil Chemistry, Insecticides, Leather Industry and Treatment of Tannery Effluents.

Unit-I Soil Chemistry

1.1 Soil – Introduction - Classification - Properties of Soil – Physical properties – Components – Structure and Texture - Soil-Water, Soil-Air and Soil-Temperature.

1.2 Chemical properties - Soil Minerals, Soil Colloids, Soil Reaction and Buffering – Analysis of Soil - Soil pH – Determination of Soil pH – Effect of pH on Plants – Buffering of soil - Soil acidity, Soil salinity and Soil alkalinity.

1.3 Soil Fertility – Carbon and Nitrogen cycle - Acid, Alkaline and Saline soils – Their Formation - Reclamation – Liming agents.

UNIT-II Fertilisers and Manures

2.1 Fertilisers – Definition - Classification – Requirements of a Good fertiliser - Nitrogen fertiliser – Urea – Preparation and Uses – Potash fertiliser – KCl, K_2SO_4 and KNO_2 - Preparation and Uses – Phosphorus fertiliser – Phosphatic slag, Superphophate of lime and Triple Superphosphate - Preparation and Uses- NPK fertiliser - Advantages– Role of Micronutrients.

2.2 Manures – Compost – Composting - Methods of Composting - Farmyard Manure, Vermicompost, Composted Coconut Coir Pith, Press mud and Poultry manure – Applications.

2.3 Types of pollutions caused by Fertilisers - Ill effects of Fertilisers and their Control.

UNIT-III Insecticides and Fungicides

3.1 Insecticides – Definition - Classification of Insecticides - Stomach poisons - Contact poisons and Fumigants - Insecticides - Organic Insecticides - DDT - Gammexane - Malathion – Parathion.

3.2 Fungicides – Inorganic Fungicides – Sulphur compounds – Copper compounds – Mercuric compounds – Organic Fungicides – Dithiocarbamates – Dithane M – Bordeaux mixture.

3.3 Herbicides - Rodenticides - Pesticides in India - Adverse Environmental Effects of Pesticides.

UNIT- IV Leather Chemistry

4.1 Introduction - Constituents of Animal Skin - Preparing Skins and Hides – Leather processing – Process before Tannage – Flaying, Curing, Drying, Pickling, Cleaning and Soaking - Liming and Degreasing.

4.2 Manufacture of Leather - Leather Tanning methods - Vegetable Tanning – Chemistry of Chrome Tanning and Mineral Tanning – Deliming.

4.3 Dyeing of Leather and Fat Liquoring - Leather Finishing - Oil Tanning - By products.

UNIT- V Tannery Effluents

5.1 Tannery effluents - Pollution and its control - Water pollution and Air pollution - Waste Management.

5.2 Treatment of Tannery Effluents - Primary, Secondary and Tertiary treatment - Pollution Prevention.

5.3 Effect of Tannery Effluents on Agriculture – Organic Amendments - Reclamation of Tannery Effluents Affected Soil.

Reference Books

- Industrial Chemistry by B. K. Sharma - Goel Publishing House, Meerut.
- Applied Chemistry by K. Bagavathi Sundari, MJP Publishers, 2006.
- Fundamental Concept of Applied Chemistry by Jayashree Ghosh, S. Chand & Company Ltd.,

- Soils and Soil Fertility - Louis M. Thompson - and Frederick. R. Troch - Tata Mc Graw Hill Publishing Co.
- Text Book of Soil Science - T. D. Biswas and S. K. Mukerjee - II Edition.
- Soil Science - A. Sankara.
- Fundamentals of Leather Science - Wood roffe Publications of CLRI - Chennai.
- Nature and Properties of Soils - Harry, O. Buckman.

SCHEME OF VALUATION FOR PRACTICAL EXAMINATIONS

PRACTICAL – I

VOLUMETRIC ANALYSIS

Internal assessment: 25 Marks

External assessment: 75 Marks

Total: 100 marks

Record: 15 Marks

Procedure: 10 Marks

Error upto 2 % : 50

2.1 – 3 % : 40

3.1 – 4 % : 30

4.1 – 5 % : 20

>5 % : 10

For incomplete or wrong calculation deduct 20 % of total marks scored.

For no calculation deduct 40 % of total marks scored.

For each arithmetic error deduct 1 mark.

CORE PRACTICAL – II

INORGANIC QUALITATIVE ANALYSIS AND PREPARATION

Internal assessment: 25 Marks

External assessment: 75 Marks

Total: 100 marks

Record: 15 Marks

Preparation: 20 (Quantity- 15 Marks; Quality- 5 marks)

Analysis: 40 Marks.

Each radical with procedure: 10 Marks

(Spotting for each radical - 5 Marks; Fixing the group - 5 Marks)

PRACTICAL - III

GRAVIMETRIC ANALYSIS

Internal assessment: 25 Marks

External assessment: 75 Marks

Total: 100 marks

Record: 15 Marks

Procedure: 10 Marks

Error upto 2 % : 50

2.1 – 3 % : 40

3.1 – 4 % : 30

4.1 – 5 % : 20

>5 % : 10

a. Among the duplicate results, the value more favorable to the candidate must be taken.

b. When no duplicate result is given deduct 5 marks.

c. If the two results differ by more than 2 % deduct 5 marks.

d. For each independent arithmetical error deduct 1 mark.

e. For incomplete or wrong calculation deduct 20 %.

f. For no calculation deduct 40 %.

g. If the experiment is not completed due to an accident, award 5 marks.

PRACTICAL - IV

ORGANIC ANALYSIS

Internal assessment: 25 Marks

External assessment: 75 marks

Total: 100 marks

Record: 15 Marks

Preparation: 15 (quantity: 10 & quality: 5)

Analysis: 45

Preliminary reaction: 4

Aliphatic/ Aromatic: 4

Saturated/ Unsaturated: 4

Tests for elements: 9

Functional groups: 10

Confirmatory tests: 10

Derivative/Coloured reaction: 4

PHYSICAL CHEMISTRY PRACTICALS

Internal assessment: 25 Marks

External assessment: 75 Marks

Total: 100 Marks

Record: 15 Marks

Experiment: 45 Marks

Manipulation, Tabulation and Calculation: 15 Marks

1) **Kinetics**

Graph	: 10 Marks
Below a factor of 10	: 35
By a factor of 10	: 25
More than a factor of 10	: 15

2) <u>Molecular weight</u>

Error upto 10 %: 45

20 %: 35

30 %: 25

> 30 %: 15

3) <u>Effect of electrolyte on CST</u>

Graph: 10

Error upto 10 %: 35

20 %: 25

30 %: 15

> 30: 10

4) <u>Transition temperature</u>

Graph: 10

Error upto 2^{o}C difference: 35

7^{o}C difference: 25

> 7^{o}C difference: 15

5) <u>Conductance</u>

<u>Equivalent conductance: 25 marks</u>		**<u>Cell constant : 20 marks</u>**	
Error upto 10 %	: 25	Error upto 10 %	: 20
Upto 15 %	: 15	Upto 15 %	: 15
>15 %	: 10	>15 %	: 10

6) <u>Conductometric titration</u>

Graph: 10

Upto 2 % : 35

2.1 to 3 % : 30

3.1 to 4 % : 25

4.1 to 5 % : 20

> 5% : 15

THIRUVALLUVAR UNIVERSITY

B.Sc. COMPUTER SCIENCE

SYLLABUS
UNDER CBCS
(with effect from 2017 - 2018)

SEMESTER I

PAPER – 1
Digital Logic & Programming in C

Objective:

Provide basic knowledge on Digital Electronics to understand the working principles of Digital computer and to develop programming skill using C language.

UNIT I: Number systems and Boolean algebra

Number Systems - Decimal, Binary, Octal, Hexadecimal and their inter conversions, - Binary Arithmetic -1's complement, 2's complement and 9's complement .Binary codes - BCD, Excess-3, Graycode.

Boolean Algebra: Boolean Laws - Simplification of Boolean Functions - Logic gates and Truth Table – Universal Gates (NAND and NOR) - The K-map method up to five variables, don't care conditions, POS & SOP forms.

UNIT-II: Combinational and Sequential Circuits

Combinational Logic: Half/Full adder/subtractor, code conversion, Multiplexers, de multiplexers, encoders, decoders, Combinational design using MUX & DEMUX. BCD adder, magnitude comparator.

Sequential logic: Flip flops (RS, Clocked RS, D, JK, JK Master Slave)-Counters & types Synchronous and Asynchronous counters- Registers, Shift registers and their types.

UNIT –III: C Basics and Control constructs

C fundamentals- Operators- Constants- Expression – Library functions- Decision making and branching- Switch- FOR,WHILE, DO WHILE loops-continue-break

Unit IV: Arrays, Functions and Structures

Arrays-Multi dimensional arrays- User defines functions- Call by Value and reference-Recursion- Storage classes- Structures and Union –Self referential structures

Unit – V: Pointers and Files

Pointers- Pointer operations and Arithmetic- File management in C : File opening and closing- - I/O operations on files - Error handling during I/O operations - Random access to files - Command line arguments

Text Book:

1. Morris Mono M. "**Digital Logic and Computer Design**",PHI Latest Pub. Ed. (Unit I and 2)
2. ReemaThareja,**" Programming in C "** Oxford University Press 2014

Reference Book

1. Albert Paul Malvino, Donald P Leach, **Digital principles and applications** TMH, 1996.
2. Balagurusamy," Programming in C" TMH

CORE PRACTICAL – I

PROGRAMMING IN C - LAB

1. Summation of Series: Sin(x) (Compare with built in functions)
2. Summation of Series Cos(x) (Compare with built in functions)
3. Counting the no. of vowels, consonants, words, white spaces in a line of text
4. Reverse a string & check for palindrome without built in string function
5. ${}^{n}P_{r}$, ${}^{n}C_{r}$ in a single program using function
6. Matrix Addison, subtraction and multiplication
7. Linear Search of a number in an array
8. Sorting an array in ascending and descending order
9. Finding maximum and minimum of list of numbers
10. Call by value and call by reference of functions
11. Employee pay bill using structure
12. Preparing an EB bill using file

ALLIED

1. MATHEMATICS – I

Objectives of the Course:

To Explore the Fundamental Concepts of Mathematics

UNIT-I: ALGEBRA

Partial Fractions - Binomial, Exponential and logarithmic Series (without Proof) - Summation - Simple problems

UNIT-II : THEORY OF EQUATIONS

Polynomial Equations with real Coefficients - Irrational roots - Complex roots- Transformation of equation by increasing or decreasing roots by a constant - Reciprocal equations - Newton's method to find a root approximately - Simple problems.

UNIT-III : MATRICES

Symmetric - Skew-Symmetric - Orthogonal and Unitary matrices - Eigen roots and eigen vectors – Cayley - Hamilton theorem (without proof)-Verification and computation of inverse matrix

UNIT-IV: TRIGONOMETRY

Expansions of $\sin^n \theta$, $\cos^n \theta$, $\sin n\theta$, $\cos n\theta$, $\tan n\theta$ - Expansions of $\sin \theta$, $\cos \theta$, $\tan \theta$ in terms of θ.

UNIT-V: DIFFERENTIAL CALCULUS

Successive differentiation upto third order, Jacobians - Concepts of polar co-ordinates - Curvature and radius of curvature in Cartesian co-ordinates and in polar co-ordinates.

Recommended Text:

P.Duraipandian and S.Udayabaskaran,(1997) *Allied Mathematics,* Vol. I & II.Muhil Publishers, Chennai.

Reference Books:

1. P.Balasubramanian and K.G.Subramanian,(1997) *Ancillary Mathematics.* Vol. I & II. Tata McGraw Hill, New Delhi.
2. S.P.Rajagopalan and R.Sattanathan,(2005) *Allied Mathematics* .Vol. I & II. VikasPublications, New Delhi.
3. P.R.Vittal (2003) *Allied Mathematics* .Marghan Publications, Chennai
4. P.Kandasamy, K.Thilagavathy (2003) Allied Mathematics Vol-I, II S.Chand& company Ltd., New Delhi-55.
5. Isaac, Allied Mathematics. New Gamma Publishing House, Palayamkottai.

2. MATHEMATICAL FOUNDATIONS - I

Objectives

To know about Logical operators, validity of arguments, set theory and set operations, relations and functions, Binary operations, Binary algebra, Permutations & Combinations, Differentiation, Straight lines, pair of straight lines, Circles, Parabola, Ellipse, Hyperbola.

UNIT-I: SYMBOLIC LOGIC

Proposition, Logical operators, conjunction, disjunction, negation, conditional and bi-conditional operators, converse, Inverse, Contra Positive, logically equivalent, tautology and contradiction. Arguments and validity of arguments.

UNIT-II: SET THEORY

Sets, set operations, venndiagram, Properties of sets, number of elements in a set, Cartesian product, relations & functions,

Relations : Equivalence relation. Equivalence class, Partially and Totally Ordered sets,

Functions: Types of Functions, Composition of Functions.

UNIT-III: BINARY OPERATIONS

Types of Binary Operations: Commutative, Associative, Distributive and identity, Boolean algebra: simple properties. Permutations and Combinations.

UNIT-IV: DIFFERENTIATION

Simple problems using standard limits,

$\lim_{x \to a} \frac{x^n - a^n}{x - a}$, $\lim_{x \to 0} \frac{\sin x}{x}$, $\lim_{x \to 0} \frac{\tan x}{x}$, $\lim_{x \to 0} \frac{e^x - 1}{x}$, $\lim_{n \to \infty} (1+1/n)^n$, $\lim_{n \to 0} (1+n)^{1/n}$

Differentiation, successive differentiation, Leibnitz theorem, partial differentiation, Applications of differentiation, Tangent and normal, angle between two curves.

UNIT-V: TWO DIMENSIONAL ANALYTICAL GEOMETRY

Straight Lines - Pair Straight Lines

Text Book.

P.R. Vittal, Mathematical Foundations – Maragham Publication,

Chennai.

Reference Books

1. U. Rizwan, Mathematical Foundation - SciTech, Chennai
2. V.Sundaram& Others, Dircrete Mathematical Foundation - A.P.Publication, sirkali.
3. P.Duraipandian& Others, Analytical Geometry 2 Dimension - Emerald publication 1992 Reprint.
4. Manicavachagompillay&Natarajan. Analytical Geometry part I - Two Dimension - S.Viswanathan (printers & publication) Put Ltd., 1991.

SEMESTER II

CORE THEORY PAPER – 2

C++ AND DATA STRUCTURE

Objective: To develop Object oriented programming skills using C++ and to introduce data structure concepts.

UNIT-I: Object Oriented Concepts and C++

C++ Fundamentals - Operators, Expressions and Control Structures: If,If..Else, Switch - Repetitive Statements- for,while,do..while - Input and Output in C++ - manipulators-manipulators with parameters. - Pointers and arrays

UNIT-II: Functions and Classes

Functions in C++ - Main Function - Function Prototyping - Parameters Passing in Functions - Values Return by Functions - inline Functions - Function Overloading.
Classes and Objects; Constructors and Destructors; and Operator Overloading - Type of Constructors

UNIT – III: Inheritance, Polymorphism & Files

Inheritance : Single Inheritance - Multilevel inheritance - Multiple inheritance - Hierarchical Inheritance - Hybrid Inheritance - Polymorphism - Working with Files : Classes for File Stream Operations - Opening and Closing a File - End-of-File Detection - Updating a File - Error Handling during File Operations .

UNIT-IV: Fundamental Data Structures

Definition of a Data structure - primitive and composite Data Types, Stacks (Array) - Operations –Linked Stack-Operations- Applications of Stack (Infix to Postfix Conversion).

Queue (Array)- operations-Linked Queue- Operations- - Singly Linked List - Operations, Application of List (Polynomial Addition)-. Doubly Linked List - Operations.

UNIT-V : Trees and Graphs

Trees: Binary Trees –Binary Search Tree- Operations - Recursive Tree Traversals-Recursion. Graph - Definition, Types of Graphs, Graph Traversal –Dijkstras shortest path- DFS and BFS.

Text Books

1. Mastering in C++, K.R.Venugopal, Raj Kumar, T.Ravisankar – McGraw Hill, 2011.
2. C++ Plus Data Structure by Nell Dale, Narosa Publications, 2000

Reference Books:

1. Reema Thareja, Object Oriented Programming with C++, Oxford University Press, 2015
2. Balagurusamy, C++ programming, TMH.
3. Fundamentals of Data Structures in C++ by Ellis Horowitz, Sartaj Sahni and Dinesh Mehtha, Second Edition, University Press
4. Data Structures using C++ by Varsha H.Patil. Oxford University Press, 2012

PRACTICAL – II

C++ & DATA STRUCTURE - LAB

1. Implementing classes, object, constructors and member functions for calculating area and perimeter of a circle.
2. Implementing function overloading (Find area/volume of rectangle, circle, sphere, cylinder, cone etc).
3. Implementing operator over loading(Addition, subtraction, multiplication of matrices)
4. Implementing single, multiple, hierarchical inheritance.
5. Implementing sequential file operations using error handling functions.
6. Implementing PUSH, POP operations of stack using Arrays.
7. Implementing add, delete operations of a queue using Arrays.
8. Implementing Infix to postfix conversion of an expression using stack
9. Implementing Binary search tree recursive traversals (in-order, pre-order, post-order).
10. Implementing Polynomial addition using linked list.

ALLIED - 2

1. MATHEMATICS – II

Objectives of the Course

To Explore the Fundamental Concepts of Mathematics

UNIT-I: Application of Integration

Evaluation of double, triple integrals - Simple applications to area, volume - Fourier series for functions in $(0,2\pi)$ and $(-\pi, \pi)$.

UNIT-II: Partial Differential Equations

Formation, complete integrals and general integrals - Four standard types, Lagrange's equations.

UNIT-III: Laplace Transforms

Laplace Transformations of standard functions and simple properties - Inverse Laplace transforms - Applications to solutions of linear differential equations of order 1 and 2-simple problems

UNIT-IV: Vector Analysis

Scalar point functions - Vector point functions - Gradient, divergence, curl - Directional derivatives - Unit to normal to a surface.

UNIT-V: Vector Analysis (continued)

Line and surface integrals - Guass, Stoke's and Green's theorems (without proofs) - Simple problem based on these Theorems.

Recommended Text

P.Duraipandian and S.Udayabaskaran,(1997) *Allied Mathematics*, Vol. I & II.Muhil Publishers, Chennai

Reference Books:

1. P.Balasubramanian and K.G.Subramanian,(1997)*Ancillary Mathematics*. Vol. I & II. Tata McGraw Hill, New Delhi.
2. S.P.Rajagopalan and R.Sattanathan,(2005) *Allied Mathematics* .Vol. I & II.Vikas Publications, New Delhi.
3. P.R.Vittal(2003). *Allied Mathematics* .Marghan Publications, Chennai.
4. P.Kandasamy, K.Thilagavathy (2003) Allied Mathematics Vol-I, II S.Chand& company Ltd., New Delhi-55.
5. Isaac, Allied Mathematics. New Gamma Publishing House, Palayamkottai

2. MATHEMATICAL FOUNDATIONS II

Objectives

To know about Matrix Operations, Symmetric, Skew-Symmetric, Hermitian, Skew-Hermitian, Orthogonal, Unitary Matrices. Rank of a Matrix Solutions of linear equations Consistency and Inconsistency, Characteristic roots and Characteristics Vectors, Cayley - Hamilton Theorem, Integration of rational functions, Integration by parts, Reduction formulae, Area and volume using integration, Planes, Straight lines, Spheres, Curves, Cylinders.

UNIT-I: MATRICES

Multiplication of matrices, Singular and Non-Singular matrices, Adjoint of a Matrix, Inverse of a matrix Symmetric and Skew-Symmetric, Hermitian and Skew-Hermition, Orthogonal and unitary matrices, Rank of a matrix, Solution of Simultaneous Linear equations by

(i) Cramer's rule.

(ii) Matrix Inversion Method.

UNIT-II: MATRICES

Test for Consistency and Inconsistency of linear equations, (Rank Method), characteristic roots and characteristic vectors, Cayley - Hamilton theorem, matrix of linear transformations: reflection about the x, y axes and the line y=x, rotation about the origin through an angle, expansion or compression, shears, translation.

UNIT-III

Integration Simple problems, integration of rational function involving algebraic expressions of the form

$$\frac{1}{\sqrt{ax^2+bx+c}}, \frac{1}{\sqrt{ax^2+bx+c}\sqrt{ax^2+bx+c}}, \frac{px+q}{\sqrt{ax^2+bx+c}}, \frac{px+q}{\sqrt{ax^2+bx+c}\sqrt{ax^2+bx+c}}, \sqrt{px+q}$$

integrations using simple substitutions integrations involving trigonometric functions of the form

$$\frac{1}{a+b\cos x}, \frac{1}{a^2\sin^2 x+b^2\cos^2 x},$$ Integration by parts.

UNIT-IV

Properties of definite integrals. Reduction formulae for

$\int x^n e^{ax} dx$, $\int \sin^n x dx$, $\int \cos^n x dx$, $\int x^m (1-x)^n dx$, applications of integration for (i) Area under plane caurves, (ii) Volume of solid of revolution.

UNIT-V: ANALYTICAL GEOMETRY OF THREE DIMENSION

Planes, straight lines.

Text Book.

P.R.Vittal, Mathematical Foundations - Margham Publication, Chennai.

Reference Books

1. U. Rizwan, Mathematical Foundation - SciTech, Chennai
2. V.Sundaram& Others, Dircrete Mathematical Foundation - A.P.Publication, sirkali.
3. P.Duraipandian& Others, Analytical Geometry 3 Dimension – Emerald publication 1992 Reprint.
4. Manicavachagompillay&Natarajan. Analytical Geometry part II - three Dimension - S.Viswanathan (printers & publication) Put Ltd., 1991.

SEMESTER III

CORE THEORY PAPER – 3

JAVA Programming

Objectives:

To improve Object Oriented Programming gathered already through an independent platform.

Unit – I: BASICS, ESSENTIALS, CONTROL STATEMENT AND CLASSES & OBJECTS

Computer and its Languages – Stage, Origin and Features for Java - JDK–OOP; Java Essentials: Program – API - Variables& Literals - Data Types - String Class – Operators - Type conversion - Constants - Scope – Comments - Keyboard Input; Control Statements: Conditional Statements – Looping Statements - Break and Continue Statements; Classes and Objects: Modifiers - Arguments - Constructors - Packages and import - Static Class - Overloaded Methods and Constructors - Returning Objects – to String() - this reference –Enumeration - Garbage Collection.

Unit – II: ARRAYS, INHERITANCE, INTERFACES AND PACKAGES

Arrays - Three or More Dimensions; Inheritance: Basics - Calling the Super class Constructor - Overriding Super class Methods - Inheritance from Subclasses – Polymorphism -Abstract Classes and Methods - Interfaces: Fields - Multiple inheritance - Interface inheritance; Packages: Creating packages – Accessing package from other packages- Access Specifier.

Unit – III: STRING HANDLING, EXCEPTION HANDLING AND MULTI THREADING

String Handling: Basics - Operations –String Methods - String Buffer class - String Builder – to String method -String Tokenizer class. Exception Basics: try and catch block - Multiple catch block - Nested try - throws keyword - Throw vs Throws - Final Vs Finally Vs Finalize - Method Overriding - Custom Exception - Multithreading: Life Cycle - Methods in Thread - thread application – Thread priority – Synchronization - Inter-thread communication - Suspending, Resuming, and Stopping Threads;

Unit – IV: APPLET AND GUI APPLICATION

Applets: Basis - Lifecycle - Applet classes - Application – Graphics; AWT-I: GUI Programming - AWT classes - Windows fundamentals- Creating Windows - Dialog Boxes - Layout Managers - Radio Buttons and Check Boxes – Borders- Swing

Unit – V: JAVA DATABASE CONNECTIVITY

JDBC - Types of Drivers- Architecture- Classes and Interfaces - Developing JDBC Application - New Database and Table with JDBC - Working with Database Metadata.

Text Book

1. S.Sagayaraj, R.Denis, P.Karthik & D.Gajalakshmi, "Java Programming", Universities Press, 2017

References

1. Patrick Naughton and Herbert Schildt. "The Complete Reference JAVA 2". 3rd Edition. Tata McGraw-Hill Edition, 1999.
2. Muthu C. "Programming with JAVA". 2nd Edition. Vijay Nicole Imprints, 2011.
3. Ken Arnold Gosling and Davis Holmen. "The Java Programming Language". 3rd Edition. Addition Wesley Publication.

Core Practical

Practical 3- JAVA Programming LAB

List of Practical's

1. Implementing Package, inheritances and interfaces
2. Implementing Flow, Border and Grid Layouts
3. Implementing Dialogs , Menu and Frame
4. Implementing User defined Exception Handling
5. Implementing Multithreading
6. Implementing I/O Stream File handling
7. Implementing a Calculator using Swing
8. CRUD operation Using JDBC
9. Client Server using TCP and UDP Socket
10. GUI application with JDBC

ALLIED - 3

1. PHYSICS - I

UNIT – I: PROPERTIES OF MATTER

Elasticity : Hooke's Law – Elastic Constants – bending of beam – Bending moment – Cantilever Depression at the loaded end of a cantilever – determination of Young's modulus by non-uniform bending.

Torsion : Torsion couple – Potential energy in a twisted wire – Torsional pendulum – Time period – Determination of rigidity modulus by Torsional oscillation (without masses).

Viscosity: Viscosity of a liquid – Viscous force – Co-efficient of viscosity of a liquid – Poiseuille's formula .

Surface Tension: Surface Tension – Surface Tension and interfacial surface tension by the method of drops.

UNIT – II: HEAT

Heat: Specific heat – Newton's law of cooling – determination of specific heat of a liquid using Newton's law of cooling – Emissivity and Emissive Power.
Low Temperature: J.K. Effect – Positive Effect – Negative Effect – Temperature of Inversion – Super conductors. Type I and II – Meisner Effect – Helium I and II.

UNIT – III: ELECTRICITY AND MAGNETISM

Electricity: Potentiometer – Principle – Calibration of low range voltmeter – Measurement of internal resistance of cell – measurement of an unknown resistance.

Magnetism – Moment and pole strength of a magnet – Deflection magnetometer – Tan C position – Vibration magnetometer – Theory – Period of Oscillation – Determination of M and B_H using the deflection magnetometer in Tan C position and the vibration magnetometer.

UNIT – IV: SOUND AND ACOUSTICS OF BUILDING

Sound: Transverse vibration of strings – Velocity and frequency of vibrations of a stretched string – laws – sonometer – A.C. Frequency – Steel Wire – Brass wire.

Ultrasonics – Production by Piezo – electric method – properties and uses.
Acoustics of buildings: Reverberation – Reverberation time – Sabine's formula (definition only) – Sound absorption co-efficient of surface – conditions for the perfect acoustics.

UNIT – V: OPTICS

Interference: Air Wedge – Description – Test for optical flatness of glass plate – Determination of diameter of a thin wire by air wedge.

Diffraction: Theory of transmission grating – Normal Incidence – Determination of Wavelength of monochromatic source and Wavelength of mercury line using a grating by normal Incidence.

Fibre optics: principle-classification of optical fibres-fibre optic communication system block diagram.

Books for Study & Reference

1. Allied Physics – R. Murugesan S. Chand & Co. First Edition (2005).
2. Allied Physics – Dr. K. Thangaraj, Dr. D. Jayaraman Popular Book Department, Chennai.
3. Allied Physics – Prof. Dhanalakshmi and others.
4. Elements of Properties of Matter – D.S. Mathur, S. Chand & Co. (1999).
5. Heat and Thermodynamics – N. Brijlal and Subramaniam S. Chand & Co.
6. A text book of Sound – by M. Narayanamoorthy and other National Publishing Companies (1986).
7. Modern Physics – R. Murugesan S. Chand & Co. (2004).
8. Introduction to Fibre optics- K.Thyagarajan and Ajay Ghatak,Cambridge,University Press(1999).

ALLIED

2. STATISTICAL METHODS AND THEIR APPLICATIONS I

Objective
To understand and computing statistical Methods by which to develop the programming Skills.

UNIT-I
Introduction - scope and limitations of statistical methods - classification of data - Tabulation of
data - Diagrammatic and Graphical representation of data - Graphical determination of Quartiles ,Deciles and Percentiles.

UNIT-II
Measures of location : Arithmetic mean, median, mode, geometric mean and Harmonic mean and their properties.

UNIT-III
Measures of dispersion : Range, Quartile deviation, mean deviation, Standard deviation, combined Standard deviation, and their relative measures.

UNIT-IV
Measures of Skewness Karl Pearson's, Bowley's, and kelly's and co-efficient of Skewness and kurtosis based on moments.

UNIT-V
Correlation - Karl Pearson - Spearman's Rank correlation - concurrent deviation methods.
Regression Analysis: Simple Regression Equations.

Note : The proportion between theory and problems shall be 20:80

Books for Reference:
1. Fundamental of Mathematical Statistics - S.C. Gupta & V.K. Kapoor - Sultan Chand
2. Statistical Methods - Snedecor G.W. & Cochran W.G. oxford & +DII
3. Elements of Statistics - Mode . E.B. - Prentice Hall
4. Statistical Methods - Dr. S.P. Gupta - Sultan Chand & Sons

Skill Based Subject –Paper 1

DESIGN AND ANALYSIS OF ALGORITHMS

Objective: To build a solid foundation of the most important fundamental subject in computer science. Creative thinking is essential to algorithm design and mathematical acumen and programming skills.

UNIT -I: ALGORITHM AND ANALYSIS

What is an Algorithm? - Algorithm Specification- Performance Analysis- Randomized Algorithms.

UNIT - II: DIVIDE AND CONQUER

General Method - Binary Search - Finding the Maximum and Minimum-Merge Sort - Quick Sort - Selection Sort- Stassen's Matrix Multiplications.

UNIT - III: THE GREEDY METHOD

The General Method - Knapsack Problem – Tree Vertex Splitting - Job Sequencing with Deadlines - Minimum Cost Spanning Trees - Optimal Storage on Tapes - Optimal Merge Pattern - Single Source Shortest Paths.

UNIT - IV: DYNAMIC POGRAMMING

The General Method – Multistage Graphs - All pair shortest path - String Editing - 0/1 Knapsack – Reliability Design - The Traveling Salesperson Problem

UNIT - V: TRAVERSAL, SEARCHING & BACKTRACKING

Techniques for Binary Trees- Techniques for Graphs - The General Method - The 8-Queens Problem – Sum of Subsets- Graph Colouring- Hamiltonian Cycles

TEXT BOOK

Fundamentals of Computer Algorithms, Ellis Horowitz, SartajSahni, SanguthevarRajasekaran, Galgotia Publications, 2015.

REFERENCE BOOKS:

1. Introduction to Algorithms ,Coremen T.H.,Leiserson C.E. and Rivest R.L., PHI 1998.

2. Introduction to the Design and Analysis of Algorithms, AnanyLevitin, Pearson Education, 2nd Edition.

Non- Major Elective-1 Paper-1

Introduction to Information Technology

Objectives:

To enable the student to be proficient with Information Technology with a better knowledge of Computer

UNIT – I Introduction to Computers:

Definition - Characteristics of a Computer - Classification of Computers - Basic Anatomy of the Computer - Applications / Uses of Computers in different fields

UNIT – II Input and Output Devices:

Input Devices - Output Devices - Data Representation - Programming Languages / Computer Languages - Software: System Software - Application Software

UNIT – III Data Communication and Computer Networks:

Data Communication - Computer Network - The Uses of a Network - Types of Networks - Network Topologies- Transmission Media: Guided Transmission Media - Wireless Transmission

UNIT – IV Internet and its Applications:

History of Internet - Uses of Internet - Advantages of Internet - ISP - Internet Services - IP Address - Web Browser - URL - DNS - Internet Explorer - Types of internet connections - E-mail - Search Engine.

UNIT – V Operating System:

Evolution of operating systems - Function of Operating System - Classification of Operating –System - Example of Operating System – DOS –Windows – UNIX - Linux

TEXT BOOKS:

1. Alexis Leon and Mathews Leon, "Fundamentals of Information Technology", Vikas Publishing House Pvt. Ltd.
2. Introduction to Information Technology, P.Rizwan Ahmed, Second Edition, Margham Publications, 2016
3. Introduction to Information Technology, PelinAksoy, Laura DeNardis, Cengage Learning India Private Limited.

.

SEMESTER IV

CORE THEORY PAPER – 4

DATABASE MANAGEMENT SYSTEM

Objective: To incorporate a strong knowledge on databases to students

UNIT - I Database Basics

Introduction: Flat File – Database System – Database – Actionable for DBA. The Entity – Relationship Model: Introduction – The Entity Relationship Model. Data Models: Introduction – Relational Approach – The Hierarchical Approach – The Network Approach.

UNIT – II Relational Algebra

Structure of Relational Databases – Fundamental Relational Algebra Operations – Additional Relational Algebra Opearations - Extended Relational Algebra Operations - Null Values - Modification of the Database - The Tuple Relational Calculus – The Domain Relational Calculus

UNIT – III Normalization

Normalization: Introduction - Normalization – Definition of Functional Dependence (FD) – Normal Forms: 1NF, 2NF, 3NF and BCNF.

UNIT – IV Structured Query Language

Structured Query Language: Features of SQL – Select SQL Operations – Grouping the Output of the Query – Querying from Multiple Tables – Retrieval Using Set operators – Nested Queries. T-SQL – Triggers and Dynamic Execution: Transact-SQL..

UNIT – V Procedural Language

Procedural Language- SQL: PL/SQL Block Structure – PL/SQL Tables. Cursor Management and Advanced PL/SQL: Opening and Closing a Cursor – Processing Explicit Cursor – Implicit Cursor – Exception Handlers – Sub Programs in PL/SQL – Functions – Precaution While Using PL/SQL Functions – Stored Procedure – Object Oriented Technology.

Text Book

1. Rajesh Narang, "Database Management Systems", PHI Learning Private Limited, New Delhi, sixth printing, 2010.

Reference

1. S.K. Singh, "Database Systems – Concepts, Design and Appplications", Dorling Kindersley (India) Pvt. Ltd., Second Impression, 2008

2. Database System Concepts , Abraham Silberchatz, Henry F Korth , S.Sudarshan, McGraw-Hill - 5th Edition - 2006.

Core Practical

Practical 4- RDBMS LAB

1. Table creation and simple Queries
2. Queries using Aggregate Function and Set Operations
3. Table creation with various Joins
4. Nested Sub queries and correlated Sub queries
5. View creation and manipulation
6. PL/SQL program for cursor
7. PL/SQL program for packages
8. PL/SQL program for triggers and its type
9. PL/SQL program for procedures and functions

ALLIED - 2

1. PHYSICS II

UNIT – I: WAVE MECHANICS

Wave Mechanics – De Broglie Waves – Dual Nature – Experimental Study of Matter Waves – Davission and Germer's Experiment – G.P. Thomson's Experiment _ Heisenberg's uncertainty Principle – The position and moment of a particle.

UNIT – II : NUCLEAR PHYSICS

Particle accelerators – cyclotron, particle detectors – GM Counter Artificial Transmutation – Rutherford's Experiment – The Q value equation for nuclear reaction – Threshold energy – Nuclear Reactions.

Conservation Laws: Conservation of Charge – Conservation of Nucleons – Conservation of Mass – Energy – Conservation of Parity – Quantities conserved and quantities not conserved in a nuclear reaction.

UNIT – III : ENERGY PHYSICS

Sources of conventional energy – Need for non-conventional energy resources – solar energy utilization – solar water heater – solar drier – conversion of light into electrical energy – solar cell – merits and demerits of solar energy – wind energy – its conversion systems – energy from Bio mass – Bio gas generation – Industrial and space application.

UNIT – IV: CRYSTALLOGRAPHY

Crystallography : The crystal structure – Unit Cell –Bravais lattice- structures of simple cubic-BCC and FCC- co ordination number, packing factor calculation for the above structures –Hexogonal closed packed(HCP) structure -Miller indices – concept of Reciprocal Vectors.

UNIT – V: ELECTRONICS

Electronics: Transistor characteristics in common base and common emitter mode- Transistor single stage amplifier- Expression for input impedence, output impedence and current gain.
Digital Electronics : NAND and NOR as universal building blocks- De Morgan's theorem –statement and proof- Fabrication of diodes and transistors using Monolithic technology–limitations.

Books for Study & Reference

1. Allied Physics – R. Murugesan S. Chand & Co. First Edition (2005).
2. Allied Physics – Dr. K. Thangaraj, Dr. D. Jayaraman Popular Book Department, Chennai.
3. Allied Physics – Prof. Dhanalakshmi and others.
4. Elements of Properties of Matter – D.S. Mathur, S. Chand & Co. (1999).
5. Heat and Thermodynamics – N. Brijlal and Subramaniam S. Chand & Co.
6. A text book of Sound – by M. Narayanamoorthy and other National Publishing Companies (1986).
7. Modern Physics – R. Murugesan S. Chand & Co. (2004).
8. Electronic Principles and Applications – A.B. Bhattacharya, New Central Book Agency, Calcutta.
9. Introduction to Solid State Physics – C. Kittel, 5^{th} Edition Wiley Eastern Ltd.
10. Renewable & Sustainable energy sources – Agarwal.

ALLIED

2. STATISTICAL METHODS AND THEIR APPLICATIONS II

Objective
To understand and computing statistical Methods by which to develop the programming Skills.

UNIT-I
Curve fitting by the methods of least squares -
$Y = a x + b$, $Y = a x^2 + b x + c$, $Y = a x^b$, $Y = a e^{bx}$

UNIT-II
Sample Space - events - probability - Addition and Multiplication Theorem - conditional probability -Baye's Theorem. Mathematical expectation Addition and Multiplication theorem, Chebychev's Inequality.

UNIT-III
Standard distributions - Binomial, Poisson, Normal distribution and fitting of these distributions.

UNIT-IV
Test of Significance- small sample and large sample test based on mean, S.D. correlation and
proportion - confidence interval.

UNIT-V
Analysis of variance - One and Two way classifications - Basic principle of design of Experiments - Randomisation, Replication and Local control - C.R.D., R.B.D. and L.S.D.

Books for Reference:
1. Fundamental of Mathematical Statistics - S.C. Gupta & V.K. Kapoor - Sultan Chand
2. Fundamental of Applied Statistics - S.C. Gupta & V.K. Kapoor – Sultan Chand
3. Statistical Methods - Snedecor G.W. & Cochran W.G. oxford & +DII
4. Elements of Statistics - Mode . E.B. – Prentice Hall

ALLIED PRACTICAL

1. PHYSICS
(Any 15 Experiments)

1. Young's modulus – non uniform bending – pin and microscope.
2. Rigidity modulus – Static Torsion Method Using Scale and Telescope.
3. Ridigity modulus – Torsional oscillation method (without symmetric masses).
4. Determination of Co-efficient of Viscosity – Graduated Burette.
5. Surface Tension and Interfacial Tension – By drop weight method.
6. Specific Heat Capacity of a liquid – by Newton's Law of Cooling.
7. Sonometer – Determining A.C. Frequency. (Screw Gauge is given).
8. Sonometer – frequency of tuning fork.
9. Newton's Rings – Radius of Curvature.
10. Air Wedge – Determination of thickness of thin wire.
11. Spectrometer Grating – Minimum Deviation – Mercury Lines.
12. Spectrometer – Refractive Index of a liquid – Hollow Prism.
13. Potentiometer – Calibration of High Range Ammeter.
14. Potentiometer – Calibration of Low Range Voltmeter.
15. Determination of M and B_H using Deflection Magnetometer in Tan C position and vibration magnetometer.
16. Figure of merit and voltage sensitiveness of table galvanometer.
17. Construction of AND, OR gates using diodes and NOT by transistors.
18. Zener diode – Voltage Regulation.
19. NAND / NOR as universal gate.
20. Demorgan's theorem verification.

ALLIED PRACTICAL

2. STATISTICAL METHODS AND THEIR APPLICATIONS - Practical

ALLIED PRACTICAL

1. Formation of uni-variate and bi-variate frequency distribution
2. Diagrams and Graphs
3. Measures of Location
4. Measures of Dispersion
5. Skewness and Kurtosis
6. Correlation and Regression
7. Curve Fitting : $y = ax+b$, $y=ax^2+bx+c$, $y=ax^b$, $y=ae^{bx}$
8. Fitting of distributions - Binomial, Poisson, Normal
9. Test of significance small sample and large sample tests
10. Analysis of Variance: one way classification, Two way classification and Design of Experiments - C.R.D, R.B.D & L.S.D

BOOKS FOR REFERENCE:

1. Statistical Methods by S.P. Gupta, Sultan chand & Sons
2. Fundamental of Applied Statistics - S.C. Gupta & V.K. Kapoor

Note:
Use of Scientific Calculator shall be permitted for Practical Examination. Statistical Table may be provided to the students at the Examination Hall.

Skill Based Subject II –Paper 2

Computer Organisation and Architecture

Objective: To enable the student to have a better understanding of architecture of computer and prepare the student for higher level of programming

UNIT - I

Instruction Codes – Computer Registers – Computer Instructions – Timing and Control – Instruction Cycle – Memory Reference Instructions – Input-Output and Interrupts.

UNIT - II

Control Memory – Address Sequencing – Micro program Examples – Design of Control Unit.

UNIT - III

Introduction – General Register Organization – Instruction Formats – Addressing Modes.

UNIT – IV

Peripheral Devices – I/O interface – Asynchronous Data Transfer – Modes of Transfer - Direct Memory Access – Input Output Processor (Excluding IBM and Intel IOPs).

UNIT - V

Auxiliary Memory – Main Memory – Auxiliary Memory - Associative Memory – Cache Memory -Virtual Memory.

NON MAJOR ELECTIVE II PAPER II

INTERNET AND ITS APPLICATIONS

Objective: To equip students to basics of Internet usage and prepare them for digital world

UNIT - I Internet Basics

Introduction to Computers Programming Language types History of Internet Personal computers History of World Wide Web- Micro software .NET Java-Web resources.

UNIT - II Web Browsers

Web Browsers - Internet Explorer - connecting to Internet Features of Internet explorer6 Searching the Internet- online help and tutorials - File Transmission Protocol (FTP) Browser settings.

UNIT - III E-Mail

Attaching a file, Electronic mail creating an E-mail id sending and Receiving mails - attaching a file - Instance messaging - other web browsers.

UNIT - IV HTML

Introduction to HTML headers – Linking - Images-special characters and line breaks unordered lists- simple HTML programs.

UNIT - V Digital Cash

E-marketing consumer tracking Electronic advertising search engine – CRM - credit card payments Digital cash and e-wallets micro payments- smart card

Text book

Internet and World Wide Web Third edition H.M.Deitel, P.J. Deitel and A.B.Goldberg - PHI Reference

The Internet- Complete Reference Harley hahn, Tata McGraw Hill

SEMESTER V

CORE THEORY PAPER – 5

MOBILE APPLICATIONS DEVELOPMENT

Objective:

This course aims to provide the students with a detailed knowledge on Mobile Application and Development and covers Android programming from fundamentals to building mobile applications for smart gadgets.

UNIT I Introduction to Mobile Applications:

Native and web applications - Mobile operating systems and applications - Mobile Databases. Android: History of Android - Android Features – OSS – OHA - Android Versions and compatibility - Android devices - Prerequisites to learn Android -– Setting up software – IDE - XML. Android Architecture: Android Stack - Linux Kernel - Android Runtime - Dalvik VM - Application Framework - Android emulator - Android applications.

UNIT II Android development:

Java - Android Studio – Eclipse – Virtualization – APIs and Android tools – Debugging with DDMS – Android File system – Working with emulator and smart devices - A Basic Android Application - Deployment. Android Activities: The Activity Lifecycle – Lifecycle methods – Creating Activity. Intents – Intent Filters – Activity stack.

UNIT III Android Services:

Simple services – Binding and Querying the service – Executing services.- Broadcast Receivers: Creating and managing receivers – Receiver intents – ordered broadcasts. Content Providers: Creating and using content providers – Content resolver. Working with databases: SQLite – coding for SQLite using Android – Sample database applications – Data analysis.

UNIT IV Android User Interface:

Android Layouts – Attributes – Layout styles - Linear – Relative – Table – Grid – Frame. Menus: Option menu – context menu - pop-up menu – Lists and Notifications: creation and display. Input Controls: Buttons-Text Fields-Checkboxes-alert dialogs-Spinners-rating bar-progress bar.

UNIT V Publishing and Internationalizing mobile applications :

Live mobile application development: Game, Clock, Calendar, Convertor, Phone book. App Deployment and Testing: Doodlz app – Tip calculator app – Weather viewer app.

Text Books

Barry Burd, "Android Application Development – All-in-one for Dummies", 2nd Edition, Wiley India, 2016.

2. Jerome (J. F) DiMarzio, "Android – A Programmer"s Guide", McGraw Hill Education, 8th reprint, 2015.
3. http://www.developer.android.com

CORE THEORY PAPER - 6

OPERATING SYSTEM

Objective: Enable the student to get sufficient knowledge on various system resources.

Unit – I Operating System Basics

Basic Concepts of Operating System - Services of Operating System-Classification of Operating System- Architecture and Design of an Operating System-Process Management -Introduction to Process-Process State -PCB - Process Scheduling - Interprocess Communication

Unit –II Operating System Scheduling

CPU Scheduling**:** Introduction - Types of CPU Scheduler - Scheduling Criteria - Scheduling Algorithms - FCFS Scheduling – SJF Scheduling;-Priority Scheduling - Round-Robin Scheduling- Multilevel Queue Scheduling - Deadlock - Basic Concept of Deadlock- Deadlock Prevention - Deadlock Avoidance- Deadlock - Detection and Recovery

Unit- III Memory management

Memory Management - Basic Concept of Memory - Address Binding; Logical and Physical Address Space- Memory Partitioning - Memory Allocation-Protection-Fragmentation and Compaction

Unit – IV Swapping

Swapping- Using Bitmaps - Using Linked Lists- Paging-Mapping of Pages to Frames - Hierarchical Page Tables- Segmentation - Virtual Memory - Basic Concept of Virtual Memory- Demand Paging - Transaction Look aside Buffer (TLB) - Inverted Page Table-Page Replacement Algorithms

Unit –V File Management

File Management - Basic Concept of File-Directory Structure-File Protection-Allocation Methods – Various Disk Scheduling algorithms

Text Books:

Abraham Silberschatz Peter B. Galvin, G. Gagne, “Operating System Concepts”, Sixth Edition, Addison Wesley Publishing Co., 2003.

Reference

1. Operating systems - Internals and Design Principles, W. Stallings, 6th Edition, Pearson
2. Willam-Stalling “Operating System” Fourth Edition, Pearson Education, 2003.

CORE THEORY PAPER – 7

DATA COMMUNICATION & NETWORKS

Objective:

To equip students to basics of Data Communication and prepare them for better computer networking

UNIT I

Introductory Concepts - Network hardware - Network software – Network Architecture - Physical layer - Guided transmission media - Cable television.

UNIT II

Data Link Layer - Design issues - Channel allocation problem - Multiple access protocols - Ethernet - Wireless LAN - 802.11 architecture.

UNIT III

Network Layer : Design issues, Routing Algorithms, Shortest path routing, Flooding, Broadcast & Multicast routing congestion, Control & internetworking.

UNIT IV

Transport Layer - Transport service - Elements of transport protocols - User Datagram Protocol - Transmission Control Protocol.

UNIT V

Application Layer - DNS - Electronic mail - World Wide Web - Multimedia - Network security.

TEXT BOOK

1. Tannenbaum, A.S., 2003 : Computer Networks, Prentice Hall.

REFERENCES

1. Stallings, William, 2008: Local and Metropolution Area Networks: An Introduction, Macmillian Publishing Co.
2. Black: Data Network, Prentice Hall of India.
3. W. Stallings, "Data and Computer Communication", Pearson Education, Fifth Edition, 2001

Core Practical – 5

Mobile Applications Development – Lab

1. Intent and Activity
2. Using Controls
3. Alert Dialogs
4. List View
5. Options Menu
6. Seek Bars
7. Shared Preferences
8. Status Bar Notifications
9. Tab Widgets Talking Clock.
10. Tween Animation
11. Grid View
12. Internal Storage - Files
13. SQlite - Database
14. Google Map
15. Permissions

Core Practical – 6

Operating System Lab

1. Implementing the Process system calls.
2. Implementing I/O system calls.
3. Implementing IPC using message queues.
4. Implementing CPU& scheduling algorithm for first come first serve scheduling.
5. Implementing CPU scheduling algorithm for shortest job first scheduling.
6. Implementing perform priority scheduling.
7. Implementing CPU scheduling for Round Robin Scheduling.
8. Implementing pipe processing.
9. Implementing first fit, best fit algorithm for memory management.
10. A program to simulate producer-consumer problem using semaphores.
11. A Shell Program to find factorial of a given number
12. A shell program to generate Fibonacci number

Elective – 1 Paper – 1

A. DATA MINING

Objective: Enable the student to get sufficient knowledge on various system resources.

UNIT - I: Data Mining Basics

Introduction: Definition of data mining - data mining vs. query tools - machine learning - steps in data mining process - overview of data mining techniques.

UNIT - II: Data Models

Multidimensional Data Model - Data Cube - Dimension Modeling - OLAP Operations - Meta Data - Types of Meta Data.

UNIT - III: Data Editing

Data Pre-Processing and Characterization: Data Cleaning - Data Integration and Transformation - Data Reduction - Data Mining Query Language - Generalization - Summarization - Association Rule Mining

UNIT - IV: Classification

Classification: Classification - Decision Tree Induction - Bayesian Classification - Prediction - Back Propagation - Cluster Analysis - Hierarchical Method - Density Based Method - Grid Based Method - Outlier Analysis.

UNIT - V: Analysis

Cluster analysis: Types of data - Clustering Methods - Partitioning methods - Model based clustering methods - outlier analysis. Advanced topics: Web Mining - Web Content Mining - Structure and Usage Mining - Spatial Mining - Time Series and Sequence Mining.

TEXT BOOKS:

1. PaulrajPonnaiah, “Data Warehousing Fundamentals”, Wiley Publishers, 2001.

2. Jiawei Han, MichelineKamber, “Data Mining: Concepts and Techniques”,Morgan Kaufman Publishers, 2006.

REFERENCES:

1. Usama M. Fayyad, Gregory Piatetsky Shapiro, Padhrai Smyth Ramasamy Uthurusamy, "Advances in Knowledge Discover and Data Mining", the M.I.T. Press, 2007.
2. Ralph Kimball, Margy Ross, The Data Warehouse Toolkit, John Wiley and Sons Inc., 2002
3. Alex Berson, Stephen Smith, Kurt Thearling, "Building Data Mining Applications for CRM", Tata McGraw Hill, 2000.
4. Margaret Dunham, "Data Mining: Introductory and Advanced Topics", Prentice Hall, 2002.
5. Daniel T. Larose John Wiley & Sons, Hoboken, "Discovering Knowledge in Data: An Introduction to Data Mining", New Jersey, 2004

B. COMPUTER GRAPHICS

Objectives: To equip students to basics of computer drawing and prepare them for computer modelling of objects

UNIT – I : OVERVIEW OF GRAPHICS SYSTEMS AND OUTPUT PRIMITIVES

Video Display Devices- Raster Scan System- Random Scan Systems- Hard Copy Deices- Graphic Software- Line Drawing Algorithms: DDA- Bresenham's Line -Circle Generating Algorithms

UNIT – II : ATTRIBUTES AND TWO DIMESIONAL TRANSFORMATIONS

Line Attributes- Curve Attributes-Color And Gray Scale Level- Area Fill Attributes- Character Attributes- Inquiry Functions- Basic Transformations - Composite Transformation – Other transformation

UNIT – III : TWO DIMENSIONAL VIEWING AND CLIPPING

The Viewing Pipeline- Window To Viewport Transformation –Clipping Operations- Point Clipping- Line Clipping: Cohen Sutherland- Liang Barsky-Sutherland Hodgeman Polygon Clipping- Text Clipping- Exterior Clipping- Logical Classification Of Input Devices- Interactive Picture Construction

UNIT – IV : THREE DIMENSION TRANSFORMATION, VIEWING AND CLIPPING

Translation-Rotation-Scaling-Viewing Pipeline- Viewing Coordinates- Projections -View Volumes and General Projection Transformation- Clipping -

UNIT – V : VISIBLE SURFACE DETECTION METHODS

Classification of Visible Surface Detection Algorithms - Back Face Detection - Depth Buffer Method - A Buffer Method - Scan Line Method - Depth Sorting Method- BSP Tree Method -Area Sub Division Method - Octree Methods - Ray Casting Method

TEXT BOOK:

Computer Graphics(C version) , Donald Hearn and M.Pauline Baker, Pearson- 2nd Edit. 2012.

REFERENCE BOOKS:

1. Interactive Computer Graphics–A top down approach using Open GL, Edward Angel , Pearson, 5th Edition.

2. Computer Graphics, Peter Shirley, Steve Marschner, Cengage Learning, Indian Edition,2009

C. INFORMATION SECURITY

Objective: To enable the student to understand various methodology available for securing information

UNIT I Information Security Basics

INTRODUCTION -History, What is Information Security?, Critical Characteristics of Information, NSTISSC Security Model, Components of an Information System, Securing the Components, Balancing Security and Access, The SDLC, The Security SDLC

UNIT II Security Investigation

SECURITY INVESTIGATION - Need for Security, Business Needs, Threats, Attacks, Legal, Ethical and Professional Issues

UNIT III Security Analysis

SECURITY ANALYSIS-Risk Management: Identifying and Assessing Risk, Assessing and Controlling Risk

UNIT IV Security Models

LOGICAL DESIGN-Blueprint for Security, Information Security Poicy, Standards and Practices, ISO 17799/BS 7799, NIST Models, VISA International Security Model, Design of Security Architecture, Planning for Continuity

UNIT V Security Physical Design

PHYSICAL DESIGN-Security Technology, IDS, Scanning and Analysis Tools, Cryptography, Access Control Devices, Physical Security, Security and Personnel.

Text Book

1. Michael E Whitman and Herbert J Mattord, “Principles of Information Security”, Vikas Publishing House, New Delhi, 2003

Reference

2. Stuart McClure, Joel Scrambray, George Kurtz, “Hacking Exposed”, Tata McGraw-Hill, 2003
3. Matt Bishop, “Computer Security Art and Science”, Pearson/PHI, 2002.

Skill Based Subject 3 Paper – 3

SOFTWARE ENGINEERING

Objective:
This course introduces the concepts and methods required for the construction of large software intensive systems.

UNIT-I:
Introduction - Evolving Role of Software - Changing Nature of Software – Software Myths; A Generic View of Process: Layered Technology - Process Models: Waterfall Model - Evolutionary Process Models.

UNIT-II:
Requirements Engineering: Tasks - Initiating the Requirements Engineering Process - Eliciting Requirements - Building the Analysis Model - Requirements Analysis - Data Modelling Concepts.

UNIT-III:
Data Engineering: Design Process and Design Quality - Design Concepts - The Design Model Creating an Architectural Design: Software Architecture - Data Design - Architectural Design - Mapping Data Flow into Software Architecture; Performing User Interface Design: Golden Rules.

UNIT-IV:
Testing Strategies: Strategic Approach to Software Testing- Test Strategies for Conventional and Object Oriented Software - Validation Testing - System Testing -Art of Debugging. Testing Tactics: Fundamentals - White Box- Basis Path - Control Structure - Black Box Testing Methods

UNIT-V:
Project Management: Management Spectrum - People - Product - Process - Project. Estimation: Project Planning Process - Resources - Software Project Estimation - Project Scheduling - Quality Concepts - Software Quality Assurance - Formal Technical Reviews.

TEXT BOOK:
Roger S Pressman, ”Software Engineering - A Practitioner’s Approach”, Sixth Edition, McGraw Hill International Edition, New York: 2005.

REFERENCES:

1. Ian Somerville, “Software Engineering”, 7th Edition, Pearson Education, 2006.
2. Mall Rajib,” Software Engineering”, 2/E, PHI, 2006.

SEMESTER VI

CORE THEORY PAPER – 8

CLOUD COMPUTING

Objective:

To enable the students to learn the basic functions, principles and concepts of cloud Systems.

UNIT I: UNDERSTANDING CLOUD COMPUTING

Cloud Computing – History of Cloud Computing – Cloud Architecture – Cloud Storage – Why Cloud Computing Matters – Advantages of Cloud Computing – Disadvantages of Cloud Computing – Cloud Services.

UNIT II: DEVELOPING CLOUD SERVICES

Types of Cloud Service Development – Software as a Service – Platform as a Service – Web Services – On-Demand Computing – Discovering Cloud Services Development Services and Tools – Amazon Ec2 – Google App Engine – IBM Clouds.

UNIT III: CLOUD COMPUTING FOR EVERYONE

Centralizing Email Communications – Collaborating on Schedules – Collaborating on To-Do Lists – Cloud Computing for the Community – Collaborating on Group Projects and Events.

UNIT IV: PROGRAMMING MODEL

Parallel and Distributed Programming Paradigms – Map Reduce, Twister and Iterative Map Reduce – Hadoop Library from Apache – Mapping Applications - Programming Support - Google App Engine, Amazon AWS - Cloud Software Environments -Eucalyptus, Open Nebula, Open Stack, Aneka, CloudSim.

UNIT V: SECURITY IN THE CLOUD

Security Overview - Cloud Security Challenges and Risks - Software-as-a-Service Security- Security Governance - Risk Management - Security Monitoring - Security Architecture Design - Data Security - Application Security - Virtual Machine Security - Identity Management and Access Control - Autonomic Security.

TEXT BOOK:

1. Michael Miller, “Cloud Computing: Web-Based Applications That Change the Way You Work and Collaborate Online”, Que Publishing, August 2008.
